July 20, 1922.

Department of Commerce, Bureau of the Census, Washington, D. C.

Attention of Dr. Frank M. Surface, Special Agent

DEAR SIR: Referring to our correspondence regarding the normal capacity of the Association flooring mills for the manufacture of Maple, Beech and Birch Flooring, we wish to advise you that we have finally succeeded in collecting this information from all of our members.

The normal capacity of the mills of the 20 members whose other statistics, beginning with March, 1919, we sent you with our letter of June 7th, is as follows:

[*In red in copy.]

Normal capacity per year	146,400 M
" " " month	12,200 "
Average days run per year	281 days
" working hours per day	9.8 hours

We wish to state for your further information that the normal capacity of the mills of the 22 members, which is our total present membership, is as follows:

Normal capacity per year	158,400 M
" " " Month	13,200 "
Average days run per year	281 days
" working hours per day	9.8 hours

Yours very truly, George K. Keehn, Secretary.

[fol. 5463] DEFENDANTS' EXHIBIT KK-2

Department of Commerce,

Bureau of the Census

Washington, May 23, 1922.

Maple Flooring Manufacturers Association, 1045 Stock Exhange Building, Chicago, Illinois.

Attention of Mr. George W. Keehn, Secretary

DEAR SIR: A short time ago you sent us statistics on the maple-flooring industry. We have been attempting to put these into shape for the "Survey of Current Business," but find certain difficulties. Your comparisons as put out in your monthly statements are perfectly all right because you make there comparisons between the reports of identical firms for this month and the same month a year ago. As you are aware we attempt to show the trends in the various movements for the past two years. The number of members who report to you varies from around 20 up to 29 at various times. This seems to introduce some discrepancies in the figures and makes it difficult to compare one month with those which precede or follow it.

You mentioned at one time about compiling figures on the normal capacity of the plants. If this were done it would be possible to relate each month's figures to a given base by computing the per cent which the actual production is to the normal production of the firms reporting. I wonder if you have been successful in securing these figures. If not, would it be possible for you to compile monthly reports on the basis of about 22 identical firms? I mention this number because most of your reports cover that number of firms.

We would like very much to use these figures in the "Survey of Current Business," but would like the comparison clear before we publish them.

Very truly yours, Frank M. Surface, Special Agent.

FMS/CW.

[fol. 5464] DEFENDANTS' EXHIBIT KK-8

May 13, 1922.

Department of Commerce, Bureau of the Census, Washington, D. C.

Attention of Dr. Frank M. Surface, Special Agent

DEAR SIR: We are in receipt of your letter of the 5th, and in compliance with your request we are glad to send you herewith the monthly statistics you refer to for each month of the calendar years 1920 and 1921.

We are also enclosing the Barometer for the month of December, 1919, so you will have as a starting point the Stocks and Unfilled Orders on Hand on January 1st, 1920. This will complete your file of statistical data regarding Maple, Beech and Birch Flooring from January 1, 1920 to May 1, 1922, inclusive.

Perhaps we should say by way of explanation that the 13/16 x 2-¼" face Maple Flooring in the three grades, Clear, No. 1 and Factory, constitutes a large percentage of the output, probably about 70%, and that the total of Maple Flooring product averages about 50% Clear, 35% No. 1 and 15% Factory.

Regarding the approximate percentage of the Maple Flooring industry which is covered by our reports, it is our impression that our Association represents about 70% of the output. We of course, have no data regarding the output of non-member mills, so we have no means of knowing what the total production of Maple Flooring is in the United States, so our estimate of approximately 70% is based upon general information only.

We wish to thank you for sending us the Survey of Current Business as of January 1, 1922, and we will send to the Superintendent of Documents, Washington, D. C., our subscription for the Survey and Commerce Reports in order that we shall receive them regularly and have the benefit of the valuable information they contain.

Yours very truly, George W. Keehn, Secretary.

[fol. 5465] DEFENDANTS' EXHIBIT KK-4

Department of Commerce,

Bureau of the Census,

Washington, May 5, 1922.

Maple Flooring Manufacturers Association, 1045 Stock Exchange Building, Chicago, Illinois.

Attention of Mr. George W. Keehn Secretary

DEAR SIR: Your letter of April 25, addressed to the Department of Commerce, was received sometime ago. I have not replied before because there were certain matters of policy in the Department, which I hope might be decided and would perhaps have some effect upon the figures we might use.

We are indeed very glad to know that you are willing to furnish your figures to the Department and I feel very sure that we can use most of them in the "Survey of Current Business."

The figures, which you have sent us, appear to be satisfactory so far as the yearly averages are concerned; however, we would like to have, if possible, monthly figures for the same items covering the years of 1920 and 1921. This would put the information in the same form as that of other commodities which we use in the "Survey." I am forwarding, under separate cover, a copy of the January number, which is the last quarterly issue, and you will note there that we give monthly figures for the two years so far as it is possible to obtain them.

I note that you are collecting data showing the normal capacity of the plants in the association. I think these would be of great assistance and I trust you will be successful in compiling them.

Can you give any idea of the approximate percentage of the total maple-flooring industry which is covered by your reports?

Very truly yours, Frank M. Surface, Special Agent.

FMS/CW.

[fol. 5466] DEFENDANTS' EXHIBIT KK-5

April 25, 1922.

Department of Commerce, Bureau of the Census, Washington, D. C.

GENTLEMEN: Referring to my interview on April 13th with Mr. Lane, assistant to Dr. F. M. Surface of the Bureau of Census:

As stated at that time, our Association will be very glad to cooperate with the Department of Commerce and furnish from time to time to the Department and to the lumber trade press for the information of the public, the following statistics which we under-

stood from Mr. Lane is that portion of our statistical data which would be useful to you and of general interest:

1. *Total Stocks on Hand at the end of each month.*
2. Total Unfilled Orders at the end of each month.
3. Total Shipments during each month.
4. Total Production during each month.
5. Total New Orders Booked during each month.
6. Average Prices Realized F. O. B. cars at Flooring Plants, during each month, for 13/16 x 2-¼" Clear, No. 1 and Factory Maple Flooring.

These statistics are compiled monthly, are compared with the same month of the previous year and are in the form shown in our so-called Barometer, a copy of which for the month of February was left with Mr. Lane. We are enclosing similar statistical statements for the months of January and March.

We also left with Mr. Lane copies of our Barometer and statistical statements for the calendar years 1921-1920, and as he said that he would like to have similar statistical data covering past years, we are enclosing a copy of a statement giving similar statistical data covering the past ten years, namely from 1912 to 1921 inclusive. There have been so many changes in membership during that period, many mills having discontinued operations and new mills coming in, that it is impossible to reconcile the data to show exact comparisons of identical mills, etc.

We are endeavoring to collect data showing the normal manufacturing capacity of all the flooring plants in the Association, so that the actual Production each month and each year can be compared with the normal capacity in order to know to what extent the normal capacity is being operated. If we succeed in getting this data in accurate and dependable form, we will include same as a feature in our monthly Barometers.

Yours very truly, Maple Flooring Manufacturers Assn., by —— ——, Secretary.

[fol. 5890] DEFENDANTS' BACON EXHIBIT No. 1

Hermansville, Michigan, 9, 4, 22.

Davenport Peters Co., Boston, Mass.

GENTLEMEN: We are in receipt of your inquiry of the 31st ult. for 13/16 x 2¼" Clear and #1 Maple Flooring and would advise that we are quite heavily oversold on both items and would not be able to make prompt shipment. However, our prices delivered Boston are:

13/16 x 2¼" Clear Maple Flg..... $106.50
" #1 " " 96.50

and we allow $1.50 per M commission.

Thanking you, we are

Yours truly, Wisconsin Land & Lumber Co., Sales Dept.

GE. EJ.

[fol. 5891] West Michigan Flooring Co.,

Manufacturers of Maple Flooring

For immediate acceptance and subject to change without notice, also to conditions printed on back of this sheet.

Manistee, Mich., Sept. 6, 1922.

Quotation No. 868

Davenport, Peters Company, Boston, Mass.

GENTLEMEN: In response to your valued inquiry of August 31st we quote you our "Acme" Brand Maple Flooring freight allowed Boston, Mass., rate subject to $2.00 per M commission upon our regular terms of 2% cash discount or 60 days net:

One car 13/16" x 2¼" face Clear D & M @ $103.50 per M.
One car 13/16" x 2¼" face No. 1 D & M @ $93.50 per M.

While we are sold up quite close to our machines on these two items, we could subject to prior sale make shipment within about ten days.

We thank you very kindly for this inquiry and will welcome your order.

Yours very truly, West Michigan Flooring Co., per Greene.
WHG-JF.

[fol. 5892] The quotation on reverse side of this sheet is subject to the following conditions:

All promises of shipment are as closely estimated as possible, we use our best efforts to ship within the time promised but do not guarantee to do so.

All agreements and deliveries are contingent upon strikes, accidents, delays of carriers and all other delays unavoidable or beyond our control including fire and floods.

Regular terms: 60 days net or 2 per cent discount for cash in 15 days or 1 per cent discount for cash in 30 days from date of invoice after deducting freight. War tax to be paid by consignee.

Standard Grading Rules to apply on all materials covered by this proposal unless otherwise specified.

All items of Hardwood Flooring, covered by this proposal to consist of our own manufacture, the "Acme" Brand unless otherwise specified.

If your order for this material is received, it will be understood that it is placed with us subject to these conditions.

[fol. 5893] Flanner-Steger Land and Lumber Co.,

Manufacturers of Northern Hardwoods, Hemlock, Maple and Birch Flooring, Lath and Shingles

Blackwell, Forest County, Wis., Sept. 4, 1922.

Contracts and agreements are not binding when circumstances and conditions arise that are beyond the control of this company.

Davenport, Peters Company, 70 Kilby St., Boston, Mass.

GENTLEMEN: Acknowledging receipt of your inquiry of the 31st, we are pleased to quote you f. o. b. Boston rate:

13/16 x 2¼ Clear Maple Flooring	$104.50
13/16 x 2¼ #1 Maple Flooring	89.50

Birch $5.00 per M less. These prices are subject to a commission of $2.00 per M to you.

Very truly yours, Flanner Steger Land & Lumber Co., by H. C. Ross.

HCR:LH.

Boston, Mass., Sept. 8, 1922.

Davenport, Peters Company, 70 Kilby Street, Boston, Mass.

GENTLEMEN: Your inquiry of August 31st to the Holt Hardwood Company of Oconto, Wisconsin, has been referred to us for reply direct, and we are pleased to quote you on one car of 13/16 x 2¼" face Clear Maple Flooring $104.50, and one car of 13/16 x 2¼" face #1 Maple Flooring $94.50, subject to $2.00 per M commission to you. Shipment of the Clear could be made in about thirty days and the #1 in about sixty days.

Trusting that you will give these prices your consideration and that we may be favored with your valued order, we are,

Yours very truly, Davenport-Evans Co. R. M. Davenport, Secretary.

RMD/D.

East Jordan Lumber Company,

Manufacturers of "Imperial" Maple Flooring, Hardwood, Pine and Hemlock Lumber, Shingles, Lath

All agreements are contingent upon fires, strikes, delay of carriers, or causes beyond our reasonable control. All quotations are for immediate acceptance only, and are subject to prior sale and change without notice. No agreement binding until accepted in writing by our home office. Delivered quotations guarantee freight rate only and not safe delivery.

East Jordan, Mich., February 8, 1923.

John A. Daley Lumber Co., 350 Madison Ave., New York City.

GENTLEMEN: Answering your favor of the 5th: we have experienced during the last two weeks a rather unexpected rush of orders for 2-¼ Clear, probably induced in part at least by the rise of price which we believe was quite general among the Flooring Manufacturers on 2-¼ which amounted to $5.00 per M.

We are enclosing new stock and price list showing our present condition.

2" No. 1 and Factory are oversold over four months and makes slowly now that we are back on rather high grade lumber. We do not dare sell any further ahead.

We are also sold ahead on 2-¼" Clear, but a good deal of this g

on jobs which are held up more or less, which leaves us with over 100M feet in the warehouse now. On this account we can spare up to 50M feet for prompt shipment.

We are expecially concerned over our 3-¼" Clear. Last year Kerry & Hanson Flooring Company beat us to it with a sale on theirs, and a good deal of what we have on hand has been here nearly a year. Our present prices are, we believe, quite a little less than most manufacturers are asking, but we wish you would have this item in mind and in case of any orders on which you need a lower price competition, we would almost feel like cutting the price another dollar or so rather than see prompt shipment business get away.

We are again taking up with Kerry and Hanson today the question of moving the ⅜ Flooring; also have asked for quotation on 1-1/16 as well as the lumber, and will let you know within a day or two what they say about it.

[fol. 5896] We are sorry that there has been this delay in getting our new prices to you. The writer has been out of the office with a second session with the La Grippe which partly explains this, but we will certainly make an effort to be a little more prompt from now on.

Yours very truly, East Jordan Lumber Company. Jno. J. Porter.

The Building Industry Since the Armistice

The Present Situation

Building construction has felt the stimulus of the present business cycle to a marked degree. The accumulated deficiencies resulting from the check to construction during the war had caused a rapid

expansion in building activity in 1919; but the expansion of that year felt—probably earlier than most other industries—the ill effect of the unsound business situation at that time, and in 1920 building contracts declined sharply. As in other industries, the boom had been short-lived.

Early in 1921, however, building again responded to the need of making good the war shortage, even before liquidation in other industries had ceased, and approximately a year before general business conditions had begun to show marked improvement. The persistent advance of 1921 brought building activity to high levels in the spring of 1922. Further advance was scored in the next twelve months, which brought issues of permits and awards of contracts to levels above those attained in any previous business cycle.

In this expansion the building industry, as frequently happens, moved in advance of other industries; and, similarly, it has recently felt the ill effects of extreme activity. Always presenting a difficult labor problem, it has recently suffered from labor shortage; so that wage increases and declining labor efficiency, combined with stiffly rising building-material prices, have increased costs very rapidly. The anticipated result—a sharp decline in activity—was early envisaged; and a persistent attempt has been made to have construction projects postponed, with the object of keeping activity stable on a high level. Early in March, Secretary Hoover recommended that the government initiate no new construction work save that most urgently necessary. In May, the governors of the American Construction Council recommended that all new construction be deferred for several months, that financing of speculative building be curtailed until after the end of the summer, and that municipal and state construction departments be urged to delay their work as much as possible until September and October.

Cautionary advice of this kind, the general conservatism of business opinion in recent months, and the advance in costs at the end of April, combined to bring about a sharp decline in the issue of building permits. This decline has been most pronounced in the large cities of the country, where the spring expansion had been greatest. In New York City, the situation had become most acute, and the developments were most spectacular. There the issue of building permits reached the astounding total of over 145 million dollars last March, as the result of fear of the repeal of the tax-exemption law in that city, combined with seasonal expansion and an increase which cannot be attributed to tax exemption. A pronounced recession followed in April and May; and this decline has been characteristic of other large cities of the country. It is in these cities that the ex-[fol. 5902] pansion last spring was most marked, and they have since shown the most drastic decline. In the smaller cities, the advance during the spring was moderate, and the following recession, though large, has been much less drastic.

The most recent developments in the industry have been the decline in the volume of building permits and contract awards, and the recession (in May) of the prices of building materials. Neither of these developments is surprising, in view of the preceding advance

and the effort which has been made to have construction postponed. Pressure on productive capacity has been to some extent relieved. Shortage of building accommodation, however, still exists. The recently postponed projects may also add later to the volume of construction. We look forward to a high level of business activity for the remainder of the year, and hence expect that building (allowing for the usual seasonal movements) will remain active during the last half of 1923. In the past, construction has usually remained large while business was prosperous.

Post-war Fluctuations in Building

Statistics indicating building activity do not relate to construction actually under way, but to the issue of permits or letting of contracts, which occur in advance of construction. Hence the figures for one month forecast activity for the months immediately following. As between permits and contracts, the general similarity of seasonal and cyclical fluctuations indicates that they precede actual construction by intervals not differing greatly in length; permits seem, if anything, to be the earlier of the two.

In this study, we have used figures for (a) the value of building permits issued in 66 of the larger cities and city areas in the United States[1] and (b) the value of contracts awarded in 27 Northeastern states, as published by the F. W. Dodge Company.[2] These figures have been adjusted for the very pronounced seasonal movement, and have been presented as bi-monthly averages. The latter practice was adopted to minimize the month-to-month irregularities in the figures, which, irrespective of seasonal movements, are very large; and to broaden the basis of the seasonal adjustment, since the accuracy of this adjustment was not felt to be sufficient to warrant the presentation of figures adjusted on a monthly basis. The effect of averaging monthly adjusted figures is to place the seasonal correction on a bi-monthly basis. In the following discussion, reference will be made to the bi-monthly figures adjusted for seasonal variation, unless otherwise specified.[3]

The accompanying charts compare the value of building permits and of contracts awarded, from 1919 to date, with the movements of the business and speculative curves (B and A) of our index chart.

In 1919, both building permits and contracts had moved up with the expansion of business; but after the first two months of 1920 they declined sharply, two months after the decline in the specu-

---

[1] For these cities, see the map on page 195 and explanatory note.

[2] The twenty-seven Northeastern states include all states east of the Mississippi River and north of the Ohio; Delaware, Maryland, Virginia, District of Columbia, North and South Carolina; West Virginia, Tennessee, and Kentucky; Missouri the eastern half of Kansas, Iowa, and one county (containing Omaha) in Nebraska; Minnesota and North and South Dakota. In 1923 this area was extended to include 36 states. Figures for the 27 states, which have been available since 1910, are used in this Letter.

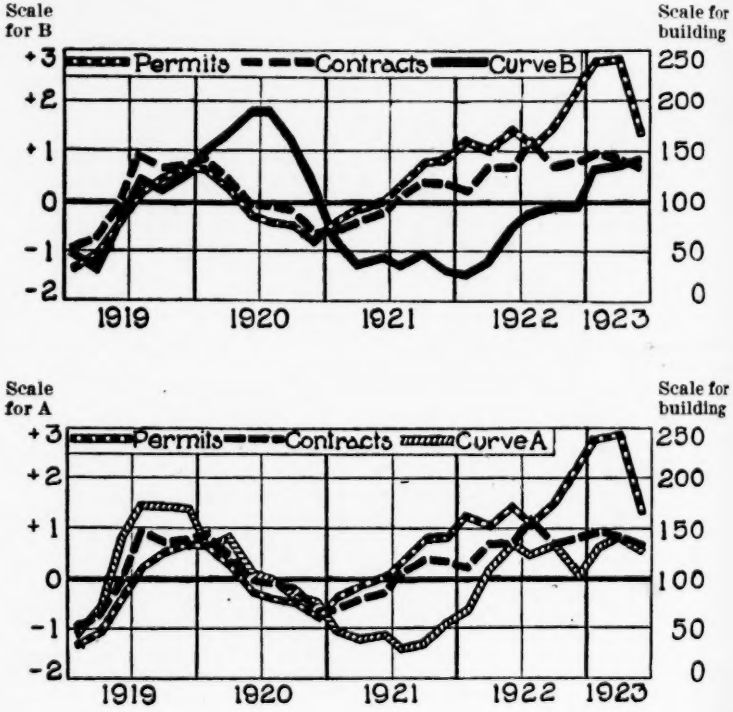
[3] A full explanation of the data and statistical methods employed, including detailed figures for the years 1910-23 and indices of seasonal adjustment, will appear in the Review of Economic Statistics for October, 1923.

lative curve (A) and six months in advance of the downward movement in the business curve (B). The decline in permits and contracts lasted throughout 1920, but early in 1921 substantial advance began, 8 months or more before the speculative market recovered, and a full year before general business conditions had shown marked improvement.

[fol. 5903] In general, the movements in building activity since the beginning of 1919 have corresponded with the pre-war experience of the industry. Periods of expanding and contracting operations have alternated, corresponding (though somewhat in advance) with similar movements in general business conditions. Such were, likewise, the movements of the pre-war years; in the three business cycles of 1903-14, building showed periods of prosperity and depres-

Chart 1.—The Value of Building Permits Issued and Contracts Awarded Compared with Curve B, Business, and Curve A, speculation

(Bi-monthly averages 1919-23. For contracts and permits, 1920-21 monthly average = 100. These figures are adjusted for seasonal variation)



sion corresponding with similar periods in business. The upward movements of building in 1904-07 and 1908-09 were substantial, and that of 1912 was slight; while the downward movements of 1907-08 and 1909-10 were likewise pronounced, and that of 1913-14 was slight.

Building permits and building contracts tend to move early in the business cycle, the upturns and downturns of the major advances and declines of the record of building permits often occurring in advance of the corresponding turning-points of business. In this connection, it should be kept in mind that permits (or contracts) are issued before construction is begun. In the three major downward movements of the years 1903-13, the movement of building permits preceded business by intervals of from 2 to 6 months, in 1909 even preceding the movement of speculation; while in the three upward movements, the relationship varied, permits moving 8 months in advance of the business curve in 1903-04, simultaneously with it in the spring of 1908, and two months after it in the winter of 1911-12. The exceptionally early recovery of building operations in the present cycle finds a ready explanation in the accumulated need for building accommodations. This had not been satisfied in the post-war boom; even the rise shown in our chart overstates the actual amount of building, since price levels were inflated during the last half of 1919 and the first half of 1920.

It is now two and one-half years since expansion in building began. Only recently has there been any well-marked recession, and this has come from strained productive capacity and business caution, rather than from the satisfaction of the demand for new structures. Even without the legacy of an accumulated shortage, the building expansion which began in 1904 lasted for three and one-half years, or up to the beginning of the depression of 1907. So long as business remained good during those years, building continued active; and, at the present time, we see no reason for an abrupt termination of building activity.

The Character of the Recent Movement

In the double chart above, the values of both building permits and contract awards have been used to indicate the post-war course of building construction. The movements of the two show no important differences before the middle of 1922. By July and Au- [fol. 5904] gust of that year, each had reached a level about 60 per cent above the 1920-21 average. Last fall and last winter, the adjusted figures for permits moved rapidly upward, and in March-April of this year rose slightly above the level of the two months preceding; while the adjusted figures for contract awards, after dropping in September-October to about the level of March-April 1922, moved up only slightly last winter and last spring.[1] In May-June,

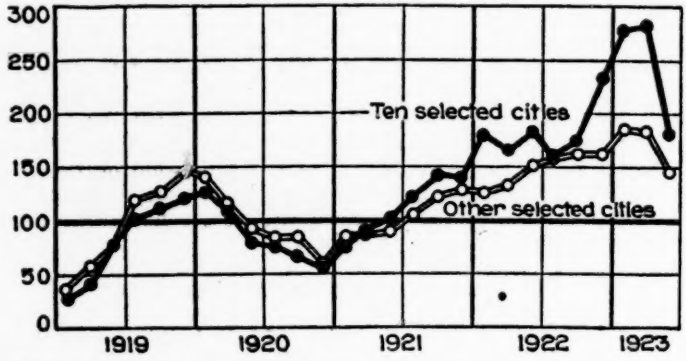
[1]These figures show very strikingly the effect of the adjustment for seasonal movement. Actual figures for building permits remained fairly constant during these months, averaging 183 million dollars in July-August 1922 and 184 million dollars in January-February 1923. Winter, however, is normally a

the figures for building permits fell off very sharply, while those for contract awards declined only slightly.

This discrepancy in their movements indicates one of the most striking characteristics in the expansion of building activity since last fall—the extent to which it has been a development in the larger cities, rather than in the smaller cities and the country. The 66 selected cities, for which this study of building permits has been made, include only a few under one hundred thousand in population; and well over one-half of the value of the permits issued in these cities is accounted for by 10 of the larger cities and city areas included. The Dodge figures for contracts awarded, on the other hand, "cover the small towns and the rural districts as well as the large cities." Thus, for the Northeastern section of the United States, they offer a more complete picture of the building field, and one in which the large cities play a much less important rôle than in the figures for building permits.

Chart 2.—The Value of Building Permits Issued in Ten Selected Cities and Other Selected Cities in the United States

(Bi-monthly averages 1919-23. 1920-21 monthly average = 100. Figures adjusted for seasonal variation)



It is in the large cities that the recent expansion was most marked. The accompanying chart compares building permits issued in ten of the largest cities selected from our list with those issued in the

---

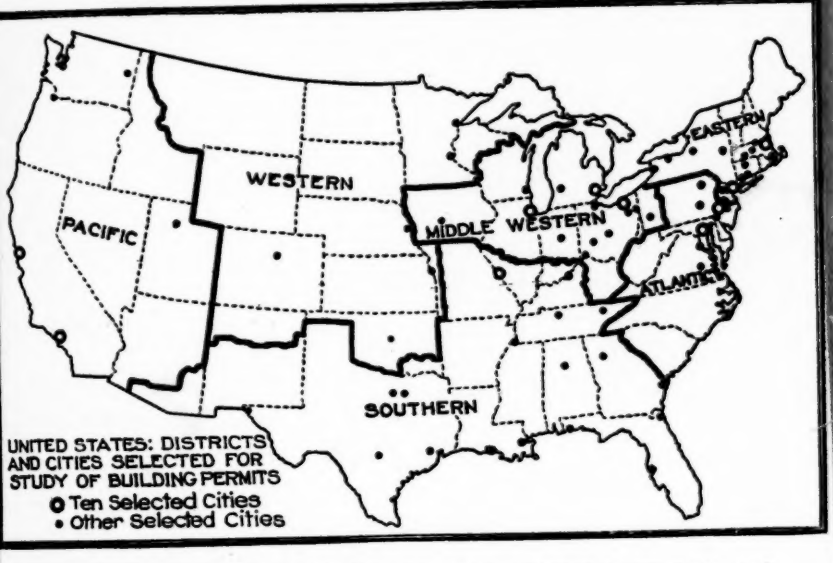
period of very marked decline; the seasonal indices average 110 for July-August and 72 for January-February. The maintenance of the high level of the actual figures during the winter months thus represented, relatively, a pronounced advance in activity, and this is show on the chart. The increase in March-April, on the other hand, though it brought the actual figures to record totals, represents only slightly more than the usual seasonal movement, and hence appears in the adjusted figures shown on our chart at about the level of the first two months of the year. Contract awards, on the other hand, if we leave out of consideration the July-August figure, showed scarcely more than a typical seasonal movement for the twelve months March 1922 to March 1923, and therefore the adjusted figures advanced only slightly during this period.

other cities included. (See map, page 195.) Each curve is corrected for its respective seasonal movement. The index for the value of building permits in these ten selected cities rose from 163 in July-August of last year to 282 in March-April 1923, and the index for the other cities from 158 to 181. The drop from the March-April figure to the May-June figure was likewise largest for our ten cities, the decline in the indices amounting to slightly over 100 points, as against 36 points for the others on our list.

Building in Different Sections of the United States

The districts which we have selected for the regional study of building are combinations of the federal reserve districts, so chosen as to bring together areas with similar seasonal movements, and thus to preserve characteristic differences in such movements as between the resulting districts. The boundaries of these districts are shown [fol. 5905] on the accompanying map. The cities for which building permits have been compiled embrace, for the Pacific district 83 per cent, and for all other districts, between 70 and 76 per cent, of the population living in cities of 25,000 or more inhabitants.

The values of building permits issued in the selected cities in each of these districts, from 1919 to date, are presented in the chart on the following page. In the left-hand column of the chart, bi-monthly



NOTE.—The following municipalities have been combined in our study, and are indicated as single points on the map: Albany and Troy; Boston, Cambridge, Chelsea, Everett, Medford, Newton, and Somerville; Duluth and Superior; Kansas City, Missouri, and Kansas City, Kansas; Minneapolis and St. Paul; Los Angeles and Pasadena; San Francisco, Oakland, and Berkeley.

averages without adjustment for seasonal variation are shown on the base: 1920-21 monthly average = 100. In the right-hand column are shown the same figures adjusted for seasonal variation. The result of this adjustment is to make each figure comparable not only with every other figure for the same district, but also with the figures for the other districts. Without seasonal adjustment, this would not be so, since one particular month may mean very different proportions of the year's building in different sections.

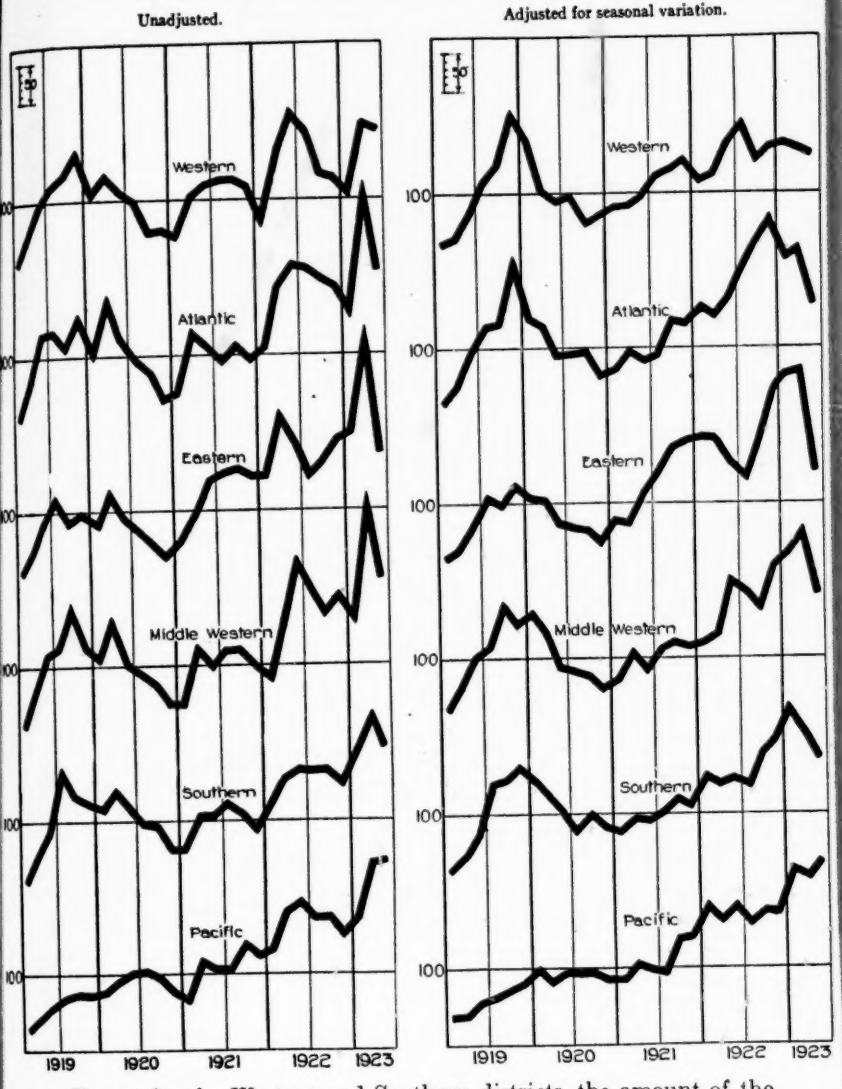
Building in all these districts—when their different seasonal movements are allowed for—has responded to the influence of the business cycle in a remarkably similar fashion. In each, a first upswing began in January-February 1919, and lasted until the next winter,[1] while a second began in the winter of 1920-21.[2] In the depression of 1919, however, the Pacific district did not decline as did the others; our curve shows a sidewise movement during the year, lying between the two periods of upward movement. In the building industry of this district, the depression was thus effective in checking expansion in 1920 rather than in causing a recession; and it is to be noted that the increase of building in this district in 1919 had been substantially less than in the others. All districts, however, show the effect of the cyclical movement of business at sub- [fol. 5906] stantially the same time, and this has been true in the building industry since 1914. No regular order in the timing of the up and down movement appears, and whatever differences occur are minor.

[1] Peak was reached for the Middle Western district in September-October 1919, and for the Pacific district in January-February 1920; for the others, in November-December 1919.

[2] Recovery in the Western district began in November-December 1920; in the Atlantic, Eastern, and Middle Western districts, in January-February 1921; in the Southern and Pacific districts, in March-April 1921.

Chart 3.—The Value of Building Permits Issued in the United States, by Districts

(Bi-monthly averages 1919-23. 1920-21 monthly average = 100)



Except for the Western and Southern districts, the amount of the recent expansion has been much the same. In the Eastern, Atlantic, and Middle Western districts, our indices of the volume of permits

issued varied between 225 and 266 (1920-21 monthly average = [fol. 5907] 100) in March-April 1923, and in the Pacific district the index reached 238 in May-June. In the Western district, the index stood at only 155 in March-April (it had reached 188 in July-August), and in the Southern district at 202. This is to be explained by the absence of large cities in the two last districts. The Western contains none of the ten large cities shown in the map on page 195, and the Southern only one—St. Louis. Since it is in the large cities that the greatest gains have been recorded, their absence accounts, at least partially, for the relatively slighter advance in these two areas.

Chart 4.—Seasonal Variation in the Value of Building Permits by Districts

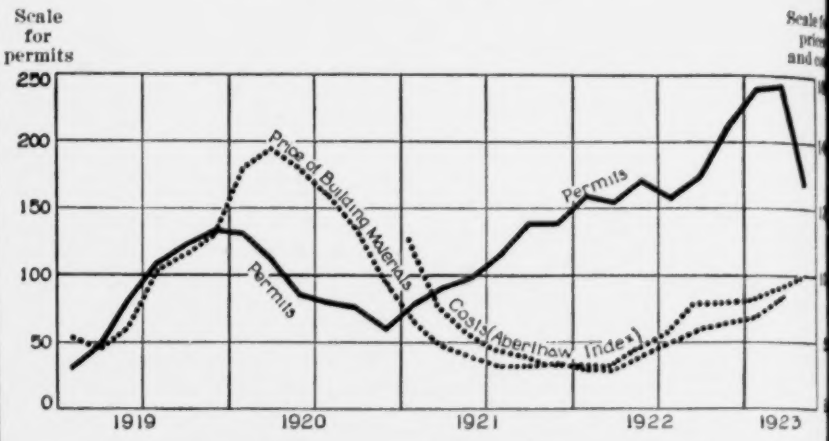
Building-Material Prices and Construction Costs

Recent changes in the price of building materials and in construction costs have, as usual, lagged behind similar changes in the volume of building. In 1919, the price of building materials moved upward by an unprecedented amount with the building expansion and the price inflation of that year. The price index number of the Bureau of Labor rose 76 per cent in the twelve months between March-April 1919 and March-April 1920. Two years of declining or stabilized prices followed, during the latter half of which building activity was rapidly expanding. Then prices again rose, the Bureau of Labor's index increasing 29 per cent between March-April 1922 and the same months a year later. The cost of constructing a reinforced concrete factory building, as measured by the Aberthaw index (continued by the M. C. Tuttle Company), has advanced very similarly to the prices of building materials during the past twelve months. These movements and our index of the value of building permits are presented in the chart on page 198. The indices of cost and prices have been plotted on a somewhat larger scale than that used for building permits, since the fluctuations in the former are normally smaller in extent.

Thus building-material prices have moved upwards and downwards with changes in the volume of building permitted, but somewhat later. This agrees with pre-war experience. The increase in building construction which began in May-June 1904 was followed by an advance in building-material prices a year later. Both [fol. 5908] moved together in the decline in 1907, but on the next

Chart 5.—The Value of Building Permits, Building-Material Prices, and the Aberthaw Index of the Cost of Constructing a Reinforced Concrete Factory Building

(Bi-monthly averages 1919-23. 1920-21 monthly average=100. Permits adjusted for seasonal variation)



upswing—in 1908—prices moved upward four months behind the increase in building permits. A lag also appeared in the movements of the years 1910-14.

Nor does the amount of the price increase seem surprising, although it has taken place in a very brief time. Building had already reached large volume before material prices began to rise, so that when the upward movement began it was very rapid. The increase since the low point of early 1922 has amounted to 32 per cent. The only building boom, during the years 1903-13, comparable in extent to the present was that of 1904-07; and in these years the advance of building-material prices amounted to 26 per cent. Too much importance should not be attached to the comparison of these two figures; but in view of the present shortage of building and the changed price level, it suggests that recent increases in such prices have not been extreme.

The relative level of the prices of building materials is higher than that of other classes of commodities, in comparison with both 1913 and 1919. Building-material prices in May were 102 per cent above the level of the earlier year, and approximately equal to that of 1919, while "all commodities" (including building materials) were only 56 per cent higher than in 1913, and 24 per cent lower than in 1919. This discrepancy is clearly the result of the relatively large demand for materials which resulted from shortage of housing.

Summary of Conclusions

1. In relation to the business cycle, the post-war movements of building have generally followed pre-war precedent.

2. Shortage caused by the war resulted in unusually early recovery of building in 1921.

3. The recent advance has been general throughout the United States. Differences in the extent of the advance among the different sections of the country may be partially explained by the recent large increases in the big cities.

4. Pressure on the productive capacity of the industry is most acute in the larger cities, and there the decreases in building activity since spring have been most pronounced.

5. The outlook is for a continuation of high levels of building during the remainder of 1923, allowance being made for the usual seasonal decline during the latter half of the year.

[fol. 5911] The Harvard Index of General Business Conditions

The Ups and Downs of Business

The varied experiences through which business has passed since the close of the war must have brought home one fact to every business man. Perpetual change is an inherent feature of modern industrial enterprise.

Prices rise and fall; markets expand and contract; production increases and decreases; orders accumulate beyond capacity and then suddenly seem to vanish altogether.

Business conditions are never normal. When commodity prices reach their peak, business is on the verge of depression, and when they hit bottom, business is on the threshold of recovery. Management always faces the problem of dealing with new and changing conditions.

Fortunately the course of business is not purely fortuitous or haphazard. Major price movements are not accidental. The chart here inserted presents an index of trade for the United States from 1903 to date. An examination of this chart reveals strikingly a well-defined ebb and flow of prosperity and depression. Depressions pave the way for business revivals; revivals develop into booms; booms breed crises; and after crises follow depressions. This round of changing conditions is known as the business cycle and constitutes one of the most persistent phenomena of the commercial world.

The Business Cycle

There are five well-defined phases of the business cycle. These phases usually occur in the same order: 1. Depression. 2. Recovery. 3. Prosperity. 4. Financial Strain. 5. Crises. Each phase develops gradually into the following and is distinguished by characteristic movements in the speculative, business, and money markets. [fol. 5912] Starting with phase 1, depression, we have as a legacy from the preceding period of liquidation, low prices of securities and small volume of speculation, depressed commodity prices and sluggish business activity, declining rates on commercial paper and increasing bank reserves. With marked dullness in speculation and business, the demand for credit slackens to a point which results in an accumulation of large quantities of money in the banks of the country. These funds seek an outlet in the security markets through the purchase of stocks and bonds which are now fluctuating around their lowest levels in the cycle. Idle money, therefore, is drawn into the speculative market to purchase high-grade bonds, high-grade stocks, and the lower-grade stocks in the order named, and an upward movement in security prices and speculative activity is under way.

After this upward swing in speculation has been in progress for several months business lifts its head from the depths of depression, commodity prices begin to advance, and we enter the second phase of the cycle, business recovery. This phase is characterized by advancing security prices, usually a strong bull market in stocks, rising commodity prices, and increasing business activity. Presently, however, the demands of speculation for funds to finance heavy stock-market operations while prices of stocks are rising, and the increasing demands of business for funds to facilitate industrial expansion, cannot both be granted under the pressure of the demand for credit. At this point we pass into phase 3 of the cycle, business prosperity.

Expanding business is now competing for funds aggressively, and speculation must give way. Manufacturers and dealers in commodities are the year-in and year-out customers of our banks and if shortness of funds makes discrimination necessary such discrimination must be in favor of business men and against speculators. The withdrawal of funds by the banks from the speculative market to finance business men whose needs grow as commodity prices continue to advance results in the culmination of the upward swing in security prices which began in phase 1, business depression.

[fol. 5913] This situation eventually leads to phase 4 of the business cycle, financial strain, the chief characteristics of which are high credit tension and more or less drastic liquidation in security markets. Money rates continue at a high level, the reasons for which are clear enough when the relation of industrial conditions and credit are considered. Business activity and commodity prices are now fluctuating around their highest levels in the cycle. There is considerable speculation in commodities and a large volume of forward buying which results in the accumulation of heavy inventories at greatly inflated prices. Railroad congestion, by slowing down deliveries, postpones collections and the prompt payment of bank loans. Unusual pressure is placed upon the money market because of the demand for credit to finance industry under the conditions which prevail. This situation is further aggravated by increasing production costs which, as the result of continued wage advances and rapidly declining labor efficiency, are now advancing out of proportion to selling price.

Doubt begins to arise concerning the willingness or even the ability of the banks to grant further accommodations in support of an unhealthy business structure. Banks are pressing their customers for the liquidation of loans. Business men, therefore, begin to make price concessions with the hope of improving their cash position. Such concessions coming at the peak of prosperity cause business men to wonder whether the turn of the tide has not been reached. The expectation of lower prices encourages cancellations; inventories become frozen; the renewal of loans becomes necessary. Money rates continue to harden because of the demand for credit by business men to satisfy the banks and other creditors who are pressing for payment. The belief that the upswing in business which began in phase 2 of the cycle, recovery, has culminated, thus spreads. The prevailing price level no longer attracts buyers and price concessions become the ruling factor of the day. A major downward movement of commodity prices and business activity is thus ushered in, and we pass into the fifth and final phase of the cycle, crisis.

[fol. 5914] Various Phases of the Business Cycles, 1903-14

Phase	Nov.-Dec., 1903 to Nov.-Dec. 1907	Jan.-Feb., 1908 to July-Aug., 1910	Sept.-Oct., 1910 to Nov.-Dec., 1913
	Months	Months	Months
Phase I: Depression	10	6	10
(a) Security prices begin to advance; speculative activity increases.			
(b) Commodity prices continue to decline; business activity is sluggish.			
(c) Rates on commercial paper decline; bank reserves increase.			
Phase II: Recovery	18	14	12
(a) Speculative activity is marked.			
(b) Business activity recovers, commodity prices begin to advance.			
(c) Rates on commercial paper begin to advance late in this phase of the cycle.			
Phase III: Business Prosperity	10	4	8
(a) Speculative activity is checked.			
(b) Business activity and commodity prices continue to increase.			
(c) Rates on commercial paper continue to advance while bank reserves decrease.			
Phase IV: Financial Strain	10	4	4
(a) Security prices decline sharply; speculative activity is depressed.			
(b) The upward tendency of business activity and commodity prices is checked.			
(c) Rates on commercial paper remain high or stiffen and the banking situation is strained.			
Phase V: Industrial Crisis	2	4	6
(a) Prices of securities reach bottom and speculative market are panicky.			
(b) Commodities are liquidated, prices fall, and business activity slumps badly.			
(c) Rates on commercial paper reach maximum and bank reserves reach minimum. The crisis breaks.			
Length of complete cycle ..	50	32	40

The crisis phase of the cycle is characterized by continued liquida-
[fol. 5915] tion in security markets and by more or less drastic liquidation in commodity markets, the intensity of the latter movement being governed largely by the degree of credit tension. If liquidation takes place gradually we have an industrial crisis similar to those of 1903 and 1910. Money strain may be so great, however, and liquidation so drastic, as to result in a repetition of the business experiences of 1907 and 1920.

Following the crisis, which generally runs its course in a few months, we find ourselves again in phase I, depression, characterized by the closing of factories, widespread unemployment, and depressed business conditions. This is the period of declining money rates, low security prices, and declining commodity prices, with which we started. At this point the cycle begins all over again.

Duration of the Business Cycle.—Various generalizations have been made by students of business conditions concerning the duration of the economic cycle or the length of time which usually intervenes between industrial depressions. The assumption which has received the widest currency is that depressions occur at ten-year intervals. The proponents of the ten-year theory cite in support of their case the crises of 1837, 1847, 1857, and again after the Civil War in the United States the crises of 1873, 1884, 1893, and 1903.

Another generalization is that crises, especially those of the last fifteen years have occurred regularly at seven-year intervals. Thus it is pointed out that commercial crises came in this country in 1907, 1914, and 1920.

It is an established fact that the business cycle has been a recurring phenomenon in the United States for more than a century. It has not been proved, however, that such cycles are of uniform duration. One of the most striking and significant things revealed by a careful study of business conditions over the past twenty-five years is the relatively short interval from depression to depression.

Evidence concerning the frequency of business depressions is offered by the course of commodity prices and money rates since 1890. The intervals between successive commodity price troughs from
[fol. 5916] 1892 to 1914 are, in months: 34, 26, 44, 44, 43, 43, and 36. The intervals between the low points in money rates are harder to determine because of the pronounced seasonal influence, but a study of the movement of interest rates over the past quarter-century shows that periods of cheap money occurred in 1892, 1894-95, 1898, 1900-01, 1904, 1908-09, 1911, 1914-15.

The movements of both of these important statistical series—commodity prices and money rates—support the conclusion that for twenty-five years preceding the war, periods of business depression occurred at intervals of approximately three or four years with one interval as short as twenty-six months. Business Cycles are, therefore, of comparatively short duration. Furthermore the lengths of complete cycles in the past, from twenty-two to forty-four months, have not been sufficiently uniform to warrant the prediction of

major turns in business activity on the basis of a constant time interval between crises.

[fols. 5919–5945] DEFENDANTS' ROBERTSON EXHIBIT NO. 2

Report of Association Inspection at Plant of No. 1

First Visit—April 30, 1914

Equipment

5 Double Circular Rip Saws.
10 Matchers—Woods, Hoyt and Berlin.
10 Wilce End Matchers.
2 Whitney Scrapers.

Find the machine work very good—matching correct, both side and end. Find a considerable quantity of shallow back, but most of

it seems to be full thickness when the gauge is applied, since the flooring generally averages strong gauge. Not much short tongue. Running grade below No. 1 and 2 Common Lumber.

Second Visit—July 11, 1914

At this visit I find but very little shallow back and practically no short tongue. All machine work is still good. The 10% of No. 1 found in the Clear may nearly all be eliminated by re-trimming, as suggested in my conversation with you at this visit. I find most of the line pieces are thrown to the grade below, and both Clear and No. 1; also that you discriminate probably a little too closely on dark spot and streak allowable in the two upper grades. This we discussed with one of your managers. Note by rules that the dark green or black spots or streaks not over 3 inches long are allowed in the Clear, and still more of these may be admitted in the No. 1.

I find your Factory (See report) slightly above standard—this is especially noticeable in the long lengths.

[fols. 6125-6131] Holt Hardwood Company, Manufacturers of Maple, Beech and Birch Flooring, Kiln-Dried Hardwood Lumber

Oconto, Wisconsin, June 20th, 1919.

Holt Hardwood Company, Oconto, Wis.

GENTLEMEN: My inspection of maple flooring at your mill today shows your grades pretty nearly at our standards all around. We have a standard of 65 per cent high strata in both clear and No. 1 and 60 per cent in factory grade, this was established by a test of the majority of mills in our standardization problem.

Your grades today show clear at 63 per cent, No. 1 at 64 per cent and factory at 59 per cent high strata. The clear contains about six per cent of No. 1 grade and the No. 1 contains 6½ per cent of factory grade. This is a little excessive and feel positive it can be reduced to our normal condition before our next inspection which will perhaps be before sixty days.

This off grade occurs by reason of various excessive defects in the clear principally of short tongue and shallow back, there is also a little excessive short tongue in the No. 1 grade.

I am quite gratified to find your grades so near the standard as they are. You will note that you are within two per cent of standard in the clear and within one per cent on the other two grades.

Standard, Clear, 65%. High 35%. Low, —.
" No. 1, 65%, " 35%. "
" Fcty., 60%, " 40%. "

Your grade today:

Clear, 63%. High, 37%. Low contains 6% No. 1.
No. 1, 64%. " 36%. " " 6½% Fcty.
Fcty., 59%. " 41%. "

Very truly yours, M. H. Robertson, Official Inspector.

Maple Flooring Manufacturers Association, Chicago

Grades Committee Work, Report of M. H. Robertson, Official Inspector

To the Members of the Maple Flooring Mfrs. Assn.

GENTLEMEN: My last trip of inspection at your mills reveals a very satisfactory condition.

If at any time any of you might be disposed to relax or exercise less vigilance in maintaining a uniform standard, it would surely be in such a period as the past few months. With an intense demand for all grades and especially the unusual demand for the Factory, it is indeed gratifying to find that in this period of extreme test you have proven your interest and confidence in the standardization proposition.

I am fully convinced that the members are universally aiming at our exact standard and that the slight variations noted in the individual reports are errors and not a part of the regular system. The fact that at this inspection all the members, save one, are at or within one point of standard in the Clear grade and 17 members are at or within one point of standard in the No. 1, I think clearly indicates that you are not only becoming more familiar with the standard, but you are zealously endeavoring to maintain it.

By comparing with former reports you will note the gradual tendency toward uniformity. In strata grade Clear and No. 1 each average one point nearer the uniform than ever before, the extreme difference in the Clear being but four (4) points and as above noted, with one exception, but two (2) points of difference. The No. 1 shows an extreme of five (5) points, but with a large majority but two (2) points. True, the Factory still shows eight (8) points extreme, but this is quite an improvement over the past report, which was thirteen (13) points difference, and much of this remaining eight (8) points rests with a minority and I am quite hopeful will be reduced to at most four or five points by the time of the next inspection.

The best I have expected we would attain would be two (2) points of difference in the strata grade, one above and one below the standard. With the rapidity and the varied mill conditions under which the workmen operate, together with the frequent changes necessitating the use of unskilled help, this will probably be as uniform as we can reasonably expect.

In the matter of offgrade, which is of vital importance and to which I give due attention in my visitation and individual reports, I may only say in this connection that the average maintains very low in all the grades. Many of the members have practically no offgrade and in all cases where it occurs in any excess above the average, the fact is discussed with the administration, the source of the difficulty found out and all reported in the individual report.

In former reports I have mentioned some of the advantages observed in the standardization feature of Association work, and since the date of those reports there has been offered me an opportunity to observe this from the viewpoint of my work as Field Representative. I may here only remind you of what is to come to be generally understood with the trade as well as the Association. That the Maple Flooring Manufacturers Association has formulated and copyrighted a plain, explicit set of rules, that they have standardized their product in accordance with these rules and trademarked it, thus placing it in the distinctive commodity rank to which it belongs and which is not difficult to recognize, but which conveys at all times the guaranty of quality and service.

Respectfully submitted, M. H. Robertson, Official Inspector.

Maple Flooring Manufacturers Association, Chicago

March 27, 1919.

To members.

GENTLEMEN:

Mr. Robertson sent us the following report from Atlanta, Ga., dated March 24, regarding his Field Representative work:

"My last report was from Macon, Ga. From there I came to—

Columbus.—This city is extensively engaged in all textile manufacturing, there being here eleven different corporations with some fourteen mills engaged in this industry. They have had a labor strike for the past two months and this, with the market conditions of all cotton products, tends to discourage improvement in the way of building. They have done a large amount of new building and repair work in the last two years and are quite well supplied with mills, warehouses, etc. These companies carry a stock of flooring, generally a car or more, for repair work, etc., and use quite generally M. F. M. A. product. Although I found one today who had bought a car of other stock from a Tennessee manufacturer. There are three architects here who say they have not a great deal of large work before them. Two good commercial buildings, one school, one large auto exhibit and salesroom, three apartments. The Government has established here an Infantry School of Arms as a sort of post-graduate training for West Point graduates and they are going to construct permanent buildings, consisting of officer's quarters, barracks, mess building, amusement houses, etc. The plans are being drafted by the Government architect at Washington and the Superintendent of construction is J. Paul Jones, who is at the present time also at Washington. It is not known here what flooring will be used in these buildings and the dealers do not seem very enthusiastic about any particular product. I would, therefore, recommend that some of our members who have a jobbing connection making this territory, get in touch with Mr. Jones and I think it quite probable that there will be no difficulty in getting Maple in use here.

Montgomery.—This has always been a very conservative city, operating much as they did a half century ago and with the general tardy spring movement of building I did not expect much here. It is not a textile mill town although it is in a cotton district and extensively engaged in handling the product but they only buy warehouse and sell it. They do, however, specialize in the manufacture of fertilizer and have very many large plants of this kind. This product keeps pace with the cotton growing industry and since the acreage will be decreased thirty to forty per cent this year, the fertilizer manufacturers are not figuring on much extension of their building operations. There is in plan a very large cooperage plant to cost about $800,000. Two or three schools, four commercial buildings, stores and offices, two warehouses, two large auto exhibits and sales rooms and an addition to a hospital costing $100,000, several apartments, one to cost about $100,000 and like most cities, they are short on homes and will build a goodly number of these. I find the architects here more inclined to use our products than when I was here two years ago. The lumber dealers, although they are not carrying it in stock, have connection with our mills and get frequently stock sheets and quotations. This is what we are aiming at and the next best thing to carrying it in stock is to have frequent quotations which enables the architect to get his figures promptly and encourages him to specify the product.

Birmingham.—As noted in my report of two years ago, this is a very progressive city, dependent mainly on iron, steel and coal industry. The mines are near by and the iron is worked to nearly the [fol. 6209] finished product with but little transportation of either this or the coal. They have been very busy furnishing war materials and have enjoyed a period of intense prosperity. This condition is somewhat changed and they are less active. There is, however, a great insufficiency of housing facilities of all kinds and a considerable activity along the building line. The city has a bond issue of $3,000,000 for schools and they are going to build some very good ones. There is also in plan a civic center consisting of court house, city hall, library, art museum and memorial hall. Several commercial buildings, stores and offices, auto exhibit and salesrooms, one hospital, three warehouses and one of the steel companies is building a large mill of large dimensions. One of the architects here specializes in churches and has a number of these in plan for adjacent towns and cities. The Secretary of the Chamber of Commerce advises that they are short one thousand homes and must build in this line. I am quite gratified with the results of my campaign here two years ago, especially among the architects. They are much more enthusiastic for Maple, Beech and Birch Flooring and are specifying it in all these classes of buildings. They are especially interested in the new book, the features of which I have explained to them, and will be pleased to receive a copy at your early convenience. The dealers have not been quite so loyal to us. The Whiting Lumber Co. of Tennessee and two or three nonassociate manufacturers of the North have personally worked this territory quite well, advancing the "Just as good" argument and are reaping some of the benefits of

our advertising. I am glad we are making this follow-up trip. It will the more thoroughly establish our claims for M. F. M. A. May I again urge our members to renew their zeal and get into a more intimate relation with their connection here for there is surely a very good outlook, especially for Maple.

Atlanta.—This is more nearly a typical northern city than any other south of the Ohio River. Because of climatic conditions, being in a latitude of neither extreme, it has attracted progressive business men who find here a climate in which they can pursue their avocations during all the months of the year. The country about which was devoted mainly to the production of cotton has changed to diversified farming and stock raising so that they are no longer dependent upon the success or failure of the single crop. The city is growing rapidly in both population and wealth. And while they, like all other cities, have experienced suspense in general building on account of the precedence of war work, which in itself has made them short in all housing facilities, they had the added misfortune of a sweeping fire which deprived them of over 1,000 homes and now that they are patriotically at liberty to again resume building, they are hastening to provide for these great necessities, which are along almost the entire line of building. Much of this will be done on a large scale. Several good schools, both public and parochial, churches, hospitals, several hotels, industrial plants, warehouses, two natatoriums, a civic group, several large commercial buildings, auto salesrooms, one to cost $125,000, a cyclorama, cotton mills, compresses, two fraternal halls, many high class apartments and homes as well as cheaper ones. The architects here, like Birmingham, are enthusiastic for Maple flooring, and will specify it on a large portion of this work. And I am further pleased to note that the dealers here are handling M. F. M. A. flooring and well pleased with their connections. I beg to advise our members who have these southern connections to keep in close touch with them as to stock supply and prompt quotations when required since some of these operations will require a knowledge of these matters on the part of the dealer when called upon. These dealers are interested in our new book and I am sure that a complimentary copy from their mill connection will be very acceptable.

There is in plan by the Federal Government for the State of Georgia several Post Office Buildings. One each at Canton, Ft. Valley, Cuthbert, Mayson, Rossville, Sandersville, Thomasville and Waynesboro. These are to cost variously from $30,000 to $200,000 each.

Yours very truly, M. H. Robertson, Field Representative.
George W. Keehn, Secretary."

[fol. 6210] DEFENDANTS' ROBERTSON EXHIBIT No. 21

Maple Flooring Manufacturers Association, Chicago

To members. April 8, 1919.

GENTLEMEN: Mr. Robertson sent us the following report from Nashville, Tenn., dated April 7, regarding his Field Representative work:

"My last report was from Raleigh, N. C. and from there I came to

Asheville.—* * * The two architects here doing most of the work have not had very satisfactory results with our Maple Flooring. One of them is using it in the new high school building here. The specifications call for the best grade of Northern Rock Maple, and while they are getting a good floor, still it contains the defects allowable in our No. 1 grade, which it is, and not Clear, and these defects, especially the dark streaks are not pleasing to the architect who, not being familiar with our grades, expected a different result. The other architect had a similar experience some two years ago and had about decided against Maple Flooring. Of course, I corrected these misunderstandings and satisfied them on the grade matter so that they are again our friends. The dealers here have been handling Northern product but not always M. F. M. A. Flooring.

* * * * * * *

Chattanooga.—There are seven active architects in this city, some of them report but little work before them, others large amounts. The principal being the smaller type of Industrial buildings, mills, warehouses, etc. There will be a few of the smaller commercial, some schools, one college building and one hospital. Maple Flooring was quite well introduced here several years ago, and [fol. 6211] is generally specified on the type of buildings mentioned, but some of the dealers who formerly handled the M. F. M. A. Flooring have been switched off to non-association stock and one of them has now a car which he claims is not up to requirements as to manufacture. He and the shippers do not agree, but they have no court of appeal. I could not be of any assistance in the matter since the shipper was not one of our members, but I used my argument for handling stock with a guarantee protecting him against a condition of this character.

Nashville.—* * * All this territory is thoroughly worked by the Oak Flooring Manufacturers with extensive plants located here, also by the Whiting Lumber Co. of Elizabethton who manufacturers southern Maple and Beech Flooring. The Oak people also manufacture and market a considerable quantity of beech Flooring. The Architects and dealers, however, are somewhat familiar with the superior quality of our Northern Maple and Beech and will use it in most of the work mentioned. They use much Oak in homes since the inside trim is chiefly Oak.

M. H. Robertson, Field Representative."

[fol. 6212] DEFENDANTS' ROBERTSON EXHIBIT No. 22

Atlanta, Georgia, November 21, 1922.

Report of M. H. Robertson, Field Representative

Maple Flooring Mfrs. Assn'n, Chicago, Illinois.

GENTLEMEN: My last report was from Richmond, Virginia, and continuing the trip South, I beg to report as follows:

Danville, Va., Durham, Greensboro and Winston-Salem, N. C.—* * * On account of the labor conditions in New England, some of the operators in that locality are building branches in the South where they have much less labor trouble, others who have been located here are enlarging their plants and building new ones. At Danville, they are building a very large textile mill, so as I had reason to suspect this is now and likely to be for some time a very fertile field, especially so since this is the class of building where we find outlet for large amounts of Maple flooring, and while they are prosperous and enlarging these operations, they are accordingly expanding in all other lines of building, such as schools, churches, colleges, dormitories and other institutional work. Take the District as a whole, there is an unusual amount of building now on and they anticipate an increase for next year. All these buildings, of course, will have floors, but not all of Maple, Beech and Birch, we are getting most of the Textile work and much of the schools of the better class and considerable of the tobacco factory floors, but not all of them. They advise that they are inclined to use more concrete than formerly. The Reynolds Tobacco Company have recently completed a new foctory in which there are no wood floors. Some of the schools are using gum, but not many of them and some are using Yellow Pine, especially of the cheaper type. I think we are holding our ground in the Textile work fairly well, but are losing a little in the other line since my last visit here. I have given it a pretty thorough stirring up this trip and hope the coming year our members will have an increased business in Maple, Beech and Birch.

Charlotte, N. C.—This city situated in the extreme Southern part of the State is the second in size and a very important railroad center of the Southern system as well as a great Textile mill district. There are several active architects here and they report a very busy season in all lines of building. They are just finishing a splendid High School built by Lockwood & Green Company of Boston, who have branch offices here and at Atlanta, and also do much Textile [fol. 6213] mill construction all over New England and the South. They report the mill work improving very much and say they have much new work in this line. They use our Maple flooring in nearly all of their jobs, schools as well as mills, and another architect here who also specialized in industrial work throughout the State has on program several large State buildings and schools and college buildings. He also uses our product universally, and says—will re-

quire a large amount of it in the near future. I do not find much competition here with Maple for industrial commercial or institutional work. They use it almost universally, but I find one of the dealers whom I used to furnish several years ago, and who is a "live wire" is special representative for W. M. Ritter Company, Southern Manufacturers and he had an arrangement whereby he handles their flooring Maple, Oak and Beech in Charlotte and all the nearby districts. Says he has handled 29 cars since January 1st. He is well fixed to handle flooring and says he is furnishing many of the Textile mills for their repair work. This Maple comes from Virginia, and Tennessee and of course does not compare with our Northern Maple, but he says it is given quite good satisfaction. I spent considerable time with him in discussion of the comparative features of Northern and Southern Maple, and he is quite familiar with both products, having handled Michigan stock for a number of years. He would like to make a similar connection with some of our members, and handle their stock instead, and thinks he will make a trip to Michigan in the near future with this intent. I think he will not furnish very much Southern Maple for the Textile mills. They are quite decided in their preference having given both products a fair trial, but by wholesale and retail he is handling considerable flooring and I should like to see him handling the best.

* * * * * * *

[fol. 6214] Atlanta, Ga.—I visited and reported Atlanta a year ago and had not intended coming here this trip, but was advised of a complication in the specification in the floors of some schools that were to be built in the city, and I came to see if — could assist in somewhat clearing the confusion. I find they are planning some 18 school buildings to cost about three and a half million dollars. The Board has engaged a supervising architect who has general jurisdiction as to plans and all materials to be used, and then the various schools will be under the sub-supervision of a number of local architects. The specifications call for best grade of Clear Maple flooring, and the confusion arises in the use of a subsequent clause which states that "Sabin's best may be used." No one seems to be able to explain just what Sabin's grade may be. Mr. Sabin is not a manufacturer but a jobber who is handling all kinds of hardwood flooring, principally Southern stock, as I understand it. I am informed that he has quoted on the school flooring, at $75.00 per thousand, which would indicate that he is figuring on a very low grade much below even No. 1. I have seen the quotations of some of the reputable manufacturers of Tennessee and their prices are about in line with the prices quoted by Northern manufacturers. I have had interviews with all of the architects of the various schools as well as the supervising architects, and they agree that our Clear is the grade that should be used, but say the appropriation is not sufficient to pay the price of our Clear. Some of our representatives are urging the use of No. 1, others a mixed grade, and one is going to bid on Factory. I have carefully gone over the whole field, explaining the charac-

teristic difference between the Northern and Southern product, and also the adaptability of the different grades to the various classes of buildings to be floored. I also took it up with the Building Committee of the Board but they say they have left the whole matter of material with the supervising architect, and he admits that he is in —for the decision but has had some two months or more and seems unable as yet to decide. He says he is now getting quotations on Yellow Pine, but the building committee and other architects say Pine will not be used, but they are not willing to decide yet between Northern and Southern Maple. The matter is being considerably agitated, and I think the architects will be persuaded to use the best which will be the only satisfactory floor for a school of this type. This is my fourth visit in this capacity here, and I find more intense building activity than in any of the former visits. In fact, they report that the year has exceeded any former in the history of the city. This activity extends to all classes, but is especially apparent in the large type of buildings, commercial, institutional and industrial. While Atlanta proper may not be considered a Textile mill city, still it is in the Piedmont district, and is surrounded with Textile mills, has also a great variety of other manufacturing. Many of these are enlarging, others building new. There is one department store being built here that will require about 300,000 feet of Clear Maple flooring and Northern stock is specified. Maple is used extensively in this class of building and I do not hear much about the substitutes.

Referring again to the school subject, I suspect they may allow one of the Contractors, on perhaps the first school built, to make a test of this unknown "Sabin's best grade," and probably will find it unsatisfactory in appearance, since it cannot be much, if any above a factory grade, which while it will make a serviceable floor, is not good enough in appearance for a building of the type of these schools. I have inspected some of the Tennessee factory grade, and find it conforms fairly well to our standard grading. The difference is not so much in the grade as in the character of the wood.

[fol. 6215] I am closing the Fall campaign here and will go direct to my winter home in St. Petersburg, Florida. The two trips have occupied 58 working days during which time I have visited and reported 52 cities in 22 states and the District of Columbia, meeting many former acquaintances and a great many new faces, and I sincerely hope that the efforts of the campaign will result in an increased volume of business, and a more intimate personal relationship of the members of the Association with their various representatives in the localities visited.

Respectfully submitted, (Signed) M. H. Roberston, Field Representative.

[fol. 6216] DEFENDANTS' ROBERTSON EXHIBIT NO. 23

Maple Flooring Manufacturers Association, 1045 Stock Exchange Bldg., Chicago

Richmond, Va., November 11, 1922.

Report of M. H. Robertson, Field Representative

Maple Flooring Mfrs. Ass'n, Chicago, Illinois.

GENTLEMEN: My last report was from, but did not include, Philadelphia.

Philadelphia, Pa.—This is the city in which I made my initial move in Field Representative work six years ago, just about this time. Since then I have visited it several times and have always found it a very fertile field; each visit reveals some new angle to the situation and some advancements made. It has always been a good market for Maple flooring and we have more recently created a very fair demand for Beech and Birch. In fact, the architects complained this trip that the demand exceeds the supply, that is they would like to use more of it, but when they call the dealers they do not find it in stock, and have to wait in uncertainty a delay in getting it from the mill. I sincerely hope that this can be corrected. The rate of construction in Philadelphia this year has been more than double that of last. The total for the ten months just passed exceeds $110,000,000. The work is continuing and is quite well distributed over the city and the district and among the various classes—homes, commercial and schools somewhat predominating. There are now well under way a number of large commercial buildings and plans are being prepared for several others to cost more than a million dollars each. A piano company will build a fifteen story sales room, warehouse and office building. The North American Insurance Company will build a twenty story office building. Victory Hall and the first unit of the Municipal Court Building, each of these latter costing a little over five million dollars each. Commercial Museum, St. Joseph's College and many others of like character are now being planned and built. The home and school situation here is not different from other cities in its demands and while they have made a good progress this year, the demand is still far in advance of the supply. This is a great home city, quite different from New York in this respect. The homes many of them are built on the group plan, occupying a whole block, but each individual owns his portion of this structure. Of this class they are doing a large amount of building. I succeeded in getting some inside information from one of the largest architectural companies here and have also offices in New York City, and they do mostly this larger commercial and industrial building. They think that Maple will always be the favorite floor for this class of work but say that there is gradually being introduced, especially in the commercial class, materials that are supposed to be non-com-

bustible. They say there is some call for linoleum but it is not very popular in Philadelphia. They think that persons who are working on these floors will demand the old style wood floor. They are specifying much Maple for their present work and say they will have a large amount of this class in the near future.

Baltimore, Md.—The building situation here is not so generally active as in Philadelphia. There is not so much of the commercial class, but more of it is using our product. They claim, however, that concrete is gradually being demanded by the builders on account of its so-called fire-proof feature. We are losing ground in Baltimore in the public school building. The new building code has substituted Yellow Pine for all schools of the city. They are building several now and will have a large program to follow. I have carefully gone over the whole situation with those in charge of this work and find them courteous and very willing to hear my arguments, but somewhat prejudiced, and I am convinced that this prejudice arises from ignorance of just how to treat and care for a Maple floor. They argue that they want to finish their floors as they would a good home floor, which they say cannot be done with the Maple. This argument, of course, is without foundation. It can be finished for the school the [fol. 6217] same as for the home, while we do not as a rule do this and it would not remain the same as a home floor and this argument would hold good with the Pine floor as well as the Maple. They further argue that they get much better lengths in the pine, admitting all the time the superiority of Maple for school floor when service is considered. But, as I say, they are quite prejudiced in favor of the pine, but I hope to have sufficiently interested one of these architects who is doing most of the school work the present year in our Beech as a school floor, for him to make a trial of this, and I hope our members who make Beech and have connection here will urge them to carry it in stock and make it easy for these architects to give it a trial, for I find several who are anxious to use it in some good home building, but say they are not able to get it from the lumber dealers. Oak and Yellow Pine are used quite extensively in home building. The dealers say they sell more of this than they do our product. I inquired about linoleum here, but find very little of it in use so far. This field needs more attention than one can give on a flying trip like this, but I think some good follow up work on the part of the Association members will help to restore normal conditions in Maple flooring.

Washington, D. C.—The architects here report the season has been an unusually busy one for them and the prospects are it will continue through the winter and well into next year. There is a large amount of speculative building, apartments, cheaper homes, small store and office buildings. Many churches and some hospitals. There is an unusual school program on of both parochial and public schools. The Roman Catholic people are planning to build a school in connection with each of their churches and the District is planning fifteen new schools to be built as rapidly as possible. There are in plans several hotels, three or four fraternity buildings, a large

laboratory, and a good deal of general institutional work. The activity extends also beyond the District where the architects operate a large field. As usual, I left Washington with the sense of having accomplished something but not all that I could have wished; especially is this true concerning the school situation. They are using Maple flooring quite universally outside the district, but not quite so generally as I would like in the city. I discussed this with the District supervising architect and he admits the superiority of Maple as a school floor and says he specifies it in all the good buildings wherever the cost of the job will permit it, but where the apportionment is not sufficient he is obliged to use the cheaper material, Yellow Pine. He thinks we ought to be quite satisfied to know that they prefer Maple and use it whenever they can afford to do so, and of course, I agreed to the extent that we do appreciate the compliment and are thankful for the preference, but it is a question of argument whether the so-called cheaper flooring is the cheapest in the end, and I use as illustration those twenty-six schools in St. Louis, Mo., which were first floored with Yellow Pine and within the last two years refloored with our Maple and Beech. Linoleum is not much used in Washington in any class of work. The architects generally do not seem to be favorable to it, and especially for schools and commercial buildings. They are using some concrete with mastic and similar top finishes for the floors of some of the new office buildings, and are using much oak in home and apartment work. It can be seen that this field is not all ours yet and that our publicity task is not yet finished. I found this trip a very largely increased interest in our Beech and Birch flooring, had many interesting conferences relative to it. They inquiry the possibility of obtaining it when specified.

Richmond, Va.—As usual, this city is in a good healthy condition commercially speaking. Their building operations are above normal and well diversified. The industrial class shows a very considerable gain over the past three years. As noted in former reports they have a great variety of manufacturing, the principal of which is tobacco in all of its varieties, paper manufacturing, woodworking plants, steel, and iron construction, locomotive works, etc. It is the gateway to the South and so there is need of warehouses of all varieties and capacity to store goods both in transit and for local use. It is a great educational center and has many institutions of [fol. 6218] learning of all kinds for both white and colored. In accordance with other cities they are very much behind the demand for proper housing of all these institutions and in public school work. The climate here permits them to build all the year round and their program will continue right on through the winter. They are now building some very good commercial structures—one of these a department store which takes something over 300,000′ of Maple flooring, will, when completed, make a good subject for a picture for some of our publications. Our product is used almost universally in their industrial, institutional and generally in the commercial work. For homes and apartments they are using more Oak, but I have secured promise from some of the architects to try

our Beech and Birch for this class of work. Our Maple flooring is handled by good concerns here who know and appreciate its merits, and I hope that the members having these representatives will urge them to put in a stock of Beech and Birch so as to get it more generally introduced.

Respectfully submitted, (Signed) M. H. Robertson, Field Representative.

[fol. 6219] DEFENDANTS' ROBERTSON EXHIBIT No. 24

Maple Flooring Manufacturers Association, 1045 Stock Exchange Bldg., Chicago

Philadelphia, Pa., November 4, 1922.

Report of M. H. Robertson, Field Representative

Maple Flooring Manufacturers Association, Chicago, Illinois.

GENTLEMEN: My last report closed with my visit at Boston, Mass., since which I have visited and report cities as follows:

Providence, R. I.—As noted in former reports, this is another intensely industrial district, not so large as Boston, but of the same varied type. In what is known as the valley, textile manufacturing predominates and is of very extensive proportion, but the City of Providence is well balanced in that it has a great variety of the industrials. There is not a very great activity in general building this year, they had a seven months' strike in the early part of the season, during which time not much work was projected. They are doing but little commercial building, and not much in prospect they claim. There is considerable home building in which they are experiencing difficulty in getting sufficient skilled labor, especially bricklayers and plasterers. They have on several good school buildings in the city, and a large number of these in the surrounding district. The industrial building is improving and they say will be much better next year. There is in plan one hospital costing $850,000, which will go forward at once; and two others little less expensive. Here I find in competition with our product, Yellow Pine, Oak, Vermont Maple and Concrete. The City school building is under a general contractor, who dictates all plans and materials and has for years used Maple for school floors, but says he is recently experiencing trouble with it; that during the summer, while the buildings are closed, the floors swell and buckle; and then in the winter, when the heat is on, they shrink so as to leave open joints. He admits that he has not had this experience any place excepting the Providence Schools. It sounds a little strange to us, and the architects and engineers smile at it; most of them are using Maple for school and other work and do not find any objection. But they do use a good deal of Vermont Maple, so the lumber dealers say; and also Yellow Pine for the cheaper homes and some concrete in Commercial build-

ings. One of the hardwood dealers who handle our products is putting on an advertising drive, specially featuring a number of articles they have for sale, and I have arranged with them to include our Maple, Beech and Birch flooring.

Hartford, Conn.— * * * These industrials are doing some work this fall, and much more in prospect for next year. There will also be several large commercial buildings built, and as usual they have a very large school program. The city has on two High Schools costing over $1,000,000 each. They use Maple flooring here almost universally in all classes of work. I have found but little competition; they say they have tried composition floors for schools and found them unsatisfactory. My efforts here have been principally on our Beech and Birch flooring and the Protective Features of our Association work.

* * * * * * *

[fol. 6220] New York, N. Y.—It seems ironical to speak of New York as being quite in any sense, yet the architects quite generally agree that building is comparatively quiet here now. The annual normal building program in New York proper is about $200,000,000; this year they say it will reach about $180,000,000. The fall building, the say, is slacking up very much on account of difficulty of obtaining sufficient material and labor and the advanced cost of both. There are two classes of building that are going forward with all possible activity and will continue if they can get material and labor; these are homes and apartments of all types, and schools. They have a tax exemption law releasing for ten years all homes and apartments to the extent of $5,000; these must be commenced within a limited time, which extends to early next year. So they are trying to get under way a great volume of this class of work. And as usual the school problem confronts them, and they are making special effort to meet the demand. The entire metropolitan district is short on schools, and this will be the prominent item of building for the next year or more. You will recall the report of my visit here last year to investigate the school flooring situation. The school architect, Mr. Snyder, became partial to Yellow Pine for school floors; and while he does not insist on his preference as he claims it, yet he has inserted in the general code of specifications Yellow Pine as an alternate. I got hold of the specifications this trip, and it reads in part as follows: "The top or finished floor shall be of the best 13/16 x 2-¼ or 2-½" face clear Maple flooring free from knots, sap, shake, split, and other imperfections. Alternate: The contractor may use 13/16 x 2-½ face B & Better grade of Yellow Pine Heart Rift. Please note the description of the defects not allowed in the Maple, where it says it must be free from sap. His attention has been frequently called to this, that it eliminates all the white and most valuable portion of the wood, but he insists that what he has written stands. Mr. Snyder handed in his resignation a short time ago and it is expected he will soon be relieved. So I think the Maple flooring situation is yet quite secure in New York. They have used it

so long, and the contractors admit that while they can get the Yellow Pine some cheaper, that there is no comparison as to the merit of the two woods for school floors; and if they use anything less than the best, it becomes a reflection on them, so they are sticking pretty close to Maple. The architects who do outside work, use Maple almost universally. The Armstrong Cork Company, manufacturers [fol. 6221] of Linoleum, mentioned in Boston report, also the Cook Company of Trenton, N. J., and others, are waging a strong advertising campaign here; but so far do not seem to be so successful as they are in Boston. The commercial builders have almost entirely discarded wood floors of all kinds. I find Beech and Birch growing in favor but they complain of difficulty in getting it; that the dealers do not carry it in stock. I have taken this up with some of the hardwood dealers, who handle a large amount of Maple, and they claim it does not pay to carry it. I hope our members who make Beech and Birch will urge their connections here to stock at least a small portion of the sizes most commonly used in home floors.

Respectfully submitted, (Signed) M. H. Robertson, Field Representative.

[fol. 6222] DEFENDANTS' ROBERTSON EXHIBIT No. 25

Maple Flooring Manufacturers' Association, 1045 Stock Exchange Bldg., Chicago

Providence, R. I., October 28, 1922.

Report of M. H. Robertson, Field Representative

Maple Flooring Manufacturers Association, Chicago, Ill.

GENTLEMEN: My last report was from but did not include Albany, N. Y.

Albany, N. Y.—The Capitol district, which embraces Albany, Schenectady, Troy, Watervliet and numerous smaller cities and towns adjacent, has had a very active year in nearly all building lines. Much of the work is still in progress and will continue throughout the fall and winter. The architects report a disposition to wait until spring for a better labor and price condition of materials. The city has on a large school program and this will go forward at once. I have had a real contest for our product for schol flooring. They have been using Maple in the past but the composition floor people have been so very active with the architects and school board, that they have been quite inclined to adopt some of this flooring. They, however, agreed to defer the decision until they could make further investigation and I referred them to the Minneapolis schools where they have made a test and returned to Maple. I also had conference with a good architect, who has had a similar experience as the Minneapolis people had and found the composition a failure. He

is not on any of the school work but is interested as a resident and tax-payer. I also had an interesting interview with Mr. Wood, General Supervising and Consulting Architect of all schools of the state except cities of the first and second class. I have met him each time I have visited Albany. He also has all the literature and arguments of the composition floor people and while he is quite partial to Maple, he thinks that some of these substitutes have considerable merit, especially what is known as the Rubberstone which is somewhat similar to Battleship Linoleum, but he can appreciate the weakness of all of these when pointed out and I think we are still secure with him not only for Maple, but Beech and Birch as well, for he took notes of my description of these and will have them inserted in the general specifications of the State Board of Education. I also renewed acquaintance with the state architect, and find their disposition concerning Maple Flooring about as reported in my report of a year ago. The state is between two seasons finishing up the present appropriation and will await results of the next legislature which they say is always somewhat uncertain. If they have sufficient funds they will have nex year a large amount of Normal School work and considerable institutional. One architect here specializes in churches, and has been investigating our Beech and Birch because he wants to carry into some of these various color schemes, and I have thus been able to give him some light on the subject.

Springfield, Mass.—The architects here report building conditions very much improved in the last 60 days. They have on a large amount of work of great variety. Some of it will be released this fall, but more will be held over until next year. They all speak encouragingly of the industrial situation which has been almost suspended during the past three years. They say there will be much of this work the coming year, and this is good news for us, for while we are pleased with all classes, yet it is on the industrial class we depend to absorb large quantities and certain makes and grades of our product. It requires many homes to equal one large mill and warehouse proposition. As noted in my former reports, this is a very populous district and contains a great variety of manufacturing, especially all kinds of tools, cutlery and shelf hardware, textiles of all kinds, shoes, furniture, etc. Most of the flooring for these is Maple. True, we are here in the front yard of the Vermont Maple, Beech and Birch and they work this territory with some success, but as you are aware, they do not undertake to make our grades nor follow our improved methods of manufacture, etc. They generally make the log run grade and let the contractor or party using the [fol. 6223] flooring trim it to suit his convenience. This leaves the flooring of apparently longer lengths which appeals to some of the Eastern buyers. One architect here who does much of the industrial building is in trouble with a job at Hartford on the grade question. He says he is through with uncertainties and hereafter will specify MFMA and in accordance with our rules, copies of which I left with him.

* * * * * * *

Boston and Vicinity.—Boston is in the midst of an extensive building program, especially is this true of the large commercial class. Those capable of judging say that it is the greatest in this line in the history of the city. In the older business sections, they are tearing down the old brick buildings and replacing them with modern steel structures and in many cases where the building is of steel and of sufficient foundation, they are extending it one, two or many stories. Considerable of this work is well under way, but much of it is only commenced and the building will extend over most or all of next year. They report a shortage of skilled labor, especially of bricklayers and plasterers, but this extensive program is not confined to the commercial class, but is also apparent in degree in all classes. The city and suburbs has on an unusual number of fine high school buildings, and the various colleges are doing more or less building to take care of the demand for class rooms, dormitories, gymnasiums, etc. Boston is frequently denominated "The Hub" and while its radius may not extend quite so far as Bostonians imagine, yet we must concede it a great commercial, educational, social and religious center with great radiation in all these features, and this influence is on the increase and to care for it they are obliged to enlarge their borders in all lines. But we are especially concerned about what part we may have in this program. I need hardly advise that for many years this has been a very good Maple Flooring market. It has been used almost universally in their commercial, school, college, hospital and in fact most of their work, but I find a considerable change has taken place. The Armstrong Cork Company, manufacturers of a type of Battleship Linoleum, have put on a tremendous advertising campaign, backed up by a personal representative located here and on the job every minute, and they surely are getting results. They started in modestly with the hospitals, with the argument of it's sanitary and quiet features, and then they extended to the commercial builders with the added argument that it can be used on a concrete slab and thus make a complete fire-proof structure, and they have so succeeded that in most of this large commercial work, linoleum is specified for offices, where our Maple was formerly used. One dealer who handles our product and well acquainted with contractors and architects and have furnished them for many years for this class of work, estimates that there is $30,000,000.00 of his work that has switched from Maple to linoleum flooring. The architects generally admit the superiority of Maple, but say that their clients demand the linoleum for the reasons above stated. And now they are starting a great advertising campaign of the use of it in all classes of buildings, including schools and homes. I am advised that they are spending about $2,000.00 a week in the Boston papers alone. They are erecting attractive signs along the railroads and the highways announcing the excellency of linoleum as a floor for all uses. I have put forward my best efforts here and think I have [fol. 6224] benefited our cause in a good many instances. I hesitate to make this discouraging report, but feel that the members of our Association ought to know the facts of the case, and if it is considered of sufficient importance attempt to stay the tide by encouraging their

local representatives in every way possible. Some of the lumber dealers are very loyal supporters of our products while others seem to be somewhat indifferent and are letting go without much trouble.

So much for the dark, now for the brighter side of the picture. As all are aware *that* Boston is surrounded on three sides by a score of cities and towns devoted to manufacturing of all kinds. I have investigated conditions in some of the more important of these, and find they are becoming quite active again in building. They are doing considerable repairing, some new mill and warehouse work and say they have in prospect much more of it for next year. Each of these communities have their own school, church, civic and home building program. In the field of the industrial building our linoleum friends will hardly venture and so far they are not apparently making much effort in the other classes in these outlying industrial cities and towns. I am especially gratified with reports on our Beech and Birch flooring. I find a great change in the attitude of the architects concerning theses. Many of them as suggested in my last visit and by our literature have given them a trial and found them entirely satisfactory. In many cases they say far exceeding their expectations and they have become ardent supporters of our claims for Beech and Birch flooring.

Respectfully submited, (Signed) M. H. Robertson, Field Representative.

[Omitted in printing]

[fol. 6228] DEFENDANTS' ROBERTSON EXHIBIT No. 27

Indianapolis, Indiana, October 7, 1922.

Report of M. H. Robertson Field Representative

Maple Flooring Manufacturers Ass'n, Chicago, Illinois.

GENTLEMEN: Continuing the Western publicity campaign, I submit report of localities as follows:

* * * * * * *

Cedar Rapids also favorably located, is very much devoted to manufacturing all kinds of cereal products, some of which they claim have the largest proposition of the kind in the country. They are engaged in somewhat the same line of building as Des Moines, but not quite so active in the commercial type. They, however, report a very good program for the coming year. I have noted in former reports of this locality, that they used more Beech floors than any other localities of equal population. I am a little disappointed

this trip to find while they are still enthusiastic for Beech, and very much so for Maple for schools, commercial and industrial work of all kinds, still they advise, especially the dealers, that they are not using so much Beech as in former years; that they are using more Oak for homes and apartments where they formerly used Beech. They say they had complaints that after they Beech had been down for some time, it would shrink and leave open joints, and thus make an unsightly floor. This complaint was principally from the dealers, one of whom I have known some fifteen years and who used to handle a large amount of Beech and was very enthusiastic for it. They did not have any concrete examples to show me but I examined several Beech floors in the city, some new and others have been down for a number of years, and I did not find any condition such as complained of. On the contrary, I noted for instance the Fine Arts Building which has had Beech in many of the rooms for years and some of the other rooms they are just now reflooring, and using Beech similar to what was used in other parts of the building so that it looks as if it had stood the test in that building, and I have referred the architects and dealers to this example.

* * * * * * *

[fols. 6229 & 6230] Peoria, Illinois.—This city is located in a very good agricultural district, as well as coal mining section. It has large manufacturing interests, manufacturing agricultural implements and farm machinery of all kinds, and in this it has been affected by the recent condition of the farmers. They have good crops, but the price obtained is such as not to give him the cost of production and so he is not doing any buying. The architects say they have much work on the boards of all classes except the industrial. Here they also complain of the advances in prices of all building material which they say will suspend very much of the larger work, such as commercial and speculative home and apartment buildings. They advise that brick, cement and all builders' hardware, and plumbing goods are where it will not be profitable to continue the building for a rental proposition. They say lumber has advanced about 20% in sixty days, but that it has made a much less advance than any of the other building materials. They use much Maple and Beech flooring, but not much Birch, except for inside trim. They formerly used considerable Oak for home floors when it went so high they substituted Beech, and have been using it for some time instead of Oak. They say now that Beech is nearly as expensive as Oak, so you can see my task here, and I mention this so that our members who have connections here may be on the alert and supplement my effort by giving the district some special attention.

* * * * * * *

[fols. 6231 & 6232] DEFENDANTS' ROBERTSON EXHIBIT No. 28

[Omitted in printing]

[fol. 6233] DEFENDANTS' ROBERTSON EXHIBIT No. 29

Duluth, Minn., September 18, 1922.

Report of M. H. Robertson, Field Representative

To the Members of the Maple Flooring Mfrs. Assn., Chicago, Ill.

GENTLEMEN: In accordance with the plan of the Advertising Committee, I am to spend in Field Representative work about four weeks each in the Middle West and Northewest and about the same time in the East and Atlantic Coast territory. I had first to make a re-inspection trip to St. Louis and while there, made a canvass of that city before returning to Chicago.

* * * * * * *

St. Paul, Minn.—This city has done a large amount of home building of the cheaper type and schools, both Parochial and Public, this season. The architects report building somewhat quiet, but they are anticipating and in fact planning a considerable amount of work next year. The city has two or three schools to finish yet this year and are launching an extensive program for next. The state has a program for something over a million dollars of work in normal schools, university, dormitory and institutional building. There is not much commercial or industrial building in sight—some warehouses and some salesrooms. They are pretty well caught up on the cheaper homes and flats, but have in prospect more of the better class of home and apartments for next year. They are using much Birch and some Beech flooring. I find a quite a different condition here regarding these two woods from that of three years ago. The architects are specifying them more generally, especially the Birch and the dealers are quite generally stocking the Maple and Birch and a few of them all three of our woods.

Minneapolis, Minn.—As noted in my report of three years ago, the Architects and Lumbermen here cover a large field and are quite familiar with general building conditions, not only of the Twin Cities, but also of Western Wisconsin, Minnesota, the two Dakotas [fol. 6234] and Northern Iowa. Many of these Lumbermen have an extensive line of yards, one the Thompson Yards, has a line of over 200 yards in operation and the buying and general supervision is all done in Minneapolis. The present year building business is closing and they report it a little quiet, but a very large program is planned for early spring and some of it for yet this fall. There is a very large amount of school work to go forward, the city has some two million dollar program and the architects generally have more or less of this class of work in the territory mentioned. As noted in former reports, Maple and Birch flooring have the right of way here, but the dealers advise that during the present year, they have had more orders for Oak for home building than formerly, especially in the small home building. The Architects do not get much of this small work and I am urging the dealers to stock and

use freely our advertising medium for Maple, Beech and Birch, for customers who want a floor with the more pronounced figures such as is found in the Oak flooring. Most of the dealers carry our Maple and Birch and a few stock the Beech also. My report of three years ago mentions the effort of the substitute material people to supply "something just as good" as our product for service floors and some of the architects advise that they tried out these substitutes for school floors with quite unsatisfactory results and that hereafter they propose to specify Maple for schools and such work and let all the so-called substitutes alone. There is a large amount of good home building in prospect and in this they are interested in Birch and Beech for flooring, not much commercial work in sight, some industrial, a few good hotels and a number of college and dormitory buildings. There is projected a very exclusive family hotel with all modern equipment to cost about two million dollars, in which I hope will be used our flooring. It would make an especially good advertisement for us. It is not yet in the hands of the architects.

* * * * * * *

[fol. 6235] DEFENDANTS' ROBERTSON EXHIBIT No. 30

December 4, 1917.

Report of M. H. Robertson, Field Representative

From San Francisco, Calif., December 1, 1917

"My last report included the Northwest territory Washington and Oregon, closing with Portland. From there I came to Sacramento, intending to make this report cover all of California, but there is considerable of immediate interest which I think our members ought to know about. I am herewith reporting the Sacramento Valley and San Francisco Bay Region.

* * * * * * *

San Francisco Bay District.—Here I have worked, not only the city of San Francisco with over 200 active architects, but also the main cities of the Bay District, such as Oakland, Berkeley, Alameda, Richmond, Santa Rosa, San Jose, Palo Alto, etc., and Tracy and Stockton in the San Joaquin Valley. Two great Universities located here, the State University at Berkeley, and the Leland Stanford at Palo Alto, the latter is planning some large work, such as a dormitory, library, President's home and some additions, the whole to cost about $1,000,000. At Berkeley they have just completed extensive building operations and think they will do but very little building the coming year. The city of San Francisco has a recent bond issue of $3,500,000.00 for schools, and will at once proceed to build very many good school buildings. This work will be dis-

tributed among a number of the City Architects. I have devoted considerable effort to this department and find they have been using some Maple flooring, also much Oregon Pine, but the authorities are in favor of better floors, and will insist upon the use of Maple quite universally in this new work. The contest here is principally between Maple and concrete floors for such work as Hotels, apartments, libraries, hospitals, amusement houses and office buildings. The great fire of 1906 seems to have paved the way for the concrete material people to argue in favor of a rejection of all combustible [fol. 6236] material, and so they have made great headway in displacing wood with their material. A majority of the office buildings have been floored with concrete, but some reaction is setting in and I am here in good time to help turn the tide in favor of wood where it properly belongs. I have spent more than the usual time here, but believe that it was imperative and that much good will result. The department stores are generally floored with Maple, and many of the office tenants are favorable to a wood floor and will demand it in the offices which they occupy:

* * * * * * *

In both Maple and Oak, there is a demand for the thinner flooring, and in this, especially the ⅜" they are using jointed stock in Oak almost universally. I have interviewed the largest floor-laying concern here whom the architects almost universally endorse, and who they say lays and finishes more than one-half of the hardwood flooring in the Bay District, and this floor-laying concern advises me that especially in this particular locality, they have trouble with the thin matched stock; that the varied conditions of dry and moist atmosphere induces swelling and shrinking to the extent that they cannot hold it from hoving up at the joints. They have made all kinds of tests they say and find the joined stock to work best hence they are using it almost universally in Oak, and recommend our manufacturing Maple—for Pacific Coast, jointed instead of matched. It might be well for out members to give this some attention.

Yours very truly, M. H. Roberston, Field Representative.

J4 80 44

Some Essential Facts 24-78

Distribution of the Three Woods (Maple, Beech and Birch) 24-25

Percentage of Maple, Beech and Birch Timber Owned by Association Members 26

Number of Producers of Rough Maple Lumber in United States 26

Flooring Manufactured by Association Members is Distributed as follows: Maple, 90%; Beech, 5%; Birch, 5% 26

Number, Manufacturing Capacity, Production and Distribution of Nonmember Manufacturers of such Flooring 27-31

Canadian Manufacturers of such Flooring 31

Potential Producers of Maple, Beech and Birch Flooring 31-33

Capacity and Production of Association Members 33-36

The Manufacture of Flooring 37-44

Production of Rough Lumber 37-38

Grades of Rough Lumber 39

How Rough Lumber is Converted into Flooring 40-41

The Different Grades of Flooring 41-42

The Different Thicknesses and Widths of Flooring 42

All Grades and Widths must be Produced at the Same Time, Regardless of the Quality of Rough Lumber used 43-44

Percentages of Various Grades, Sizes and Kinds of Flooring Produced by Association Members 44

How such Flooring is Marketed and to Whom Sold 45

Sold in Advance of Production to Expert and Well-informed Buyers 45-46

Association Flooring is Standardized, and is Superior to that Manufactured by Nonmembers 46-54

Lumber Dealers Prefer to Buy from Association Members 47-54

Proof Undisputed that Defendants' Prices have Always been Fair and Reasonable..... 54-61

Government Failed to Produce a Single Witness to Testify that any defendant had ever exacted unfair prices, or Acted Arbitrarily..... 62-64

Record Abounds with Proof that Defendants are Unusually Fair, Considerate and Honorable in their Dealings with Buyers..... 62-64

Competing Floorings 65

Divers Facts which are Insuperable Barriers to Concert of Action by Defendants with Respect to Production, Prices, Commissions, or Terms of Sale.... 66-75

Nothing has been Done Covertly..... 75-76

High-handed Methods of Department of Justice during Mr. Daugherty's Regime..... 77-78

Brief of Argument..... 79-96

Argument 97

I.

The proof shows that the petitioner's charge that

"The defendants agreed to adopt and have concertedly adopted Cadillac, Michigan, as an arbitrary freight basing point from which they compute and charge freight, regardless of the point from which each may actually ship flooring."

is not true..... 97-103

Why the District Court Went Astray..... 97-98

Controlling Principles 99-100

The Evidence 101-103

Present Association was Organized on March 29, 1922 101

VI.

The Government offered no proof whatsoever in support of the charge:

> "The use of the uniform trade-mark and the character of the advertising put out by the defendant Association intensify the tendency to establish and maintain uniform prices, and also practically eliminate all competition between the deefndants based on the quality of their respective products."

Neither did the Government offer any proof that the standards adopted and maintained by the defendants were not fair and reasonable.

The proof showed that the quality of the flooring had been improved by means of the adoption and maintenance of such standards, that disputes between manufacturers and buyers had been greatly reduced, and that litigation had been eliminated.

The Government's own witnesses, as well as buyers all over the United States, were both unanimous and enthusiastic in their praise of the standardization of maple, beech, and birch flooring by the defendants. Buyers testified that the flooring manufactured by the defendants was superior to that manufactured by others, and that standardization of such flooring by the defendants had increased competition and greatly benefited the public.. 169-194

Elimination of friction between buyer and seller. 188-189
Increase of Competition..... 190-194
Reduced Cost of Manufacture and Distribution.. 190-192
The Tweedledum-Tweedledee Attitude of the Department of Justice 192-193
Standardization has not resulted in Price Uniformity. 193-194

VII.

The proof shows that the prices of maple, beech and birch flooring have at all times fluctuated in harmony with the laws of supply and demand. Distinguished statisticians and economists so testified, and supported their evidence by a mass of statistics, charts and other data.

The record conclusively shows that the alleged minimum price plans were never enforced, and that in actual practice each member sold his flooring at whatever price he could get, and ran his business just as he pleased. (It is undisputed that said plans were never adopted by the present Association.)

The undisputed proof also shows that prices during the earlier years were never uniform, because of the diversities mentioned on pages 66-75; whereas, from 1919 to 1921, inclusive, they were controlled by abnormal economic conditions, which found adequate expression in the rise of factory grade flooring from $45.00 per M. feet to $150.00, and its decline to $15.00.

At no time does the proof show fixation or control of price by the defendants; and, as we have seen, even the Government admitted at the hearing that there had never existed any uniformity of prices among the defendants.. 195-229

The District Court failed to take into account failure of proof to support Petition..... 195-196

The District Court considered the mere terms of the old abandoned Minimum Price Plans, and apparently overlooked undisputed proof that they were never enforced or observed..... 196-206

Proof by Statisticians and Economists that Defendants had not Controlled, and could not Control prices of flooring; that such prices had fluctuated in harmony with supply and demand..... 207-229

Mr. Gordon's Testimony 207-215
Government Restrictions on Building during War 212-215
Unprecedented Demand for Flooring upon Removal of Restrictions coincided with I. W. W. Strike and two disastrous fires, and caused great shortage of flooring during 1919-1920.. 213-215
Statements showing Wages paid, Cost of Mill Supplies, and Prices Paid for Rough Lumber during 1913-1922—all reduced to Percentage Basis (Appendices H, I, J, K, L, M and N, pp. 9-18) 215
Mr. Grant Keehn's Testimony 216-226
Professor Vanderblue and Professor Hettinger, of the Harvard Graduate School of Business Administration, Concurred in Conclusions of Messrs. Gordon and Grant Keehn 227
The inadequate discussion of the foregoing testimony by the District Court 227-229

VIII.

The Government failed to support by proof the essential allegations of the petition with respect to the activities of the present Association, which was organized on March 29, 1922 230

General Provisions of Present Articles 230
Future Prices of Flooring never Discussed at Association Meetings 230-233
No allegation that at such Meetings any Agreement, express or implied, with respect to Flooring Prices 233, 20, 21
Average Costs 234-280
Article XIV 234
Necessity for Cost-accounting 235-243
Hazards of Capitalist Industry 235-240
Investigations and Recommendations of Federal Trade Commission 240-242
Secretary Hoover's Views 243
Advantages of Cost-accounting 243

Sections 1 and 2 of Article XIV 244-245
Why Association could not determine actual Cost, and was necessarily confined to Average Cost 244-245
Members determined their own Costs and reported to Secretary, who ascertained the Average 245
Section 3 of Article XIV contains only Proper Elements 245-251
Manufacturing and Marketing Costs Contain only Proper Elements 252-271
Government introduced no Proof at all in Support of the Allegation that Average Costs Contained Profits 253, 258, 266
Proof undisputed that Costs have been Reduced by Association 266-271
Cost Surveys Committee 272-274
Test Runs, how made, and their Relation to Average Costs 274-280
Freight Rate Books 281-301
Most Buyers Demand Delivered Prices 281-282
Defendants sell f. o. b. cars Flooring Mills whenever Requested so to do 282
The Averages of the Freight Rates from Michigan and Wisconsin Producing Points to Principal Markets (approximately) equal Average of Rates to said Markets from Cadillac 282
Necessity for Distribution of Freight Rate Books 283
Use made of such Books by Members 283-291
Average Costs 291
Delivered Cost Charts 292-293
Differentials 293-299
What Freight Rate Books now Contain 299-301
Statistical Reports 301-335
Cannot be viewed apart from Environment 301-302
Article XV 303-335
Monthly Sales Reports to Secretary 303-306
Weekly Sales Reports to Secretary 306-307

Reports made by Secretary to Members..... 307-313

Amendment of Articles—Identity of Members not disclosed in any reports sent out by Secretary..... 308-309

Weekly Sales Report..... 307-309

Monthly Report 309

Miscellaneous (quarterly and yearly) Reports 310

Reports are not accompanied by any Analysis, Comment or Recommendation 310-313

No fines or Penalties, except for failure to pay dues or Assessments..... 313

No Audits made..... 313

The Statistics are given to both Buyers and Sellers, to Department of Commerce, Federal Reserve Bank, Chicago, and to anyone who asks for them 314-316

They are published in trade papers, which are taken by Buyers..... 316

Defendants' offer to pay for their further publication in any paper designated by the District Court 317-318

Association members deal with expert and well-informed Buyers who take the trade papers that publish Association Statistics..... 319

Association Statistics are only one of many sources of Information possessed by Members..... 319-322

Use made of Statistics by Members and Importance attached to them..... 322-335

Weekly Sales Reports are based on quotations from a week to four weeks old; price information contained in them stale; quantity moving helpful 322-335

Reports of Stock on Hand, Unfilled Orders, etc., enable Members to produce Grades and Sizes of which there is a shortage..... 327-330

Factors taken into Consideration by different Members in determining for themselves their own prices 322-330

IX.

A comparison of the prices obtained by members, with the AVERAGE COSTS (issued by the present Association) and with the TABLES OF VALUES (issued by the Association immediately preceding), conclusively demonstrates not only that the Government's charge that there was uniformity of prices is not true, but that neither the Average Costs nor the Tables of Values were used by the members either as minimum prices or as a basis for determining individual prices..... 336-348

Why both Freight and Commissions must be deducted in order to reduce Delivered Prices to an *f. o. b.* Flooring Mill Basis..... 336-343

Preliminary Considerations 336-341

The Reason 342

Government's Exhibit 79 337

Appendix T (p. 24 of Appendices to Appellants' Brief) which gives Government's Original Price figures for 13/16" x 2¼" Clear Maple Flooring, with only freight deducted from Delivered Prices, and as corrected by the deduction of Commissions; Comparison of Corrected figures with Average Costs, and Price Ranges..... 344

Summary of Corrected Figures..... 345

Appendices U and V (pp. 25-61 of Appendices to Appellants' Brief) give prices (reduced to an *f. o. b.* mill basis) received for divers other grades and faces of Maple Flooring and Comparisons with Average Costs 347

Appendix W (pp. 62-4 Appendices), Summary of Appendices U and V..... 347

XII.

The following facts:

(a) fundamental differences that exist among Association Members;

(b) unstable basis of the maple, beech and birch flooring industry;

(c) relation that Association members bear to the flooring industry as a whole;

(d) lack of control of any appreciable proportion of raw material;

(e) fragmentary character of statistics collected and distributed;

(f) publication of statistics collected;

(g) relatively superior position of lumber dealers who buy or handle 90 to 95 per cent of the flooring manufactured by Association members,

and many other facts disclosed by the record conclusively demonstrate that the collection and distribution of statistics by the Association cannot injuriously affect interstate trade or commerce.

The necessity for the collection and distribution of trade statistics for the benefit of both buyers and sellers is recognized by all modern economists 367-439

Fundamental Differences Among Members 369

Association Members have no Control of Raw Material 370-374

The Finished Product is not a Necessary of Life; it has Numerous Substitutes and is not Protected at any Stage by either Patents Controlled by Defendants, or a Tariff 375-378

It Costs only $30,000 to Engage in the Manufacture of Flooring from the Ground Up. One Producer of Rough Maple Lumber bought a second-hand Machine at an Expense of $5,000, exclusive of Cost of Installation, and engaged in the Production of Maple Flooring 379

There are Hundreds of Rough Maple Lumber Producers in the States of Michigan and Wisconsin alone, and Practically 3,000 of them in the United States, to say nothing of Manufacturers of Fir and Oak Flooring who Manufacture some Maple Flooring and who could Produce it on a Large Scale if the Prices made it Profitable to do so..... 379

There are many Nonmember Manufacturers of Maple, Beech and Birch Flooring Throughout the United States with an Aggregate Capacity much greater than that of the Members of the present Association 380

Competition between Members and Nonmembers and among the Members themselves has always been Active and Vigorous..... 380

The Defendants Manufacture Standardized Products which Lowers Manufacturing and Marketing Costs and Increases Competition..... 380

The Statistics Collected and Distributed by the present Association are Manifestly Incomplete not only with Respect to the Flooring Industry, but with respect to the Business of Members..... 381-382

Barometers used by Bankers and Business Men..... 382-383

Relative Disadvantage of Manufacturers who Deal with Brokers and Wholesale Dealers..... 384-385

Necessity for Business Statistics..... 386-396

Collection and Distribution of Statistics by Trade Associations. Recognition of Importance by Department of Commerce and Federal Trade Commission 397-400

13 The Americana 25

3 The Americana 25

great mass of heterogeneous facts which lie in almost inextricable confusion in the 6 volumes that comprise the printed record. They relate not only to technical features of an unfamiliar industry and the articles and practices of a trade association organized during March, 1922, but—over our objection—to the articles and practices of numerous antecedent associations dating back to the late nineties of last century. After all, *length* is a relative term; and we hope that the length of our brief bears some appreciable proportion to an easy mastery of the facts by this Court.

For the convenience of the Court, we have prepared at the expense of considerable time, labor and money a separate volume of Appendices. These appendices contain the results of much labor which we did not desire to impose upon the Court.

In its petition the Government endeavored to set forth the existence of a combination and conspiracy among the defendants whereby interstate trade and commerce in maple, beech and birch flooring was unreasonably restrained, contrary to Section 1 of the Sherman Act. The Government did not charge that a monopoly existed or that any attempt had been made to monopolize interstate trade or commerce contrary to Section 2 of said Act.

A great deal of evidence was adduced in open court by both the petitioner and the defendants. On January 4, 1924, the District Court granted the injunctive relief asked by the petitioner under Section 4 of the Sherman Act (Tr. 60), but suspended the injunction until January 1, 1925, or the prior determination of this appeal. (Tr. 63.)

GOVERNMENT'S PETITION.

The learned District Court and counsel for the defendants differed with respect to both the form and the substance of the petition. The latter asserted that it conferred no jurisdiction upon the court; that it did not state a cause of action, and that it was a confused, ambiguous, contradictory jumble of conclusions, metaphors, and inconsequential facts. (Motions to dismiss, Tr. 13-24.)

The District Court announced that the petition was a model of good pleading, and denied the said motions. (Tr. 24.)

Inasmuch as we are of the same opinion still, it is difficult for us to state concisely the substance of the petition. We must, therefore, resort to quotation and analysis. By this means the issues will be made clear. We will then show that the undisputed proof not only fails to support the allegations of the petition, but confutes them, even if it be assumed that the petition states a cause of action.

THE DEFENDANTS.

There are three classes of defendants, viz.:

1st. The *defendant Association,* described as "an unincorporated organization" with offices at Chicago.

2nd. The *members* of the defendant Association, or manufacturers engaged in the maple, beech and birch flooring industry, referred to in the petition as the "defendant corporations."

3rd. The *individual* defendants, or the respective representatives of the several members, and George W.

maintained under and in accordance with the provisions of Articles of Association dated *January 1, 1922,* which will be in effect until January 1, 1925.

"*All* of the defendant corporations are *now* parties to said Articles of Association and through the individual defendants as their representatives they take an active part in all of the activities of the defendant association." (Tr. 4.)

It thus appears that there was not one association, but several successive and distinct associations, composed of different members, and operating under separate articles.

THE ALLEGED MEANS.

1. EARLY ACTIVITIES.

The petitioner alleged that all the articles above mentioned provided for the organization of the "defendant association" with headquarters at Chicago; "for the usual officers and a board of trustees," and "for a special fund or membership fee fund as a guaranty for the fulfillment of the obligations assumed by its members, and for an expense fund created and maintained by assessments levied on its members." (Tr. 4, fol. 7.)

"Said Articles of Association PRIOR *to those of January 1, 1922,* also established a pooling arrangement * * * by allotting to each member a certain percentage of the total business, by creating a general fund through payments from all members on shipments over their prescribed allotted percentages, and by providing for payments from said general fund to members shipping less than their prescribed allotments. The defendant corporations operated under this arrangement for the pooling of their businesses continuously from *January 1, 1913,* until on or about *March 31, 1920.*" (Tr. 4-5, fol. 7.)

(2) MINIMUM PRICE AGREEMENTS.

"Under dates respectively of *July 1, 1916, July 1, 1919,* and *January 6, 1921,* the defendant corporations and *the other manufacturers of flooring who were members of the defendant association on said dates,* entered into mutual agreements termed 'Minimum Price Bases' or 'Minimum Price Plans,' each of which constituted an amendment to the Articles of Association under which the defendant association was being maintained. By said minimum price plans the defendant corporations agreed to establish minimum prices for the sale of maple, beech, and birch flooring; and not to sell any such flooring below said minimum prices. Said plans specified *certain elements* which should be used as the basis for determining an average cost of manufacturing and selling flooring, and the average percentage of net profit which should be added to said average cost in order to establish said minimum prices. Said plans also provided that said minimum prices should be the delivered prices in the 'Table of Values' in the 'Association Rate Book and Index of Towns,' which is hereinafter described, and specified the concessions and commissions which could be allowed and the terms of sale that should be enforced." (Tr. 5, fol. 8.)

Of course, the purpose of the petitioner in bringing into this case long-extinct associations and plans which had been abandoned years before the institution of this suit, was to prejudice the *present association* and confuse the issues.

"(3) THE PRESENT METHOD OF ESTABLISHING MINIMUM PRICES."

"In and by the aforesaid Articles of Association of *January 1, 1922,* the defendants *substituted* for the aforesaid Minimum Price Plans *a statement of policy* to the effect that a careful consideration of the question of cost is recognized as the only scientific method of conducting the business of manufac-

The petition continues as follows:

"The defendant corporations have at all times during said period *accepted* and *acted upon* said recommendations." (Tr. 6, fol. 10.)

What is the meaning of the word *accepted* in the phrase "accepted and *acted upon* said recommendations"?

If the *recommendations* were *agreed to*, or *adopted* why use the phrase "accepted and *acted upon*"? It is clear that *accepted* as used by the petitioner does *not* mean *agreed to* or *adopted*. If *recommendations* were made, then some committee or subordinate body must have made a *report*. The Century Dictionary gives as one meaning of the word *accept*:

> "In a deliberative body to *receive as a sufficient performance of the duty with which an officer or a committee has been charged; receive for further action;* as, the report of the committee was accepted: Syn. take, etc."

That this is the meaning of the word in the phrase above quoted is borne out by the next succeeding words "*and acted upon.*" The petitioner, however, does not aver *what* action was taken. The late Republican National Convention *acted upon* the platform planks prepared by the Wisconsin delegation, and presented to the Convention for adoption, but . . . .

According to the petitioner, then, *all the defendants* (including the defendant corporations) recommended that the defendant corporations should not sell flooring at less than "average costs"; the defendant corporations received said recommendations, and *severally* and in the exercise of an unfettered discretion,—*since no joint action or agreement to be bound by said recommendations is alleged—acted upon* them. *What* action was taken, the petition does not state.

The petition then proceeds as follows:

"and have *concertedly* established and maintained *as* the *basis* of their *individual* selling prices, the minimum prices or so-called *average costs* determined as heretofore described,—" (Tr. 6. fol. 10.)

It might be asked selling prices of *what?* If of *maple, beech* or *birch flooring,* did the selling prices apply to interstate shipments? Let us pass these questions for the moment.

If after January 1, 1922, the defendant corporations had not sold their flooring *for less than the "average costs",* it would have been easy to allege the fact. *However, the petitioner makes no such allegation.* What does the allegation mean?

The *average costs* were concertedly established and maintained by the defendant corporations as the *basis* of their *individual selling prices.*

It appears then that *each* corporation defendant fixed its own *selling prices. But what relation did the selling prices bear to the "average costs"?* The petitioner does not state; and the allegation above quoted, if not meaningless, is at least susceptible of the following construction:

That the defendant corporations accepted in principle the proposition that selling prices should equal average costs, and that each corporation in determining its "individual selling prices" took into consideration the "average costs". *But the petitioner does not allege that the selling prices, either as the rule or as an exception, did equal average costs.*

It should be remembered that the petitioner is here endeavoring to set forth the *means* whereby the Sher-

man Act was violated. Reasonable certainty is therefore required. And in case of doubt either as to the acts done by defendants, or as to the meaning of doubtful phrases, or as to whether an unlawful act has been committed, such doubt—arising as it does from the *petition*—will be resolved against the petitioner.

The allegation must bear the construction above suggested—in which case no violation of the Sherman Act is charged—or the construction *that by means of concert of action the "individual selling prices" of the defendant corporations always at least equalled "average costs"*.

The petition then proceeds as follows:

> "and by concertedly maintaining the same [that is, the 'average costs' as the basis of individual selling prices] and also the uniform terms of sale, the uniform rules with regard to allowing cash discounts, the uniform commissions, and the uniform rules regarding the allowance of commissions and concessions, *which were established by and in accordance with said Minimum Price Plans*,[1] they have always maintained during said period [from 1913 to March 5, 1922] and they still maintain"—*what?*
> *"a practical uniformity between* [among?] *themselves of net f. o. b. selling prices"*. (Tr. 6, fol. 10.)

It is not alleged that the "practical uniformity" "of net f. o. b. selling prices",—whatever that means—ap-

[1] According to the petition the Minimum Price Plan was abrogated on January 1, 1922. (Tr. 5, fol. 9), and the defendant association "is now being maintained under *and in accordance with* the provisions of Articles of Association dated January 1, 1922." (Tr. 4, fol. 7.) There is no allegation that the articles last mentioned provided for uniform rules regarding terms of sale etc. *When* were the uniform rules *maintained?* Obviously, *prior to* January 1, 1922.

plied to *maple, beech* or *birch flooring*. If it be assumed that it did, then there is no allegation that the "net f. o. b. selling prices" applied to *interstate* trade and commerce. And to make either assumption is to *assume* rather than *plead* vital facts. For all that appears in the allegations above noticed, the selling prices may have related to other commodities than maple, beech or birch flooring, or if to such flooring then to the purely *intrastate* business of the defendants.

The following allegations contained in Paragraph II of the petition do not supply these defects.

> "The *defendants* make *sales* of the flooring manufactured by them from [at†] their said offices *in this district*"—(Tr. 2.)

All the defendants, then, make sales of *the* flooring manufactured by them (that is, *all the flooring* manufactured by them) *at their offices* in the *Western District* of MICHIGAN.

> "The term sale has a well defined meaning. It is the transfer of property from one person to another for a consideration of value". (*Arnold* v. *North American Chemical Co.*, 232 Mass. 196, 122 N. E. 283, 284.)

It therefore follows that the *sales* in question were made *wholly within the State of Michigan*. The property was *transferred* by defendants to other persons in Michigan. The petition continues:

> "and *they thereupon ship* said flooring in interstate trade and commerce *from this district into other states*, to the wholesale and retail lumber dealers who have contracted for its purchase." (Tr. 2-3.)

The phrase "in interstate trade and commerce" *as used above* is tautological, if it have any meaning at all.

Obviously, the pleader's idea is adequately expressed by the words "and they thereupon ship said flooring * * * *from this district into other states*" * * *. A person may properly be said to be *engaged* in interstate trade and commerce; it is correct to say that *commodities* are *subjects* of interstate trade and commerce, or that they are shipped from one state into other states. But to say that *goods* are SHIPPED "IN *interstate* TRADE *and* COMMERCE" is to utter nonsense. The verb "to ship" originally meant *to put or take on board a ship or vessel.* It now means *to deliver to a common carrier* for transportation whether by land or water or both. And the *delivery* to the carrier must of necessity take place either within or without a state. It should also be remembered that the petitioner had just previously alleged *sales* within the State of Michigan. And what the petitioner obviously intended to allege was the fact expressed by the assertion that the flooring was thereupon shipped from the Western District of Michigan into other States. Furthermore, the assertion that the defendants *after making* SALES of flooring *in Michigan* thereupon *shipped* said flooring in interstate trade and commerce is, if not meaningless, a *conclusion.*

It is obvious that no *interstate* sales are alleged. Suppose that wholesale and retail lumber dealers from Philadelphia, Boston, New York and other cities are *at the offices of the defendants* in the Western District of Michigan; that the defendants then and there make certain *sales* of flooring to said dealers. Such *intra*state transactions would not be converted into *inter*state commerce, by the action of the defendants in thereafter "shipping" the flooring into other states. The property would have been *transferred* within the State of Michigan; it would leave the state as the property of the

buyer, and in "shipping" said property—that is, delivering it to the common carrier for transportation,—the defendants would be engaged in a purely *intrastate* transaction. A sale or a contract to sell may be of a purely *intra*state character so far as the *seller* is concerned and of an *inter*state character—or at least it may ultimately become such—so far as the *buyer* is concerned.

Under certain circumstances the result would not be different even if the buyers had entered into contracts of purchase with the defendants within the state of Michigan. And it must be remembered that the petitioner has not particularized here. For instance, if the contracts of purchase provided for delivery f. o. b. cars within the Western District of Michigan, the transactions would be of a purely intrastate character, so far as the defendants are concerned. Will it be *assumed* that the transactions above mentioned were otherwise, when the petitioner has not alleged that they were?

For instance, in

Addyston Pipe & Steel Co. v. *United States*, 175 U. S. 211, 247,

the Court said:

> *"In regard to such of these defendants as might reside and carry on business in the same State where the pipe provided for in any particular contract was to be delivered, the sale, transportation and delivery of the pipe by them under that contract would be a transaction wholly within the State, and the statute would not be applicable to them in that case. They might make any combination they chose with reference to the proposed contract, although it should happen that some nonresident of the State eventually obtained it.*
>
> *The fact that the proposal called for the delivery of pipe in the same State where some of the defend-*

ants resided and carried on their business would be sufficient, so far as the act of Congress is concerned, to permit those defendants to combine as they might choose, in regard to the proposed contract for the delivery of the pipe, and that right would not be affected by the fact that the contract might be subsequently awarded to someone outside the State as the lowest bidder. In brief, their right to combine in regard to a proposal for pipe deliverable in their own State could not be reached by the Federal power derived from the commerce clause in the Constitution.

To the extent that the present decree includes in its scope the enjoining of defendants thus situated from combining in regard to contracts for selling pipe in their own State, it is modified, and limited to that portion of the combination or agreement which is interstate in its character. As thus modified, the decree is

AFFIRMED."

The petitioner first alleges that *sales* were made by the defendants in the Western District of Michigan, but fails to allege *to whom* the sales were made. It is then alleged that the defendants delivered the flooring to common carriers for transportation into other states to the wholesale and retail dealers who had *contracted for* its purchase, but the petitioner does not allege either that said dealers had *contracted with the defendants* for the purchase of said flooring, or that the *sales* theretofore alleged were made by the defendants *to said dealers.* For all that appears in the petition, there may have intervened several intermediate *sales* and *contracts of purchase* between the original *sales* and the delivery by the defendants to the common carriers.

The foregoing considerations are important, not only because of the allegations analyzed on pages 8-13, *supra,* but because of the following allegations.

"*Said sales and shipments* [that is, *the ones we have just been considering*] are made pursuant to

and in conformity with the restrictive practices and agreements which are hereinafter described." (Tr. 3, fol. 4.)

It will be observed that here the petitioner differentiates between the *sales* and the *shipments* but says nothing of *contracts of purchase.*

The foregoing allegation is the only one in the entire petition that attempts to connect the *alleged restrictive practices and agreements,* which we have analyzed on pages 8-16, *supra,* with any *sales of maple, beech or birch flooring.*

And in view of the fact that *"said sales"* were made by the defendants at their offices "in this district", and it is not alleged *to whom* or *how* or *upon what terms* they were made, it follows that the petitioner has not pleaded facts which show that said "restrictive practices and agreements" applied to *interstate* trade or commerce.

The "said shipments" *followed* the *intrastate* sales; the flooring left the Western District of Michigan as the property of the buyers.

The defendants *"shipped"* the flooring into other States, but the alleged restrictive practices and agreements *had already operated* upon the *intrastate* sales.

(4) FREIGHT RATE BOOKS.

"In connection with the aforesaid determinations of minimum prices or of so-called average costs, the defendant association has (fol. 11) from time to time prepared and distributed to the defendant corporations so-called freight books. Said books contain tables of the freight rates from Cadillac, Michigan, to many cities and towns in all of the States of the United States. They also contain an average

cost chart showing the average costs f. o. b. cars of the principal items of maple flooring in the three established grades; other kinds of maple, beech and birch flooring by additions to or subtractions from said average cost chart; statements of the extra charges for special grades, for special sizes and for special lengths; statements of the terms of sale and of the rules for allowing cash discounts; and delivered cost charts showing the average so-called cost of any item of flooring, including the freight from Cadillac, Michigan, when delivered at any destination." (Tr. 6, fol. 10-11.)

That is what the *defendant association and its predecessors* are alleged *to have done.* Certainly, in the absence of some agreement or action on the part of others, no violation of the law is charged.

The petitioner continues:

"By means of said freight rate books, the defendants from 1913 continuously until the present date *have been enabled* to determine the delivered 'minimum price' for any item of maple, beech or birch flooring at any destination in the United States, in accordance with the aforesaid Minimum Price Plans, or the so-called 'average cost' thereof in accordance with the 1922 Articles of Association." (Tr. 6, fol. 11.)

The defendants have also been *able* to commit murder or treason, but ability to do is not equivalent to doing.

"The defendants agreed to adopt and have concertedly adopted Cadillac, Michigan, as an arbitrary freight basing point from which they compute and charge freight, regardless of the point from which each may actually ship flooring." (Tr. 6, fol. 11.)

The petitioner then continues:

"They also agreed to adopt, and have concertedly adopted and used, and they still continue to use, the minimum prices or so-called average costs stated in

said Freight Rate Books, as the *basis* of their *individual selling prices*, and by concertedly maintaining the same and also the uniform charges and practices heretofore described, they have always maintained, and they still maintain, *a practical uniformity between themselves of net delivered prices.*" (Tr. 6-7, fol. 11-12.)

What has been said above on pages 8-16 is applicable in all respects to the allegations last quoted.

Even if it be assumed that the petition states a cause of action, what the petitioner complains of—*the essence of its plaint*—is that *the defendants have maintained among themselves a practical uniformity of net f. o. b. mill prices and net delivered prices.*

The means are merely incidental—the *uniformity of price* is the evil which the petitioner seeks to eliminate. And if the alleged uniformity does not exist, then, of course, the petitioner must fail, so far as the foregoing portions of the petition are concerned.

5. EXCHANGE OF STATISTICS.

Petitioner alleges that in accordance with the Articles of Association of *January 1, 1922,* the defendant corporations made certain weekly, monthly and quarterly reports to George W. Keehn, the defendant Association's Secretary, who compiled the same and then distributed the information to members. (Tr. 7-9.)

It should be observed that the petitioner does *not* allege:

(a) That the data sent out from the Secretary's office are accompanied by any analysis, interpretation or comment. Each member must make his own deductions from the said statistics.

(b) That any forecasts of future market condi-

tions are made by an expert statistician or any one else.

(c) That any recommendations as to production, or prices are made by any one. Each member is free to manage his own business in his own way.

(d) That any member is in any way whatsoever restricted as to when, where or to whom or at what price he may sell his flooring, or as to the quantity he may manufacture.

Even the petitioner *does* allege:

"The aforesaid *monthly* statistical reports are published in certain trade papers, but at such times that the defendants have the information contained therein considerably earlier than does the general public. The distribution of the detailed information as to sales and prices is strictly confined to the defendant corporations." (Tr. 9, fol. 16.)

(6) ASSOCIATION MEETINGS.

"Prior to 1922, defendant George R. Keelin, as Secretary of the defendant association, generally transmitted the aforesaid statistical reports of the open competition plan to the defendant corporations accompanied with his comments interpreting the same, and with statements and comments regarding general conditions in the industry. Since 1921, the defendants have substituted for said written comments and statements the system of holding frequent meetings, and they now assemble monthly at association meetings and discuss the prices and the supplies of rough flooring lumber, the costs of manufacturing and selling flooring, the conditions of supply and (fol. 17) demand in the flooring industry, and trade conditions and the flooring situation in general, and especially as reflected by the statistical reports of the defendant association. In short, they exchange with each other at said meetings, all the information which they have, and all the experiences which they have had in their several businesses, which can be of general interest to them as manufacturers of maple, beech, or birch flooring.

"For use at the aforesaid monthly meetings defendant George R. Keehn secures from the defendant corporations, on blank forms distributed by him, information as to orders, production, and shipments for the portion of each month preceding its monthly meeting. These data are compiled and are discussed at said meetings, and the defendants forecast therefrom the probable amounts of orders, of shipments, and of production for the entire month, and then compare the same with similar data for preceding months. The Committee on Cost Surveys of the defendant association also frequently reports at said meetings respecting the supplies of rough flooring lumber and gives its opinion as to the actual market value of such lumber and as to the average cost of manufacturing and marketing flooring." (Tr. 9.)

The petitioner does *not* allege that at such meetings:

1. There was any agreement or understanding, express or implied, as to production or prices.

2. That the *future* prices of flooring were even discussed.

7. UNIFORM TRADE-MARK AND GRADING RULES.

"The defendant association has adopted a trade-mark, which is used by the defendant corporations under and in accordance with (fol. 18) the terms of uniform trade-mark license agreements which have been entered into between each of them and said association. Said agreements grant each of said defendant corporations the right to use the uniform association trade-mark, followed by the index number of the individual corporation, so long as each continues a member in good standing of the defendant association, and provide that each member so licensed shall maintain the standard grades of flooring established by the defendant association and shall be subject to inspection by the association inspectors for the purpose of seeing that said standard grades are properly maintained. Standard grades and also detailed grading rules have been

adopted and copyrighted by the defendant association, and they are now being uniformly and concertedly maintained by the defendants." (Tr. 10.)

8. ASSOCIATION ADVERTISING.

"The defendant association has for a number of years conducted, and is still conducting, an extensive advertising campaign for the purpose of promoting the use of maple, beech and birch flooring and of emphasizing that purchasers should secure flooring bearing the aforesaid association trade-mark. Said advertisements carry the name of the defendant association alone, and not the names of its members, and they state that flooring bearing the association trade-mark is standardized and guaranteed by the defendant association. Many of said advertisements contain price propaganda urging (fol. 19) purchases of flooring at the time of the publication of said advertisements on the ground of the price being fully adjusted to then existing conditions. Inquiries received in answer to said advertisements are bulletined by the defendant association to the defendant corporations." (Tr. 10.)

ALLEGED RESULTS.

The petitioner then asserts the *conclusion* that as a result of the matters and things complained of, interstate trade and commerce in maple, beech and birch flooring has been unreasonably restrained. (Tr. 10-11.)

PRAYER.

Petitioner prays that the association be dissolved, and that the other defendants be perpetually enjoined, etc. (Tr. 11-12.)

DEFENDANTS' ANSWER.

Owing to petitioner's inveterate intermingling of conclusions, facts, epithets and misstatements in the petition, the first portion of the defendants' answer consists largely of specific denials. (Tr. 26-35.) Three separate defenses are then pleaded. (Tr. 35-45, 45, 45-46.)

No question as to the sufficiency of the said answer or any part thereof is involved; and inasmuch as all the facts must be examined at length, no further statement with respect to defendants' answer will be made at this time.

THE DECREE.

The District Court held that there was a combination in restraint of interstate trade and commerce; ordered the defendants to dissolve the defendant association, and restrained the defendants from thereafter doing any of the things charged in the petition. (Tr. 60-61.)

ERRORS RELIED ON.

The assignment of errors filed in the District Court contained twenty-five specifications of error. (Vol. I, pp. 64-68.) All these specifications may be summarized as follows:

1. The petition is not supported by the proof.

2. The decree entered is contrary to law.

3. The decree is contrary to the weight of the evidence.

4. The petition does not state a cause of action.

5. Even if certain practices of the defendants were objectionable the restraining of such practices would amply protect the public.

For a detailed statement of the propositions of fact and law relied on, please see Brief of Argument, pp. 79-96, *infra*.

We believe that much time and space will be saved if we set forth here certain technical data which are necessary to an understanding of much of the other evidence appearing in the record. There are also certain facts pertaining to the industry as a whole which are essential to an appreciation of many phases of this case. *These fundamental facts constitute the environment in which the defendant Association functions, and by which it is limited and circumscribed.* With this factual background the Court will readily understand the argument upon particular controverted points. The argument will also move more rapidly, if these fundamental facts are set forth here rather than during the discussion of particular propositions of fact and law.

SOME ESSENTIAL FACTS.

DISTRIBUTION OF THE THREE WOODS.

The maple is indigenous to the North Temperate zone, and is found most abundantly in China, Japan, United States and Canada. Rock, or sugar maple (of which the best flooring is made) "is especially characteristic of rich woods from Maine to Michigan and southward in the mountains to Georgia." The principal habitats of beech and birch are North America, Europe and Northern Asia, the latter wood being found even within the Arctic

Circle, whereas, the former also grows abundantly in Chile and Patagonia. (Authorities cited in footnote.)[5]

According to a report on Senate Resolution 311 by the Forest Department, United States Department of Agriculture, issued by the Government Printing Office in 1920, the stand of maple, beech and birch timber in the United States then amounted to 90,784,000,000 feet, distributed as stated in the margin.[6] The total cut for the years 1920-1922, inclusive, is conservatively estimated at 5% of stand in 1920, or 4,784,000,000 feet, leaving the estimated stand in 1923 at 86,000,000,000 feet. (Vol. II, pp. 773-779.)

---

[5]Fossils of all three woods are found in Miocene strata. Maple, beech and birch trees, therefore, flourished long before Man's prehuman ancestors had abandoned their arboreal habits, and preceded the appearance of the Tool-maker and Dreamer by at least some 500,000 years. They made their appearance in the arts with the Runic tablets, which were of beech boards. Birch became an emblem of authority in the fasces carried by the lictors in ancient Rome, and a means of discipline in the hands of countless parents and schoolmasters. The maple has long charmed man by its beauty and nourished him with its sap. In fact, a long line of scientists, historians, essayists, novelists and poets have praised these three trees for their matchless beauty and multiform utility. Man is indebted to them not only for warmth, shelter, domestic utensils, means of transport and sustenance, but because they have stirred his emotions and preserved his ideas.

[6]

New England	8,143,000,000
Middle Atlantic States	16,897,000,000
Lake States	36,076,000,000
Central States	20,505,000,000
South Atlantic	4,522,000,000
Lower Mississippi	4,641,000,000

(Vol. II, 773; Defts'. Ex. DD, Vol. 4, p. 838.)

PERCENTAGE OF MAPLE, BEECH AND BIRCH TIMBER OWNED BY MEMBERS OF DEFENDANT ASSOCIATION.

Even if the 203,622,000 feet owned by the Wisconsin Land & Lumber Co. be included upon the theory that said company is a member of the defendant Association, the holdings of the different members of said Association would aggregate only 1,476,086,000 feet of maple, beech and birch timber, or 1.72% of the total stand for 1923. (Vol. II, pp. 773-779; Defts'. Ex. DD, DD-1, Vol. IV, pp. 838, 839.) The holdings of said members are 125,000,000 feet in the Middle Atlantic States, or 0.78% of the stand in such area, and 1,351,086,000 feet in the Lake States, or 3.94% of the stand in said last-named group. (Id.)

NUMBER OF PRODUCERS OF ROUGH MAPLE LUMBER IN THE UNITED STATES.

The *flooring* produced by all the members of the defendant Association is distributed among the three woods as follows: Maple 90%; Beech 5%; Birch 5%. (Vol. II, pp. 630-1, 778; Defts'. Ex. CC-3, Vol. IV, fol. p. 5432.)

Only 14 of the 22 members of the defendant Association (if the Wisconsin Land & Lumber Co. be counted as a member) own maple, beech or birch timber. Eight members are forced to purchase *all* their raw material—that is, the *rough lumber* of which *flooring* is made—in the open market. (Defts'. Ex. DD-1, Vol. IV, p. 839; Vol. II, p. 779.)

In the margin is set forth the number, (together with the distribution by states), of sawmill operators producing rough *maple lumber* during the years 1912 to

1920, inclusive.[7] The petitioner's evidence on this phase of the controversy agrees with and supplements the evidence introduced by the defendants.[8]

NUMBER, MANUFACTURING CAPACITY, PRODUCTION AND DISTRIBUTION OF NONMEMBER MANUFACTURERS OF MAPLE, BEECH OR BIRCH FLOORING.

Various lists of *nonmember* manufacturers of *maple, beech* or *birch flooring* were compiled by both the petitioner and the defendants. (Defts'. Gordon Ex. 1, Vol. pp. 893-895, Vol. I, pp. 626-7; Defts'. Ex. CC-4, Vol. IV, fol. p. 5433; Vol. I, p. 778; Gov. Ex. 68, Vol. IV, fol. pp.

**Data not available by States.

(Defts'. Gordon Ex. 5, Vol. V, p. 897; Vol. II, pp. 603-3.)

[8] Number of Manufacturers of Rough Maple Lumber in the *United States:*

Yr.	
1909	10,858
1912	8,002
1913	5,000
1916	4,131
1917	3,994
1918	3,659
1919	4,583
1920	4,131
1921	2,800
1922	2,900

(Gov. Ex. 57, Vol. IV, fol. p. 3449; Vol. I, p. 142-3.)

3557-3708; Vol. II, pp. 800-1; Defts'. Ex. 22, Vol. IV, f-l. p. 5507; Vol. II, pp. 861-2.) The petitioner sent out inquiries to said manufacturers with respect to their *production* during certain years, whereas the *defendants'* interrogatories concerned both production and *capacity*. Some of the manufacturers reported that they had abandoned the manufacture of flooring, others responded only to the inquiries of the petitioner, some only to the inquiries of the defendants, some to the inquiries of both parties, and yet others made no response at all.

It was stipulated that all the reports received from said manufacturers might be admitted in evidence. (Vol. I, p. 142; Vol. II, p. 771.)

With the exceptions hereinafter noted, the Defendants' Ex. QQ combines the data received by both the petitioner and the defendants. According to this exhibit the *non-member* manufacturers of maple, beech or birch flooring during 1918, 1919, 1920, 1921 and 1922, were as follows:

New Hampshire	4
Vermont	5
Massachusetts	3
New York	9
Pennsylvania	2
Michigan	6
Wisconsin	9
Minnesota	3
Illinois	2
Ohio	3
Kentucky	1
Tennessee	6
West Virginia	6
North Carolina	2
Arkansas	1
Total	62[a]

[a]However, the number of producers was not constant. The total represents merely the number of operators who produced flooring at some time during the years above mentioned.

Their production and *capacity* for the years above mentioned were as follows:

1918

Capacity . . . . . ———
Production . . . . . 21,828,000 ft.

1919

Capacity . . . . . 131,450,000 ft.
Production . . . . . 41,236,000 ft.

1920

Capacity . . . . . 174,450,000 ft.
Production . . . . . 46,616,000 ft.

1921

Capacity . . . . . 220,000,000 ft.
Production . . . . . 43,195,000 ft.

1922

Capacity . . . . . 238,000,000 ft.
Production . . . . . 61,317,000 ft.

(Defts'. Ex. QQ, Vol. IV, fol. p. 5507;
Vol. II, pp. 861-2.)

According to Mr. Hughes, Investigator for the Department of Justice, there were *73* manufacturers who reported that they were producing (Vol. II, p. 801), which would add 11 manufacturers to the 62 shown on Defts'. Ex. QQ.[10]

Mr. Lawrence J. Koerble, Purchasing Agent and Traffic Manager for the John Schroeder Lumber Company, of Milwaukee, which handles about 750,000,000 feet of lumber annually, and which is a large buyer of flooring, testified that his list of maple, beech and birch flooring manufacturers contained *"more than 100 names."* (Vol. I, p. 447.)

---

[10]Some manufacturers were either unable or unwilling to give figures.

Mr. William C. McConnell, a large dealer of Boston, testified that he purchased about 20% of the maple, beech and birch flooring handled by him from Vermont, New Hampshire, Maine and Canadian companies. (Vol. II, p. 569.) He also testified that there were about *15* mills in Vermont, New Hampshire and Maine, which manufactured maple, beech or birch flooring. (Vol. II, p. 567.) It will be recalled that Defts'. Ex. QQ contains the names of only *9* manufacturers in Vermont and New Hampshire, and *none* in the State of Maine.

Mr. Hodges also named three large manufacturers in New York and Vermont, who were not listed in Defts'. Ex. QQ. (Vol. I, pp. 287-8.)

Mr. Ralston, of the Indiana Flooring Company (a *non*-member), who has traveled the country over in selling flooring, testified as follows:

> "Q. State whether or not in different communities in West Virginia, Tennessee, Michigan, New York, Pennsylvania and other states—Vermont and the New England States—there are not many lumber companies who have merely one machine, and who are not known to the trade as manufacturers of maple flooring?
>
> A. I know of several such cases, and there is no question but that there are a *lot* of sawmills that have but one flooring machine, or perhaps two, making flooring at odd times, and do not advertise the fact much at all. They have a mixed grade [ear?] trade; perhaps they are supplying certain yards throughout the country with different material,—different kinds of *lumber*—and they ship a *great deal* of their maple *flooring* to these yards." (Vol. II, p. 325.)

For similar testimony by Mr. Robertson, see Vol. II, pp. 524 (fol. 916) and 527. See also Defts'. Robertson

Ex. 20, Vol. IV, p. 873, third line from bottom of page for the name of a Tennessee manufacturer which does not appear on Defts'; Ex. QQ.

CANADIAN MANUFACTURERS OF MAPLE, BEECH OR BIRCH FLOORING.

No attempt was made by either of the parties to gather statistics with respect to the number of Canadian manufacturers or the amount of flooring produced by them. However, the record abundantly shows that a great deal of maple, beech and birch flooring is produced in Canada, and shipped into all the border states. The Canadian manufacturers are especially strong competitors of American manufacturers in the New England states and New York, by reason of the proximity of certain large Canadian mills to those markets, and because there is no import duty on shipments of such flooring, into the United States. (Vol. II, pp. 524, 567-8-9; Vol. I, pp. 320-1, 245.)

The tariff on maple, beech and birch flooring shipped into Canada is 25% *ad valorem*. (Vol. I, pp. 320-1.)

POTENTIAL PRODUCERS OF MAPLE, BEECH AND BIRCH FLOORING.

We have seen that maple, beech and birch trees are widely distributed; that in 1923 the stand of such timber in the United States amounted to 86,000,000,000 feet; that only *14* of the 22 members of the defendant Association own timber, and that in the aggregate their holdings amount to substantially less than 2% of the total stand. (Page 26, *supra.*)

It is undisputed that one needs only a relatively small capital—$30,000—in order to engage in the manufacture of maple, beech and birch flooring. All the necessary

equipment can be freely purchased—*not from the defendants*—but from the usual manufacturers of machinery, mill supplies, etc. (Vol. II, p. 632.)

We have also seen that in 1920 there were in Michigan and Wisconsin alone *476* sawmill operators engaged in the production of rough maple lumber; that in that year the number of such operators in the United States was 4,131; that in 1921, there were 2,800 producers of rough maple lumber, and that in 1922 there were 2,999. (Page 26, *supra.*) It is undisputed that these owners of timber and operators of sawmills could at *small expense* engage in the manufacture of flooring. (Vol. II, p. 633.) For instance, Mr. W. R. Gillette, of the Brown Lumber Company, Traverse City, Michigan, testified that his company installed flooring machinery in 1920; that

> "our equipment for the manufacture of flooring cost us about $5,000 not including the cost of installation. We bought the machine second-hand. It is an American Woodworking machine. *We saw our own maple lumber.*" (Vol. I, p. 92.)

Mr. Gillette's company produced 1,200,000 feet of maple *flooring* in 1922. The said company is not a member of the defendant Association. (Vol. I, p. 92.)

We have also seen that in 1922, even the nonmembers listed on Defts'. Ex. QQ had a capacity of 238,000,000 feet of maple, beech and birch flooring, but that they produced only 61,317,000 feet. If the profits in the industry were especially large,—if the public were charged unreasonable prices for flooring—this large reserve of productive capacity could and would be tapped without any preliminary expense whatsoever.

But there is at hand another and still larger source of supply at all times ready and able to produce maple,

beech and birch flooring. There are scores of manufacturers of oak and fir *flooring* in the United States. *And they use the same kind of equipment that the manufacturers of maple, beech and birch flooring use.* (Vol. II, pp. 520-1, 526, 771; Vol. I, pp. 84, 85, 88, 137, 446.) As a matter of fact, some of them manufacture maple, beech or birch flooring whenever they can do so at a profit; whenever they are unable to do so, they shift to oak, or stop manufacturing altogether, and *buy maple, beech and birch flooring from the members of the defendant Maple Flooring Manufacturers Association.* (Vol. I, pp. 137, 86-7, 93, 97, 435, 427-8; Vol. II, pp. 778-9, 497.)

CAPACITY AND PRODUCTION OF MEMBERS OF THE DEFENDANT ASSOCIATION.

It will be recalled that the petitioner alleges that the membership of the defendant Association "represents approximately seventy per cent of the total *manufacturing* CAPACITY of" maple, beech and birch flooring "in the United States." (Vol. I, p. 3.)

For purposes of comparison we set forth in the margin the capacity of the members of the *successive* associations known as the Maple Flooring Manufacturers Association and the capacity of the nonmember manufacturers of maple, beech and birch flooring listed on Defts'. Ex. QQ, as well as the number of manufacturers that reported, and the percentage of the capacity of each group of the aggregate capacity of both groups.[11]

---

[11] MANUFACTURING CAPACITY.

	Members.			Nonmembers.		
	Number Reporting	Quantity	Per Cent	Number Reporting	Quantity	Per Cent
1922....	22	158,400,000 ft.	39.9	38	238,610,000 ft.	60.1
1921....	22	158,400,000 "	41.8	36	220,900,000 "	58.2
1920....	21	154,800,000 "	47.	31	174,450,000 "	53.
1919....	21	154,400,000 "	54.1	26	131,450,000 "	45.9

(Defts'. Ex. 22 Vol. IV, fol. p. 5506; Vol. II, pp. 770-1, 861-2.)

It should be remembered that the nonmember manufacturers listed on Defts' Ex. QQ are by no means all the nonmember manufacturers of maple, beech and birch flooring in the United States, to say nothing of the Canadian manufacturers of such flooring, or the manufacturers of oak and other flooring who use the same kind of equipment that is used by the producers of maple, beech and birch flooring. (See pages 32-33, *supra.*)

We also set forth (with the same reservations above stated) the figures with respect to production.[12]

Since the figures with respect to capacity and production were compiled, the Grand Rapids Trust Company, as Receiver for William Horner, bankrupt, (both William Horner and the Receiver were members of the defendant Association), sold Horner's Reed City, Mich., flooring plant to the Indiana Flooring Company, a *nonmember.* (Vol. I, p. 318.) The sale was made during May, 1923. (Tr. Id.) It was testified that the "present output" of this *nonmember* manufacturer "is about *eleven to twelve million feet* a year. (Vol. I, p. 318.)

It will be recalled that Mr. Koerble, a large buyer of maple, beech and birch flooring, testified that his list of such flooring manufacturers contained more than 100 names. (Page 29, *supra.*) Mr. Ralston and Mr. Robertson both testified to the existence of many sawmill and

(Defts' Ex. 22, Vol. IV, fol. p. 5506; Vol. II, pp. 770-4, 861-2.)

planing-mill operators in all parts of the United States who had one or more machines for the manufacture of maple, beech and birch flooring. Both these gentlemen have been connected with the flooring business for a long time, and have gone into all parts of the United States a great many times for the purpose of selling flooring, etc. (Vol. II, pp. 497-8, 518-520; Vol. I, pp. 319, 320, 325.)

In answer to a question put by the petitioner's counsel, Mr. Robertson testified that in his opinion the *nonmember* manufacturers *produced* "somewhere from *sixty to seventy per cent*" of the total output in the United States of maple, beech and birch flooring (Vol. I, p. 527), and that nonmember manufacturers in the States of Michigan and Wisconsin produced "about forty to forty-five per cent" of the total quantity of such flooring produced in the said states. (Vol. I, p. 528.)

Mr. Robertson was of the opinion that the *members* of the defendant Association did not produce more than "fifty to fifty-five per cent" of the total output of maple, beech and birch flooring in the United States. (Vol. I, p. 324.)

Mr. Ralston was asked to estimate the proportion of the total output of such flooring for the State of *Michigan* that was produced by the *Michigan members* of the defendant Association. Upon being instructed by the Court to count the 11,000,000 to 12,000,000 feet per annum that was produced by the Reed City plant of the Indiana Flooring Co. (a *nonmember*) as *Association* production, "because at the time this bill was filed that plant" belonged to the Horner Estate (a *member*), Mr. Ralston estimated that the *Michigan members'* percentage of the total *Michigan* production was "probably 80%." (Vol. I, pp. 328-9.) Also that the *Wisconsin members'* percent-

age of the total Wisconsin output was "about 75,—probably a little less, because I think that there are more mills out of the Association [there] than in Michigan." (Vol. I, p. 329.)

In response to a question put by petitioner's counsel Mr. James E. Dewey testified as follows:

> "I have no definite knowledge, but I should say that the members of the present defendant Association manufacture between 50 and 60% of the total production of maple, beech and birch flooring in the United States."

There was some correspondence carried on by officers of the defendant Association, wherein it was stated that the percentage of maple, beech and birch flooring produced by the members thereof was about 70% of the total amount produced in the United States. But as explained in one of said communications, this was a mere guess unsupported by data with respect to the production of nonmembers. (Vol. IV, pp. 842, 507.)

If, as the petitioner asserts, the Maple Flooring Manufacturers Association, has always been *one* association, and not *many successive* associations, then the said defendant Association has lost much ground since its organization in the 1890's. According to trade papers the members of the Maple Flooring Manufacturers Association in 1898 represented about *90%* of the total supply. (Vol. IV, p. 827.)

THE MANUFACTURE OF FLOORING.

PRODUCTION OF ROUGH LUMBER.

Although mankind has for centuries fashioned flooring of divers materials, it was not until the 1890's that maple, beech and birch woods were extensively used for that purpose. The very excellence of these woods for flooring purposes is the reason why they were not sooner employed. They are very hard, and it was not until the apotheosis of the Machine that means were found to efficiently fashion these refractory woods into flooring on a large scale. It was not until then that maple, beech and birch trees became commercially valuable. In fact, even the wasteful white-pine operators formerly left these trees standing, as not worth the trouble to cut. (Defts'. Ex. BB, Vol. IV, p. 826; Vol. I, p. 769.)

The first step in the manufacture of flooring is, of course, the production of the rough lumber, or the raw material of which flooring is made. Inasmuch as some of the members of the defendant Association own maple, beech and birch timber and produce all or a part of the rough lumber used by them in the manufacture of flooring, let us see what is necessary to be done by them in order to get their raw material.

Mr. Robertson described this work as follows:

> "The first move, as it now is practiced, is to establish camps in a given tract of timber. * * * These camps must be suitable for the accommodation of the men," who fell the timber and cut the logs into suitable lengths. "This is followed by the skidding crew, who skid it [the logs] to either a logging road or a spur of the railroad if we transport by rail. It is then brought to the mill, dumped into a pond of water, which in the winter season is

heated; this is for the purpose of cleansing the log" of sand. "It is then taken into the sawmill, which has usually a band saw or circular saw, which cuts the log into boards, or flitches sometimes. It then goes to the resaw, in most mills, where it is resawn from these larger flitches to boards of the required thickness. * * * From there it goes to what is called the edging saws, which are sometimes a single circular saw, sometimes a single band, sometimes a gang of each of these—where it is cut into suitable widths, and the larger defects are removed. And from this it goes to the trim saws, trimming out more of the unallowable defects. It then goes to the grader, who grades it for piling." (Vol. II, p. 511.)

Rough lumber (of the grades used in the manufacture of flooring)

"is then taken some distance from the mill to avoid fire hazard, and there it is piled, on cross piles, or what we call piling with stickers; usually we use dry stickers, to avoid sticker marks in the flooring lumber. *It remains in these piles anywhere from nine to eighteen months.*

Q. Why?

A. So as to give it what is called the air drying process.

Q. Is that necessary to properly season the lumber?

A. Well, we consider it so, after having given up some of these other ideas, which have been promulgated by certain kiln manufacturers—that they can take it direct from the saw and save us that process of handling it, in piling from the sawmill, and from the long carrying charge of anywhere from nine to eighteen months; *but that has been tried out and has not proven satisfactory to the flooring manufacturers; hence we all give it the air drying process.*

Q. That air drying process is used, is it not, by the present members of the defendant Association?

A. Yes, sir." (Vol. II, p. 512.)

The flooring mills of some members of the defendant are located at from 200 to 250 miles from their source of rough lumber supply. (Vol. II, p. 771.)

GRADES OF ROUGH LUMBER.

Rough maple, beech and birch lumber is graded in the order of their excellence as follows:

Firsts and Seconds (or Clear), Selects, No. 1 Common, No. 2 Common, No. 3-A Common, No. 3 Common. (Vol. II, p. 511; Vol. I, pp. 197.)

Mr. W. L. Saunders testified:

> "Firsts and Seconds, Selects, and the better end of No. 1 Common rough maple lumber are not generally used in the manufacture of maple flooring by manufacturers who produce their own lumber, because it is not profitable to do so. We are always able to get a better price for that class of rough lumber on the market than we can get by working it through the flooring factory. The better grades of rough maple lumber are very largely used by manufacturers of automobiles, pianos, vehicles, etc. As a rule, the Firsts and Seconds will bring as high a price in the market as Clear [the best grade] maple *flooring.*" (Vol. I, pp. 197-8.) (See also Vol. II, pp. 511-512; Vol. I, pp. 94, 222, 447-8.)

Flooring is therefore, usually manufactured of No. 1 Common, No. 2 Common and No. 3-A Common, although "some members use Selects and Firsts and Seconds * * * or the entire product of the log in manufacturing flooring." (Vol. I, p. 405.) There have been times when even No. 1 Common sold for more than the best grade of flooring. (Vol. I, p. 198.)

HOW ROUGH LUMBER IS CONVERTED INTO FLOORING.

After the rough lumber has been air-dried for from nine to eighteen months, it is piled loosely in layers, separated by dry stickers or narrow strips of board, on large steel trucks which run on tracks into and through the dry kilns. These dry kilns are usually constructed of concrete or brick, sometimes of steel and concrete, and occasionally of wood. The walls must be quite thick in order to retain heat. One flooring unit (which consists of a matcher and two end matchers—Vol. I, p. 397), producing from 7,000 to 8,000 feet a day, requires a dry kiln area 100 feet long and 18 feet wide.

At the receiving end of the dry kiln the air is kept quite moist so as to prevent case hardening of the lumber. This moisture is gradually reduced until the second half of the kiln is reached where the air is dry and is kept at a temperature of 180 degrees.

It is six or seven days from the time lumber is put into the dry kiln before it is taken out. The kiln receives and discharges lumber once a day. (Vol. II, pp. 512-514.)

From the dry kiln, the lumber is discharged into the cooling room where it remains until its temperature has been reduced to that of the mill, for the reason that hot lumber will not take a highly polished surface. The lumber is then ripped into various widths. In some mills these various strips of lumber are next double-surfaced, but in the modern plants one machine (the matcher) not only double-surfaces the strips, but puts a tongue on one edge, a groove in the opposite edge and hollows out the back. The function of the tongue and groove is, of course, obvious, whereas the hollow back provides an air chamber under the flooring and thus prevents dry-rot,

as well as reduces the weight of and the freight on the flooring. (Vol. II, pp. 514-516.)

In some mills the material is then taken to saws where defects are cut out, and thence to the end-matcher, where a groove is put in one *end* and a tongue on the other *end* of each piece,—so that both ends and sides of the flooring may be matched. In other mills, one machine trims out defects and end-matches the material. (Vol. II, p. 516.)

The grader then classifies the material as to grade; after which the material is put into appropriate racks, and then bundled with either twine or wire. These bundles contain from six to twelve pieces each. (Vol. II, pp. 516-7.)

The finished flooring is then taken to the warehouse and piled,—the various grades and sizes, of course, being kept separate. With but one exception, all the members of the defendant Association even load the flooring into cars inside the warehouse. (Vol. II, p. 517.) It *cannot* be *piled* outside. (Vol. II, p. 591.) "We keep our flooring in steam-heated storage rooms * * * and as far as possible in an even temperature." (Vol. I, p. 199.)

There is also *jointed* flooring, which is flooring that is neither tongued nor grooved.

THE DIFFERENT GRADES OF FLOORING.

Maple, as well as beech and birch, flooring is divided into three grades. In the order of their excellence these grades are: Clear, No. 1 and Factory.

The Clear is used in high-class homes, office buildings, apartments, schools, colleges, and textile mills. It must be free from stain and uniform in appearance.

The No. 1 is used in department stores, commercial, industrial and other buildings where the discolorations and other defects not permitted in the Clear grade, are unobjectionable.

The Factory is used in warehouses and industrial buildings where neither an absolutely smooth flooring nor one of fine appearance is essential. (Vol. II, pp. 518-519.)

For the Grading Rules now in force see Vol. IV. fol. pp. 5329-5336; Vol. I, p. 156, where the different grades are carefully defined.

The chief characteristic of maple is its hardness and durability. Beech and birch are almost as hard, and they are very easily stained and grained in imitation of other woods. (Vol. II, pp. 519-520.)

THE DIFFERENT THICKNESSES AND WIDTHS OF FLOORING.

Maple, as well as Beech and Birch, flooring is produced in the thicknesses and widths indicated in the margin.[12] In working up the rough lumber some 3½" and 4" faces are also produced, as well as some jointed flooring of various dimensions, but the widths listed in the margin are the usual ones. (Vol. II, p. 514.)

[12]

Thicknesses	Widths or faces			
5/8"	1½"	2"	2¼"	
½"	1½"	2"	2¼"	
5/8"	1½"	2"	2¼"	
13/16"	1½"	2"	2¼"	3¼"
1 1/16		2"	2¼"	3¼"
1 1/16"		2"	2¼"	3¼"
1 1/16"		2"	2¼"	3¼"

(Gov. Ex. 63-C, Vol. IV, pp. 497-501; Defts'. Ex. F, fol. pp. 5249-5253; Vol. I, p. 156.)

ALL GRADES AND WIDTHS MUST BE PRODUCED AT THE SAME TIME, REGARDLESS OF THE QUALITY OF ROUGH LUMBER USED.

Mr. Hamlin J. Ward (a nonmember manufacturer) testified:

"Grades of flooring depend very largely upon the grades of lumber used, that is, so far as the *percentage* of each grade is concerned. A thousand feet of lumber will make a *number of items of different grades and sizes.* There are *three grades,* Clear, No. 1 and Factory, and *there are several widths* which *must* be made in order to avoid waste. The *product* of *every* thousand feet of *rough lumber will consist of flooring of each width and grade.* In other words, in manufacturing flooring all three grades are made at the same time." (Vol. I, p. 94.)

Mr. William L. Saunders testified as follows:

"In some localities you cannot sell 3¼-inch face or 1½-inch face. In working up our lumber in the most economical method known in order to take care of our widths and avoid waste, we must make a certain amount of 3¼-inch and an inch and a half and two-inch faces. It is necessary for us to sell such widths in the markets where they are used, regardless of price, when our surplus gets to a point where we feel that we must unload. *The manufacturer has no choice as to the grades that he will produce. All three grades of flooring can be manufactured from cull lumber. We cannot, for instance, manufacture Clear flooring at one time, No. 1 at another, and Factory at another. Only by sorting out rough lumber in the yards could we manufacture any particular widths of flooring, and that is not at all practicable, for the reason that every board slashed from a log varies in width from the previous board.* Of course, we attempt to save our material, hence in sawmill practice we edge on half-inch basis. One board drop may edge eight inches wide, the next one by stepping in on the circle may edge nine inches wide. We who manufacture our own lumber stock

those widths as much as we can, but nevertheless, we have the odd widths to handle some time. We must handle the odd widths sometime. It is not practicable to sort the lumber before it goes to the dry kiln, because in lumber practice those widths are piled all together, and you could not be changing your machine as to widths, and so on, all the time." (Vol. I, p. 199.)

Mr. J. L. Colby testified that

"You have got to take your widths as you find them. While of course you can temporarily sort out certain widths * * * you can't keep that up. Within the course of a month or two you have got to manufacture all of the widths that your flooring stock produces." (Vol. I, p. 211.)

See also: Vol. I, pp. 239, 386, 389-0; Vol. 11, p. 591.

PERCENTAGES OF VARIOUS GRADES, SIZES AND KINDS OF FLOORING PRODUCED BY MEMBERS OF DEFENDANT ASSOCIATION.

We have seen that, taking the Association as a whole, 90% of all the flooring produced by its members, is maple; 5% beech, and 5% birch. (Vol. II, pp. 630-1, 778; Defts'. Ex. CC-3, Vol. IV, fol. p. 5432.)

The average percentages of the three grades in all three woods are: Clear 50%; No. 1, 35%; Factory 15%. (Defts'. Ex. KK, fol. IV, p. 842; Gov. Ex. 409 YY, Vol. IV, fol. p. 1622.)

The 13/16 x 2¼ *maple* flooring (*all three grades*) constitutes about 70% of the entire output of flooring produced by the members. (Defts'. Ex. KK, Vol. IV, p. 842; Vol. I, pp. 122-3.)

HOW MAPLE, BEECH AND BIRCH FLOORING IS MARKETED, AND TO WHOM IT IS SOLD.

Like steel, iron, wheat, flour, cotton, packing-house products, and other staples, flooring is sold months in advance of production. (Vol. I, pp. 403, 421, 341-2, 386; Vol. II, fol. p. 462, 465, 563.) Defts'. Grant Keehn Ex. 22, Vol. V, p. 955, is a graph which shows in feet the amount of unfilled orders of ~~all~~ 25 Association members at the end of each month, beginning with January, 1912, and ending with February, 1923. 4,000,000 feet for November, 1920, was the smallest amount, and more than 30,000,000 feet during 1917, 1919 and 1923 was the greatest amount of unfilled orders during the eleven years above mentioned.

SAID FLOORING IS SOLD LARGELY TO EXPERT AND WELL-INFORMED BUYERS.

"About 90 to 95 per cent of all the flooring produced by members of the Association is sold through retail and wholesale lumber dealers, who take the trade journals above mentioned."[14] (Vol. I, p. 171.) These journals also publish a great deal of other information and statistics with respect to market conditions, prices, sales, trend, etc., and are read generally by all dealers in flooring and other lumber products. (Vol. I, pp. 291-2.)

Most of these dealers, especially the large ones, send out inquiries by telegraph or mail, to from 3 to 40 or more flooring manufacturers asking for prices on specified quantities of different items, and buy where they can do so cheapest. (Vol. I, pp. 410-427, 429, 436, 448; Vol.

[14] The leading lumber journals of wide circulation wherein are published much of the data gathered by the defendant Association. (Vol. I, pp. 170-171.)

II, pp. 450-458, 459-461, 466, 467, 469, 530-538, 560, 564, 571-577, 578, 581, 584, 588, 597, 605, 617-624.)[15]

Many of the defendants have representatives in the principal markets of the country, some of them traveling salesmen as well as representatives, and stock and price lists are sent out from time to time by most members. (Vol. I, 173, 260, 319, 322, 341, 393-4; Vol. II, pp. 560, 564-5, 579, 592.) Some depend principally upon established good will of regular customers, who are reached by means of telegrams and letters. (Vol. I, pp. 210, 218, 259.)

Frequently the buyer offers to buy in the first instance at a fixed price, or after getting a quotation he will report back that some other manufacturer has made a lower price, and offer an order at said lower price. (Vol. I, pp. 289, 303-305, 313, 316-317, 342-3, 350-1, 363, 369-370, 233, 211.)

IT IS UNDISPUTED THAT THE FLOORING MANUFACTURED BY MEMBERS OF THE DEFENDANT ASSOCIATION IS SUPERIOR TO THE MAPLE, BEECH AND BIRCH FLOORING MANUFACTURED BY NONMEMBERS; THAT ARCHITECTS SPECIFY FLOORING MANUFACTURED BY MEMBERS OF SAID ASSOCIATION OR ACCORDING TO RULES ADOPTED BY IT, AND THAT WHOLESALE AND RETAIL LUMBER DEALERS, COMMISSION MEN AND JOBBERS PREFER TO DEAL WITH MEMBERS OF THE DEFENDANT ASSOCIATION.

As shown on pages 169-188, *infra*, the defendant Association and its predecessors slowly standardized the flooring manufactured by their members. Grading rules, carefully defining the different grades, were formulated.

---

[15]Hundreds of quotations by different manufacturers, both members and nonmembers, were identified by buyers and introduced in evidence by the defendants.

Mr. Robertson was appointed inspector of the different Association mills; periodical trips to all the mills are made, instruction is given to graders and other employees, and numerous suggestions have been made from time to time for the improvement of the machine work.

Within the last few years uniform steel gauges were adopted by all the members (except one) *so that the flooring from one Association mill would match with the flooring from the other Association mills.*

A reinspection service was established and maintained by the defendant Association and its predecessors for the reinspection, upon the request of buyers, of flooring manufactured by Association members. Inspectors are sent anywhere in the United States, regardless of the amount involved.

Mr. Hawley, Vice President of the Burns Lumber Company, of Chicago, which has been engaged in the retail lumber business for the past 22 years and which owns two yards, testified that his firm handled about 750,000 feet of maple flooring annually;[16] also—

"I know that there is now and has been an Association. *We prefer to deal with them because we are pretty sure of getting what we buy, both as to grade and quantity, and usually we find the prices right.*" (Vol. II, p. 462.)

On cross-examination, Mr. Hawley testified:

"We purchase at least 95 per cent of our maple flooring from the Holt Hardwood Company. We do not always get Holt's prices first. * * * We frequently get prices from commission men without knowing whom they represent. We usually ask commission men whether flooring offered was made by

[16] A minimum carload of flooring is 20,000 feet. (Vol. II, p. 458.)

a member of the Association or whose flooring it is they are quoting on. * * * *We have always preferred to do business with members of the Maple Flooring Manufacturers Association. I think their grades are more standard than the grades of outside people.*" (Vol. II, p. 466.)

Mr. Harris, the Manager of the Harris Flooring Company, of New York City, which represents the Harris Manufacturing Co., manufacturers of oak and maple flooring, testified that his company "handles about five million feet of flooring a year, of which 500,000 feet are maple flooring"; also

"We represent the Harris Manufacturing Company, *and buy from other manufacturers. Lately we have been confining our purchases of maple flooring to members of the Maple Flooring Manufacturers Association because of the uniform quality of the flooring manufactured by them.*" (Vol. II, p. 584.)

Mr. Storm, a member of the firm of George H. Storm & Company, of New York City, large retail dealers in all kinds of lumber, testified that his firm handled about 2,000,000 feet of maple flooring a year. (Vol. II, p. 581.) Mr. Storm testified as follows:

"The standardization of maple flooring by the Maple Flooring Manufacturers Association has been very beneficial to the purchasers of maple flooring.

Q. And in what respect, Mr. Storm?

A. Well, for example, *we know that when we buy maple flooring manufactured by a member of the Association that it will be well manufactured and if it is not we do not have to take it. If we purchase from outside mills we cannot be so sure about it, it may or may not be. And in purchasing we always mention the fact that it shall be Association manufacture, because that protects us, sort of like a 14 karat mark on your jewelry. That is a fact. It is very, very helpful.*

We frequently purchase from various manufacturers when our own mills cannot supply us, but I will tell you frankly that we do not like to purchase from any mill that is not an Association mill. We have been burned that way several times and do not like to do it. If there were no Association all the different manufacturers would be making their own grades and sizes and you would not know what you were getting unless you got it from one mill. I do not remember any case in recent years where we have had to have reinspection. *At times there have been complaints but the manufacturers themselves have always come on and adjusted them. We have, however, offered our customers the reinspection service and it is usually a very convincing argument. As a whole, the reinspection service is beneficial to the trade. * * * In our judgment the Maple Flooring Manufacturers Association has been decidedly beneficial from the standpoint of the user of the maple flooring."* (Vol .II, p. 583.)

Mr. Earl Bartholomew, President of the E. Bartholomew Hardwood Co., of Chicago, which handles about 2,000,000 feet of maple, beech and birch flooring a year, besides oak flooring and hardwood lumber, testified:

"Q. And whom do you prefer to deal with, as a general rule?

A. We would rather buy from the Association members, for the reason that there is *uniformity* of grade; and then *in case of dispute with a customer there is a recourse of inspection, at any destination.*

Q. State whether or not you have found the grades of flooring manufactured by the different members of the Association satisfactory?

A. They have been very satisfactory.

Q. State whether or not you have found the reinspection service maintained by the defendant Maple Flooring Manufacturers Association satisfactory?

A. Yes. They have given prompt service, and

so far as we know it has been satisfactory to both buyer and seller.

Q. Do you consider that that service is efficiently and honestly and fairly maintained?

A. Yes, we believe so." (Vol. II, p. 455.)

This whole matter is summed up by Mr. C. A. Flanagin, who has had twenty-five years' experience in all branches of the lumber business. His company annually handles about 3,000,000 feet of maple, beech and birch flooring at its Chicago yards. (Vol. I, p. 427.) Mr. Flanagin's testimony on this point is set forth in the margin.[17]

---

[17] "Q. Why do you prefer to deal with members of the defendant Association?

(fol. 760.) A. Well, for many reasons. One of our reasons is that we are surer of getting a uniform grade of flooring and uniform manufacture; and in case we have any complaint on it, as often will happen, even if the grade is right,—an architect may not be feeling just right when he looks at it, and he will think that it is off grade, or perhaps the owner is complaining to the architect, and it is very easy for the architect to fall back on the materialmen, the yard here, that is the go-between between the manufacturer and the consumer, and he will complain about the grade; well, if we are buying association flooring all we have to do is call for an association inspector, and if the flooring is right, that settles it, and if it is not right we want to protect the architect and the consumer. If it is right it settles any argument—which we could not settle otherwise.

Q. Have you had occasion to have re-inspections, as they are called?

A. Yes, sir.

Q. State whether or not those re-inspections have been satisfactory to you and your clients, or unsatisfactory?

A. Why, they have been satisfactory. We have had different results. I call to mind about a year ago, I think, that we had a complaint on some maple flooring, factory maple, from I. Stephenson Company; and we called for the association inspector, and he sustained

Similar testimony was given by dealers of Boston, Philadelphia, New York City, Grand Rapids (Vol. I, p.

---

our customer's complaint, and I. Stephenson & Company had to make good through us to our customer.

Q. Did they do that readily?

A. Oh, yes. They sent a man down here, their Mr. Shepeck, from Wells, came down here and authorized our customer to go ahead (fol. 761) and sort the flooring and use what he could, and they paid for the labor and replaced the flooring.

Q. Have such disputes as have arisen been adjusted satisfactorily to you and to your customers?

A. Yes, sir.

Q. Either one way or the other?

A. Yes. We have had complaints where the customer was wrong and where the inspector sustained the manufacturer; but it was always satisfactory; after the inspector had made his inspection and given his report, why, that settled it,—everyone was satisfied.

Q. Would you say that that inspection service of any of the associations that have been in existence since 1915 has been honestly and impartially conducted?

A. Yes, sir; decidedly so. We used to buy of R. Connor Company when they were members of the Association. When they discontinued their membership in the Association we ceased to buy from them because we felt that we had no protection if there should be a complaint on the grades.

Q. State whether there is any difference between the uniformity of grades manufactured by members of the Maple Flooring Manufacturers Association and the grades that are manufactured by non-members?

A. Outside of Cadillac I think the grades are very uniform. We consider Cadillac makes a better grade of maple flooring than any other manufacturer that we know anything about. In fact, they make a better grade of flooring than we made ourselves, and we thought we made as good a grade as could be produced.

Q. To whom do you refer by 'Cadillac'?

A. Cobbs & Mitchell—Cobbs & Mitchell and Mitchell Brothers, their grades are identical, the two plants.

Q. Leaving out Cobbs & Mitchell, and taking the grades manufac-

141; Vol. II, pp. 459, 467, 538, 562, 565-6, 579, 593, 604, 610, 618), and the petitioner stipulated that testimony to

---

tured by the other members of the Association, how does that compare with the grades of nonmembers?

A. I would say they were very uniform, outside of Horner's grades; I am not familiar with them since he has been a member of the Association; before that time his grades were unsatisfactory; so much so that we discontinued any business with him.

Q. How about the machine work on them?

A. *Their machine work is all very good; they interchange, you know, and if you have a carload of flooring from one concern it is a big advantage to be able to match that up with somebody else, in case you can buy a little cheaper from some other manufacturer, and you have a part of a carload on hand, it enables you to buy from some other manufacturer and mix it right in and ship it out. Otherwise you would have to keep a little of this man's flooring, and a little of the others, and if you had a little on hand you would have to keep it entirely separate and ship it separate, which would be quite a hardship on the lumber yards.*

Q. The matching of the products of the different Association members has been brought about, say, within the last two or three years, has it not?

A. Largely so, yes sir.

(fol. 763.) Q. You consider that change a distinct advantage to the buyer?

A. To the dealer, yes sir.

Q. To the dealer?

A. To the dealer, yes sir; it enables him to carry less flooring on hand, as I just explained. You do not have too many different kinds, in case he changes in buying from one to another.

Q. Have you bought any flooring of Horner's, after he became a member?

A. No, I think not."

(Vol. I, pp. 430-1.)

like effect would be given by representatives of the Hill Lumber Company, the Tozer Lumber Company and the Capital City Lumber Company, of St. Paul and Minneapolis, if called. (Vol. I, pp. 225-6.)

That architects specify that maple, beech and birch flooring shall conform to the Grading Rules of the defendant Association, see Vol. I, pp. 94, 140, 293, 307.

That the product of the Southern mills is considered inferior, see Vol. II, pp. 608, 610—the testimony of a large Philadelphia dealer.

With respect to the New England product, Mr. Robertson testified as follows:

"Q. And there is considerable flooring manufactured in the New England states, is there not?

A. Yes. It is not standardized, neither is it graded, according to our grading rules. They manufacture it in long lengths, but do not grade it in accordance with our grading rules, at all, on most of it.

Q. What are the differences between the Eastern grading and the grading of the present defendant Association?

A. There are defects allowed in their stock which are not allowed in our grading; and they will leave the boards as they come from the matcher, long, with the defects in. We trim them out, and make the grade, make the grade all Clear, No. 1 and Factory. Maybe there is a defect down there, pretty close to the end of the board; we will throw that end of the board into Factory. And they leave that the whole length, and call it a log run; it is just as it comes from the log or lumber.

Q. What do you say, if there is a defect in it? What defect do you mean?

(fol. 915.) A. Knots, shakes, splits, hard, or anything—such defects as have been mentioned before in my testimony." (Vol. II, pp. 523-4.)

Mr. Robertson (the Association's inspector of plants and field representative) is corroborated by correspondence that passed between the P. W. Wood Corporation of Boston, Mass., and the Holt Hardwood Company during 1921. The former company paid the latter $5 to $9 a thousand feet more than it could buy Maine and Canadian flooring for. (Vol. I, pp. 245-247.)

THE PROOF WAS UNDISPUTED THAT THE PRICES OF ASSOCIATION MEMBERS FOR MAPLE, BEECH AND BIRCH FLOORING HAD BEEN AND WERE FAIR AND REASONABLE.

The John Schroeder Lumber Co.—one of the largest in the country—abandoned the manufacture of maple, beech and birch flooring because they could not make it pay at Milwaukee.

> *"It costs more to manufacture flooring in the City of Milwaukee than we can buy it in the open market.* We found that we could purchase to better advantage from other fields than manufacture the flooring needed for big jobs. Most of the people from whom we buy flooring call us shoppers. We shop around and get the lowest prices possible." (Vol. I, p. 93.)

> "I think we started manufacturing flooring about 1890" and "quit in 1913. We had figured out that we could not make any money in the manufacture of flooring, and would not buy any more lumber for the manufacture of flooring. Later on our Government ordered us to start making maple flooring again. A lot of Government work was allocated to us, and we had to go back into the game. We continued the manufacture of flooring until after the war. *We quit the manufacture of maple, beech and birch flooring at the beginning of 1922.* * * *

> We quit the manufacture of maple, beech and birch flooring at the beginning of 1922, *because we could not make a dollar out of it. We were losing money on every foot we made. Since that time we have procured maple, beech and birch flooring for our retail yards in Milwaukee from other manufacturers."* (Vol. I, pp. 435-6.)

Mr. Koerble, the General Purchasing Agent and Traffic Manager for the John Schroeder Co., is a large buyer of the flooring above mentioned, and has dealt with the different members of the defendant Association. (Vol. I, pp. 436-445.) He testified as follows:

"Q. What would you say as to the reasonableness or unreasonableness of the prices of maple, beech and birch flooring since you have been buying it, after your going out of business in 1921, that is, after you ceased manufacturing it in 1921?

A. *The maple flooring, at the prices we have been paying for it, and against the price of rough lumber, we are far better off to buy the flooring.*

Q. *Than to manufacture it?*

A. *Yes, sir.*

Q. You consider that the prices that the public have to pay for maple, beech and birch are reasonable, or unreasonable?

A. *They are very reasonable.*

Q. *State whether or not you are familiar with the prices of the rough lumber, and the cost of manufacturing it?*

A. Yes sir, I am.

Q. And your testimony, that the prices are and have been reasonable is based upon your knowledge of costs, and your manufacturing operations before?

A. Yes sir.

Q. And the price of rough lumber?

A. Yes sir." (Vol. I, p. 446.)

Mr. Hawley, the Vice President of the Burns Lumber Co., of Chicago, retail dealers in all kinds of lumber products, including maple flooring, who, after testifying that he preferred to buy such flooring from members of the defendant Association because of the quality of their

flooring, their accuracy as to quantity, and because "usually we find their prices right," testified as follows:

"Q. Would you say that the prices that you have paid for maple flooring during the period you have mentioned have been fair and reasonable or unfair and unreasonable?

A. *I would say they are very fair.*" (Vol. II, p. 462; see also p. 466.)

Mr. Charles J. Heniff, a small retail lumber dealer at Chicago, who buys about 80% of his maple flooring from a member of the defendant Association, testified:

"Q. Do you consider that the manufacturers have been fair in dealing with the retail yard dealers or wholesale yard dealers?

A. I believe they have.

Q. Do you consider that the price of maple, beech and birch flooring has been fair and reasonable?

A. I do." (Vol. II, p. 467.)

Mr. C. A. Flanagin, testified as follows:

"I am a citizen and resident of Chicago, Illinois, and am engaged in the lumber business. I am the Vice President of Rittenhouse & Embree Company. I have been engaged in the lumber business for 25 years, in practically all branches. I have been in the manufacturing end and the buying and selling of lumber of all kinds. Rittenhouse and Embree Company are wholesalers and retailers of all kinds of lumber in Chicago. We handle pine lumber, hardwood lumber, hardwood flooring, pine flooring of all kinds, everything, in fact, in lumber, both rough and dressed.

Rittenhouse & Embree Company does not manufacture any maple, beech or birch flooring at the present time. The company discontinued the manufacture of such flooring in 1915, I believe. Since 1915 our company has bought such maple, beech and birch flooring as it has handled. We handle approx-

imately three million feet of maple, beech and birch flooring annually. The Rittenhouse & Embree Company was once engaged in the manufacture of maple, beech and birch flooring in Chicago.

Q. Why did your company cease the manufacture of maple, beech and birch flooring?

A. *Well, it reached a point where we considered that we could make more money buying our flooring than manufacturing it;* we had to bring the lumber in here green, and dry it; and of course there is a great deal of waste in manufacturing, there is a waste in kiln drying, and then a large waste in ripping the lumber. I do not know how elaborately you want me to go into this, but, if you know, lumber is produced from a log in random widths, and then it has to be ripped into flooring widths, widths that will make standard widths of flooring; and in ripping it there is a large waste to it. Well, of course, we had to pay freight on this lumber in the green, and there was a big loss there, over manufacturing it at the mills; of course they have the same loss in ripping and in waste, but they do not have to pay freight on it; and then other conditions, labor conditions, were against manufacturing in Chicago, also, so that we have found that we can make more money buying our maple and oak flooring, both, than manufacturing it.

Q. Did you go into the matter of costs before you ceased the manufacture of it?

A. That is the reason that we ceased to manufacture it. For a good many years, like others, I presume, we ran our business all in together, and we were making some money, and did not know where we were making it; and when I took over the management of the manufacture of the hardwood flooring, I started keeping costs. I had a little suspicion that we were not doing as well out of that department as we thought we were; and I kept cost, very complete, kept cost of each department, even to the tying up of the flooring, the twine we used, and the cost of ripping it, kiln drying and waste, between the green lumber and the kiln dried, and the waste

between the kiln dried and the manufactured product, kept all those wastes (fol. 757) and all the costs of each operation; and I found at the end of the first year we would be better off if we were not manufacturing; and when I showed the results to our Board of Directors they gave me one year longer to test it out; they were not quite satisfied; but at the end of the second year the results were such that they immediately decided to discontinue manufacturing in Chicago.

Q. What did you do with that plant?

A. Wrecked it; sold the machines for what we could get for junk.

Q. You spoke about the waste between two different processes there. State where the waste is, and give the percentages, approximately, if you can?

A. Well, that is some time ago. As far as I can remember—as near as I can remember, the waste on maple between measurement as it came into our yard and the measurement as it came out of the kilns, was about eight per cent, as I remember it. And then the shrinking between the kiln and the manufactured product would vary according to the class of lumber; you will get better maple from one section than you will from another, you know; it will work up to better advantage; but as I remember it, it ran all the way from fifteen to twenty-two or twenty-three per cent waste.

Q. Additional?

A. Yes sir. Since 1915 we have bought such maple, beech and birch flooring as we have handled and have supplied the flooring for a great many large buildings here in Chicago, either before or since 1915. We furnished practically all the large buildings on State street, starting with Rothschild's, The Hub Department Store, The Boston Store, Marshall Field Store for Men, Hibbard, Spencer, Bartlett's stores and warehouses, Rock Island Depot, The Railway Exchange Building, both sections of the First National Bank Building, The Continental Bank Building, the building occupied by the Edison Com-

pany. We also furnished the flooring for both sections of the Illinois Merchants Bank Building, now under construction, which will use approximately 800,000 feet. The other buildings mentioned above are large, modern buildings and take on an average of about 200,000 feet each." (Vol. I, pp. 427-9.)

Mr. Flanagan also testified as follows:

"Q. *What is your opinion as to whether the prices for maple, beech and birch flooring have been fair and reasonable to buyers and to the public since 1915 up to the present time?*

A. *Yes sir, I think they have been fair. They have fluctuated a great deal, due to supply and demand.* During the war there was a shortage of flooring, and prices, like everything else, went out of sight; *but I think they have been very fair and equitable at all times, compared to the price of rough material and the cost of manufacture.*" (Vol. I, p. 432.) (See also Vol. I, pp. 97, 367, 395.)

Mr. Charles A. Goodman, of the Goodman Lumber Co., Goodman, Wisconsin, and the Sawyer-Goodman Co., of Marinette, Wisconsin, manufacturers of maple flooring, hardwood, hemlock and white pine, testified that the capacity of his maple, beech and birch flooring plant at Goodman, Wisconsin, was 12,000 feet a day, and that the capacity of the Marinette flooring plant was from 12,000 to 15,000 feet a day. (Vol. I, pp. 85-86.) Despite this large capacity, the production of his two companies was quite small. (Vol. I, p. 86.)

He testified that

"neither of our companies belongs or has ever belonged to the defendant Association." (Vol. I, p. 87.)

Mr. Goodman, a witness produced by the petitioner, on cross-examination also testified as follows:

"*We manufacture our maple flooring from our own logs, our own lumber. There is almost no time*

that I can recall when there was any money in making maple flooring out of the maple lumber we had on hand. We could usually sell the maple lumber to some one else at a price which if we put it into the factory at the same price would leave us no margin, but we have been making this maple flooring largely as a matter of taking care of our trade and accommodation to our customers. We sell flooring in mixed cars with other lumber. The demand for maple lumber is very much broader than the demand for flooring. There are a great many uses to which maple lumber is put, whereas maple flooring is limited almost entirely to use in factories, homes and commercial buildings and the demand for it is dependent on the condition in the building industry. *At times we have purchased flooring from other manufacturers and resold it to our trade. * * * We have bought flooring from the Holt Hardwood Company, Wisconsin Land & Lumber Company, and mostly from the J. W. Wells Lumber Company because they are neighbors of ours and some from I. Stephenson Company."* (Vol. I, pp. 86-7.)

All the companies last above mentioned are defendants in this suit.

See also Vol. I, pp. 97, 367, 395; Vol. II, pp. 574, 589, 609, 619, 778-9; Vol. III, p. 165, and pages 116-120, of this brief.

The foregoing evidence was undisputed. The petitioner did not produce *a single buyer or manufacturer* in the whole United States to testify that the prices of maple, beech or birch flooring ever had been or were unfair or unreasonable.

Moreover, as we shall later see, the foregoing evidence was corroborated by evidence with respect to costs of manufacture, etc. See Defts'. Gordon Ex. 6, Vol. V, p. 899, where the index of prices of "The Product" of the members of the defendant Association are compared with

the indices of the "All Commodity Prices," "All Building Materials Prices" and "Lumber Prices"; Defts'. Grant Keehn Ex. 17, Vol. V, p. 945, where the prices of "The Product" are compared with the prices of competing wood floorings; Defts'. Grant Keehn Ex. 18, Vol. V, p. 947, where the index of the prices of "The Product" is compared with the indices of the prices of competing wood floorings; Defts'. Grant Keehn Ex. 19, Vol. V, p. 949, *where the index of the prices of "The Product" is compared with the index of the prices of rough maple lumber;* Defts'. Grant Keehn Ex. 21, Vol. V, p. 953, *where the index of the prices of "The Product" is compared with the index of the "Average Manufacturing and Marketing Costs";* Defts'. Grant Keehn Ex. 23, Vol. V, p. 957, *where the relation of the prices of "The Product" to the demand and supply thereof is shown;* Defts'. Grant Keehn Ex. 29, Vol. V, p. 971, *where the average cost of "The Product" is compared with the range of f. o. b. mills selling prices;* Defts'. Grant Keehn Ex. 30, Vol. V, p. 973, where the index of the prices of "The Product" and the index of the average cost thereof are compared with the indices of the prices of competing wood floorings.

It will be necessary to go into these matters in the argument, and further comment will not be made here.

THE PETITIONER DID NOT PRODUCE A SINGLE BUYER TO TESTIFY EITHER THAT ANY OF THE DEFENDANTS HAD EVER EXACTED UNREASONABLE PRICES FOR FLOORING, OR THAT THEY HAD EVER BEEN GUILTY OF DISHONEST, UNFAIR OR ARBITRARY PRACTICES.

THE RECORD ABOUNDS WITH PROOF THAT THE DEFENDANTS WERE UNUSUALLY FAIR, CONSIDERATE AND HONORABLE IN THEIR DEALINGS WITH BUYERS.

In addition to other instances heretofore mentioned, we wish to call attention to the following typical illustrations of the defendants' methods of doing business. We say that they are *typical*, for the reason that they help to explain *why* dealers *prefer* to trade with members of the defendant Association.

Mr. Bartholemew testified as follows:

"Q. You mentioned, I believe, one experience that you had with Cummer-Diggins Company. State what that was,—that you told me about.

A. Well, this year we bought from Cummer-Diggins quite a bunch of flooring in Clear, No. 1 and Factory, being I think, along the first of the year, around the first of the year, at $110 a thousand.

Q. How large a quantity?

A. As I remember there was about 150,000 feet in this lot.

Q. *And that was for future delivery, was it not?*

A. *Yes, sir.*

Q. Now, go on.

A. And they afterwards changed their price to meet the conditions, to $105, and later to $100, and as I remember a little later on, to $95—*voluntary on their part.*

Q. *In other words, they reduced the price on future deliveries to you, in acordance with the market at that time?*

A. *Yes sir.*

Q. *Notwithstanding the fact that they had your contract for the whole lot at $110?*

A. *Yes, sir.*

Q. *And you say they did that voluntarily?*

A. *Absolutely.*

Q. You did not ask them to do it?

A. Oh, no.

Q. *He mentioned that the market was softer or lower, and he thought that in fairness to you you should have the benefit of it?*

A. *That was the idea.*" (Vol. II, pp. 455-6.)

It is a matter of common knowledge that, not only when the prices of all commodities were rapidly rising owing to the unprecedented conditions that obtained during the war, but when the terrific slump came later on, commercial practices were as vicious as they could well be in any form of society. After commodity prices had advanced to undreamt of heights, many manufacturers would make new contracts and ignore previous ones made at lower prices, or withhold deliveries on various pretexts, or seek on technical grounds to evade their just obligations. *The conduct of the defendants conformed to the highest peace-time standards throughout those feverish times.*

Mr. Alexander B. Clancy testified as follows:

"Our dealings with the manufacturers above mentioned [members of the defendant Association] have always been very satisfactory. *In no instance have any of them ever attempted to cancel a contract or to get higher prices after making a sale to us for future delivery when the price was later on advanced. Once we placed an order for about 350,000 feet of 2¼-inch Clear maple flooring, and I think the price was*

then $56 a thousand. The manufacturer carried that order along for more than a year before we required shipment, and I am sure the price went up from $56 to about $225 or $235 a thousand before the order was completely shipped. Delivery was made without complaint. Bigelow-Cooper Company was the manufacturer that made the shipment. They took their medicine like a man and delivered beautiful flooring without one word of complaint. The people who received the flooring were very technical, but they had no complaint to make with respect to this flooring. The flooring in question went into the Western Electric Company plant at 52nd and 22nd streets." (Vol. II, pp. 459-460.)

Mr. Albert P. Hawley testified that he had entered into a contract with the Holt Hardwood Co. for 150,000 ft. of 13/16 x 2¼ Factory maple flooring at $37.50 per M., to be shipped as ordered. Owing to severe competition he had been compelled to sell 82,000 ft. of 13/16 x 2¼ Factory maple flooring to a customer at $35 per M. The correspondence introduced shows that he acquainted the Holt Hardwood Co. with the facts and asked said company to let him have the 82,000 feet at $35 per M., without applying said lot on the standing order for 150,000 feet. *The request was granted.* (Vol. II, pp. 463-4.)

Many nonmember manufacturers, as well as buyers, large and small, in numerous cities testified, but none of them had anything but praise for the methods, practices and conduct of the defendants.

COMPETING FLOORINGS.

Mr. Robertson testified as follows:

"Q. In your trips about the country you have become familiar, have you not, with the floorings, whether natural or synthetic, that compete with maple, beech or birch flooring?

A. Yes, I come in contact with that.

Q. I wish you would name the competing floorings.

* * * * *

A. *Well, in wood there is the oak, and the yellow pine, white pine, Norway pine, fir, tamarack, cypress, gum, redwood, spruce, wood block; and they make even hemlock flooring.*

* * * * *

Q. What are some of the synthetic floorings that compete?

A. *Cement, and tile, and slate, and soapstone, terrazza, asphalt, mastic, mastolith, gypsum, cork, linoleum and marble.*" (Vol. II, p. 520.)

That the manufacturers of the floorings above mentioned have at all times been in active, vigorous competition with the manufacturers of maple, beech and birch flooring, see Vol. I, pp. 288-9, 294, 211-2, 255; Vol. II, pp. 521, 522, 525-6; Gov. Ex. 15-CCC, Vol. III, p. 194; Gov. Ex. 15-H, p. 136; Defts'. Robertson Ex. 21, Vol. IV, p. 875; Defts'. Robertson Ex. 22, Vol. IV, p. 876-8; Defts'. Robertson Ex. 23, Vol. IV, pp. 880-2; Defts'. Robertson Ex. 24, Vol. IV, pp. 882-884; Defts'. Robertson Exs. 25, 27, 29, 30, Vol. IV, pp. 884-891.)

DIVERS FACTS WHICH ARE INSUPERABLE BARRIERS TO CONCERT OF ACTION BY DEFENDANTS WITH RESPECT TO PRODUCTION, PRICES, COMMISSIONS OR TERMS OF SALE.

We set forth in the margin the names of the members of the defendant Association, the amount of maple, beech and birch timber owned by each member, and the number of matchers (which determine capacity) in their respective plants.[18]

The *first fundamental difference* is the amount of maple, beech and birch timber owned by the different members of the defendant Association.

	Amount of Maple, Beech and Birch Timber	Number of Matchers
W. D. Young & Co.	25,000,000 ft.	8
Kerry & Hanson Flooring Co.	None	4
Strable Lumber & Salt Co.	None	4
*Bigelow-Cooper Co.	253,750,000	4
Mitchell Bros. Co.	None	6
Cobbs & Mitchell, Inc.	72,674,000	8
Cummer-Diggins Co.	125,000,000	2
East Jordan Lbr. Co.	116,000,000	3
Nichols & Cox Lbr. Co.	None	3
West Mich. Flooring Co.	None	4
**Wisconsin Land & Lbr. Co.	203,000,000	7
I. Stephenson Co., Trustees	99,040,000	7
J. W. Wells Lbr. Co.	75,000,000	3
Northwestern Cooperage & Lbr. Co.	86,000,000	5
Grand Rapids Trust Co., Receiver for Wm. Horner	100,000,000	11
Holt Hardwood Co.	None	3
Foster-Latimer Lbr. Co.	50,000,000	3
Flanner-Steger Land & Lbr. Co.	50,000,000	3
Kneeland-McLurg Lbr. Co.	105,000,000	1
North Branch Flooring Co.	None	2
Osgood & Blodgett Mfg. Co.	None	1
Oval Wood Dish Corporation	125,000,000	2

*Now Kneeland-Bigelow Company

**It is a question of law whether the Wisconsin Land & Lumber Co. is a member of the present Association.

(Defts'. Ex. DD-1, Vol. IV, p. 839, Vol. II, p. 779; Defts'. Ex. CC-2, Vol. IV, fol. p. 5431, Vol. II, p. 773.)

The *second fundamental difference* is quantity of flooring produced. For the year 1920 the production of the different members ranged from 618,000 ft. to 24,709,000 ft. (Defts'. Ex. CC-1, Vol. IV, pp. 836, 837; Vol. II, p. 772.) For the year 1922 the production ranged from 518,000 ft. to 21,431,000 ft. (Defts'. Ex. CC-2, Vol. IV, fol. p. 5431; Vol. II, p. 773.)

The *third fundamental difference* is location of plant. Members own plants in Chicago, St. Paul and Grand Rapids; in large towns such as Bay City, Saginaw and Cadillac, Mich.; in sawmill villages, such as East Jordan, Mich., Mellen, and Phillips, Wis., and so on down to mere lumber camps in the woods such as Blackwell, Wis. (See p. 4, *supra*, for the location of the different plants.) *These differences result in different labor, manufacturing, marketing and other costs.* (Vol. I, pp. 396, 213, 428.)

The *fourth difference* is the value and quality of the timber owned or the rough lumber available to the different members. The timber in the Southern Peninsula of Michigan is of higher quality and is worth more than the timber in the Upper Peninsula and Wisconsin. (Vol. I, p. 213.)

The *fifth difference* is that, whereas some members are engaged exclusively in the manufacture of flooring, others not only produce flooring but are also engaged in various branches of the lumber business, as well as in other lines of industry. The *entire output* of some members is flooring (Vol. I, pp. 338-9, 405), whereas, *flooring constitutes but 5% of the business of another member.* (Vol. I, p. 226.) Some produce white pine and other kinds of lumber, such as hemlock, basswood, elm, ash, as well as flooring, and sell maple, beech or

birch lumber; others convert into flooring all the maple, beech and birch lumber they produce; others produce as well as buy rough lumber for converting into flooring; others must buy all such rough lumber. *Some members are also engaged in the salt business or land business, or manufacture shoe-last blocks, bowling pins, broom handles, wood dishes, clothespins, pie plates,* etc. (Vol. I, pp. 197, 226, 233, 286, 338-9, 393, 405, 426.)[10]

The foregoing facts evidence marked diversity of size, equipment, organization, business relations, financial strength, credit, needs, business methods, ability, information and reaction to economic and political phenomena, especially as they affect the production and sale of maple, beech or birch flooring.

But there are other and more fundamental differences which preclude concert of action with respect to prices, etc. *All the members manufacture maple flooring, 12 manufacture beech flooring, 15 birch flooring.* "Some manufacture one wood [maple flooring] some two woods [maple and/or beech or birch flooring] and some all three woods [maple, beech and birch flooring]." (Vol. I, pp. 154, 161, 197, 226, 233, 260, 286, 393.)

As we have already seen, some use the full product of the log in manufacturing flooring, whereas, generally

---

[10] All the defendants did not testify. Court and counsel agreed that typical manufacturers should testify and that the other defendants would, if placed on the stand, testify to "substantially the same effect and to *similar facts and circumstances* * * * and that they would produce data and correspondence similar in character to that" produced by the defendants that testified. (Vol. I, pp. 225, 409.) *The names of the different members also give* some indication of the character and magnitude of their business where the record is silent.

the better grades of rough lumber are not used for that purpose. (Page 39, *supra.*)

Different matchers, or flooring machines, which vary markedly in capacity, are also used. (Vol. II, pp. 524-5; Defts'. Robertson Ex. 866, Vol. IV, p. 866; Vol. I, pp. 226, 197, 86, 88, 93, 137, 339.)

All members are not engaged in producing the same thicknesses and widths of flooring.

"*Some of them manufacture thick flooring, many of them don't manufacture it at all.*" (Vol. I, p. 154.)

"*Some mills make items that are not made by others.*" (Vol. II, p. 457.)

Mr. Colby, of Cummer-Diggins Co., testified:

"We manufacture *all* faces of *13/16* flooring, from inch and a half, two inch, two and a quarter, *three and a quarter, and three and a half inch. We do not manufacture two and a half inch. We also manufacture* ⅜ *by an inch and a half and* ⅜ *by 2 inches.* We manufacture half an inch by 2 inch; half inch by two and a quarter inches. *I think that is all.*"[20] (Vol. I, p. 211.)

"As a matter of fact, our production of different grades differs from the production of other manufacturers. I think we manufacture *more* of certain *widths.* For instance, we manufacture *more three and a quarter inch* flooring than many other manufacturers do." (Vol. I, pp. 221-2.)

Mr. Shepeck, of I. Stephenson Co., Trustees, testified that his company manufactured largely the *narrow faces;* that "*we have never made three and a quarter inch flooring.*" (Vol. I, p. 263.)

---

[20]See page 42 *supra* for list of thicknesses and widths.

Flanner-Steger Land & Lumber Co. does not manufacture any 13/16 x 2" maple flooring. (Vol. IV, p. 575,—fol. p. 4595.)

Mr. Greene, of the West Michigan Flooring Co., stated that the three and a quarter inch face *accumulated very slowly* with him (Vol. I, p. 350), whereas, members like the Kneeland-Bigelow Co., with a very large production, and who cater to Eastern trade, manufacture a great deal of the wider faces, because the East demands such flooring, whereas the Middle West prefers the narrower faces. (Vol. I, pp. 393, 262-3.)

Some members manufacture flooring one and one-sixteenth of an inch thick, others do not. (Vol. I, pp. 210, 236.)

And of course the principal trade of the members is different. Mr. McLurg, of the Kneeland-McLurg Lumber Co., of Phillips and Morse, Wisconsin, testified:

"We desire to make flooring so as to enable us to ship *mixed carloads* to the retail yard trade, *and use flooring as a drawing card for other business. Flooring is a side line with us and constitutes about 5% of our business.* * * * *The freight rates on flooring are exactly the same as on other lumber products that we ship.* We sell *practically all of our maple flooring in the Middle West.* Our birch flooring, however, goes to the eastern markets. *We sell our maple flooring in the Middle West because we have the advantage there on freight rates.* * * * For instance, if a retailer wants 200 feet of flooring and we can sell him about 16,000 feet of other yard stock, our ability to sell the flooring is nearly as much benefit to our business as a salseman would be. *In the territory that we work there is a big demand for one and one-half inch flooring. The Michigan manufacturers don't have that trade. We are usually oversold on the narrow face, whereas the Michigan manufacturers are usually long on it. We*

have to take that into consideration in making our prices. We very often buy narrow flooring from other manufacturers in order to take care of our trade." (Vol. I, pp. 226-7. See also Vol. I, pp. 262-3.)

Other manufacturers sell flooring throughout the United States, as well as export it. (Vol. I, pp. 234, 319, 384.) *One sells most of his flooring in "Boston, New York, Philadelphia and other points in the same territory"* (Vol. I, p. 288), *whereas another testified that "the largest portion of our flooring is sold in the East and Middle West because the freight rates are an advantage to us over other manufacturers."* (Vol. I, p. 393.)

Mr. Colby testified that—

> "I think it was in 1920, the *general* supply of Factory flooring was immense, *probably the largest stock that has ever been on hand*—individually *we didn't have any, we were oversold most of the time simply because we had worked up a trade for that particular item. Our prices on Factory were advancing while the rest of them were declining."* (Vol. I, p. 217.)

See also, Vol. I, pp. 217, 222, 228, 360, 209-210, 261-2, 263, 288, 236, 292, 319, 384, 393-4.

And, of course, the members with plants at Chicago and St. Paul cannot pay the freight on rough lumber and then ship East, South and West in competition with members and nonmember manufacturers, especially with those owning timber. Their trade is necessarily largely confined to buyers in their respective territories, *but they are in competition there with both members and nonmember manufacturers.*

Different methods of marketing the flooring are also used.

Some members have traveling salesmen; others have none; some have exclusive representatives in different parts of the country, others have none; some depend exclusively upon correspondence; some sell to consumers direct, others will not; some broadcast individual price lists, others do not, etc., etc. (Vol. I, pp. 218, 227, 228-9, 260, 261-2, 288, 319, 360, 393-395, 341; Vol. II, pp. 538, 560, 564-5, 582, 592, 322.)

Some members have their own brands and trade-marks, and each of them pushes the flooring of his own brand or manufacture. (Vol. I, pp. 261, 362; Vol. II, p. 492.)

Quite naturally, or rather inevitably, some buyers expressed a preference for particular brands, or preferred the product of some manufacturer, at least in some grades, to that of others. (Vol. I, p. 431; Vol. II, pp. 455, 462, 466, 467, 562-3, 564, 607.)

Other especially vital factors, are **individual stock conditions** and **warehouse capacity.**

We have seen that the different grades and widths must be manufactured together, and that all of them accumulate, even though a manufacturer's *principal* trade and production are in certain instances largely confined to particular widths or thicknesses. (Pages 43-44, *supra.*)

The *ordinary* warehouse capacity of such members of the present Association as were members of the Association in existence during 1918, (16 in all), then ranged from *300,000 feet* to *4,000,000 feet.* (Gov. Ex. 52-J, Vol. IV, p. 441.) *The maximum* warehouse capacity of such members at that time, ranged from *450,000 feet* to *5,000,000 feet.* (Id.) No figures for later years are in the record.

The semi-annual report for July 14, 1923, is illuminating. The *stocks on hand* on January 1, 1923, of the various members ranged from *117,000 feet* to *4,115,000 feet*. On *June 30, 1923*, they ranged from *101,000 feet* to *2,750,000 feet*,—some members gaining, others losing during the interim. On *January 1, 1923*, the *unfilled orders* of the different members ranged from *nothing to 2,837,000 feet;* on *June 30, 1923*, they ranged from *nothing* to 4,635,000 feet,—some members gaining, others losing. The *shipments* of the different members for the first half of the year 1923, ranged from *146,000 feet* to *11,260,000 feet; production* from *nothing* to *11,466,000 feet; new orders*, from *146,000 feet* to *9,998,000 feet*. (Gov. Ex. 41-2U, Vol. IV, fol. p. 2107.) See also Gov. Ex. 40-5R, Vol. IV, fol. p. 2050, for the report of April 17, 1923.

The different *buyers* as well as the *defendants*, testified that the controlling factors as to prices of the Association members were competition of other members and nonmembers and *individual stock conditions*. (Vol. I, pp. 198-200, 210-217, 229, 237-8, 243-4, 260-263, 289-293, 322, 327, 395, 398, Vol. II, pp. 537-8, 560, 564, 565-9, 580, 591-2.)

The reason for this is well stated by Mr. Klesner, a representative of the Grand Rapids Trust Co., Receiver for William Horner, as follows:

> "We manufacture about 50,000 feet a day, *and if we accumulate stock in the warehouses so that they are full, we have simply got to get rid of it. We couldn't shut down and disorganize our crew.*" (Vol. I, p. 335.)

Mr. James E. Dewey, of the Kneeland-Bigelow Co., testified:

> "In determining what prices we shall charge, our

condition would govern almost entirely. I mean my stock conditions, my orders on hand. We have a very large output, practically fourteen million feet a year *and we have difficulty in keeping that sold. It is of a great deal more importance to me to have my plant produce to full capacity at all times than it is to raise my prices every time it is possible to do so. We would lose a great deal more money if our plant were compelled to curtail its output than we would by failing to get the top of the market at all times.*" (Vol. I, p. 398.)

Members are compelled to move flooring by taking whatever prices they can get for it. (Citations on p. 73, *supra;* and Vol. I, pp. 243-4, 277.)

Mr. Charles T. Kerry, of the Kerry & Hanson Flooring Co., testified as follows:

"*We have run our plant at full capacity except in 1920 or 1921,*[21] when the shed got full and we did not care to go out and purchase any more lumber because *we knew we could not move flooring.* We ran as long as we could and until the shed got full. In order to get through the winter I think we shut down for about two months, *when we were sure that the men could be taken care of. Grayling is a small town and we lose our men if we let them get away from us. We ran until our storage capacity was ex-*

[21] In 1920-1921 came the big slump after the unprecedented demand for building materials due to the lifting in 1918 of war-time building restrictions. *Stocks on hand* (~~all~~ 15 members) mounted from about *7,500,000 ft.* on January 1, 1920, to more than *25,000,000 ft.* on December 31, 1920; *unfilled orders* on January 1, 1920, amounted to more than *30,000,000 ft.*, whereas, by December 31, 1920, they had dropped to less than *3,000,000 ft.* (Defts'. Grant Keehn Ex. 22, Vol. V, p. 955.) These conditions were expressed in the prices. During the same period Factory flooring dropped from more than *$150* per thousand ft. to less than *$20;* Clear from *$180* to less than *$100;* No. 1 from more than *$170* to *$55.* (Defts'. Gordon Ex. 7, Vol. V, p. 901.)

hausted. Flooring must be kept under cover." (Vol. I, p. 406.)

Another factor was well stated by Mr. DeWitt:

> *"The demand may be very large for one grade or one thickness or one face at one time and very small at others. The demand for each grade or thickness is not * * * constant, but it is continually fluctuating."* (Vol. I, p. 237.)

All the foregoing conditions produced the extraordinary variations in the prices quoted or received at any given time by the members of the defendant Association. The differences between the prices received by different members were as much as 65%. (Vol. II, pp. 715-16.)

SINCE 1913 COPIES OF ALL ARTICLES OF ASSOCIATION HAVE BEEN SUBMITTED TO THE DEPARTMENT OF JUSTICE, AND TO THE FEDERAL TRADE COMMISSION SINCE 1915.

THE DEFENDANTS HAVE DONE NOTHING SECRETLY; THEY HAVE AT ALL TIMES ACTED UPON THE ADVICE OF COUNSEL; THE STATISTICS GATHERED BY THEM HAVE BEEN SENT TO THE DEPARTMENT OF COMMERCE, AND THE AGENTS OF THE DEPARTMENT OF JUSTICE WERE GIVEN COPIES OF WHATEVER DOCUMENTS THEY WISHED BY THE ASSOCIATION'S SECRETARY.

Mr. DeWitt testified:

> "We joined a Maple Flooring Manufacturers Association in March, 1919, and continued to be a member of it about one year. Upon the so-called Memphis decision, we felt that perhaps the Association as it was being conducted would be declared illegal and for that reason we resigned from the Association at that time. I don't just remember when we did resume our membership. I think we resumed our membership in the old Association perhaps sometime in 1921. We are members of the present Association. *Subsequent to our first resignation and before resuming our membership, we received a legal*

opinion from Mr. Newman and resumed our membership believing that the Association was legal at that time. Of course, we knew nothing about the law, and had to rely upon advice of counsel. We had no intention of violating the law. On the contrary we wish to comply with it." (Vol. I, p. 233.)

See also, Vol. I, pp. 163, 177.

For Mr. Newman's opinion after the District Court's decision in the Hardwood (or Memphis) case, see Defts'. Ex. A, Vol. IV, p. 797. For his analysis of the Supreme Court's opinion in the same case, see Gov. Ex. 15-AA, Vol. III, pp. 146-152.

That all articles of association, plans of operation, etc., were submitted to the Federal Trade Commission and the Department of Justice, see Vol. I, pp. 72, 74, 143, 77-8, 146, 79-80, 81-82, 98, 145, 148-149, 177; Vol. II, p. 794; Gov. Ex. 75, Vol. IV, p. 529; Gov. Ex. 10 and 11, Vol. III, pp. 76-84; Gov. Ex. 12 and 13, Vol. III, pp. 84-97; Gov. Ex. 14-D, Vol. III, p. 101; Gov. Ex. 15-M, Vol. III, p. 130; Gov. Ex. 15-BB, Vol. III, p. 152; Gov. Ex. 52-R, Vol. III, p. 448; Gov. Ex. 63-E, Vol. IV, p. 502; Defts'. Ex. A, Vol. IV, p. 797, Defts'. Ex. B, B-1 and C, Vol. IV, pp. 798-804; Defts'. Ex. I, Vol. IV, p. 818.

That the present Association has regularly furnished the Department of Commerce all the statistics that said department will receive, see Vol. I, pp. 167-171; Vol. II, pp. 787-8; Defts'. Ex. KK-4, KK-5, Vol. IV, p. 843.

That the agents of the Department of Justice were given copies of whatever documents they wanted by the Secretary of the Association at various times during some five or six years before the filing of the petition herein, see Vol. I, pp. 102, 109, 112, 122, 171; Gov. Ex. 14-K, 14-L, Vol. III, pp. 102-104.

Some three months before November 26, 1923, the District Court set the cause for hearing on the date last mentioned. During October, 1923, numerous depositions were taken by the parties. At that time counsel for the Government were advised by counsel for defendants

> "*that the solicitors of the defendants had collected a great mass of data,* but had not been able to confer personally with all their clients in order to prepare for the hearing of said cause, but that schedules for appointments would shortly thereafter be prepared, *and they intended to spend the major portion of November, prior to the 26th day thereof, in a series of conferences at Chicago, Illinois, with their clients in order to prepare for the hearing of said cause.*" (Vol. I, p. 50.)

Thereafter, and on or about November 1, 1923,—

> "the Honorable A. T. Seymour, Assistant to the Attorney General of the United States, and of counsel for the plaintiff in said cause, *demanded* of Newman, Poppenhusen, Stern & Johnston, as solicitors for the defendants, *the physical possession of all files, documents and other data that the said solicitors had received from their clients in order to ascertain the facts and to be in a position to advise their clients as to the law, and to represent them on the hearing of said cause.* That the Honorable A. T. Seymour informed said firm of solicitors that unless his said demand was complied with *he would take other steps to procure the information that he desired.* That within a week or ten days *after* the ultimatum above mentioned, the subpoenas *duces tecum* above mentioned were issued." (Affidavit in support of motion for continuance, Vol. I, p. 52.)

Subpoenas *duces tecum* were issued requiring the defendants and one of defendants' counsel to appear before the Grand Jury at *Grand Rapids,* Mich., on *November 9,* 1923, *despite the fact that the hearing of the cause* had been set for November *26,* 1923. (Vol. I, pp. 49, 50, 51.)

And *after* Judge Sessions had quashed the subpoenas (on the authority of *Hale* v. *Henkle*), *and had suspended the operation of the decree herein pending appeal,* the Government procured the *indictment* of the defendants by a Grand Jury at *Chicago,* Illinois. (Appellants' Suggestions in Support of the Government's Motion to advance this cause on Supreme Court docket.)

The manifestly untrue allegations in the Government's petition herein, that "the *defendants* make sales of *the flooring* manufactured by them *from their said offices in this district* [Western District of Michigan]" (Vol. I, p. 2), and the fact that the Association's headquarters had always been at *Chicago* (Vol. I, p. 1), and the further facts that this Court had reversed the decision of the Federal Court at *Chicago* in the Linseed Oil case *after* the institution of this suit at Grand Rapids and *before* the indictments above mentioned; the threat of Mr. Seymour and the legal frustration of his attempted perversion of the power of Government; the suspension of the decree by Judge Sessions, *and* the *subsequent* indictments at *Chicago,* are at least interesting.

Of course, all this took place during Mr. Daugherty's administration, and not during that of his successor.

BRIEF OF ARGUMENT.

I.

The proof shows that the petitioner's charge that

> **"The defendants agreed to adopt and have concertedly adopted Cadillac, Michigan as an arbitrary freight basing point from which they compute and charge freight, regardless of the point from which each may actually ship flooring."**

is not true.

Vol. I, pp. 335, 235, 260, 228.

II.

The proof showed that the terms of sale generally used by some of the defendants were those universally used in all branches of the lumber business. Moreover the defendants varied even their own terms to suit the convenience of buyers, or to conform to the customs that obtained in the different markets.

Vol. I, pp. 94, 95, 228, 236-307, 208, 209, 385, 155, 56.

Vol. IV, pp. 811-814, Fol. pp. 5249-5254.

III.

The proof showed that the commissions allowed by the different defendants ranged from nothing to $4.00 per M. feet, and that there was no uniform practice followed by any defendant, much less by all the defendants.

Vol. I, pp. 286, 288-289, 393, 533, 535, 534, 94, 323, 229, 261, 262, 269-273, 173.

IV.

The petitioner wholly failed to support by proof the averments that the defendants had always maintained and still maintain "a practical uniformity between themselves of net f. o. b. selling prices," and "a practical uniformity between themselves of net delivered prices."

The undisputed proof showed the existence of great price variation and intense competition.

Government's abandonment of its contention that that ever had been uniformity of prices: Vol. II, p. 857.

V.

The proof showed that the advertising campaign conducted by the defendant Association and its predecessors was necessary in order to meet similar campaigns that were being carried on by other associations and manufacturers of competing floorings, both wood and composition. This could not be done by the defendants individually.

The advertising was intended to promote the sale of maple, beech and birch flooring manufactured by Association members. Such flooring was standardized, of uniform quality, guaranteed by the Association and protected by an efficient inspection service. The advertising featured quality and service. It gave useful information. It said not a word concerning prices.

The Government adduced no proof that the advertising in question was dishonest or misleading.

Vol. I, pp. 150, 294-295, 221, 334, 225; Vol. III, pp. 124-125, 193-195.

VI.

The Government offered no proof whatsoever in support of the charge:

> **"The use of the uniform trade-mark and the character of the advertising put out by the defendant Association intensify the tendency to establish and maintain uniform prices, and also practically eliminate all competition between the defendants based on the quality of their respective products."**

Neither did the Government offer any proof that the standards adopted and maintained by the defendants were not fair and reasonable.

The proof showed that the quality of the flooring had been improved by means of the adoption and maintenance of such standards, that disputes between manufacturers and buyers had been greatly reduced, and that litigation had been eliminated.

The Government's own witnesses, as well as buyers all over the United States, were both unanimous and enthusiastic in their praise of the standardization of maple, beech and birch flooring by the defendants. Buyers testified that the flooring manufactured by the defendants was superior to that manufactured by others, and that standardization of such flooring by the defendants had increased competition and greatly benefited the public.

VII.

The proof shows that the prices of maple, beech and birch flooring have at all times fluctuated in harmony with the laws of supply and demand. Distinguished statisticians and economists so testified and supported their evidence by a mass of statistics, charts and other data.

The record conclusively shows that the alleged minimum price plans were never enforced, and that in actual practice each member sold his flooring at whatever price he could get, and ran his business just as he pleased. (It is undisputed that said plans were never adopted by the present Association.)

The undisputed proof also shows that prices during the earlier years were never uniform because of the diversities mentioned on pages 66-75 supra; whereas, from 1919 to 1921, inclusive, they were controlled by abnormal economic conditions which found adequate expression in the rise of factory grade flooring from $45.00 per M. feet to $150.00, and its decline to $15.00.

At no time does the proof show fixation or control of price by the defendants; and, as we have seen, even the Government admitted at the hearing that there had never existed any uniformity of prices among the defendants.

Abandonment of minimum price plans: Vol. I, pp. 101, 141-146, 227-228, 233-234, 258, 261, 378-379, 321-322; Vol. III, pp. 207, 230-231, 246-247, 249-251, 299, 333, 340, 411; Vol. IV, pp. 435-436, 519-521; Vol. I, p. 138.

THE STATISTICAL REPORTS.

Monthly sales reports to Secretary: Vol. III, p. 70; Government's Exhibits 46, 46-A, 46-B: Vol. III, fol. pp. 2854-56; Vol. I, p. 123; Government's Exhibit 48: Vol. III, fol. p. 2858; Vol. I, p. 124.

Government's Exhibit 57: Vol. III, fol. p. 2857; Vol. I, pp. 123-24.

Government's Exhibit 45; Vol. III, fol. p. 2853; Vol. I, pp. 122-23; Vol. IV, pp. 572-73; fol. p. 4587.

Weekly sales reports to Secretary: Government's Exhibit 44: Vol. III, fol. p. 2852; Vol. I, pp. 122-23, 127, 155-58, 121.

Reports made by Secretary to Members: Vol. I, pp. 158, 163, 173, 176, 390, 399.

Weekly sales reports made by Secretary: Vol. I, pp. 125, 156-58; Vol. IV, pp. 812, 814; Vol. I, pp. 156-59, 162-63, 130-1, 390, 399, 123, 125-26, 127, 130, 204; Vol. III, pp. 390-97, 398-403; Defendants' Exhibit G: Vol. IV, fol. pp. 5337-39; Defendants' Exhibit G-1; Vol. IV, fol, pp. 5340-42.

Monthly report made by Secretary: Vol. I, pp. 128, 132; Government's Exhibit 50: Vol. III, fol. pp. 28, 61-69; Vol. I, pp. 128-132; Defendants' Exhibit H, H-1 and H-2: Vol. IV, Fol. pp. 5343, 5353, 5362; Vol. I, pp. 158-163; Vol. IV, pp. 5352, 5361, 5370.

Quarterly reports: Vol. I, pp. 130-31, 160-62.

Reports are unaccompanied by any analysis, comment, or recommendation: Vol. I, pp. 163-65; Defendants' Exhibit I: Vol. IV, p. 818; Vol. III, pp. 146-152.

There are no fines or penalties for failure to make reports: Vol. I, pp. 121, 161, 389.

No audits are made: Vol. II, p. 861.

The statistics collected have been given the widest publicity and go to buyers as well as Members of the Association: Vol. I, pp. 165-69, 169-171; Vol. II, pp. 787-88.

The statistics are only one of many sources of information possessed by Members: Vol. I, pp. 211-212, 291, 335, 385-86, 394-95, 397, 229, 260, 319, 324, 326.

Use made of statistics by Members and importance attached to them: Vol. I, pp. 397-99, 210-212, 215-216, 221-22, 227, 230-31, 386-87, 389, 252, 264, 291, 289, 292-93, 324, 326-27, 198-201, 211-12, 213, 222, 227, 229, 230-31, 237-38, 243-44, 248, 259, 263-64, 268-285, 288, 290, 292, 303-18, 322, 326-27, 335, 385, 388-89.

IX.

A comparison of the prices obtained by Members with the AVERAGE COSTS (issued by the present Association) and with the TABLES OF VALUES (issued by the Association immediately preceding), conclusively demonstrates not only that the Government's charge that there was uniformity of prices is not true, but that neither the Average Costs nor the Tables of Values were used by the members either as minimum prices or as a basis for determining individual prices.

Government's Exhibit 79: Vol. IV, pp. 583-796; Vol. II, pp. 847, 859; Vol. III, pp. 372, 390; Vol. II, pp. 850-59; Vol. IV, pp. 799-807; Vol. I, pp. 148-49; Vol. IV, p. 529; Vol. I, pp. 143-46; Vol. III, pp. 37-44.

Appendix T, Government's Exhibit 28-N: Vol. III, p. 315; Government's Exhibit 52-H, 52 II: Vol. IV, pp. 461-62; Vol. III, pp. 881-82; Vol. IV, pp. 975-77.

Appendix U, Appendix V, Appendix Q: Vol. II, pp. 539-556, 557-560, 785-87.

Principles of Economics, by F. W. Taussig (3d ed. rev.), Vol. II, pp. 439-440.

Appendix W (pp. 62-64).

X.

The present Articles of Association do not even attempt to regulate production, sales, prices or to otherwise limit the discretion of members in the manufacture or sale of flooring. Except the agreement to manufacture flooring of standard quality and to report past transactions, each member is left wholly free to conduct his business as he pleases. There is no proof of any other agreement, express or implied, among said members.

In view of the undisputed proof that the PRICES of the members of the present association for maple, birch and beech flooring

(a) have always been FAIR AND REASONABLE,

(b) were generally lower than the prices of nonmembers, although the flooring manufactured by members is superior to that manufactured by nonmembers,

(c) were never uniform and were often below the cost of production of both members and nonmembers,

and that the flooring manufactured by members is in all respects satisfactory to the public, it necessarily follows that neither the contract nor the conduct of defendants has unreasonably restrained interstate trade or commerce.

XI.

In addition to the undisputed proof that the prices obtained by members of the present Association had always substantially varied; that the prices of such members were fair and reasonable, and that although the flooring manufactured by such members is superior to that manufactured by nonmembers, the prices of members are generally lower than those of nonmembers, there was the following undisputed proof:

(a) by the Government's witnesses, including both competitors and buyers, that competition among the defendants themselves, as well as between the defendants and nonmembers, was strong, active and vigorous;

(b) by dealers, large and small, in the principal centers of consumption, that there was and always had been vigorous competition among the defendants;

(c) by dealers that the defendants were unusually fair, considerate and honorable in their dealings with purchasers of maple, beech and birch flooring;

(d) by economists and statisticians that the prices of the several members had fluctuated in accordance with the laws of supply and demand.

No witnesses were produced by the Government to testify to fixation or uniformity of prices, unfair prices or restraint of trade.

In view of the foregoing facts, the Government's petition (under the decision of this court in the Steel Corporation case) should have been dismissed.

Trusts, Pools and Corporations (revised ed.), by Ripley, pp. 1-77.

XII.

The following facts:

(a) fundamental differences that exist among Association members;

(b) unstable basis of the maple, beech and birch flooring industry;

(c) relation that Association members bear to the flooring industry as a whole;

(d) lack of control of any appreciable proportion of raw material;

(e) fragmentary character of statistics collected and distributed;

(f) publication of statistics collected;

(g) relatively superior position of lumber dealers who buy or handle from ninety to ninety-five per cent of the flooring manufactured by Association members,

and many other facts disclosed by the record, conclusively demonstrate that the collection and distribution of statistics by the Association cannot injuriously affect interstate trade or commerce.

The necessity for the collection and distribution of trade statistics for the benefit of both buyers and sellers is recognized by all modern economists.

XIII.

It is both the privilege and the duty of equity not only to prevent evil but to hold fast to that which is good. Its decrees are, therefore, infinitely various and flexible.

The decree entered by the District Court herein is as unselective as a hurricane or an earthquake. If unleashed it will convert into junk machinery of great pecuniary and social value.

ARGUMENT.

I.

The proof shows that the petitioner's charge that

> **"The defendants agreed to adopt and have concertedly adopted Cadillac, Michigan, as an arbitrary freight basing point from which they compute and charge freight, regardless of the point from which each may actually ship flooring." (Tr. 6, fol. 11.),**

is not true.

WHY THE DISTRICT COURT WENT ASTRAY.

The District Court refused to limit the petitioner with respect to time, subject matter, or space. Whatever evidence the petitioner offered, despite its fragmentary character, or source, was "received subject to objection," even though it concerned associations that had ceased to exist some two or three decades or years before the hearing. This great mass of irrelevant matter not only confused the issues and prejudiced the present association and its members, but caused the appellants here to pay some $16,000 for printing (and Clerk's fees), despite the fact that counsel for petitioner stipulated that much of said matter need not be printed. (Vol. V, pp. 975-977.)

In the opinion filed herein, the District Court put to

himself the questions set forth in the margin.[22] The question of *monopoly* or attempt to monopolize under *Section 2* of the Sherman Act was not raised by the petitioner. The petition herein was based *solely* upon *Section 1* of said Act. And, apparently, the great mass of irrelevant matter concerning long-extinct associations and practices that had been abandoned years before the institution of this suit, rested so heavily upon the mind of the District Court that the evidence concerning the *present* association, its methods, and practices, was, in comparison, lighter than the gossamer that "idles in the wanton summer air." Apparently, *all the facts heretofore set forth, as well as those which will be adduced during the course of our argument,* rested as lightly upon the scale "as sleep upon tired eyes." We believe that this court will be amazed at the amount, consistency and cogency of this evidence, of which not even a hint is given in the opinion filed by the District Court. *Furthermore, the learned District Court wholly disregarded the allegations of the petition herein, and made no effort to determine the relation that existed between the petition and the proof.*

---

[22] "Does the conduct, past and present, of the defendants indicate a purpose to monopolize the maple, beech and birch flooring industry? Do the present Articles of this Association, either in and by their own force and terms or when viewed in the light of prior agreements of like nature, exert a pressure or compulsion toward the control of production and prices? Does the plan or system followed and pursued by defendants in their operations have a direct and necessary tendency to destroy the kind of competition to which the public has a right to look for protection and which the Congress intended to preserve in and by the enactment of the Sherman Anti-Trust Act? The decision of this case depends and hinges upon the answers to be given to these questions." (Tr. 55.)

CONTROLLING PRINCIPLES.

In order that the issues here may be clear, we take the liberty of recalling to the mind of this court a few elementary principles. Some of them are well stated in

United States v. *United States Steel Corporation*, 223 Fed. 55, 59-60,

as set forth in the margin.[23]

In the same case, on appeal, this court said:

> "Our present purpose is not retrospect for itself, however instructive, but *practical decision upon existing conditions.* * * * In other words, our consideration should be of *not what the corporation had power to do or did,* but what it has

---

[23] "Now unlawful restraints of trade are of three kinds, past, present and future. As to present and future restraints, Congress by section 4 empowered 'the Attorney General to institute proceedings in equity to prevent and restrain such violations,' and to that end invested the courts 'with jurisdiction to *prevent and restrain violations* of this act.' *The jurisdiction here conferred is the chancery power of injunction, a power which is used to restrain present wrongs or prevent threatened ones.* This is shown by the act providing even for temporary preliminary restraining orders while the case is being heard. *'The function of an injunction is to afford preventive relief, not to redress alleged wrongs which have been committed already.' Lacassagne* v. *Chapius*, 144 U. S. 119, 12 Sup. Ct. 659, 36 L. Ed. 368, cited in *Black* v. *Jackson*, 177 U. S. 360, 20 Sup. Ct. 648, 44 L. Ed. 801. Applying that general principle, the Supreme Court of the United States in the Standard Oil Case, *supra*, citing *Swift* v. *United States*, 196 U. S. 375, on page 377, 25 Sup. Ct. 276; 49 L. Ed. 518, said:

'It may be conceded that ordinarily, where it was found that acts had been done in violation of the statute, adequate measure of relief would result from restraining the doing of such acts in the future.'"

now power to do, *is doing*, and what judgment shall be now pronounced. * * * (*U. S.* v. *U. S. S. C.* 251 U. S. 417, 444.)

And again on page 445:

"Monopoly, therefore, was not achieved, and competitors had to be persuaded by pools, associations, trade meetings, and through the social form of dinners, all of them, it may be, violations of the law, *but transient in their purpose and effect. They were scattered through the years from 1901* (the year of the formation of the Corporation), *until 1911, but, after instances of success and failure, were abandoned nine months before this suit was brought.*"

In the case of

United States v. *New England Fish Exchange*, 268 Fed. 732,

it appeared that certain practices of the Exchange had been abandoned *after* the filing of the bill. The court, therefore, merely restrained the *resumption* of such practices.

In equity the general rule is as stated in 10 Ruling Case Law, p. 559:

"In making its decree the Court is governed by the situation in regard to the respective rights of the parties existing at the time the decree is to be made, and not by that which existed at the inception of the litigation."

21 Corpus Juris, 663.

THE QUESTION.

Now let us see whether the members of the *present* association have adopted Cadillac, Mich., "as an arbitrary freight basing point from which they compute and charge freight regardless of the point from which each may actually ship flooring."

In the first place, it should be noted that the present association was not organized until *March 29, 1922*, although the *proposed* Articles were dated January 1, 1922. (Vol. I, pp. 78-79, 147, 149; Gov. Ex. 15-GG, Vol. III, pp. 155-6; Gov. Ex. 52-00, Vol. IV, p. 461.)

In *March, 1922*, Mr. F. C. Klesner became the representative of the Grand Rapids Trust Co., Receiver for William Horner,[24] with flooring plants at Newberry, and Reed City, Mich. (Vol. I, p. 333.)

Until May, 1923, all flooring was sold under Mr. Klesner's direction; thenceforth he was in exclusive charge of the sale of flooring under the direction of the Receiver." (Vol. I, pp. 333, 318.)

Mr. Klesner testified:

> "I know of no understanding or agreement among the members of the Association that flooring shall be sold on an f. o. b. Cadillac basis, or that freight shall be charged from Cadillac regardless of the point from which the flooring is shipped." (Vol. I, p. 335.)

Mr. DeWitt, of Oconto, Wis., testified:

> "I know of no understanding or agreement whereby the different members of this Association were to sell their flooring on an f. o. b. Cadillac basis." (Vol. I, p. 235.)

[24] The said Trust Company, as Receiver, is a party defendant to this suit, but Mr. Klesner is not.

Mr. Shepeck, of Wells, Mich., testified:

"I do not know of any understanding or agreement among the members of the defendant Association * * * that flooring should be sold on the Cadillac basis, or that the delivered price should be arrived at by adding the Cadillac freight rate. *We have never used any such method.*" (Vol. I, p. 260.)

Mr. P. S. McClurg, of Phillips, Wis., testified:

"In selling our merchandise, we make a notation on the invoice that the amount of the paid expense bill is to be deducted. *We do not make any computation of the freight.* The buyer then deducts the freight and remits to us the net proceeds. *The buyer learns the amount of the freight from the expense bill that he gets from the railroad company and turns in the expense bill to us as a receipt for the amount of freight deducted from the invoice. For instance, if a shipment of flooring, or a mixed carload of flooring and other lumber, is shipped by us to a buyer at Minneapolis, the buyer deducts the freight from Phillips to Minneapolis. He does not deduct the freight from Cadillac to Minneapolis. In every case the buyer takes the actual freight paid by him to the railroad company and sends in to us the paid expense bill.*" (Vol. I, p. 228.)

Mr. DeWitt, of Oconto, Wis., testified:

"*When we invoice the flooring there is no separation of the flooring from the freight. No separate charge is made for freight as distinguished from flooring.* Sometimes we prepay the freight, but not very often. When freight is not prepaid, the buyer deducts from the invoice the *actual* freight that he pays and then deducts whatever discount is allowed and remits the balance to us by means of check or draft. *The buyer deducts from the face of the invoice the actual amount of freight he pays to the railroad company.*

The Court: I take it that this testimony will be given in substance by every witness that is put on

the stand because that is the *universal* practice in shipping lumber.

Mr. Darby: In view of what the Court has said, we will put on no more testimony as to this matter." (Vol. I, p. 235.)

It was undisputed that buyers of maple, beech and birch flooring—indeed, of *all* lumber—deducted from the face of the invoice the *actual amount of freight paid to the carrier.* And, of course, the carrier collected the freight from *point of origin* to point of destination.

The petitioner did not adduce *any* proof to the contrary. Therefore, the proof failed to support the allegations of the petition that the defendants computed and charged freight from Cadillac, Mich., regardless of the point from which the flooring was shipped.

II.

The proof showed that the terms of sale generally used by some of the defendants were those universally used in all branches of the lumber business. Moreover, the defendants varied even their own terms to suit the convenience of buyers, or to conform to the customs that obtained in the different markets.

It will be recalled that the petitioner charges that uniform rules with respect to terms of sale and the allowance of cash discounts, were one of the means by which defendants maintained a practical uniformity of both "net f. o. b. selling prices" and "net delivered prices." (See page 12, *supra.*)

Mr. Hamlin J. Ward, a *non*member manufacturer of maple and beech flooring, and a witness for the petitioner, testified:

> "*The terms we quote our customers are 2% off from net amount of invoice for cash within 15 days, or 60 days net.* I think these terms are quite generally used by other manufacturers. *They are terms that are general in the lumber business, not only maple flooring, but lumber business generally.*" (Vol. I, pp. 94-5.)

Mr. Ward has been engaged in the hardwood flooring business for about twenty-four years. (Vol. I, pp. 93-4.)

For a great many years the freight rate books issued by the defendant Association and its predecessors contained terms of sale. The freight rate book at the time of the institution of this suit contained the following matter:

"TERMS OF SALE.

Sixty days net or 2% for cash in 15 days or 1% discount for cash in 30 days from date of invoice after deducting freight.

If the car has not arrived, the discount may be deducted on 90% of the invoice less estimated freight for cash within proper discount period, the balance with original paid freight bill to be remitted net within 5 days after arrival of car. No cash discount will be allowed after 30 days from date of shipment." (Vol. IV, fol. pp, 5249-5254.)

Mr. P. S. McLurg (a defendant), testified that the terms of his company were as follows:

"Our terms of sale are 2%, 15 days, 60 days net, on both flooring and other lumber products. The terms used to be 2%, 10 days. They were changed about 15 years ago, I think. I do not know of any Association rule with respect to terms of sale." (Vol. I, p. 228.)

Mr. DeWitt (a defendant), testified as follows:

"Our regular terms of sale are cash less 2% 10 days from date of shipment after freight was deducted, but those terms are varied to suit particular conditions. In fact, I am sure that there are more (fol. 428) sales that varied from the regular terms than there are that conformed with them. For instance, the New York custom has always been to discount either five or ten days after the arrival of cars and in most of the markets no payments are made until after receipt of car. We have one customer in Chicago, who discounts all invoices immediately upon receipt of them. On our coast shipments we have one customer that we allow 2% 90 days after the freight is deducted. *We vary our terms of sale according to our past relation with the individual buyer or according to our financial needs. Terms of sale fluctuate continually and it is a matter of compromise and adjustment. Some buyers are*

always wanting special terms and if they are good customers, we don't haggle over it. This has been our practice since we have been manufacturing flooring.

I knew that the freight rate books contained so-called terms of sale. They are standard terms of sale on which practically all lumber products are handled. I do not regard the terms of sale appearing in the freight rate books as limiting my discretion or as being in any wise binding upon me. We followed those terms when our customers liked them. The present Association has no rules with respect to terms of sale." (Vol. I, pp. 236-7.)

The testimony of Messrs. Colby and Greene (defendants) is set forth in the margin.[35]

See also, Vol. I, pp. 263, 324, and Vol. II, pp. 240-242.

---

[35]Mr. Colby:

"Our terms of sale on maple flooring are 2 per cent cash discount for payment within 15 days from date of invoice; one per cent for payment within thirty days, and sixty days net. *Our terms on flooring are an outgrowth of the lumber terms that our company has used for a good many years. We use the same terms in our lumber business, except that in selling lumber we give a two per cent discount for cash in ten days. This difference between the 10-day period and the 15-day period is because flooring moves to a greater distance than lumber does.* The bulk of our *lumber* is marketed in the State of Michigan, whereas *flooring* moves very largely to New England and Pacific Coast points; hence, we have to allow a little longer time for cash discounts because a customer naturally does not like to pay for a car of material until he sees it in his yard. The terms I have mentioned have been used by our company since I have been connected with it. *These terms, however, are not invariably followed. We do not split hairs on the matter of terms and agree to anything that seems fair and reasonable.* In the New York market some buyers insist on taking a two per cent cash discount five days after arrival of car. We do not like that and tell our customers that if they will send us within ten days after receipt of invoice a substantial amount to apply on the car, we will allow them the two per cent cash discount, which they can take five days after arrival of car. If we

While Mr. George W. Keehn, the Association's Secretary, was on the stand the following colloquy took place:

"**The Court:** * * * One question more: The terms of sale, have they varied materially over a considerable period of time? Isn't the usual term 60 days net, or 2% for cash?

A. I think that has been the general custom in

---

need business we sometimes accept their terms, and if we are not in need of orders we exact our own terms. The matter of terms is governed largely by supply and demand. The Pacific Coast buyers also demand an extension of the usual terms and we meet their demands. *We have never considerd ourselves bound by any terms of sale that might have been established by the Association.* We used our own judgment entirely. I do not know of any uniform terms of sale so far as the present Association is concerned that are being lived up to. *I think the Association has gathered from different members what might be termed a consensus of opinion as to what the prevailing cash discount terms were, but any statement that was issued with respect to such matters was not considered binding by anyone that I know of. We have always made our own terms of sale in order to meet conditions as they changed from time to time.*" (Vol. I, pp. 208-9.)

Mr. Greene:

"Our terms of sale are 2 per cent cash fifteen days, or 60 days net. They are what we call our regular terms of sale. However, we make special terms as conditions might require. We have for example the Pacific Coast trade, California trade, which I mentioned; we make terms to those people of two per cent discount upon the arrival of the car, recognizing the fact that there is a certain delay, for the privilege of unloading and examining the stock, *and it requires a little more than fifteen days for that car to go across the continent and so they can't take advantage of the discount in the 15-day period, and so we make it more or less elastic in cases of that kind; and we also recognize in selling through representatives who guarantee our accounts, that where we invoice to them, if their customers take their discount from their invoice a few days later than fifteen days, we recognize their right to also take that discount from our invoice, otherwise they would be the loser in the transaction.*

I know of no rules of the present Association regarding terms of sale. *I consider myself free to follow any rule I like and have always done so.*" (Vol. I, p. 385.)

the lumber industry, 60, 2 off ten, sometimes 60, 2 off fifteen.

The Court: *It prevails in all branches of the lumber industry, doesn't it?*

A. "I think in a general way it does. You know some buyers in the eastern market, for example, will not follow such terms. They insist upon the discount 5 days after arrival of car or two days after arrival of car. The same is true with respect to shipments to California. Purchasers out there also insist upon the discount so many days after arrival of car. My observation has been that manufacturers are compelled to accede to the terms of buyers in different markets, according to the customs in force there. These different customs have always prevailed in different parts of the United States." (Vol. I, p. 155.)

Pursuant to resolution adopted on *July 19, 1923, the terms of sale and much other data objected to by the petitioner were eliminated from the freight rate books.* (Vol. I, pp. 155-6, Defts'. Exs. E, and F-1, Vol. IV, pp. 811-814, and fol. pp. 5249-5254.)[26]

The proof therefore failed to support the allegations of the petition that the defendants had established and maintained uniform rules with respect to terms of sale. The slightest knowledge of commercial practices would have prevented the making of any such allegations. In all trades and lines of industry there are customs and practices (elastic in operation) with respect to terms of sale.

[26] F-1 is the proper exhibit number for the eliminated matter, although the F resembles the figure 2.

III

The proof showed that the commissions allowed by the different defendants ranged from nothing to $4 per M feet, and that there was no uniform practice followed by any defendant, much less by all the defendants.

The present Association has never taken any action, either directly or indirectly, with respect to commissions. In the freight rate book issued by *the Association in existence during 1921* there appeared the matter set forth in the margin.[27]

The Oval Wood Dish Corporation, of Tupper Lake, N. Y., began the manufacture of maple, beech and birch flooring during June, 1921, and joined the Association then in existence in August, 1921. (Vol. I, p. 286.) Mr. Hodges testified:

> "I am in charge of the sale of our flooring. *Our commissions range all the way from nothing to $4.00 a thousand. When we joined the Association there was nothing said about our maintaining any standard scale of commissions or limiting our discretion as to when or how much commissions we should pay.*

---

[27] "COMMISSIONS.

"A Commission not exceeding $2 may be allowed to your own Registered Special Representative, or a Commission not exceeding $1.50 may be allowed to Registered Wholesalers and Commission Men.

Your Registered Special Representative may allow the Wholesaler's Commission of $1.50 when selling Registered Wholesalers and Commission Men, but the Commission to be paid to your Registered Special Representative on his sales to Registered Wholesalers and Commission Men to whom he allows the $1.50 Wholesaler's Commission shall not exceed $1. In no event shall the total Commissions allowed exceed $2.50." (Gov. Ex. 34, Vol. III, fol. p. 695.)

We have at all times considered that we were free to do as we pleased with respect to commissions. *We have followed no uniform rules with respect to commissions.* We sell largely to jobbers and wholesalers and to some big yards, who maintain a force of floor layers who both sell flooring and lay it. We occasionally sell to contractors and consumers direct. For instance, we sell Stone & Webster, Boston contractors, who used the flooring in a building for the Victor Talking Machine Company of Camden, New Jersey." (Vol. I, pp. 288-9.)

Mr. Dewey, of the Kneeland-Bigelow Co., Bay City, Michigan, testified:

"Our commissions vary from $1.50 to as high as $4.00 per thousand. I know of no rule of the Association which in any wise limits members with respect to what commission shall be paid, to whom, or when. I have never known of any such rule since I have been a member. *We have always paid whatever commissions we pleased without objection by any members of the Association or the secretary."* (Vol. I, p. 393.)

Mr. Godfrey, a wholesale lumber dealer of Boston, gave in evidence quotations received on *February 14*, 1922, from three of the defendants and the commission offered by one of them was *$3.00* per M. feet; whereas the other two offered a commission of *$2.00* per M. feet. (Vol. I, p. 533.) He also gave in evidence other quotations received from certain defendants during *November*, 1922, with the same range of commissions (Vol. I, p. 535); likewise quotations received during *April, 1922*, and testified:

"The Strable Lumber & Salt Company's commission was 5% and the commission of William Horner was $2.00 per thousand. Some companies allow us a commission of 5% and others allow us a commission of $2.00 per thousand. *The commissions allowed by the different manufacturers vary."* (Vol. II, p. 534.)

See also the quotations given in evidence by Mr. L. L. Barth, of the Edward Hines Lumber Co., Chicago, where the commissions range from *nothing* to $2.00 per M. feet, (Vol. I, pp. 412-419), as well as the quotations identified by the other dealers whose depositions were taken.

Mr. Hamlin J. Ward, of Ward Brothers, Big Rapids, Michigan, *nonmember* manufacturers of maple flooring, testified as follows:

> "Quite generally, the quotation to wholesalers and others dealing in maple flooring is made subject to commissions. *The usual commission at the present time is $2.00 a thousand.* Such an allowance is quite generally made in the maple flooring industry." (Vol. I, p. 94.)

Mr. Ward was produced as a witness by the petitioner.

Mr. Greene, a defendant, testified as follows:

> "Our commission varies from nothing up to $3.00 per thousand.
>
> Q. Do you know of any rule of the present Association which attempts to prescribe the commission?
>
> A. I do not.
>
> Q. What were your commissions, before the present Association was organized, in previous years?
>
> A. *Well we paid at one time as low as fifty cents per thousand, one dollar per thousand, a dollar and a half up to two dollars per thousand; in some instances, to the present time, three dollars per thousand; as the price of the product advances we advance it a little more; it costs a little more to the other fellow, with the responsibility of carrying the account, and therefore he is entitled to a little larger commission.*"

Mr. Ralston explained that during the war when the prices of flooring had advanced the commission men

asked for and were given higher commissions than had been paid before because their cost of doing business had kept step with the advance of the cost of living. Mr. Ralston also stated that when *net* quotations are made the commission men have to look to their customers for commissions. (Vol. I, p. 323.)

See also the testimony of Mr. Colby, (Vol. I, p. 229), and Mr. Shepeck, (Vol. I, pp. 261-2, 269-273), who stated what their companies paid as commissions. *They also testified that the present Association had never had any rules on the subject, and that during the existence of previous associations the commissions had varied.*

Mr. George W. Keehn, the Secretary, testified:

> *"There is not now and has never been under the present Articles of Association, or since January, 1922, any registration of special representatives or brokers."* (Vol. I, p. 173.)

See also Vol. I, p. 210.

The petitioner adduced no evidence to the contrary; neither was a single jobber or retail or wholesale dealer, or broker produced to testify that larger commissions should be paid by the defendants, or were paid by other manufacturers of flooring or of lumber products.

The allegations of the petition with respect to uniform commissions are not supported by the proof.

IV.

The petitioner wholly failed to support by proof the averments that the defendants had always maintained and still maintained "a practical uniformity between themselves of net f. o. b. selling prices," and a "practical uniformity between themselves of net delivered prices."

The undisputed proof showed the existence of great price variation and intense competition.

As pointed out in our analysis of the petition herein, the petitioner charged that the defendants infringed the Sherman Act, in that by *various means* they had always maintained and still maintained *"a practical uniformity between themselves of net f. o. b. selling prices,"* and *"a practical uniformity between themselves of net delivered prices."* (Pages 12, 19, *supra.*)

The means were (a) the establishment of minimum prices until 1922, and "average costs" subsequently; (b) recommendations that defendants should not sell flooring below said minimum prices or said average costs; (c) the establishment and maintenance by defendants "as the basis of their individual selling prices," the minimum prices or so-called "average costs"; (d) the use of the Freight Rate Books containing freight rates from Cadillac, Michigan, average cost charts showing average cost f. o. b. cars of flooring, tables of differentials, delivered cost charts, etc.; (e) the charging of freight from Cadillac regardless of point from which flooring was shipped; (f) the establishment and maintenance of uniform terms of sale, cash discounts, commissions "and concessions which were established by and in accordance with said minimum Price Plans."

The alleged *means* are, of course, merely *incidental.* Or rather they are *instrumental.* According to the petitioner, the defendants *employed them* to violate the Sherman Act just as a burglar employs a jimmy to break into a house. The (alleged) unlawful *result* of the use of such means was *the practical uniformity among the defendants of "net f. o. b. prices" and "net delivered prices."* This unlawful *result* is the gravamen of the petitioner's charge. This alleged *result* is adduced by the Government as *proof* that there exists an *unreasonable restraint of interstate trade.* Or rather, the (alleged) *unreasonable restraint of interstate trade* is *deduced* from the (alleged) existence of *practical uniformity* of "net f. o. b. prices" and "net delivered prices."

We have already seen that it is undisputed that the defendants' *prices* for maple, beech and birch flooring were *fair and reasonable.* (Pages 54-61, *supra.*) We have seen that the buyers of the country *prefer* the flooring manufactured by the defendants, and have praised the said defendants for their honesty and fair-dealing. (Pages 62-64, *supra.*)

Manifestly, if the alleged *uniformity of prices* has never existed, or *does not now exist,* the petitioner's entire case must fail. Why? For the good and sufficient reason that the *public* has not been *injured.* Because an *unreasonable restraint* of interstate trade does not exist. For the reason that the petitioner has based its case upon the alleged *uniformity of prices.*

Let us make the violent assumption that *all* the alleged means were *continuously* employed by *all* the defendants, and examine the record for the purpose of ascertaining what *results,* if any, they produced. Let us determine

whether there ever existed among the defendants any uniformity of either f. o. b. mill or delivered prices for maple, beech or birch flooring. Let us ascertain what the record shows with respect to price competition among the defendants.

It is significant (or rather characteristic of the *unbridgable gulf* that exists between the *petition* and the *proof*) that on March 7, 1923, or *two days* after the petition herein was filed, a lumber dealer in Baltimore wrote to the defendant West Michigan Flooring Co., of Manistee, Michigan, a letter asking for quotations on 39,000 feet each of 13/16 x 2¼ Clear, No. 1 and Factory maple flooring. This letter also contained the following paragraph:

> "I shall be very glad indeed to have you keep me posted as to prices and conditions pertaining to orders for maple flooring from time to time, *as there seems to be such a wide spread between the different quotations that our customers receive that they hardly know how to make a consistent estimate.*" (Vol. I, p. 383.)

On November 4, 1920, Mr. Sam E. Barr, a large dealer of New York City, wrote to the defendant above mentioned in part as follows:

> "Your letter of the 2nd received, and in reply wish to say that prices on maple flooring are lower than they have been for a long time. This situation no doubt you know about, *and I can't find where two manufacturers are quoting the same prices on any one item.* I have prices on 13/16 x 2¼" Number 1 as low as $125.00 and as high as 145.00; Factory as low as $75 and as high as 90; Clear as low as $140.00 and as high as $148.00." (Vol. I, pp. 343-4.)

GOVERNMENT'S WITNESSES.

But let us see what the *Government's own witnesses* testified. The following persons were called by the Government and interrogated with respect to their *production*. On cross-examination they testified as follows:

Mr. August O. Bublitz, of Beck & Co., Milwaukee, *nonmembers:*

"We sell most of our flooring at St. Louis, and all the way up to Chicago and St. Paul. We keep in touch with market conditions through salesmen, or we solicit by mail. If we make quotations and our orders are turned down we have got to come again. *We have pretty strong competition.* In the course of our business we have learned of the prices made by Kerry & Hanson, J. W. Wells Company, I. Stephenson, Trustees, Cummer-Diggins Company, West Michigan Flooring Company, Cobbs & Mitchell, and Mitchell Bros. [all defendants]. *They have been competitors of ours in selling in the territory above mentioned.*

Q. State whether or not you have at times found any of the firms you have mentioned quoting lower prices than yours or sometimes higher. How has that been, generally?

A. Well, we have found them sometimes lower and a few exceptions where they were higher—they have often a better price than we—*as a rule they are always lower.* We try to get prices, you know—*we have to meet competition in order to get the business.*"

"*Sometimes we were able to meet their lower prices and to get the business and sometimes they got the business.*" (Vol. I, pp. 84, 83.)

Mr. Carl Barnes, of A. H. Krauskoph Co., Richland Center, Wis., *nonmembers:*

Sell maple flooring as far east as Madison, Wisconsin, and west throughout Iowa.

"In selling maple flooring we have met competition from other manufacturers who sometimes sell at lower prices than we do. We came into competition with the *Northwestern Cooperage & Lumber Company*, W. D. Connor Company, *Wisconsin Land & Lumber Company.*

I am not sure as to the difference in prices as between Connor and *The Cooperage Company, but as between them and us I have noticed a difference. We are higher than they are. That is true also of the Wisconsin Land & Lumber Company, but not so much so I think.* I am not so conversant with the prices recently that they have made." (Vol. I, p. 85.)

Mr. Charles A. Goodman, of Goodman Lumber Co., and Sawyer-Goodman Co., of Goodman, and Marinette, Wisconsin, respectively, *nonmembers:*

"We sell most of our flooring in Wisconsin, Illinois, Michigan and Ohio to wholesale dealers and retail lumber yards. *In the sale of our maple flooring we have met competition from other manufacturers and that competition has always been pretty active since we have been in business. The manufacturers whom I come most directly in competition with are I. Stephenson Company and Cobbs & Mitchell; Mitchell Bros., Wells Lumber Company, Wisconsin Land & Lumber Company, Northwestern Cooperage Company, William Horner, Ward Bros., W. D. Young & Co.* In selling in competition with these various manufacturers *we have found that competition took the form of varying prices quoted by different manufacturers. Sometimes their prices were lower than ours and sometimes we were able to meet their prices or perhaps better them. There has at all times been substantial variations in the prices quoted for the same grades and same sizes of flooring by the different concerns above mentioned.* We find the prices are *extremely variable.*

"The competition we meet is quite difficult for us to locate because we can't depend upon the same prices at all. *We will quote a price on a carload of a certain kind of flooring and maybe get the order and the next day quote the same price for flooring again and lose the order by several dollars. The condition above described so far as the spread in prices between manufacturers for the same grades and sizes of flooring has existed right along since we have been in business and exists to-day. There have been many times when we could figure no profit in manufacturing flooring. At times the prices of flooring has been high enough to permit a substantial profit; other times the prices has permitted no profit. We manufacture our maple flooring from our own logs, our own lumber.*" (Vol. I, p. 86; and see pp. 59-60, *supra.*)

Mr. George Bulgrin, of R. Connor Company, Marshfield, Wisconsin, large *nonmember* manufacturers, who discontinued association membership on February 1, 1920, (Vol. II, p. 478):

"I am the sales manager of the R. Connor Company. As such I come in competition with other manufacturers of maple flooring. Our principal competitors are I. Stephenson & Co., Trustees, Northwestern Cooperage & Lumber Company and Wisconsin Land & Lumber Company; Foster-Latimer Company, Kneeland McLurg Company, J. W. Wells Lumber Company. I have been sales manager of the R. Connor Company for about six years, and during all of said time have kept in close touch with market conditions. *I have always found that competition was very keen and that very rarely would there be any prices alike. Some would be lower and some higher all the time.* The variation in prices was *very substantial.* The normal variation in price *per thousand feet* was $5.00 per thousand. In 1919 and 1920 the variation for a given size and grade of maple flooring was sometimes as high as $25 to $30 a thousand. There were times when there was a spread as

high as $50.00 a thousand. *In order to meet this competition since 1918 I have found that at times our prices were higher than the prices of our competitors who were members of the Association. That has occurred frequently. At other times we were able to meet their prices or perhaps better them and get the business.*" (Vol. I, pp. 88-9.)

Mr. W. R. Gillette, of Brown Lumber Co., Traverse City, Michigan; *nonmembers;* began to manufacture maple flooring in 1920:

"Most of our flooring goes to Chicago, practically 80% of it, and the balance to Detroit. In the Chicago and Detroit markets in the sale of our flooring since 1920 we have met competition. *At times we find the competition very keen and we are able sometimes to get the business, other times we find that the other fellow apparently has a lower price than we have, so we don't get the order.* Our principal competitors are the *Northwestern Cooperage & Lumber Company, Wisconsin Land & Lumber Company, Holt Hardwood Company. I have often been told by our salesmen that some of our competitors were quoting lower prices for the same grade and size of maple flooring than we were. That situation has existed since 1920.*" (Vol. I, p. 92.)

Mr. Hamlin J. Ward, of Ward Brothers, Big Rapids, Michigan, large *nonmembers;* in maple flooring industry twenty-four years:

"During the time that I have been in the maple flooring business I have found *quite active competition. That competition has been represented by variation in prices quoted by different manufacturers for the same size and grade of flooring at any given time.* That *competition* has *always* existed and *exists today.*" (Vol. I, p. 94.)

Mr. Sidney L. Eastman, jobber of maple flooring, hardwood lumber, etc., has not manufactured flooring since 1917:

"I purchase the maple flooring sold by me from

different manufacturers in Michigan. I bought from four different manufacturers and have solicited quotations from a number of others. In 1917 my mill burned. In soliciting prices from various manufacturers of maple flooring I have found that there are *hardly any two prices alike.* There is *always* a variation on most purchases I make. *At times the prices vary anywhere from $2.00 to $10.00 a thousand on the same size and grade.* Most of our flooring is largely for export. I have to charge a higher price in order to take care of expenses incidental to export business. I have made the largest purchases from *Kerry & Hanson Flooring Company of Grayling,* Kerry & Way Manufacturing Company of Saginaw, *the East Jordan Lumber Company,* and the *West Michigan Flooring Company.* Before 1917 I belonged to the Maple Flooring Manufacturers Association." (Vol. I, p. 97.)

Mr. R. F. Hooker, retail lumber dealer, Grand Rapids, Michigan:

"We buy maple flooring from various manufacturers. We have bought from *Nichols & Cox, J. W. Wells Lumber Company, Mitchell Bros., Cobbs & Mitchell, Wisconsin Land & Lumber Company, Kerry & Hanson Company, Cummer-Diggins Company, Bigelow Cooper Company, West Michigan Flooring Company.* In buying flooring we send out inquiries to several different manufacturers. We buy less than half a million feet a year in both carload and less than carload lots. *We address inquiries to several different manufacturers in order that we may buy to best advantage.* There is *always a variation* in the quotations made by *different manufacturers* on *one* inquiry. *I don't recall that I ever found all of them quoting the same price.* At *all* times there has been a *variation between* prices quoted on the *same* inquiry by the different manufacturers *above mentioned. This variation fluctuates.* We buy other lumber products as well as maple flooring. At times the variation in prices of maple flooring was as large as the variation in prices of oak flooring or other

lumber products. We have bought flooring from *Horner of Reed City* and Ward Bros. of Big Rapids. Sometimes the prices of Ward Bros., as compared with the prices of the other manufacturers above mentioned, were lower and sometimes higher." (Vol. I, p. 141.)

WITNESSES FOR DEFENDANTS.

CHICAGO DEALERS.

So much for the Government's witnesses. Let us now turn to the evidence of *buyers* of maple, beech and birch flooring.

Mr. L. L. Barth, 73 years of age, engaged in lumber business since 1878; senior vice president, stockholder and director of Edward Hines Lumber Co., which was organized in 1891 or 1892. Buying and selling done under his direction. Company owns numerous mills and subsidiary corporations, and largest lumber yard in the world at Lincoln street and Blue Island avenue, Chicago, where 300,000,000 feet of lumber handled annually. All told company and subsidiaries handle about 1,000,000,000 feet of lumber annually. *Chicago yard handles from three to five million feet of maple, beech and birch flooring annually.*

Has done business with members of defendant Association.

Keeps in touch with market conditions and prices of maple, beech and birch flooring by *means of inquiries addressed to practically all manufacturers of maple flooring;* talks with representatives of such manufacturers, other yardmen, customers; competitors' prices on some jobs, etc., etc. (Vol. I, pp. 409-410.)

"*We do not make any distinction in purchasing*

flooring between members of the Maple Flooring Manufacturers Association and nonmembers. We do not care from whom we buy flooring so long as we get what we buy." (Vol. I, pp. 425-6.)

"*I consider that it is to our interests as a buyer that there should be free and full competition among the manufacturers of maple, beech and birch flooring, and that is what I am in favor of.* If a person were to tell me that during all the time since 1895 or any part thereof there had been no competition among the manufacturers of maple, beech and birch flooring, and that by various devices said manufacturers and their confederates had established and maintained a practical uniformity of f. o. b. mill and delivered prices of maple, beech and birch flooring, *I would say that he did not know what he was talking about.* I do not think that a man that has had any experience in the lumber business would make such a statement. He might know something about the lumber business, but his experience would be very limited. *I have never suspected that I was being victimized in the manner charged by the Federal Government in its petition in this case. From my knowledge of the lumber business and talks with other yard men, I can say that all yard men in Chicago feel that there has always been competition among the manufacturers of maple, beech and birch flooring.*

I have *never* observed *any uniformity, whether practical or otherwise, in the prices for maple, beech and birch flooring by the different manufacturers.* There might be a case or two where on one item they might be the same, but as a general proposition no. The prices have always varied and that variation has been pretty substantial in many cases. *From my knowledge of the lumber business I can say that the variation or difference in prices of the different manufacturers of maple, beech and birch flooring has been as great as the variation in prices of the other lumber products that I buy. If there had been a practical uniformity of prices, or if the prices of maple, beech and birch flooring had been artificially regulated and controlled by a group of manufac-*

turers, I do not think that such a condition could exist 24 hours before I would become aware of it. This for the reason that we are buying every day and we would immediately learn of any uniformity of price. I do not think there was *ever* a time during my *extended* experience when *all* the *quotations* that we received, were all the *same.*

There has *never* been a time when they were *practically uniform.* From my experience I would say that the prices of maple, beech and birch flooring in Chicago have been governed by the law of *supply and demand,* and that such prices have *not* been artificially *manipulated* and *fixed* by some *group* of manufacturers. This information [opinion?] is based upon my *experience* in the purchase and sale of from *three* to *five million feet* of *maple, beech* and *birch flooring annually.* I believe that there *is now* and has *always* been *free, active and vigorous competition* among the *different manufacturers* of *maple, beech* and *birch flooring.*" (Vol. I, pp. 410-411.)

Fortunately, some quotations received during a period of two years before the date on which Mr. Barth gave his deposition, were located. (See explanation of office system on pages 426-7, Vol. I.) Let us notice the quotations received in response to the *first three inquiries* that appear in the record. It should be stated that the quotations are *per thousand feet* delivered at Chicago, unless otherwise specified.

"The papers you hand me which have been marked Defendants' Barth Ex. 1 for identification are an inquiry dated September 15, 1922, that was sent out by the Edward Hines Lumber Company for *15,000 feet* 13/16ths by 1¼ inch face Clear maple flooring, and also for a car of 13/16ths by 2¼ inch face Clear maple flooring, addressed generally to manufacturers of maple, beech and birch flooring, and the answers of different manufacturers who quoted on said inquiry. Said quotations received by us on the *15,000 feet* of

16th by 2¼ inch face No. 1 Maple flooring delivered at Pittsburgh, Pennsylvania, and the quotations received in response thereto. Said quotations are as follows:

Kneeland-Bigelow, $105.00 less $2.00 commission.

Holt Hardwood Company, $100.50 less $2.00 commission.

The documents you hand me marked Defendants' Barth Exhibit 22 for identification are an inquiry of the Edward Hines Lumber Company, sent out on April 3d, 1923, for *five* cars of flooring and the quotations received in response thereto. One of the inquiries related to *13/16ths by 2¼ inch No. 1 Maple Flooring delivered at Chicago,* and the quotations received with respect to such flooring were as follows:

Holt Hardwood Company, on 5 cars, $94.00, less $2.00 commission.

Holt Hardwood Company, on 5,723 feet, $94.50.

The inquiry also related to 13/16th by 2¼ inch Factory Maple Flooring and the quotations received were as follows:

Holt Hardwood Company, on two cars, $54.50, less $2.00 commission.

J. W. Wells Lumber Company, $59.00.

[30]Ward Brothers, on two cars, $59.25." (Vol. I, p. 420.)

Mr. Barth testified also:

"The inquiries and quotations that have been read in evidence are *typical* of our experience, for the time that we have been in business, of variations in quotations that have been received from different manufacturers." (Vol. I, p. 426.)

The Edward Hines Lumber Co. is a competitor of some

---

[30]Nonmember.

members of the defendant Association in some lines of the lumber business. (Vol. I, p. 426.)

That the price variations above set forth are *substantial* is evidenced:

(a) By the previous testimony of the witness that they were substantial.

(b) By the difference in dollars and cents on the number of feet involved between the results obtained by using the high and the low quotations as multipliers.

(c) By the fact that (when not purchasing for stock) both wholesalers and retailers buy for specific jobs, and their profit ordinarily consists of merely the commission allowed. (Vol. II, p. 595 (fol. p. 1041), and pages 111-112, 138.)

Mr. C. A. Flanagin, Mr. Earl Bartholomew, Mr. Alexander B. Claney, Mr. Albert P. Hawley, and Mr. Charles J. Heniff, other Chicago dealers (large and small), gave equally strong testimony as to the variation in prices. They also testified that strong, active competition existed among the defendants, and many other quotations were read into the record. (Vol. I, pp. 429-434; Vol. II, pp. 449-458, 458-461, 461-466, 467-471.)

MILWAUKEE.

Mr. Lawrence J. Koerble, of John Schroeder Lumber Co., also gave similar testimony with respect to the existence of competition among the defendants. (Vol. I, pp. 445-6.)

The Edward Hines Lumber Co. destroyed all quotations more than two years old. Mr. Barth was therefore unable to read into the record quotations received during 1920, the period of high prices. Let us notice a few of the quotations received by Mr. Koerble during that year.

All the quotations are *per thousand feet* f. o. b. cars, Milwaukee, unless otherwise specified. We quote from the record:

"Defendants' Koerble Exhibit 4 for identification is an inquiry we sent out dated September 20, 1920 for certain items of flooring and the responses that we received thereto.

The quotations received on 13/16 x 2¼" *clear* maple flooring are as follows:

I Stephenson Company	$225.00
Cummer-Diggins Company	177.00
Bigelow-Cooper Company	201.50
Nichols & Cox	187.50
Northwestern Lumber & Cooperage Co.	185.00
Cobbs & Mitchell	182.50
Kerry & Hanson Flooring Co.	182.50
West Michigan Flooring Co.	197.50

The quotations we received on the 13/16, 2¼" face *No. 1* maple flooring were as follows:

Wisconsin Land & Lumber Co.	$170.00
G. H. Tennant Co.	185.00
East Jordan Lumber Co.	173.00
Strable Lumber & Salt Co.	171.00

On the 13/16, 2¼" face *factory* maple flooring, we received the following quotations:

Foster-Latimer Company	$150.00
W. D. Young & Co.	140.00
Bigelow-Cooper Co.	159.50
Nichols & Cox	137.50
Northwestern Cooperage & Lumber Co.	150.00
Cobbs & Mitchell	127.50
G. H. Tennant Co.	155.00
East Jordan Lumber Co.	130.00
Kerry & Hanson Flooring Co.	132.50
Strable Lumber & Salt Co.	146.00
Wisconsin Land & Lumber Co.	135.00
I. Stephenson Company	150.00
Cummer-Diggins Lumber Co.	126.00"

(Vol. I, p. 440.)

All the firms above mentioned were members of the Maple Flooring Manufacturers Association then in existence. (Vol. II, pp. 477-8.) Many other quotations were read into the record by Mr. Koerble. Some of these quotations were from nonmember manufacturers as well as from *brokers.* If the names are not on Defendants' Exhibit QQ, and are not listed as members of the defendant Association or its predecessors (Vol. II, pp. 472-479), then where only individual names are given, such as Paul Knolk, Clayton Gibson, etc., it is safe to assume that such persons are *brokers. Of course, it does not appear by whom the flooring they were offering for sale was manufactured.* The District Court's assertion that "somewhat lower prices have usually been quoted by nonmembers" (Vol. I, p. 59), is opposed to the testimony of both nonmembers and buyers, and is conclusively disproved by the actual quotations appearing in the record. For names of members of the different associations since 1913, see Vol. II, pp. 472-479.

BOSTON.

Mr. Lester N. Godfrey, Treasurer of the Godfrey Lumber Co., has been handling maple, beech and birch flooring for 30 years, and has been engaged in the wholesale lumber business in Boston for 43 years. Mr. Godfrey testified in part as follows:

"Q. Now, in the many years that you have been engaged in the purchase of maple, beech and birch flooring, *has there ever been a time in your experience when all of the manufacturers of that flooring,* or at least all with whom you come in contact as a purchaser, *were quoting uniform prices for their product?*

A. *I cannot remember such a thing, no.*

There has *always* been *competition* among the manufacturers of maple, beech and birch flooring in

the sale of flooring to large dealers such as my company. That competition has expressed itself in varying prices quoted by the manufacturers on the same grade and size of flooring. That condition has always existed as far as I remember. It certainly has existed during the last ten years.

I gave you such inquiries as I was able to find that were sent out by my company to the flooring manufacturers during the year 1922 and the replies that were received in response thereto. The documents you show me are copies of letters and the letters that I received in answer thereto that I sent out dated January 6, 1922, addressed to William Horner, Cummer-Diggins Company and the Kerry Hanson Flooring Company.

(Said documents marked Defendants' Godfrey Exhibit 1, and received in evidence.)

In my letter of January 6, 1922, addressed to the manufacturers above mentioned, I asked for quotations on 13/16 x 2¼" Clear Maple Flooring. The quotations that I received were as follows:

William Horner	$98.50
Cummer Diggins	99.50
Kerry-Hanson	94.50

All the prices above mentioned were f. o. b. cars Boston and were subject to the usual commission.

While I have not had direct charge of the buying during the last few years, I go through all the correspondence every day. I haven't had a vacation for years and it is only a matter of convenience whether Mr. Fisher or either of my sons dictate an inquiry or have the stenographer send one out. I am the head of the business of our company and direct the affairs of it and devote all my time to the management of said company.

In the letter of William Horner dated January 9, 1922, which forms a part of Exhibit 1, it is said, 'We do not see how we can possibly cut this figure, but if it will help you out any, we would be willing to go $1.00 per thousand lower.'

It has been my experience frequently, in dealing with manufacturers, that they endeavor to give me a price which would enable me to meet competition and would cut their own prices accordingly below prices previously quoted by them. *If the prices were uniform, or substantially uniform, for the same grades or sizes of maple flooring, we would not have to send out any inquiries at all.*

In the telegram of Kerry & Hanson Lumber Company dated January 9th, they state, *'Will make up to five dollars per thousand reduction. Do best you can on price.'* It is quite a frequent occurrence, where manufacturers endeavor to meet competition by giving us as low a price as they feel they can. In that particular case Kerry & Hanson practically left the price to us.

The letters you show me are copy of an inquiry that my Company sent out on February 11, 1922 and the answers that were received in response thereto. All these letters were received in the regular course of mail.

(Said documents marked Defendants' Godfrey Exhibit 2 and received in evidence.)

On 13/16 x 2¼" No. 1 Maple flooring, the following quotations were received:

William Horner	$72.00
Kerry & Hanson Flooring Co.	74.50
Flanner-Steger Land & Lumber Co.	69.50

On 13/16 x 2¼" No. 1 Beech flooring, we received the following quotations:

William Horner	$62.00
Kerry & Hanson Flooring Co.	64.50

All the foregoing prices were per thousand f. o. b. cars Boston or New England delivery rate and subject to the same commission.

The documents you hand me are a copy of an inquiry our Company sent out on February 14, 1922, and the letters that were received in response thereto.

(Said letters marked Defendants' Godfrey Exhibit 3 and were received in evidence.)

On 13/16 x 2¼" Clear Maple flooring, we received the following quotations:

Flanner-Steger Land & Lumber Co.	$94.25
Cummer-Diggins Co.	99.50
William Horner	98.00

On 13/16 x 2¼" Clear Beech flooring, we received the following quotations:

Cummer-Diggins	$84.50
William Horner	80.00

On the 13/16 x 2¼" No. 1 Beech flooring, we received the following quotations:

Cummer-Diggins	$64.50
William Horner	60.00

On 13/16 x 2¼" face No. 1 Maple flooring, we received the following quotations:

Cummer-Diggins	$44.75
William Horner	43.00

All the prices above mentioned were on a delivered basis.

The Flanner-Steger Land & Lumber Company's prices were subject to a commission of $3.00 per thousand and the prices quoted by the other manufacturers were subject to a commission of $2.00 per thousand

In our letter to Cummer-Diggins Company, which is a part of Defendants' Godfrey Exhibit No. 3, we state: 'Beg to advise that our customer had a price of $80.00 on 13/16 x 2¼" inch clear beech and $94.25 on 13/16 x 2¼" clear maple. Therefore we were not in it.' That represents a typical case where some other wholesaler was able to quote a lower price than our Company was. Sometimes our competitors are able to underbid us and sometimes we underbid them. There are a good many wholesalers of maple, beech and birch flooring in this territory, and all of us are bidding for the business. The competition

has at all times been vigorous and active and we send out inquiries in order to find out what we can buy the flooring at. *We get the business sometimes because we are able to make a better price through getting the flooring cheaper than our competitors and sometimes vice versa. Such conditions have always existed.*" (Vol. II, pp. 531-533.)

And on cross-examination:

"As a general rule, we buy from Cummer-Diggins, William Horner and Kerry & Hanson, and very frequently from Flanner-Steger Land & Lumber Company, perhaps more frequently from them than the others.

Some of the manufacturers of maple flooring have exclusive representatives here and if they have we don't address inquiries to them. They give their representatives the benefit of their distribution and would not quote us. That is one of the reasons why we don't send out to more than five or six manufacturers at one time. It might be a material advantage to address inquiries to a larger number of manufacturers. *Even among the small number to whom we address inquiries, there is a great variation in price.* We send inquiries to about all we know about who make good flooring and manufacture in large enough quantities to supply our orders. We dicker with the different manufacturers as to commissions and prices in order to obtain as low a price as possible so that we may meet competition. Of course, if a manufacturer gives us a larger commission, his profit would be less. The purpose of allowing a larger commission is to secure orders and the one allowing a larger commission may underbid the other fellow.

I could not state what the average variation in the various prices on a certain grade of maple flooring would be. My correspondence is accessible to either the plaintiff or the defendant. You will find quite a variation at different times. It is owing, a great deal, I imagine, to the amount of lumber they have on hand of certain grades. I don't know whether the difference in freight rates has a bearing upon the

price of flooring. I don't know what effect standardization of flooring has had upon prices, *but I do know that it has been of great assistance to us. We now have a more dependable grade.*

I buy all our flooring outright." (Vol. II, p. 538.)

Other quotations were also read into the record by Mr. Godfrey.

Similar testimony was given by Mr. William Bacon, of the Davenport-Peters Co.; Mr. William C. McConnell, of the McConnell Company, Boston dealers of long experience. (Vol. II, pp. 560-564, 564-569.)

NEW YORK CITY.

The following quotations, which were made to dealers in New York City during the latter part of *February, 1923*, or less than 30 days before the filing of the petition herein, are interesting, especially in view of the different grades and sizes involved:

	13/16x2" clear	13/16x2¼" clear	13/16x2" No. 1	13/16x2¼" No. 1
East Jordan Lbr. Co.	98.25	.....	88.25	.....
Horner	101.50	108.50	.....	98.00
Holt Hardwood Co.	93.25	98.25	63.25	68.25
J. W. Wells Lbr. Co.	.....	108.25	.....	98.25

	13/16x2 factory	13/16x3¼ factory	13/16x3¼
Horner	53.00	57.00	.....
J. W. Wells Lbr. Co.	53.25	59.25	.....

	13/16x3¼" clear	13/16x3¼" No. 1	13/16x3¼" factory
East Jordan Lbr. Co.	84.25	.....	54.25
Horner	.....	84.00	57.00
J. W. Wells Lbr. Co.	94.25	89.25	59.25

(Vol. II, pp. 577-578.)

Mr. Ralph A. Brown, of the John A. Daley Lumber Co.; Mr. George A. Yaest (with Sam E. Barr); Mr. Ray-

mond W. Storm, of George H. Storm & Co.; Mr. Paul G. Ribett, of the Harris Flooring Co., dealers in New York City, all testified to the existence of competition and the variation in prices. Many quotations were also identified and introduced in evidence. (Vol. II, pp. 569-578, 578-581, 581-584, 584-587.)

PHILADELPHIA.

Mr. Elmer M. Phisterer testified as follows:

"'I live at Philadelphia and have for practically all my life—45 years. I am Sales Manager for the William M. Lloyd Company of this city. That Company has been engaged in the lumber business in Philadelphia since 1868. I have been Sales Manager for the William M. Lloyd Company for three years. Before that I was their Traffic Manager.

As Sales Manager I purchase and sell lumber. Our Company handles Long Leaf Yellow Pine, Short Leaf Yellow Pine, Yellow Pine Floorings, Maple Flooring, Oak Floorings, White Pine, Hemlock, Spruce, practically all lumber that is used in building contruction. Our Company deals in these products, both wholesale and retail. We sell principally to the lumber yards throughout the eastern portion of the United States. We also sell to builders, contractors, consumers in and around Philadelphia. *During the past two years I think our Company had handled about a million feet of maple flooring a year.* We purchase maple flooring from different flooring mills. During the past two years we have specialized in the product of Kneeland-Bigelow Company, formerly the Bigelow-Cooper Company. Before we began to handle the product of the Kneeland-Bigelow Company, we purchased maple flooring from various mills. We sent out inquiries addressed to several manufacturers in order to determine from whom we would buy. These inquiries were addressed to probably six or eight different mills in different sections.

The prices quoted by the different mills varied. That was always the case. The variation in prices

was a matter of dollars per thousand feet. I was also then familiar with the prices of oak floorings. *I think that the variations in prices quoted by the maple flooring manufacturers were as great, or greater, than the variations in prices quoted by the manufacturers of other competing flooring, such as oak.* Sometimes the variations would be much greater than at others. I have known of variations of six or seven or eight dollars per thousand feet on different grades of maple flooring. In the sale of the product of the Kneeland-Bigelow Company we are constantly in competition with the product of other manufacturers. W. D. Young & Company of Bay City, Michigan and the West Michigan Flooring Company of Manistee, Michigan are represented in this territory and are the principal ones that we come into competition with. Competition is active all the time and the prices quoted by the representatives of other flooring manufacturings vary from our prices. This variance is sufficient to swing the business to or from us, according to whether our prices are lower or higher than the prices of our competitors.

To my knowledge this condition has existed all the time that we have been handling Kneeland-Bigelow flooring. I don't want to give the impression that we were always higher because there were lots of occasions when we have been equal to or lower than other quotations and received the business; maybe through friendship or through business association we received business, possibly on the same basis or maybe 25 or 50c higher than other quotations.

During all the time that I have been selling flooring I have found very substantial variations in the prices quoted by other manufacturers in competition for a given job. That variation is sometimes as much as four or five or six dollars per thousand feet of flooring. The Philadelphia market is a large consumer of maple flooring, which is used in office buildings, schoolhouses and construction of that character. To my knowledge there has [never] been a time when substantially all the manufacturers of maple flooring, either directly or indirectly, quoted

uniform or practically uniform prices. As we encountered competition, we took the matter up with Kneeland-Bigelow Company.

The letters you show me are correspondence passing between our Company and the Bigelow-Cooper Company or the Kneeland-Bigelow Company. This correspondence was carried on in the ordinary course of business. The correspondence in question was taken directly from our files.

Our letter of January 7, 1922, addressed to Bigelow-Cooper Company, Bay City, Michigan, reads as follows:

'Recently I quoted John L. Conrad & Sons at Port Carbon, Pa., on 10,000 ft. 4-4 Factory Maple Flooring at $38.50 f. o. b. car their city.

I have followed this matter very closely and received a re- (fol. 1032) sponse from them this morning (as I have a friend in their employ) stating that it was bought from Young at $31.50 delivered.'

That letter is typical of the competition between ourselves and some other manufacturer or manufacturer's representative in the sale of factory flooring. I recall the case referred to in that letter. By Young I meant *W. D. Young & Company of Bay City.*

The letter of March 6, 1922, written by the Bigelow-Cooper Company to our Company, reads as follows:

'You understand of course that we have discontinued the operation of our plant and do not intend to resume operations until conditions are stabilized to a point where we can pay the present market prices for rough lumber and sell our flooring at a profit.

Our supply of flooring lumber was reduced to a very low point and we realize it would be necessary for us to go out on the market and replenish our stock. *When we learned the market price on lumber and compared the prices for the finished product, together with our cost of operation, we promptly discovered that figures were in the red.*'

The letter written by the Bigelow-Cooper Company addressed to our Company, under date of March 14, 1922, reads in part as follows:

'We have a great deal of confidence in the future, however, and feel that the extensive proposed building program throughout the country will improve values, while, on the other hand, the crop of rough lumber produced during the past winter will soon be ready for the market and there is a possibility that prices on the rough lumber will be lower. With this in view we are anxious to have our house in order so that it will be possible to take advantage of the conditions and operate our plant to full capacity.

On our last price list we made concessions on certain items which we believe represent the present market, *but in any instance where you are offered business for these items at prices lower than our list, we will allow you to meet legitimate competition, in order secure the business.*

We fully appreciate your position under these conditions and assure you that it is our desire to cooperate to the fullest extent possible without serious loss to ourselves, and we are confident that you do not expect any more than this. *Of course we want you to handle our stock exclusively, but there is absolutely no objection to your purchasing elsewhere items that we cannot furnish, or that it is possible for you to buy to better advantage.'*

When we met active competition and lower prices quoted than we were able to meet, we usually submitted the matter to Kneeland-Bigelow Company. Sometimes they would authorize us to take the business at lower prices and sometimes they would not. We usually have specific cases which we submitted to them where the business had been offered to us and before we would accept we would naturally get in touch with the mill and get their acceptance. Of course, we were always authorized to accept business at the prices fixed in Kneeland-Bigelow Company's current price list. What we took up with them was whether we could accept certain specific orders at less than the prices stated in their current price lists. It was the practice of the Kneeland-Bigelow

Company, as well as the practice of other manufacturers, to send out their price lists from time to time. This is true of the lumber trade generally. Price lists of some character are received in almost every mail. On July 6, 1922 we received a letter from the Bigelow-Cooper Company calling attention to the stocks on hand in various sizes, etc. Said letter reads in part as follows:

'We have made concessions in prices on these items and believe they are considerably below the present market; therefore, we urge you to call the attention of your trade to these particular items.

We would appreciate an expression from you regarding the conditions in your market in reference to prices and the prospective future demand. *It is essential that we have all of the information possible so that we may keep in line with our competitors and plan our future policy.'*

It was our practice from time to time to advise the Kneeland-Bigelow Company of the competitive conditions in this market. It was our intention to keep said Company fully informed as to what their competitors were doing because our getting orders depended always upon being in line with the market or being able to at least equal or undersell other dealers.

On August 9, 1922, we received a stock list and prices from the Bigelow-Cooper Company, accompanied by a letter which reads in part as follows:

'We have endeavored to make prices on these items that are attractive, but are perfectly willing to meet legitimate competition from reputable Maple Flooring manufacturers, if necessary to secure orders.

We will welcome any information that you can give us regarding conditions in your territory, especially with reference to competitive prices, and also any suggestions which you may have to offer that will lead to our mutual benefit in the distribution of our products.'

When a manufacturer has a considerable quantity of given grades and sizes of maple flooring on hand,

the usual procedure is to make a special effort to move those sizes at the list price, if possible, and if not, of course, at lower prices. A flooring mill has to have a continual flow through the mill. Otherwise, if the warehouse becomes filled with maple flooring, the mill portion must stop. It is of such a character that you cannot pile it outside. It must be protected all the way through the manufacture, and then it must be kept in the warehouse until it is loaded on cars and shipped out. Consequently there must be that even flow through the warehouse continually, and if they cannot sell a certain size of certain dimensions, or a certain grade, that piles up, and it is produced all the time in the manufacture of the other grades, that is, you cannot stop it, it comes on continuously, then that flooring much be moved out of that warehouse. All different grades and sizes are and must be produced at the same time. It has been our experience that when a manufacturer becomes stocked up on one particular grade, he cuts the price.

We received a letter from the Bigelow-Cooper Company dated August 23, 1922, reading as follows:

'We desire to again call your attention to the surplus items on our list, and urge you to make a more earnest effort to secure orders for this stock. We are especially anxious to move some of the shorts.

If you find that our prices on this item are not in line with our competitors, it will be satisfactory for you to meet the market price. Our weekly sales reports show that other manufacturers are selling the short lengths, and we see no reason why it should not be possible for you to secure a portion of this business.'

On January 24, 1923, we sent a letter to the Kneeland-Bigelow Company, reading as follows:

'Will you be kind enough to let me know what information you have regarding Wisconsin Land and Lumber Company, as these people were in competition with us with a contract of this city on 200,000 feet 13/16 x 2¼" #1 Maple Flooring, on which they quoted $92.00 per thousand feet.

I understand they manufacture the LXL brand, and inasmuch as their price is $.75 lower than yours I did not think it advisable to wire you the offer as you do not show any of this grade on your stock list.'

We received from time to time stock lists, as well as price lists, from the Kneeland-Bigelow Company. We had those stock lists in order that we might know just what to sell and what not to sell.

On April 17, 1923, we wrote to the Kneeland-Bigelow Company a letter, reading in part as follows:

'For your information, we understand that Ward is willing to take on the business, shipping as outlined, and their price is 50 cents under ours, but we can secure the business on our price.'

The business referred to was 102,000 feet of 13/16 x 2¼" clear maple flooring. The Ward mentioned in said letters is Ward Brothers of Michigan. I do not know whether Ward Brothers are members of the Maple Flooring Manufacturers Association.

In Philadelphia we sell to contractors and consumers and come in competition with yardmen and other dealers who handle maple flooring of other manufacturers. Outside of Philadelphia we have a wholesale business, and in such business we come in competition with other manufacturers in the sale of maple flooring.

We received a letter from the Kneeland-Bigelow Company dated May 3, 1923, reading in part as follows:

'We are surprised to note that you are losing business on lower competitive prices, as other mills report that they are receiving orders at higher prices than our list. As a matter of fact, we have acted very conservatively in raising prices and it was our conviction that it was advisable for us to accept orders for shipment during the third quarter of this year, which you know has not been our policy heretofore.

The instance you report on Factory Maple Flooring may be unusual in some respects as, of course,

in this grade we have competition from various sections of the country.

We are very glad to have you keep us advised of competitive conditions that you have to contend with and assure you that it is our desire to co-operate with you to the fullest extent possible in order to increase the business.'

We received a letter dated June 18, 1923, from the Kneeland-Bigelow Company, reading in part as follows:

'We have been advised in several instances that some manufacturers of Maple Floring are offering reductions in certain items. It is our desire to keep in line with the market in order to secure a fair share of the business offered.

We desire to co-operate with you on future orders and in any cases that you encounter lower prices, we would appreciate it if you would inform us by wire and we will immediately give you definite response.'

We also received the letter dated June 3, 1923, from Kneeland-Bigelow Company, reading as follows:

'Referring to our stock list of June 15th, we call your attention to the surplus of 17-16 by 3¼" face Factory.

In order to secure prompt orders for this stock, we will allow a special concession of $2.50 per M to you for the entire quantity shown in our list.'

We also received the letter dated June 27, 1923, from the Kneeland-Bigelow Company, reading in part as follows:

'We have your favor of the 25th inst. with reference to quotations in your territory and since this letter was written, we have mailed you new price lists with *reductions* on a great many items. This now makes our price on the 13-16 by 2¼" face Factory $57.75 delivered your rate. *You realize, of course, that we have been heavily oversold and consequently have hesitated in reducing our prices. However, we wish to keep in line with the market*

and as previously advised you, it is necessary for us to depend upon our representatives to keep us informed of the competitive price conditions.'

The letters which have been introduced in evidence are typical of the correspondence that has passed between our Company and the Kneeland-Bigelow or the Bigelow-Cooper Company. The competitive conditions described in said letters have at all times existed in the flooring business in the Philadelphia market." (Vol. II, pp. 587-593.)

Mr. George Lippincott, who represented William Horner and the Grand Rapids Trust Co. as Receiver for Horner; Mr. W. N. Lawton, who represented the West Michigan Flooring Co., identified and read into the record price lists received from the above named defendants, as well as others. (Vol. II, pp. 605-616, 616-624.)

A comparison of these price lists will amply substantiate their testimony that competition among the defendants had always existed.

Many quotations were read into the record by Mr. W. J. Barnett, of Watson, Malone & Sons, Philadelphia dealers in lumber since 1854. (Vol. II, pp. 596-604.)

MINNEAPOLIS AND ST. PAUL.

It will be recalled that the petitioner stipulated that similar testimony would be given by representatives of the John C. Hill Lumber Co., the Tozer Lumber Co., and the Capital City Lumber Co., of Minneapolis and St. Paul, if called as witnesses. (Vol. I, pp. 225-6.) They were not called because of a desire by counsel for all parties and the Court to expedite the hearing at Grand Rapids.

ASSOCIATION STATISTICS.

F. O. B. FLOORING MILL SALES.

Appendix B to this brief is a facsimile of Defendants' Exhibit GG, which is contained in Vol. IV, fol. p. 5448. Concerning this exhibit Mr. George W. Keehn, the Association's Secretary, testified as follows:

> "This statement which we have here starts out with the year 1922, shows every f. o. b. mill price where the flooring was sold f. o. b. flooring mills, during the months of January to December inclusive 13/16ths x 2¼ inch face clear, number one and factory maple flooring standard grades and lengths of clear, number one and factory. In this report we have indicated the identity of the member of the Association who made the sale by recording his Association membership number in red ink above the price. During January, February and March, 1922, identifying numbers of members who reported their sales were not disclosed in our weekly record of completed transactions from which all the f. o. b. mill selling prices given on this statement were compiled. During that period of time no identifying numbers appear upon the weekly sales reports." (Vol. II, pp. 781-2.)[31]

---

[31]These identifying numbers were used for brevity in making out reports. (Vol. II, pp. 474, 479-480.) In order to eliminate possible objections to the Weekly Sales Reports, the use of identifying numbers has been discontinued. (See pages 308-311, 273, *infra*.)

The numbers of the members of the defendant association are as follows:

No. 2, W. D. Young & Co., Bay City, Michigan.

No. 3, Mitchell Brothers Co., Cadillac, Michigan.

No. 4, Wisconsin Land & Lumber Co., Hermansville, Michigan, with the explanation heretofore made concerning said company.

No. 5, Cobbs & Mitchell, Inc., Cadillac, Michigan.

No. 7, I. Stephenson Co. Trustees, Wells, Michigan.

As a reference to Appendix B will show, there was not only the widest variation in prices among the different members, but in the prices of individual members during any given period.

No. 14, Cummer-Diggins Co., Cadillac, Michigan.
No. 22, Osgood & Blodgett Manufacturing Co., St. Paul, Minnesota.
No. 23, Holt Hardwood Co., Oconto, Wisconsin.
No. 24, Kerry & Hanson Flooring Co., Grayling, Michigan.
No. 26, East Jordan Lumber Co., East Jordan, Michigan.
No. 30, Nichols & Cox Lumber Co., Grand Rapids, Michigan.
No. 33, Strable Lumber & Salt Co., Saginaw, Michigan.
No. 34, Foster-Latimer Lumber Co., Mellen, Wisconsin.
No. 37, West Michigan Flooring Co., Manistee, Michigan.
No. 42, J. W. Wells Lumber Co., Menominee, Michigan.
No. 44, Northwestern Cooperage & Lumber Co., Gladstone, Michigan.
No. 45, Flanner-Steger Land & Lumber Co., Blackwell, Wisconsin.
No. 47, Grand Rapids Trust Company, Receiver for William Horner, Reed City.
No. 48, North Branch Flooring Co., Chicago, Illinois.
No. 49, Kneeland-Bigelow Co., Bay City, Michigan.
No. 50, Kneeland-McLurg Lumber Co., Phillips, Wisconsin.
No. 51, Oval Wood Dish Corporation, Tupper Lake, New York.

The Bigelow-Cooper Company's name was changed to the Kneeland-Bigelow Company about January 1, 1923. All the persons, firms and corporations above mentioned have been members of the present defendant Association from the date of its organization, and are members at the present time, with the reservation, of course, heretofore made with respect to the Wisconsin Land & Lumber Company. (Vol. II, p. 479.)

The identifying numbers are not in sequence, for the reason that members of previous Associations dropped out for one reason or another. A number once given a member was retained by him in succeeding Associations in order to avoid confusion. New members were numbered consecutively, beginning with the next number after the highest number already assigned to a member. (Vol. II, pp. 479-480.)

DELIVERED PRICES OBTAINED BY MEMBERS IN SAME REPRESENTATIVE MARKETS DURING MONTHLY PERIODS IN 1922.

Statements of delivered prices obtained in large markets such as Minneapolis, Chicago, Cleveland, Boston, etc., during different months in 1922 were compiled by the Association's Secretary, Mr. George W. Keehn, who testified that

> "all prices checked have been verified by comparison with prices on original orders and invoices which will be submitted as supporting data.
>
> 2. All prices circled are without supporting orders or invoices but they were included in members' reports of delivered selling prices obtained in the thirty representative markets.
>
> 3. Members No. 2, 4, 34, 47 and 50 did not find time to select from their records their orders and invoices supporting their statements of delivered selling prices obtained." (Vol. II, p. 780.)

These statements were marked Defts'. Ex. FF to FF-9 inclusive, and received in evidence. (Vol. II, p. 781.) They will be found in Vol. IV, fol. pp. 5438-5447.

The same absence of uniformity is shown by the statements above mentioned.

RECORD OF AVERAGE PRICES REALIZED.

Appendices C and D are copies of monthly reports entitled as above. At the end of each month each member tabulated all sales of 13/16" x 2¼" Clear maple flooring and prices obtained. He then deducted from the *delivered prices* the *actual freight* paid by the different purchasers to common carriers. And from the aggregate quantity sold and the net amount realized each member would arrive at the *average* price received by him *f. o. b.*

his mill for 13/16" x 2¼" Clear maple flooring during the previous month. The same method was also used in order to ascertain the *average price* f. o. b. mill of 13/16" x 2¼" No. 1, maple flooring, as well as the average price f. o. b. mill of 13/16" x 2¼" Factory maple flooring,—all three grades of maple flooring of the size above mentioned constituting about 70% of the aggregate shipments of flooring by the members of the Association. (Page 44, *supra.*) From the reports of all members the Association's Secretary formerly compiled reports showing the *average prices* received by the different members f. o. b. their respective mills for 13/16" x 2¼" Clear, No. 1 and Factory maple flooring during two months preceding the date of the report. (Pages 308-311, 273, *infra.*)

Appendices C and D are facsimiles of Defendants' Exhibits II-1 and II-2, which appear in Vol. IV, fol. pp. 5458-9. (See Vol. I, pp. 782-4.)

These averages are also shown on a bar chart. (Defts'. Grant Keehn Exhibit 28, Vol. V, p. 969; Vol. II, pp. 714-717.)

As testified by Mr. Grant Keehn the difference between the high and low averages amounted to as much as 65%.

The explanation should here be made that Member No. 3 (Mitchell Brothers Company) and Member No. 5 (Cobbs & Mitchell, Inc.), both of Cadillac, Michigan, are allied interests having a common sales manager. (Vol. I, p. 431.)

RANGE OF AVERAGE SELLING PRICES FROM 1913 TO 1922 INCLUSIVE.

Appendix E is a part of Defendants' Exhibit HH, which was compiled from the *monthly* reports mentioned on pages 146-147, *supra*, and shows the high and low *average* prices f. o. b. mills for 13/16" x 2¼", Clear, No. 1 and Factory maple flooring by *months* from September, 1913, to December, 1922, both inclusive. These average prices are shown for different groups, as well as for all Michigan and Wisconsin members, who have at all times constituted a large majority of the different associations. This exhibit is explained on pages 782-3 of Vol. I, and appears in Vol. IV, fol. pp. 5449-5457.

Appendix E is a facsimile of such portion of the said Exhibit that gives the figures for the years 1920 to 1922, both inclusive.

The figures show not only a wide range of prices at all times, but also *absence* of artificial fixation or control.

CORRESPONDENCE OF MEMBERS WITH AGENTS AND BUYERS.

MR. GREENE OF THE WEST MICHIGAN FLOORING CO.

Let us notice a few of the many letters that were introduced in evidence by the defendants.

On February 6, 1922, Sam E. Barr, wholesale lumber dealer of New York (Vol. II, p. 578), wrote the following letter to the defendant West Michigan Flooring Co., of Manistee, Mich.

> "GENTLEMEN: This will acknowledge receipt of your letter of Jan. 27th with price list on Maple Flooring to apply on orders for shipment during February. We thank you very much for same and

will be glad to send you any orders that we can secure, *but of course you know as well as we do the present chaotic condition of the Maple Flooring market. If our old friend Horner succeeds in getting rid of the stock he has it will probably help some, as he is the only one I have heard of who is making a price as low as $25.00 on Factory, although I have had several of my customers tell me that they have had prices as low as $27.00.*

Prices on 2¼" No. 1 seem to range from $68 to $73.00 and on Clear, $95.00 seems to be the average.

There is quite a variation in prices on 3¼". Your price on 3¼" Factory is as low as any I have seen, but 3¼" No. 1 has been quoted as low as $63.00 and 3¼" Clear as low as $83.00, so there you are.

I certainly do wish that business would get good enough so that prices could be made more stable. It gives me a great deal more pleasure to send an order to a mill that I know they can make a profit on, than to send at some of those competitive prices that I know when they get the order they are bound to lose money on.

I will be very glad to keep you posted as to price conditions in this particular territory, and will be glad to have you keep me posted as to any surplus stock that you may want to move from time to time. Your very truly." (Defts'. Ex. W-17½, Vol. I, p. 367.)

On September 27, 1921, the West Michigan Flooring Co. wrote to the Wyman-Allen Lumber Co. of Boston, as follows:

"GENTLEMEN: We have your letter of Sep. 23rd in which you ask for price on a car 13/16 x 3¼" face Clear Maple Flooring for your yard stock. We have only a small quantity, or less than a carload of this size and grade on hand today and as 3¼" Clear accumulates very slowly with us it would be at least 30 days before we could furnish a car.

Subject to prior sale we could make prompt ship-

ment of one half car 3¼" Clear and one half car 3¼" No. 1 on which we quote you the price of $85.50 per M for the Clear and $60.50 for the No. 1 delivered Boston rate.

We have your letter of Sep. 23rd, advising that our recent quotation on 2¼" No. 1 was out of line and that your customer bought at a lower price. It has become evident to us that we must revise our values particularly on No. 1 and Factory grades, and accordingly we are enclosing herewith our List No. 52, the basis upon which we trust you will be able to send us some business.

It has always been our policy when establishing prices on our product from time to time to stand pat on these prices and *we possibly are making a mistake in doing so under present conditions as there are three or four mills in this territory who evidently do not take costs into account in arriving at selling values, who have no fixed price and are out to meet competition regardless.*

Having faith in your good selves to treat us right on any leeway that we may give you in the question of quoting our Maple Flooring to meet competition, we will until further notice authorize you to quote our product at any reasonable concession necessary from Price List No. 52, excepting 2¼" Clear, to meet competition of any of the Wisconsin or Michigan mills providing the business can be secured for our Maple Flooring on an equal basis of price. We will not care to make any concession on 2¼" face Clear at this time as we find a ready sale for it at our asking price, in fact, we are sold ahead on it to some extent, and most of the manufacturers are situated in the same way.

All the way 'round, it would seem to us that our List No. 52 is low enough to compete with reliable manufacturers although, if not, we are going out to meet their competition." (Defts'. Ex. W-12A, Vol. I, p. 350.)

On June 25, 1920, Mr. John C. Hill of St. Paul, wrote

to the defendant W. H. Greene of the West Michigan Flooring Co., as follows:

"My dear Mr. Greene: I have been diligently trying to get at something definite regarding the market. It is a very hard matter to do. In the first place, things are very quiet and they are adopting the policy of the Dutchmen in Milwaukee, buying just as little as they can and therefore they are not as hungry as they were six months ago, and as some of the mills are taking care of their orders better now, they are not anticipating their wants ahead.

I have gathered up the following information, however, which you can look over and govern yourself accordingly.

Wish that you would kindly treat this confidentially, because I may want to get you information later on, and I don't want to let them know that I am passing it on.

Hermansville claim are filling open price orders at $185.00 for Clear; $175.00 for #1. (This is their idea of market prices.)

Foster-Latimer & Connor claim to be getting $200.00 for Clear; $190.00 for#1; and $150.00 for Factory, on new business.

I. Stephenson Company authorize new business on basis of prices Foster & O'Connor.

J. W. Wells have nothing to sell as they have strike on and not running.

Twin City Hardwood Lumber Company representatives for Cooperage Company, claim they have recently bought 1½" Clear at $191.00; 2¼" Clear for $186.00 and ⅞ x 1½" Clear at $155.00.

Chicago market-Factory is offered as low as $131.50 up to $160.00, we are trying to get $150.00 to $155.00 in C/L; #1 is $185.00 and Clear is $195.00 to $200.00.

This information from Chicago is Nashville Hard-

wood Flooring Company, which account we have West of the Miss. River,—

Oak market is weak and unsettled.

Horner thinks the market is $185.00 for Clear, $180.00 for #1, and $140 for Factory, is as low as it should be quoted.

With kind personal regards I am, yours very truly." (Defts'. Ex. W.-19L, Vol. I, p. 378.)

On August 6, *1922*, the Strable Hardwood Co. of *Oakland, California*, wired the West Michigan Flooring Co. as follows:

"Quote delivered f. o. b. Sacramento forty thousand feet one by three also one by four number one maple flooring tongue and grooved for delivery sixty days *competition unusually keen* some firms shading prices rush wire protecting quotation up to and including August fifteenth."

In answer the West Michigan Flooring Co. wired as follows:

"Your wire sixth *meet legitimate competition other reliable manufacturers.*" (Defts'. Ex. W-2½ and W-2, Vol. I, pp. 340-1.)

In the printed transcript it is stated that the foregoing telegrams were dated August 6, and 7, *1923*, respectively. That this is due to a typographical error, either on the part of the stenographer or the printer is evidenced by the context. The witness (Mr. Greene) had already identified two other communications dated, January 5, *1922*, March 29, *1922*, then the two telegrams above quoted. Whereupon the witness testified that

"the *foregoing letters* are *typical instances* of conditions that existed right along **before** the *beginning of this suit.* * * *

Mr. Darby: Telegram from the Strable Hard-

wood Company dated January 17, 1922, to West Michigan Flooring Company, Manistee, Mich." (Vol. I, p. 341.)

Two telegrams dated January 17, and 18, 1922, respectively, were then read. Then came a long series of communications which were exchanged during *1923, 1921* and *1920*, (Vol. I, pp. 342-383), whereupon Mr. Greene testified:

"The foregoing letters dated in 1920, 1921 and 1923 are typical of our experience in the sale of flooring." (Vol. I, p. 383.)

MR. HODGES OF THE OVAL WOOD DISH CORPORATION.

On May 27, 1922, the Jones Hardwood Co., of Boston, wrote the defendant Oval Wood Dish Corporation, of Tupper Lake, N. Y., as follows:

"Your letter of May 23rd with new price and stock list came to hand while I was away, and I would like to know if these new prices are subject to the special arrangements for discount which you gave me when you were here last. I want to know about this as we are quoting prices continuously and want to be sure where to place the business. *It seems to the writer that your price on 2¼" Factory of $39.50 is pretty stiff. The Western mills as a rule, are asking $34.50 less commission, while your price on the 3¼" face Factory is lower than theirs somewhat.*" (Defts'. Ex. X-8¼, Vol. I, p. 309.)

On October 24, 1923, Mr. Sam E. Barr wired the Oval Wood Dish Corporation as follows:

"Have order immediate shipment twenty-seven thousand one by three Clear Maple, one hundred dollars delivered Spring Lake, N. J. stop. Thirty thousand same width, thickness number one Maple ship about two weeks New York City, New York Central delivery eighty-seven. *Wrote several manufacturers and have their reply. Can purchase their*

prices, offer immediate acceptance. Wire answer prices subject regular commission." (Defts'. Ex. X-4½, Vol. I, p. 306.)

On the same day the said defendant wrote the following letter to Barr:

"Your telegram is received, and we have wired you as follows: 'Your telegram 24th accept both orders.' And now confirm.'

This covers twenty-seven thousand feet of thirteen sixteenths x 2¼ Clear Maple flooring at $100, less commission, delivered Spring (fol. 547) Lake, N. J. for immediate shipment. Also 30 M feet of 13/16 x 2¼ No. 1 Maple Flooring for shipment in two weeks at $87.00 less commission, delivered New York City. *We are satisfied that the stock can be purchased for these prices, and are, therefore, meeting the competition. However, we do not believe we want to accept any further orders on this basis."* (Defts'. Ex. X-4, Vol. I, p. 306.)

On *June 27,* 1922, George H. Storm & Co., New York City, wrote to the Oval Wood Dish Corporation as follows:

"GENTLEMEN: We have been doing a lot of scrapping lately over the big order of Maple Flooring for *John Lowry. He has been a good customer of ours for years,* and *we could not let the order pass.* He has offered us the job at the other man's figure, and we have today agreed to accept it, *although it is altogether too low considering the class of work that he expects.* He had a combination figure from some wholesaler and some lumping floorlayer here in town, which was what caused all the trouble.

We received your telegram that you could not cut the price, and suppose you are right in your stand, although it did seem that *considering the special conditions surrounding this order, and the fact that you have been so anxious to move your Clear stock, you should have been able to help us a little.*

We have submitted samples of your flooring and we want to supply your stock, so that you may expect to receive an order from us very shortly. It will be for about 150,000′ for shipment between now and September 1st. We believe this ought to make you feel good." (Defts'. Ex. X-16, Vol. I, p. 314.)

On *June 29*, 1922, the said defendant wired Storm & Company as follows:

"Advance prices on two and quarter Clear, number one and factory Maple flooring five dollars per M—*Will accept Lowry order if sent promptly.*" (Defts'. Ex. X-15, Vol. I, p. 314.)

(For other telegrams and letters see, Vol. I, pp. 303-317.)

MR. SHEPECK, OF I. STEPHENSON CO., TRUSTEES.

On March 17, 1923, the Schneider-Deschamps Lumber Co., of Milwaukee wrote to the defendant, I. Stephenson Co., Trustees, the following letter:

"We have yours of the 16th inclosing maple flooring stock sheet and note what you say about orders for 13/16 x 2¼ clear. We do not seem to be able to get posted on the flooring situation at present. *We lost several orders at Madison recently on account of a difference of 5.00 per thousand in the price on clear, and the dealers here advise us that they have prices from a number of mills quoting 103.00 on clear and from what we can learn this price is being quoted by southern Michigan mills.* We wish you would give us what information you have on the market and this may be of some help to us." (Defts'. Ex. V-15, Vol. I, p. 278.)

On March 20, 1923, the said company wrote the said defendant as follows:

"We are returning herewith your *sales report* of

maple flooring and of course it is very interesting to us.

We can now see where some of the business we did not get has been placed, and while the price on flooring has not hurt our business very much in the country towns, we do notice the difference in Milwaukee and Madison and towns of that size that seem to be worked harder by *the southern Michigan mills.*

We hope you will find time to stop off here on the 22nd." (Defts'. Ex. V-17, Vol. I, p. 279.)

That the "Sales report" above mentioned was the *Weekly Sales Report issued by the defendant Association,* see Defts'. Ex. V-36, Vol. I, p. 285, and Defts'. Ex. V-16, Vol. I, p. 278.

On January 26, 1923, Mr. J. O. Mackie, traveling salesman for said defendant, wrote his employers as follows:

"These Dower orders look pretty good with the exception of the one item of 4,000′ of 1½″ No. 1 on order #21. Mr. Dower showed me a quotation from Hermansville of $81.25 f. o. b. Wadena, on a lot of about 60,000′ of this, also a price of $42.00 on about 100,000′ of 7 inch to 22 inch 2¼″ clear maple, also a letter dated Jan. 22nd, in which they said their prices of Sept. 15th would not be changed. *In view of this and the fact that they gave me all their flooring orders, even the car for Wadena where they have always used IXL, I thought it all right to meet the Hermansville price.* Mr. Dower showed me the Hermansville letters in confidence so if you have occasion to say anything, please do not refer to them." (Defts'. Ex. V-29, Vol. I, p. 282.)

"Hermansville" is, of course, the defendant Wisconsin Land & Lumber Co., of Hermansville, Mich.

On Sept. 22, 1921, the Schneider-Deschamps Lumber Co., wrote the said defendant as follows:

"GENTLEMEN: Inclosed find our order for a car

of flooring for Northside Lbr. and Fuel Co., and in connection with this will say that in the past week we have called on every retail yard in the City and we get the same story at every yard, that is, Beck is selling the yards at 90.00 delivered on the job and we find that Holt and the Cooperage Co. are quoting $89.00 on the clear and we were told that they are shading our price on the number one. *We cannot sell Hilty Lbr. Co. at 89.00 and we feel that they are buying it for less, so it is up to us to take the business at competitive prices or leave it and if you feel that you do not care for any of this business we of course will pass it up.*

We have tried to get started at Sheboygan this year as there has been considerable business there, and while we have quoted on nearly every inquiry we were never low enough to get the order. Last week Deschamps was at Sheboygan and quoted Hildebrand 90.00 to try them out but was advised that the Cooperage Co. made them a price of 89.00 through Newfeldt of Green Bay. We are advising you of these facts so you will understand what we are up against." (Defts'. Ex. V-9, Vol. I, p. 275.)

"Beck" is August C. Beck Co., Milwaukee. (Defts'. Ex. QQ, Vol. IV, fol. p. 5507.) "Holt" is the defendant Holt Hardwood Co. The "Cooperage Co." is the defendant Northwestern Cooperage & Lumber Co.

For other communications, see Vol. I, pp. 268-285.

In this connection it should be remembered that the Government stipulated "that the individual defendants and the officers and agents of the corporate defendants who have not testified in this suit, would, if placed on the stand, testify to substantially the same effect and to similar facts and circumstances as did the witnesses De Witt, Ralston, Greene, McLurg, Dewey, Saunders, Klesner, Colby, Shepeck, Kerry and Hodges, *and that they would produce data and correspondence similar in character*

to that produced by, and offered in evidence in connection with the testimony of, the witnesses above mentioned." (Vol. I, pp. 409, 225.)

TESTIMONY OF THE DEFENDANTS.

All the gentlemen mentioned in the foregoing stipulation as having testified gave evidence of the most positive and convincing character as to the existence of competition in the sale of maple, beech and birch flooring. However, *inasmuch as the evidence given by the witnesses for the Government and the lumber dealers throughout the country,* to say nothing of the correspondence above mentioned, *is undisputed,* we need not take the time to set forth or discuss this cumulative and supererogatory evidence of the said defendants.

THE FIELD REPRESENTATIVE'S REPORTS AND TESTIMONY.

Mr. De Witt aptly described Mr. Robertson as the *missionary* for the defendant Association and its predecessors.

> "Q. And I wish you would state briefly to the court as to the field representative's work, the work that is done by Mr. Robertson, the official field representative of the Association.
>
> A. Well he is what we call our 'missionary,' that is what I call him anyway; *he visits the architects all over the country and consults with them as regards the building conditions in their territories and the prospective*—
>
> **The Court:** I am very glad you used that word, because it was running through my mind all yesterday afternoon, when I was listening to the witnesses, that the principal business of this Association was to be a home missionary.

A. He consults with architects and tries to induce them to use our product in buildings where it is possible, tries to show them the benefit of using that material in the place of other.

Q. *And on the different grades, does he tell them where one grade is satisfactory and the other one is not?*

A. *Just as we were doing, just the same as in the Tolona high school job, where I tried to make them understand that Factory flooring was not suitable for that building,* that is one of Mr. Robertson's jobs, *and he keeps us well informed of the building prospects over the country.* He really is a missionary, that is what he is, *trying to introduce the right flooring into the proper buildings.*

Q. *And to advise the members of the building conditions and operations in different parts of the country?*

A. *Yes, sir*

Q. And he occasionally sends in the name of some lumber dealer whom you get in touch with if you happen to have your [no?] flooring carried in that district, etc.

A. Very often." (Vol. I, pp. 254-5.)

Mr. Robertson made written reports from time to time. These reports describe competitive conditions in different parts of the country. They show what local manufacturers of maple, beech and birch flooring were doing to get business. They tell what efforts the nonmember manufacturers of Michigan and Wisconsin were making along the same lines. They relate what the oak flooring manufacturers, and the makers of composition floorings were doing, etc., etc. A reading of these reports (Defts'. Robertson Exhibits 20 to 30, inclusive, Vol. IV, pp. 872-891) will show not only the existence of the intensest competition, but also the utter impossibility

of maintaining uniformity of prices by the members of the defendant Association. See also Mr. Robertson's testimony in Vol. I, pp. 520-527.

THE GOVERNMENT'S ABANDONMENT OF ITS CONTENTION THAT THERE EVER HAD BEEN UNIFORMITY OF PRICES.

Practically at the close of the hearing when the Government introduced some data alleged to have been compiled from the weekly sales reports of the defendant Association and its predecessors for the years 1920 to June 30, 1923, inclusive, Mr. Fowler said:

> **"We are not insisting on uniformity."** (Vol. II, p. 857.)

Upon what, under the petition herein, **can** the Government insist? *Uniformity of f. o. b. mill prices and net delivered prices is the very crux of the Government's petition.*

And inasmuch as the evidence is *undisputed* that the prices for maple, beech and birch flooring were *fair and reasonable;* inasmuch as the alleged uniformity *never* existed; *and the keystone of the arch of the petition has been withdrawn by the Government;* inasmuch as it is undisputed—indeed, *proved by the Government's own witness that competition in the sale of said flooring existed and had always existed*—how, we ask, can it be contended with even a *semblance* of logic or good faith that the activities of the defendants have resulted in an unreasonable restraint of interstate trade?

At any rate, the proof *wholly* fails to support the allegations of the petition that the defendants *"have always maintained * * * and they still maintain a*

practical uniformity between themselves of net f. o. b. selling prices" and "of net delivered prices."

In the opinion filed herein the learned District Court makes the astounding assertion that "*the actual results* flowing from such plans, agreement and execution and performance thereof, *are of secondary importance.*" (Vol. I, p. 59.)

Apparently *a priori* reasoning is more to be trusted than the results obtained by actual experiment. If such results contradict theories arrived at by the deductive method from uncriticized assumptions or allegations of fact unsupported by proof, so much the worse for the results!

Nature herself is the great Experimenter; she recognizes no other test than trial and error. The methods employed by the learned District Court in arriving at a decision herein were discarded hundreds of years ago in every existing science upon the suggestion of Bacon of Verulam. And the brilliant advancement of all the sciences, the rehabilitation of philosophy, and progress in all the arts has, broadly speaking, been due to the patient observation of experiments and acceptance of the results. Notwithstanding the dictum of the learned District Court, we still believe with the Son of Man that a tree is best judged by its fruit.

The learned Court also makes the remarkable assertion that

> "No method has been discovered and probably none can be discovered by which to measure either accurately or even approximately the *effect* of the agreements and doings of these defendants upon prices, production and competition in the maple,

In order to provide for the general expenses of the association we make an assessment of 25 cents per thousand on the shipments of each quarter. We started out originally with an advertising fund of 10 cents per thousand on shipments during each quarter and that assessment was afterwards raised to 25 cents per thousand feet of flooring shipped, that is, 25 cents per thousand feet shipped by each individual member of the association. *There is some effort now being made to increase the advertising assessment to 40 cents per thousand, but it has not yet been agreed on. This increase was suggested on account of the competition of oak flooring and other flooring materials. It seems necessary to expend more money in advertising in order to hold our places in the market.* We raise funds from the members in proportion to their volume of business. *The advertising fund, of course, is spent for advertising maple flooring and also covers the field representative work.*

For example, we recently sent Mr. Robertson to California to investigate the competition of Philippine mahogany. This flooring is known as Begac and Orion. We have been informed that these floorings were coming in from the Philippines and were supplanting maple and beech for school houses and other business in California. Mr. Robertson does considerable field work during the year." (Vol. I, p. 150.)

Mr. Frank M. Hodges testified as follows:

"Q. How about the field representative work, how about the field representative work by Mr. Robertson, I wish you state as to that.

A. Why I think that is very valuable. He goes to these various markets and gets in touch with the architects there and finds out what kinds of flooring are being used in that particular market, he gets a list of the public buildings that are being constructed, schools, various things of that kind, and that information is all sent out to the members.

Q. *How about the advertising done by the Association, is that a benefit?*

A. *That is very valuable I think.*

Q. *Why?*

A. *Well because every association is advertising, the oak flooring association are spending a vast amount of money in the eastern territory to advertise oak flooring.*

Q. *How about the Linoleum people?*

A. *The linoleum people are very active, they do more advertising than anyone else I know of down there.*

Q. *And various synthetic floorings and other woods?*

A. *Yes, sir.*

Q. *Could the manufacturer meet the propaganda and advertising carried on by the Associations of competing woods and other sorts?*

A. *No, we could not.*

Q. *Do you consider that the guaranty of your quality by the Association is a valuable asset to your company in the sale of your flooring?*

A. *We think enough of it so we specify in all of our advertising that we are members of the Association.*

* * * * *

Q. *The Association has paid a great deal of attention, in advertising, to the quality of its product?*

A. *Yes, sir.*

Q. *And advertises the fact that it is guaranteed and there is reinspection service. State whether or not some dealers will pay more and some architects prefer to specify the product manufactured by the members of the Maple Flooring Manufacturers Association because of these things?*

A. *I think so.*" (Vol. I, pp. 294-295.)

magazines is directed by experts. (Report last mentioned.) The necessity for extensive magazine adverising is also shown in the said report.

Although denigrative epithets were freely used in the petition, the Government did not even attempt to support them by evidence.

Surely, it is fantastic to claim that the *advertising activities* of the defendant Association and its predecessors have even *tended* to restrain interstate trade and commerce. Surely, there existed many activities on the part of numerous individuals and groups which had a more pernicious effect upon the public welfare than the dissemination of information as to *how to lay maple, beech and birch flooring,* or the beating of rhetorical tom toms in order to attract the public's attention to their manifold virtues. Under the circumstances, the assault upon such activities by the Department of Justice, under the leadership of Mr. Daugherty, is not unlike that never-to-be-forgotten assault upon the windmills by that valiant knight, Don Quixote.

VI.

The Government offered no proof whatsoever in support of the charge:

> "The use of the uniform trade-mark and the character of the advertising put out by the defendant association intensify the tendency to establish and maintain uniform prices and also practically eliminate all competition between the defendants based on the quality of their respective products." (Vol. I, p. 10.)

Neither did the Government offer any proof that the standards adopted and maintained by the defendants were not fair and reasonable.

The proof showed that the quality of the flooring had been improved by means of the adoption and maintenance of such standards, that disputes between manufacturers and buyers had been greatly reduced, and that litigation had been eliminated.

The Government's own witnesses, as well as buyers all over the United States, were both unanimous and enthusiastic in their praise of the standardization of maple, beech and birch flooring by the defendants. Buyers testified that the flooring manufactured by the defendants was superior to that manufactured by others, and that standardization of such flooring by defendants had increased competition, and greatly benefited the public.

That during this industrial age a department of Government—even the Department of Justice during the administration of Mr. Daugherty—should seriously object to the standardization of flooring almost surpasses belief. We feel that by his promotion of the standardization movement in many branches of industry, as well as by his intelligence, common-sense, efficiency, modernity, helpfulness, and broad vision, Mr. Secretary Hoover has dishonored and betrayed the traditions, methods and practices of bureaucracy, of which he is such an unworthy member.

The standardization of maple, beech and birch flooring has been accomplished step by step during the past fifteen years. (Vol. I, p. 206.) It will take some little time to go into these technical matters; however, inasmuch as the Government has raised the issue, such matters must be gone into, at least to the extent that the absurdity of the Government's position will clearly appear.

The standardization of maple, beech and birch flooring by the defendant Association and its predecessors rests upon *five things*. *First*, the formulation of practical standards for the guidance of graders at different mills. *Second*, the precise definition of the three grades for the benefit of Association members, architects, lumber dealers and the general public. *Third*, the creation of the office of Mill Inspector for the purpose of keeping Association mills up to the mark. *Fourth*, the establishment and maintenance of a reinspection service for the mutual protection of Association members and the general public. *Fifth*, the use of uniform templets or gauges in the manufacture of flooring so that the product of one Association mill will match with the product of other Association mills and can be used together for all purposes.

Let us look at the happy conditions that obtained in pre-standardization times—those good old days over which the Department of Justice heaves sentimental sighs, and which it seeks to restore.

THE GOOD OLD DAYS.

Mr. George W. Keehn testified that he had been Secretary of the various Maple Flooring Manufacturers Associations since 1905; also:

"In about 1912 or 1913 there was a movement initiated by the manufacturers of maple, beech and birch flooring with respect to the standardization of the different grades of flooring. Before and at that time the flooring was manufactured in three grades, namely, the Clear grade, which is the best quality, the No. 1 grade, which is the second quality, and the Factory grade. Along in 1910, 1911 or 1912 there was considerable agitation with respect to standardizing the grades. This agitation became quite strong in 1913. *In 1914 an effort was made to standardize the grades in order that manufacturers would know what they were expected to furnish and that architects and the consumers of flooring generally would be protected and get the grades of flooring that they wished to use. Some manufacturers were strongly in favor of standardization, some were luke warm and others were opposed to standardization.* All of them felt the importance of standardization in a general way, but like every movement of that kind it grew and developed somewhat slowly.

The conditions that lead to the agitation for standardization of grades were the many complaints that were received by the manufacturers regarding the flooring that they had shipped. There was an absence of a precise definition and authoritative interpretation of grading rules. Each one put his own interpretation upon what constituted Clear or No. 1 or Factory. This was also true of architects, dealers and consumers. They knew in a general way that there was a Clear grade and a No. 1 and a Factory grade, but there was confusion and disagreement as to what was meant by Clear, No. 1 and Factory as applied to grades.

Maple, beech and birch flooring were shipped to

all parts of the United States and the grading rules were differently interpreted in different parts of the United States. As a result of the agitation for standardization, grades were more precisely and clearly defined so that the manufacturer and architect and the consumer would know what was intended by Clear grade, No. 1 grade and the Factory grade. The Association that brought about the standardization was the one that was organized on January 1, 1913. That Association took up the movement for standardization in the spring of 1914." (Vol. II, pp. 480-481.)[33]

---

[33]Mr. Keehn also testified as follows:

"It has been the custom for a great many years for various lumber Associations to adopt standard grades for their products. As a matter of interest, I have been collecting some of the grading rules of these other Associations. I have also been looking through the publications of the United States Chamber of Commerce of the War Industries Board regarding grading rules that have been adopted by the various Associations. In looking over some of these matters, the first reference that I can find with respect to grades of lumber and inspection service, etc., is in the charter that was granted to the Lumbermen's Exchange of Chicago by the State of Illinois on March 31, 1869, which reads as follows:

'Said corporation shall have power to appoint inspectors, as many as they shall see fit, to examine, measure and inspect lumber, timber, shingles, wood and every article of traffic commonly dealt in by the members of said corporation or any of them or by persons engaged in what is commonly understood to be the lumber business, and to prescribe the rules and fix the grades by which such inspectors shall be governed in the discharge of their duties, and a certificate of such inspector as to the quality, quantity or character of such article thus inspected, and their mark thereon, shall be evidence between buyer and seller of the grade, quantity, quality or character of the same, and shall be binding upon the members of said corporation or others interested who shall obtain, require or assent to the employment of such inspector.

Nothing herein contained, however, shall compel the employment by any one, of any such inspector.'

I might add that in those days very large quantities of lumber

Mr. Robertson testified that before 1914:

"We had what was called an Arbitration Committee, or official inspectors, whose business it was when a complaint was lodged with a member, and

---

*were shipped to Chicago by cargo. * * * The full product of the log came upon the market and was offered for sale without a tally from the shipper and had to be inspected and tallied and sold in the different yards engaged in business in those days. Then later on, when the source of production was farther away from the market, different Associations were formed and they adopted grading rules for the different species of lumber.*

In former days there were no official grading rules in any of the markets and if a dealer wanted to buy a lot of lumber, it was necessary for him to go to the saw mill, look the stock over, purchase it and then have it shipped. Lumber, as well as flooring, is very bulky and it would not be practical to carry on the business of selling lumber or flooring and shipping samples all over the country. For example, if a lumber dealer in California or in New England wanted to buy a carload of flooring and there were no standard grades established, it would be necessary for him to make a trip to the flooring mill to find out what he was going to get, for a manufacturer might call flooring Clear, No. 1 or Factory. On the other hand, if he wanted to have a sample shipped, that would be very cumbersome. A manufacturer might be obliged to ship 100 pieces of flooring as samples of Clear grade, and in that case they would not be typical of all the flooring contained in the grade. Consequently, in order to carry on the business it became necessary for all the different Associations to establish standard grades so that the buyer would know what he was to furnish and the seller would know what he was going to get.

In the earlier days of the maple flooring industry and generally in the lumber business, many honest differences of opinion arose between the buyer and the seller because the grades were not clearly defined. It is my experience that the more clearly the grade of flooring or lumber is defined, the more satisfactory it is to the honest buyer and the honest seller. A clear definition of the different grades eliminates ambiguities and sources of confusion and disagreement. For these reasons grading rules have been adopted by the various Associations." (Vol. II, pp. 482-3.)

The witness then identified grading rules of numerous Lumber Associations. (Vol. II, pp. 483-485.)

it could not be adjusted between the shipper and the consignee it was referred to this committee, and some member, or more, one member or more of this committee inspected, and heard the complaint and passed judgment whether or not the complaint was justifiable or not. *It became a burden to the Association. I was one of this committee, and I did a good deal of traveling, and I saw that there was a wide diversity of quality in what was termed the same grade although we had the same rules; both the manufacturer and the buyer had the same rules, but they put different interpretations on those rules; there was not a specific declaration in the rules relative to the smaller, intricate features of the application of a rule. Hence what seemed to be a great grievance to one man might be much less to another; and so those differences of opinion continued until it became, as I say a burden;* and I agitated myself, and so did some others, until we had a standardization of the mills, both as to the grading of the stock, and the manufacturing of it, and all features pertaining to it." (Vol. II, p. 498.)

"A. *There was room for complaint. Many times when I would go out on these reinspection trips I would find that the manufacturer had by some means misinterpreted his grade and there was cause for complaint. The same dealers, or the same consumer, whichever it might be, may have bought another car, of the same mill, and the grade did not correspond—there was somewhat of a difference, quite a difference, in the grading of the same grade from the same mill.*

Dissatisfaction of buyers with grades discredited the whole industry because each manufacturer was somewhat of an underwriter for all the members belonging to the Association." (Vol. II, p. 501.)

FIRST STEPS TO IMPROVE CONDITIONS.

Mr. George W. Keehn testified that in 1914 the Association then in existence

"employed an expert flooring man, Mr. M. H. Robertson of East Jordan, Michigan. *Mr. Robertson had had a wide experience in every branch of the lumber business.* He had been a manufacturer of maple, beech and birch flooring.

In the earlier days he was an inspector of rough maple and other lumber and had a thorough knowledge of the characteristics and grades of the raw material. He was also thoroughly familiar with logging operations and saw mill processes because at one time he had been an employee of the East Jordan Lumber Company, who had a saw mill and extensive timber holdings. As above stated, Mr. Robertson had been engaged in the manufacture of maple flooring with a plant at East Jordan, Michigan. After that he was engaged in the superintendence of the manufacturing operations and in the sale of maple flooring produced by the East Jordan Lumber Company after that Company took over Mr. Robertson's flooring plant. *Mr. Robertson was a man of very high integrity and impartiality and had the confidence of the trade and of the other members of the Association.* In the sale of flooring, Mr. Robertson had come in contact with architects, buyers and dealers in traveling about the country. *The Association was convinced that if anyone was capable of standardizing the grades, Mr. Robertson was the man.* They therefore employed him to do the work and requested him to make preliminary trips among the mills in 1914." (Vol. II, p. 481.)

Mr. Robertson testified:

"In 1914 I made three several trips and visited each mill on each of these trips. On my first trip I paid particular attention to the grading of the product as it passed all the machines. I also got a general opinion as to how each one was doing his grading. I took the high and the low and the inter-

mediate and tabulated all these data and from them I arrived at a standard. *I did this after visiting the mills three times and going over the grading. I also made a list of the types of machines used, number of machines, etc., at each plant. My first trip was largely an observation trip and in order to learn the conditions at the different mills.* My first trip was made in April and May. I think my second trip was during the mid-summer of 1914. *On the second trip I examined conditions more thoroughly and discussed with the various managements imperfections in machinery and in the handling of the product.* My third trip, in 1914, was made in Ocober, I think." (Vol. II, p. 499.)

THE STANDARDS.

From the data gathered Mr. Robertson formulated standards for the three *grades* of flooring. The standards represented the averages of all the mills for the three trips in 1914. These standards and the testimony of Mr. Robertson can be best understood by referring to the attached diagram.

There are *three* grades of maple, beech and birch flooring. In the order of their excellence (as to grade) they are Clear, No. 1 and Factory. Inasmuch as all three grades *must* be produced at the same time, regardless of the quality of rough lumber used (pages 43-44 *supra*), *the flooring as it comes from the machines is not of uniform quality.*

It consists of pieces or lengths of Clear, No. 1 and Factory. *And in each grade there are some pieces or lengths much better than others, no two pieces being exactly alike,* and the rules specifying what are *allowable* defects in each grade. *Pieces or lengths of flooring containing these allowable defects* belong in the *lower*

strata of each grade, and were designated "low" by Mr. Robertson, whereas, *the best pieces or lengths* would go in the *upper strata* of each grade and were designated "high" by Mr. Robertson. However, *neither the pieces in the upper strata nor those in the lower strata can have unallowable defects.* In other words, *all pieces in the upper strata and all the pieces in the lower strata of each grade must not have unallowable defects.*

Mr. Robertson determined that the Clear grade should contain 65 pieces (or percentage in feet) of the best quality (upper stratum or "high") and only 35 pieces (or percentage in feet) of flooring having allowable defects (lower stratum or "low.") *The 100 pieces* (*or per cent*), however, would all be *Clear* grade.

The standard for the No. 1 was 65 of upper stratum and 35 of lower stratum. The standard for the Factory was 60 of upper stratum and 40 of the lower.

It is perhaps needless to say that pieces classifying as upper stratum of Factory would not classify as even lower stratum No. 1. Neither would the upper stratum of No. 1 classify as lower stratum Clear. The upper stratum of each grade is simply the best of *that* grade.

The diagram is drawn to scale, and the distance between the heavy lines AA and BB is 2½ inches or *40 sixteenths* inches. The distance between the heavy line AA and the light line aa is 26 sixteenths inches or 65% of the distance between the lines AA and BB—*the amount of the best quality of flooring* the Clear grade must contain being 65%.

In the No. 1 the amount is the same, whereas in the Factory the amount is 60%, and the distance between

the heavy line CC and the light line cc is 24 sixteenths inches or 60% of the distance between the heavy lines CC and DD which represent the Factory Grade.

Mr. Robertson's testimony on these points is as follows:

"Q. You say you formulated a standard. How did you formulate the standard?

A. I took a hundred pieces, for example, a hundred pieces of say the clear grades, first; *and of a hundred pieces on the average sixty-five of those would stand up in what I call the high strata; and thirty-five of them will fall below, down toward the lower extremity or lower edge of that strata.*

Q. *But the whole hundred pieces would be clear?*

A. *The whole hundred pieces would be clear. None of them will contain any defects which are not allowable. We have what we call allowable and unallowable defects. What we call the unallowable defects may occur in a grade; if so, we describe that, and throw it down into the next grade below.*

Q. *What is the next grade below?*

A. *The next grade below is our No. 1.*

Q. *And the grade below that?*

A. *Is our Factory.*

Q. Now, can you graphically represent the method by which you formulated this standard for the grading of the product.

A. I think we drew, according to my interpretation, something a while ago, and it will save my drawing it again, if we have it." * * *

"A. *It is understood by lumber men practically no two pieces are exactly alike, as no two faces are exactly alike; hence we cannot say that they all, in the clear grades, are alike in any respect; there will be some distinguishing feature which will distinguish one piece from another. Now, those pieces which are almost free from all defects are what I call my*

upper strata of the clear grade; and those which have allowable defects are in the lower strata. That may grade from one allowable defect to the extreme number of allowable defects; but they are almost free from all defects, in the upper strata. Now, I found, after giving this the three times interpretation, that the standard rested, at sixty-five pieces out of a hundred, rested in the upper chamber—as it were, of this diagram—sixty-five pieces will run in what I call the high. That I have termed it all through my report, 'high.' And thirty-five pieces in the lower strata, which is denominated 'low.' Now, that holds good in the No. 1, as well, sixty-five high, thirty-five low. The Factory grade rested first as fifty-nine pieces high and forty-one low. It afterward was advanced to sixty high and forty low, where it stands today or at the last inspection I made." (Vol. II, pp. 499-500.)

The figures set forth in the margin show the Association's average and *a member's* average for the first two trips made by Mr. Robertson in 1914.[34] *It will be observed that neither average equalled the standards ultimately established, and that the Clear grade contained some No. 1; the No. 1 some Clear and Factory, and the Factory some No. 1 and a small percentage of flooring which did not classify as Factory at all.* (See Vol. II, pp. 501-2.)

Before the standards were adopted, a buyer might receive a shipment of Clear grade with only 45 per cent of higher stratum and 55 per cent of the lower stratum.

Defts'. Robertson Ex. 2, Vol. IV, p. 868.)

The next shipment might be 70-30, the next 40-60 and so on, to the confusion and dissatisfaction of the buyer.

Mr. Robertson also testified as follows:

"Q. Now, as the result of your efforts to produce standard rules and interpretation and definition of the rules, would you say that the quality of the product as now manufactured is worse or better than the product that was manufactured say in 1914, and before that, or 1915? *In other words, has the product been improved, or has it deteriorated since 1914?*

A. *The whole product cannot be improved, except by machinery. If you take a hundred pieces of the natural production of the trees, or lumber, as it comes as a whole, you cannot improve that any, because you cannot re-make that lumber; you cannot improve the grades perhaps, very much, excepting to interpret them, and closely interpret what is called the off-grade, that is, the grade of No. 1 that may be found in the Clear and should belong in the No. 1. You cannot improve that any. It will all be in that space that I have defined there as belonging to the Clear grade. But you can't have it all in there; that is what we are expecting.*

Q. What do you mean by cannot have it all there?

A. *Well, there are what I call sharp practices. taking out a little of the upper Clear and putting a little of the upper No. 1 over into this Clear, and putting a little Factory over into the No. 1, and calling it a grade in which it does not belong.* If I take out some of that grade; it should all be there.

Q. *Assume that the rules are followed strictly, and a person is given 65 of the upper strata in the Clear and 35 of the lower strata, would you say that he now receives less service or better service than what he was receiving in 1914?*

A. Better service than when?

Q. Than in 1914.

A. Before 1914?

Q. Yes, or before 1914.

A. *He is receiving better, because it is uniformly that; there is no departure from that rule,—that is, there is a slight departure, I had better put that; humanly speaking we do not get things perfect.*

Q. *Why not give them a hundred pieces of the upper strata instead of 65?*

A. *Because the timber would not make it, or the lumber would not make it; and if that is done, he has got to rob some other shipment to do it, in other words, it is what we call robbing Peter to pay Paul.*

Q. You say the rules provide for 65 of the upper strata of clear and 35 of the lower strata?

A. Yes.

Q. It being all Clear. *Now, why not give the buyer 100 of the upper strata?*

A. *Because the product will not make it, the raw material will not make it.*

Q. *Did he at any time ever receive 100 of the upper strata when he was buying?*

A. *Not unless some other shipment was robbed to do it.*

Q. *If the rules now in force are strictly followed by the manufacturer is the buyer in a worse or better position than he was before 1914?*

A. *He is in a better position.*

Q. *In what respect?*

A. *Because they [the Association members] have come to a better knowledge of what this standard is and what it means, and they adhere to it very tenaciously—with some departures, of course, but they still adhere to that, and thus there is a uniformity. A new grader comes on, and they are afraid to trust that new grader until he has been instructed either by me or by the former grader, who has had his instructions from me; and thus that uniformity exists, not only in a given mill but in all the mills—*

so much so that it is surprising how nearly they conform to the standard. And that makes it very satisfactory to the buying public." (Vol. II, pp. 509-510.)

MORE DETAILED AND EXPLICIT GRADING RULES.

Mr. George W. Keehn testified:

> "*Along in 1916 grading rules were compiled and the characteristics of the different grades were clearly defined.* That work was done by a committee consisting of different manufacturers and was finally completed by Mr. Robertson and Mr. Fred R. Welsh, who, at that time, were official inspectors of the Association then in existence. Mr. Welsh also had had large experience in the manufacture of maple, beech and birch flooring. Mr. Robertson was one of the leaders of the movement for the standardization of grades." (Vol. II, p. 486.)

Mr. Keehn also testified:

> "When the present Association came into existence * * * it continued to use the same grading rules. *The Association which originally adopted said rules on January 28, 1920, had about 40,000 copies of the rules printed and distributed all over the country to architects, contractors, retail lumber dealers, wholesale lumber dealers and others, so that everyone interested in the use of maple, beech or birch flooring could be fully informed as to said grading rules. * * * the present defendant Association has merely continued to use such printed copies as had not been distributed."* (Vol. II, pp. 481-2.)

The grading rules have been changed from time to time as experience suggested. The rules now in force will be found in Vol. IV, fol. pp. 5331-5336. Some of the former rules and much historical data will be found in the statement prepared by one of the leaders in the standardization movement, Mr. Kerry, of the defendant

Kerry & Hanson Flooring Co., (Defts.' Ex. BB, Vol. IV, pp. 826-830; Vol. II, p. 769.)

As a reference to the various rules will show, *the wasteful processes of earlier days have been eliminated.* As stated by Mr. Kerry:

"It will be observed by a comparison of the previous grading rules and those now in force that the grades are much more fully defined. *Modern perfected methods of manufacturing hardwood flooring produced a larger proportion of shorter lengths than the old time methods, because the defects are cut out closer, thus improving the average quality of the flooring, and experience has demonstrated that shorter lengths combined with longer lengths cost no more to lay and make as good or better floors at a material saving in cost, than all long lengths. Shorter lengths can always be used to advantage in closets and other small spaces.*

The stand of maple, beech and birch stumpage is limited and is becoming rapidly depleted, and the sentiment in favor of conservation of forest resources is strongly in favor of the utilization to the greatest extent of these valuable woods, especially when the result obtained in a finished floor is in no wise depreciated. In the extravagant process of earlier times the shorter lengths now used were burned as offal. Were it not for the utilization of these shorter lengths the cost of the longer lengths to the consumer would be greatly increased. In other words, if these shorter lengths were thrown away as was done in the early days of the industry, the cost to the consumer per thousand feet of the other product composed of longer lengths would be greatly increased." (Vol. IV, p. 829.)

THE ADOPTION OF STANDARD GAUGES.

Mr. George W. Keehn testified as follows:

"In 1920 the shape of the flooring was standardized in order that the product of the different mills would match up. *Prior to that time the grades had been standardized as to quality but the matching had not been standardized,* so that a man could buy flooring of a mill in Wisconsin, the flooring of a mill in Michigan and the flooring of an Eastern Lower Michigan mill or of a Saginaw Valley, and use it altogether in one building. *A standard thickness was adopted and steel templates and blue prints were made and furnished to each member so that all of them would know exactly what to do in manufacturing their flooring.*

This made it necessary to bring out a new edition of the grading rules, which was done on July 29, 1920. On Page 6 of said grading rules under the title "Standard Measurement," there appears the following language:

'The actual thickness of 13/16 inch and thicker flooring is 1/32 inch scant of the thickness used as the trade name. *The 1/32 inch scant is taken from the under side of the flooring, leaving the thickness of the wearing surface unchanged.'*

In other words, the consumer of the flooring got just as good services as before because the wearing surface of the flooring was not changed." (Vol. II, p. 486.)

Upon being asked why this change was made, Mr. Keehn stated that it was due to his experience with Government agencies during the war. *As Secretary of the Association then in existence orders for large amounts of flooring were sent to Mr. Keehn. Owing to the Association's statistical work Mr. Keehn knew what mills made maple, beech or birch flooring of the desired thicknesses and faces, and, what was more important, the*

stock on hand at each mill. These large orders were distributed to the different mills, so that shipment could be made without delay.

However, it was then necessary to give instructions to the Government agencies that the flooring received from the different mills for one job must be kept separate and used for different floors, for the reason that it would not match. (Vol. II, pp. 487-492.)

As shown on page 74 *supra, the stocks on hand in 1920 were lower than they had ever been before.* It was therefore an opportune time to make this desirable change. Modern buildings require all the way from 200,000 to 800,000 feet of flooring. (Page 59 *supra.*) The different mills have their regular trade, and 300,000 feet of *one* size represents a considerable portion of a year's run of any one mill. (Vol. I, pp. 420-426.) *It is obviously of great advantage to dealers and contractors to be able to get the desired quantity of any size without delay from several mills, especially when the flooring from such mills can be intermingled and used together.*

Other advantages are described by Mr. Kerry as follows:

"For many years I took an active interest in standardization, both as a manufacturer of maple flooring and subsequently as a member and chairman of the Grades Committee. *I found that some manufacturers were center matching, also using a large round tongue, which left a lesser wearing surface, and others were using a smaller tongue, and some of them a wedge shaped tongue. We finally in our own factory established the use of the smaller wedge-shaped tongue. By having a smaller tongue and putting it below the center gives a better wearing surface. We also had letters of comment from some of our users, advising that they could lay floors where the wedge shaped tongue was in use for at*

REINSPECTION SERVICE.

In case of dispute as to grade, inspectors are sent anywhere in the United States to reinspect the flooring. As shown on pages 47-54, *supra*, the dealers praise this service very highly. See also Vol. I, pp. 425, 430, Vol. II, pp. 455, 459, 565, 581.

The Government did not produce a single instance where any buyer had been unfairly treated.

The reinspection work was described at length by Mr. Robertson, chief inspector, and by Mr. Keehn. (Vol. II, pp. 491-492, 504-5.)

It should also be stated that the flooring manufactured by Association mills is stamped in such a way that it can be readily determined whether it was manufactured by an Association mill, and if so the mill that manufactured it. (Vol. II, p. 492.)

And of course all flooring manufactured by Association members is guaranteed by the Association. (Vol. I, pp. 149, 286, 293, 300, 298; Vol. II, p. 498.)

RESULTS OF STANDARDIZATION.

DEFENDANTS' WITNESSES.

Mr. Robertson and Mr. Keehn testified that complaints had been materially reduced; that the relations with architects, lumber dealers and consumers had been improved; that every one had praised the work accomplished by the Association. (Vol. II, pp. 490-1, 506-7.)

They also testified that the quality of the flooring had

been improved, and that it was better now than ever before. (Vol. II, pp. 509-510, 490-1.)

For the opinions of some of the defendants, see Vol. I, pp. 220-1, 251-255, 286-7, 293-4, 300-3, 307, 334, 398-9.

GOVERNMENT'S WITNESSES.

Mr. Ward, a *nonmember,* manufactures his flooring according to Association rules. (Vol. I, p. 94.)

Mr. Foreman, a *nonmember,* testified:

"I am familiar with the grading rules of the Maple Flooring Manufacturers Association. *We manufacture our flooring strictly according to those rules.* They are standard and we could not sell flooring if we didn't. *Architects specify flooring to be made under those rules. Standardization of maple flooring has been of great benefit to the public as well as to the yard men and wholesalers. It gives them something to stand on.* The quality of flooring is tested by reference to those rules. *It is a benefit to the dealer because he can carry the product of three or four different mills or a dozen different mills and all of the different floorings can be used on the same job.* That condition did not exist in early days. My flooring will match up now with the flooring of other manufacturers. *That is because I was formerly a member of the association and have continued to manufacture my flooring in the same way.*" (Vol. I, p. 140.)

Mr. Hooker, a Grand Rapids lumber dealer, testified:

"*I believe standardization of maple flooring is a good thing. We know exactly what we are going to get when we send out an inquiry and place an order.*" (Vol. I, p. 141.)

Mr. W. R. Gillette, a *nonmember,* testified:

"We manufacture our flooring according to the grading rules of the Maple Flooring Manufacturers

Association. We have found it an advantage to do so. *It enables us to say to our customer that the flooring is made in accordance with the Association rules, and we claim that our flooring is equally as good as that made by members of the Association. I think the rules are all right. They give the purchaser a standard grade of flooring—uniform flooring.*" (Vol. I, p. 92.)

See also Vol. I, p. 85.

It should be stated, however, that the grading rules merely describe the different grades. The standards formulated by Mr. Robertson for the guidance of graders at Association mills are not contained in the grading rules. This, in part, perhaps, accounts for the superiority of Association flooring.

THE PROOF WAS UNDISPUTED THAT STANDARDIZATION INCREASES COMPETITION AND REDUCES COST OF DISTRIBUTION.

Mr. Ralph A. Brown, a large dealer of New York City, testified:

"*My experience has been that the standardization of maple flooring has been beneficial to the trade.* It has been beneficial with respect to uniform matching of the flooring and uniform grades so that when a certain grade is asked for *it can be obtained, not necessarily from one particular mill, but from several mills. Standardization makes competition better and, in my opinion, increases rather than decreases competition. It provides a wider field from which a buyer can select flooring for a particular job.*

I have had occasion to ask for the reinspection service maintained by the Maple Flooring Manufacturers Association. Such service has been beneficial to the trade. It insures the purchaser of maple flooring fair treatment and the delivery of exactly

what he has contracted to buy. *I do not think that the Maple Flooring Manufacturers Association has had the effect of keeping up the prices of maple flooring above the level which the ordinary law of supply and demand would put it.*" (Vol. II, pp. 573-4.)

Similar testimony was given by other large dealers. (Vol. II, pp. 579, 586, 618.)

And as Mr. Phisterer of the William M. Lloyd Company, of Philadelphia, pointed out:

"Standardization of flooring is of benefit to all concerned. *That benefit would be to the consumer in the appearance of the flooring after it has been put down. It would also, I should think, be a basis on which you could judge the prices that the different mills were asking for that particular grade of flooring. If you had a standard grade of flooring, called clear, then, if they were manufacturing under that standard, then the difference in the price would be of advantage, but if the one manufacture was excellent and the other manufacture was poor, the lower price might be a high price in the long run and at the end of the sale. In the absence of standardization, there is no real basis for the comparison of prices.*" (Vol. II, p. 593.)

In the Tenth Annual Report issued by the Department of Commerce, Mr. Secretary Hoover states:

"Agitation has been current for many years for the extension of the Federal laws to the establishment of grades and qualities of different commodities. *The lack of such established grades and standards of quality add very largely to the cost of distribution, because of the necessity of buying and selling upon sample or otherwise, and because of the risk of fraud and misrepresentation, and consequently larger margins in trading.* It was considered by the Department, however, that it would be *infinitely better* if such grades and qualities could be established *voluntarily* in the *trades themselves,*

instead of by *legislation, and policed by trade associations, as is the case in several old established trades.* To this end a number of conferences have been held in different branches of the lumber, textile, paper and other trades.

The service of the Department has been to bring the different branches of the trade, the manufacturers, wholesalers, retailers and representatives of larger consumers' associations together, and to develop committees of different branches of trades. The plan has been generally welcomed, and applications have been received from many trades for such assistance. The expert services of the Bureau of Standards, Bureau of Foreign and Domestic Commerce, and the other Bureaus of the Department, have been brought into service for technical advice in these matters; *and results of important bearing upon the improvement of business ethics and cheapening of distribution have been attained.*" (Vol. II, p. 485.)

For a good account of the standardization movement and the results thereof see *Trade Associations and the Law* (Jones), pp. 80-102.

THE TWEEDLEDUM AND TWEEDLEDEE ATTITUDE OF THE DEPARTMENT OF JUSTICE.

While Mr. DeWitt was on the stand, he was asked whether architects did not specify that flooring be manufactured according to the grading rules of the defendant Association, whereupon the following proceedings were had:

"**Mr. Fowler**: Your Honor, that has been gone over by witnesses a dozen times if not two dozen times, a repetition of the same thing, and it is a waste of time. There will be no question but that architects require that and that that is what they ask for, and there will be no testimony to the contrary. It is unnecessary to repeat that so often.

Mr. Darby: *Well, Mr. Fowler, you allege that these standardization rules violate the Anti-Trust Act. If you will withdraw that charge—*

Mr. Fowler: That is a certain line of evidence here that they have gone over and over, and I don't see any necessity for going over it so often, and especially that particular line of evidence, *that we will not introduce proof to the contrary and there will be none so far as the standardization is concerned. I am not eliminating anything so far as the charge is concerned.*

Mr. Darby: The Court suggested he would be interested in the subject of the benefits obtained [from Association membership] and I intend, subject to the ruling of the Court, to go into the matter of the benefits and advantages, fully.

The Court: Proceed." (Vol. I, p. 253.)

As heretofore stated the Government did not introduce any evidence that even tended to show that the standards adopted by the defendant Association were not fair, nor any evidence that even tended to support the charges of the petition heretofore quoted in our Point VI.

As Mr. Bacon of Boston testified:

> *"I haven't noticed any tendency to uniformity of price because of standardization.* In fact, standardization of the product has tended to broaden the field. *New manufacturers have gone into the business because they would know what grading rules they could use in working up their lumber into flooring. Before that everything was at sixes and sevens, they didn't know how to grade flooring."* (Vol. II, p. 561.)

In the entire record there is proof of but one respect in which the value of the standardization of maple, beech and birch flooring was questioned. Mr. Robertson testi-

fied concerning his conversation with some lumber dealers, as follows:

"A. Yes, I have had them question the value of that, on the subject of *price* only.

Q. What was said?

A. *They would ask me what value the standardization feature would be to them, when the quotations were so widely apart, from different members of the Association. We adhere to no standard on price.*

Q. *And what did you say to that?*

A. *I always say to that that we have no standard on price, that our Association members are at liberty to quote as they choose.*" (Vol. II, pp. 522-3.)

That dealers prefer the product of Association mills, see pages 47-54, *supra.*

In the face of all the foregoing *undisputed evidence* it will not do for the Government to indulge in *a priori* reasoning as to the effect of the standardization of maple, beech and birch flooring.

VII.

The proof shows that the prices of maple, beech and birch flooring have at all times fluctuated in harmony with the laws of supply and demand. Distinguished statisticians and economists so testified, and supported their evidence by a mass of statistics, charts and other data.

The record conclusively shows that the alleged minimum price plans were never enforced, and that in actual practice each member sold his flooring at whatever price he could get, and ran his business just as he pleased.

The undisputed proof also shows that prices during the earlier years were never uniform because of the diversities mentioned on pages 66-75 supra; whereas, from 1919 to 1921, inclusive, they were controlled by abnormal economic conditions, which found adequate expression in the rise of Factory grade flooring from $45 per M feet to $150, and its decline to $15.

At no time does the proof show fixation or control of price by the defendants; and, as we have seen, even the Government admitted at the hearing that there had never existed any uniformity of prices among the defendants.

Before the District Court filed its opinion herein we had assumed that in equity cases pleading without proof, or proof without pleading, was insufficient to support a decree. We had thought that it was the duty of a court to ascertain the relation that existed between a complainant's pleading and the proof, and that in this process *all* the evidence would be considered. The record in the case at bar shows that the District Court did not follow these fundamental rules, and that his opinion herein and the decree based upon it are demonstrably erroneous.

The Government's allegations with respect to the Minimum Price Plans are set forth and analyzed on pages 7-17 *supra*. It will be observed that the Government first alleges that certain Minimum Price Plans were adopted by the defendant corporations and others; then the terms of the Plans are generally described; next comes the allegation that minimum prices were ascertained from time to time and that "*recommendations*" were made that the defendant corporations and other members should not sell flooring "at prices below said minimum prices." It is then alleged that

> "the defendant corporations have *at all times* during said period accepted and acted upon said recommendations, and have concertedly established and maintained as the *basis* of their individual prices, the minimum prices * * * and by concertedly maintaining the same," and the uniform terms of sale, etc., "they have *always maintained* during said period * * * *a practical uniformity between themselves of net f. o. b. selling prices*" and "*of net delivered prices.*" (Tr. 6-7.)

It is clear that the burden was upon the Government to *prove* the allegations above quoted. The District Court summarily considered the *mere terms* of the said Minimum Price Plans, and held that they were obnoxious to the Sherman Act.

Besides ignoring (in the opinion filed herein) the *undisputed* proof that there had *never* existed *a practical uniformity of prices* for maple, beech and birch flooring, *and that price competition among the defendants had always been strong, active and vigorous*, (pages 116-162 *supra*), the District Court also ignored the following evidence, which clearly proves that the Minimum Price Plans were abandoned and never enforced.

Mr. George W. Keehn testified:

"Another provision of the minimum price plan was that if a member sold flooring at less than the minimum price, he was to pay into the expense fund of this Association ten per cent on that sale. *As a matter of fact, no penalties were ever exacted from any member of the Association under the minimum price plan and no criticisms were ever made to any member of the Association either by the secretary's office or by any other member of the association regarding any prices at which he sold his flooring.*" (Vol. I, p. 101.)

And again:

"During the period that these four articles of association which have been referred to by me were in force there was also in force or at least there was an agreement containing a provision for the carrying out of the minimum price plan. That is the minimum price plan dated July 1, 1915, introduced in evidence as government exhibit 11. That plan was entered into about July 1, 1916.

Q. How long did that continue in effect?

A. Well, this particular plan says July 1, 1916, to November 1, 1916.

Q. Was that plan or agreement in force during that period?

A. *It was never enforced.*

Q. When you said in your direct examination that it was never enforced will you explain just what you meant by that? What was done by the association then existing under this minimum price plan, Government exhibit 11, if anything?

A. Some of the statistical data and lists of surplus stock, etc., were submitted to the association, *but no penalties or fines or assessments of any kind were ever made upon or claimed for or ever paid into the general fund or the treasury of the association or were demanded by the association. In other words, the members continued on and so far as my*

judgment and opinion goes they sold their flooring at whatever prices they pleased.

I had an opportunity to observe the prices the members were selling their flooring at this period from statistical data I received from them and according to my observation the prices during all that time varied and we assembled considerable statistical data showing average prices realized, f. o. b. flooring mills and at different markets in the United States which will surely substantiate that statement. I might also add that no criticism was ever made by the officers of the association regarding the prices at which any member sold its flooring, and so far as I know no members of the association criticised other members of the association regarding the prices at which they sold their flooring or called them on the carpet as the saying is. I certainly never did it as secretary of the association.

The Court: That doesn't answer the question, at least as I understood it. The question was this: Was there a general observance of the minimum price plan by the members of the association. In other words, did the members of the association generally refrain from selling below the minimum price?

A. According to my observation they did not.

* * *

It is my recollection that this minimum price plan of July 1, 1916, government exhibit 11, came to an end in November, 1917, but according to this letter that we read today it seems to have been extended until January 1, 1919. I wouldn't be sure whether that letter refers to the articles of association. It might have referred to the minimum price plan because later on the minimum price plan was reprinted under date of January 1, 1919, running to July 1, 1919. That was the same plan, government exhibit 11, but a reprint of the same, together with the petition. It was not sent to the Trade Commission. I think it was given to Mr. McKeague when he was in Chicago.

Q. What was the status during that period from January, 1919, on, with respect to the operation of this minimum price plan?

A. Mr. Johnston, there seems to have been an extension of some kind made in there, you know, between 1917 and January, 1919.

Q. Well, during that period was there any change in the situation as you have described it in answer to my previous questions with respect to the operation or effect of this plan?

A. No, sir.

Q. Was it in force in the same way that you have testified the original plan of July 1, 1916 was in force?

A. You mean "in force"?

Q. In force, yes.

A. We figured it was the same proposition all the way through.

Q. *Was it enforced?*

A. *None of the provisions in regard to penalties, etc., of any of the minimum price plans were ever enforced.*" (Vol. I, pp. 144-6.)

Mr. P. S. McLurg testified:

"There were certain so-called Minimum Price Plans in 1919. When we signed those Minimum Price Plans, we were of the opinion that they would be lived up to. *We found out they weren't and that everyone sold their flooring at any price they wanted to, and we did the same. We took what we were able to get for our flooring. We learned that the Minimum Price Plan wasn't being observed through our traveling salesman. He gave information that he got from his customers. If he failed to land a certain order, he would telephone the office and say that the customer had told him another mill had made a certain price. It might be an Association mill or a nonmember mill. If we were long on stock, or if we needed the money, which we usually did, we told him to get the order.*" (Vol. I, pp. 227-8.)

And again:

"Our company never paid any fines or penalties for not living up to the rules of any of the associa-

tions. I know of no demands that were ever made on any of the other members." (Vol. I, p. 233.)

Mr. Walter L. De Witt testified:

"When there was a minimum price plan or minimum price basis *certain prices were recommended but they were never observed. I know that because we found in selling our product that we were obliged to meet competition, and sometimes our price was higher and sometimes our price was lower.*" (Vol. I, p. 234.)

On cross-examination Mr. De Witt testified:

"Q. Then when you made your agreement you didn't consider that you were bound by a single solitary thing in the thing you signed, is that it?

A. We knew when we signed that agreement that we were not going to be compelled to maintain any price.

Q. Well, why did you know that when it is specifically stated on that page that you are bound to observe the minimum price?

A. Because there had been those same agreements and practically the same agreements in force for a long time, *and they had never been observed, they never had been enforced, and we knew they would not be.*" (Vol. I, p. 258.)

Mr. H. H. Shepeck testified:

"There wasn't any uniformity of price when the so-called Minimum Price Plans were in effect. I knew that from daily contact with the trade. We were meeting competition. We were seeing the quotations made by others and knew what orders were being placed with other concerns. There never was any demand for a fine or penalty and none was ever imposed upon us for a failure to observe Minimum Price Plans. I know of no demand that was made upon anyone else for a fine or penalty for failing to observe the so-called Minimum Price List." (Vol. I, p. 261.)

The situation that obtained in the old days before the organization of the present Association is well stated by Mr. Greene in a letter to the John C. Hill Lumber Co. of St. Paul dated *Nov.* 8, 1920:

"Gentlemen: This acknowledges receipt of your letter of November 4th in which you submit a list of ten cars of Maple Flooring for which you have inquiry and in which you ask us to give you a line on the going prices on these items. To be candid with you we would not know what kind of price to put on the stock ourselves if we had the flooring for sale.

At the last meeting of the Association held on September 29th the Market Conditions Committee *recommended* as a fair value for 13/16" Maple Flooring of Full List for Clear, $5.00 Off List on No. 1 and 40.00 Off List on Factory. This refers to the list of March 1st, 1920, using CJ freight for delivery to Twin Cities.

We expect there will be another meeting of the Association sometime this month although we do not know the exact date. *However, in any event the Association does not have iron clad prices. Our Market Conditions Committee after analyzing stocks on hand, production, unfilled orders, new business, etc. merely recommends what in their judgment ought to be the asking price. This is merely a guide to the manufacturer and he is at liberty to quote his stock at any old price either more or less than the recommended values.*

The flooring business is certainly in a demoralized condition and everybody seems to be running wild. We have reports from some of our Eastern connections to the effect that no two manufacturers are quoting within gun shot of the other and that prices are varying from $5.00 to $15.00 and $20.00 on the same items. This certainly is not a healthy condition and it of course is due to the fact that there is very little demand and some mills are very anxious for business and some disregard altogether the cost of production." (Vol. I, pp. 378-9.)

Mr. T. M. Ralston testified as follows:

"Q. You spoke of the variation in prices, competition among the different manufacturers. Did that group of manufacturers include the members of the Maple Flooring Manufacturers Association?

A. Yes, both members and nonmembers.

Q. You say there has always been active competition not only among members, not only by members among themselves, but of members against nonmembers?

A. Absolutely, yes, sir.

Q. How do you explain the existence of that condition, when you consider the fact that during the previous years there was supposed to be in force and effect, at least the so-called Minimum Price Plan of the Maple Flooring Manufacturers Association?

A. I really don't know, unless, if there was any such agreement, it was not carried out. Whatever I saw of prices that were being quoted, my own opinion would be that the law of supply and demand for flooring controlled it.

The Court: It must have been one of two things: Either they didn't carry out their bargain, or the prices quoted must have been above the minimum price.

Q. What was your observation as to whether those Minimum Price Plans were observed in the practical conduct of the business?

A. I would say absolutely that they were not.

Q. How do you know that?

A. From prices that I have seen at different times and my own personal knowledge of the prices that other mills were quoting.

Q. You compared the prices that you saw and were able to get, with the minimum prices, so-called, in force at that time?

A. With the prices—

Q. So-called minimum prices. I think in some of the articles they set forth what shall be the minimum price Frame "A." Did everybody get higher than that price, or get that price all along?

A. *My judgment would be that there wasn't much attention paid to it. In some cases, the price would be higher and in some cases lower.*

Q. *Each fellow got the business on such terms as he could?*

A. *Yes, sir.*

Q. *That is the way you conducted the sales department of Horner?*

A. *Absolutely, at all times.*

Q. *Was it your observation the others conducted their business along the same line, the other members?*

A. *I would judge from the quotations I have seen, and what I know of their business, that they did.*

Q. You were getting statistics, were you, that were issued by the Association?

A. Yes, sir.

Q. Did you ever have occasion to compare the reported sales with the so-called minimum prices which were supposed to be in effect?

A. I don't know as I ever did, because I never paid much attention to the prices that were given in the completed list.

Q. What would you take into consideration when you fixed the price of your flooring? You had to arrive at some price at which you would sell it; how did you arrive at the price, what factors did you take into consideration?

A. Our cost of production based on the cost of the rough lumber, manufacturing costs, selling costs, and a profit.

Q. And the conditions in the respective markets where you wanted to sell?

A. And market conditions very largely.

Q. The amount of inquiries you received, did you take that into consideration?

A. *Not so much that as the amount of business on our books, or our wish to move a certain article, certain size or grade, of maple flooring; all those things entered into it.*

Q. *Did you feel free to exercise your own independent judgment during all that time, or did you feel constrained by some rule or data that were issued by the Association, or any recommendations of the Market Conditions Committee?*

A. *I aways felt free to make my own prices, and I always did make them.*

Q. *You always did?*

A. *Yes.*

Q. How did you advise your trade as to what your prices were, or your representatives, or special agents?

A. We sent out lists on our own stationery, showing the different items and our price f. o. b. cars mill, freight at the bottom, the amount to add for freight in dollars and cents to cover the point which that representative covered.

Q. You made out and distributed your own price lists?

A. Yes.

Q. *Did you use any books or data that were issued by any of the associations as price lists?*

A. *None whatever.*" (Vol. I, pp. 321-2.)

As stated by the District Court, "Either they didn't carry out their bargain, or the prices quoted must have been above the minimum price." But it was incumbent upon the Government to *prove* either that the defendants had carried it out, or that "the prices quoted" were "above the minimum price."

The Government did not even undertake to show the minimum prices which were alleged to have been determined from time to time. There are a few scattering recommendations in the record, but there is no proof that these were all that were made.

The Government did not even undertake to prove the relation that existed between the recommended minimum prices and the prices at which members sold their flooring, nor what effect if any the said recommendations had upon the prices of the different members.

The Government did not even *allege* that the minimum price plans were carried out, or that flooring was sold by the defendants at prices equal to or more than the recommended or alleged minimum prices. As pointed out in our analysis of the Government's petition on pages 10-12 *supra*, all that the Government alleges is that the defendants "concertedly established and maintained as the *basis of their individual selling prices*," the aforesaid minimum prices. What this allegation means, we do not know. (For its possible meanings, see pages 10-12 *supra*.) At any rate, the foregoing allegation was incorporated in the petition merely by way of *inducement*. The Government alleged that the defendants *by concertedly maintaining the minimum prices as the basis of their individual selling prices* (and the uniform terms of sale, commissions, etc.) "have always maintained during said period and still maintain, *a practical uniformity between themselves" of "net f. o. b. selling prices" and "net delivered prices."*

It is the alleged *uniformity of prices* upon which the Government based its case. Of course, the evidence is conclusive that the alleged uniformity never existed (Pages 116-162 *supra*.)

For further proof that the minimum price plans, scientific price lists, etc., did not work out in actual practice, see Vol. III, pp. 207, 230-1, 246-7, 249-251, 299, 333, 340, 411; Vol. IV, pp. 435-6, 519-521. All the foregoing evidence was introduced by the Government.

Furthermore, Mr. Thomas Forman, a witness called by the Government, testified that he was a member of the various associations from 1898 until 1918 or 1919, (Tr. 137-8); that in the early days, say in 1903 or 1904, an attempt was made to fix the price of flooring, but that "it was a dead failure" for the reason that "we couldn't hold together, all the time somebody breaking the price, we got disgusted with it." He also testified that the members therefore ignored the price that had been fixed and sold their flooring as best they could. *And the same conditions obtained with respect to the alleged minimum prices which were recommended*—"we were never controlled in any way at all—we all went and sold our stuff as we were a mind to." (Vol. I, p. 138.)

The District Court's conclusion is squarely opposed by the testimony of Mr. Edward B. Gordon, Mr. Grant Keehn, Professor Albert John Hettinger and Professor Homer B. Vanderblue. Mr. Gordon is on the Research Staff of the Bureau of Business Research of Harvard University. Mr. Grant Keehn is a graduate of the Harvard Graduate School of Business Administration and is employed in the Statistical Department of Goldman-Sachs & Company of New York City. Professor Hettinger is the Assistant Professor of Business Statistics of the school above mentioned and Consulting Statistician for the Federal Reserve Bank of Boston and the Ludlow Manufacturing Associates. Professor Vanderblue is Professor of Business Economics in said School and Economist with the Harvard University Committee on Economic Research.

MR. GORDON'S TESTIMONY.

Mr. Gordon testified that prices may be kept (1) at an unreasonably low level, or (2) at an unreasonably high level, or (3) at a reasonable level, or (4) intermittently at one or the other levels previously mentioned. (Vol. II, p. 625.) He stated that if the defendant Association and its predecessors had controlled the prices at an unreasonably low level *there would have been no other supply produced.* Inasmuch as other supply was continuously produced by nonmembers, (see pages 27-31 *supra*) he concluded that prices had not been kept at an unreasonably low level. (Vol. II, p. 626-7.)

He testified that prices had not been kept at an unreasonably high level, for the following reasons:

If the price of a commodity is kept at an unreasonably high level there would be special inducement in the form of attractive profits for the production by others of an additional supply. This supply would either break the market or deprive the original producers of their trade.

To control prices at an unreasonably high level, it is necessary to control the potential supply. The potential supply of a commodity rests upon control of raw material, equipment, capital, management and labor. The raw material of maple, beech and birch flooring is the rough lumber, which accounts for about *seventy-five per cent* of the cost of the finished product. Investigation showed that the members of the defendant Association controlled *less than* 2% of the total stand of maple, beech and birch timber in the United States, and that from 1912 to 1920, inclusive, the members of said defendant and its predecessors devoted to flooring purposes less than 20% of the annual cut of maple lumber.[35] (Vol. II, pp. 628-9.) See also page 26, *supra.*

Machinery for the manufacture of flooring can be freely purchased. And it requires only an expenditure of $30,000 to embark upon the production of maple, beech and birch flooring. Furthermore, there are the oak flooring manufacturers and the saw-mill operators who could without any additional (or only nominal) expense engage in the manufacture of maple, beech and birch flooring. (See pages 31-33, *supra.*) And the large productive capacity of nonmembers, of which not more than 15 to 20 per cent was used, could likewise be tapped if prices were unreasonable. (See page 29, *supra.*)

We assume that not even the Government will contend that the defendants ever had control of capital, managerial ability or labor.

It was concluded, therefore, that neither the defendants nor their predecessors had controlled prices at an unreasonably high level. (Vol. II, pp. 632-633.)

It was testified that investigation had disclosed that there was no fixation or control of price at a reasonable level, because the defendants did not have control of the raw material, or capital, equipment, management or labor necessary to the production of flooring. (Vol. II, p. 634.)

With reference to intermittent fixation of price at one or another of the three levels already discussed, Mr. Gordon testified as follows:

"A. Well, this method of price manipulation would be done in the following manner:

The seller, A., with control of a portion of the supply would raise his price to an unreasonably

[fn] Maple flooring constitutes about 90 per cent of the total (flooring) output of Association members. (Page 44, *supra.*)

high level in order to secure additional profit. Provided he did not have control of the potential supply of the product, other supply would be produced and sold under the inducement of an adequate margin of profit.

The seller, A., who was attempting price control, would find additional supply placed upon the market at a lower price. He would be forced to lower his price in order to retain his market. The failure to do so would mean the loss of his market to the cheaper supply, which was available to the purchaser,—to the buyer. If he maintained his price at the unreasonable level he would be forced out of business. If he lowered his price, in order to keep his market, he would cut below the price of the additional supply which was being offered to buyers. The price of the seller, A., would be below the price of the uncontrolled supply for two reasons: First, the cost of production of the seller, A., would be less than the cost of production of the additional supply, for if this were not the case this additional supply would have been produced before; secondly, the additional supply, with the same demand, would cause the price to decline.

Thus, the result would be to drive the producer of this additional supply from the market. *This manipulation of prices would be reflected in the prices realized by the seller, A., and would be evident in comparison with other prices, particularly the prices of similar commodities.*

Q. *For the purpose of ascertaining, therefore, whether there was in this case any such attempted fixation of prices at alternately high and low levels in the manner in which you have described, have you made a comparison of the prices realized by the members of the Maple Flooring Manufacturers Association with an index of all commodity prices, an index of all building material prices, and an index of lumber prices, and also a comparison with the prices of competing floorings.*

In addition we have compared the prices realized by members of the Association with the cost of the

raw material, and with the cost of other manufacturing and marketing expenses." (Vol. II, pp. 634-5.)

The witness then identified and verified defendants' Gordon Exhibits 6 and 7. (Vol. II, pp. 635-647.) Defendants' Gordon Exhibit 6 is a comparison of the index of the prices of "The Product" with the United States Bureau of Labor Statistics indices of "All Commodity Prices," "All Building Materials Prices" and "Lumber Prices," by months from 1913 to 1923. (Vol. V, p. 899.)

The prices of "The Product" were arrived at by taking the *monthly* average prices of 13/16" x 2¼" Clear, No. 1, and Factory (see pages 146-148, *supra*) and combining them in the proportion of their production, viz., 50 per cent, 35 per cent and 15 per cent, respectively. This method is known as "weighting" and is used by the United States Bureau of Labor Statistics and statisticians generally. It is fully explained by Mr. Gordon on pages 635-647 of Vol. II. Defendants' Gordon Exhibit 7 (Vol. V, p. 901) is the proof of the validity of the method used in arriving at the prices of "The Product."[26] (Vol. II, p. 646.)

Mr. Gordon's analysis of Defendants' Gordon Exhibit 6 appears on pages 647-651 of Volume II. A reproduction of said exhibit is Appendix F to this brief. The witness concluded this study as follows:

"Now, a study of the movements of the four indices reveals the fact that during the years 1916, 1917 and 1918, and the first half of 1919 the price

[26] It should be stated that in some instances the supporting data were not printed, for the reason that it was undisputed that the graphs or charts were correct representations of the data upon which they were based.

levels of the four indices were dissimilar. The index of all commodities prices was on the highest level, and the index of all building materials prices upon the next highest level, followed by the index of lumber prices and with the index of the Product upon the lowest level.

During the last half of 1919 this relationship changed. The Product advancing to the highest level, all building materials to the third highest level and all commodities upon the lowest level.

A study of the indices themselves, that is, the commodities which make them up, will explain this relationship. Maple flooring is a specialized product and cannot be used for a variety of purposes,—its sole outlet being for flooring purposes in building construction. Lumber, on the other hand, is a less specialized product, although the major proportion, it has been estimated sixty per cent, of all lumber goes into new building construction. There are also a variety of other uses, such as for boxing, crating, shipbuilding and such outlets for lumber. All building materials is a still less specialized group. Many of the products making up this index are used in a variety of industries, and in addition many of them are made from raw materials, such as iron and steel, which, if the prices are not attractive will be diverted and processed into other commodities. The all commodity index has no specialization, being made up of all manner of commodities and will be influenced by an increase or decrease in the amount of building in the United States only to the extent that those products used in the building industry make themselves felt in the general average of the 404 commodities which are included in the index. (Vol. II, pp. 650-1.)

A series of charts (Defendants' Gordon Exhibits 9-13, both inclusive) were then introduced in evidence. (Vol. II, pp. 651-662; Vol. V, pp. 917-925.) *These charts show that the demand for maple flooring is dependent upon the volume of new building construction in the United*

States, and explain the reversal of price level that took place in 1919-1921. They show

"that as the volume of new building advanced or increased or decreased the volume of new orders booked by Association members advanced and increased or decreased in a corresponding manner." (Vol. II, p. 662.)

Mr. Gordon testified:

"Q. Now, having discussed the question of the dependence of new orders booked by members of the Association upon the volume of building construction in the United States, will you go back to Defendants' Gordon's Exhibit 6, and point out, if there is anything that you desire to point out there, the relationship of the dependence or the importance of the dependence in the reading of this chart, Exhibit 6?

A. *The purpose of determining the dependence of the demand for maple flooring upon the volume of building construction in the United States was to explain the change in price level as shown by the chart Exhibit* 6.

During the years 1916, 1917 *and* 1918, *when the index of the Product was upon a lower relative level than the other three indices, there was very little new building construction in the United States because of restrictions placed upon that industry.*

As a result this failure of demand for flooring inevitably caused its price to stay upon a low level. The continuance of this low volume of building, during the years 1917 *and* 1918 *created a shortage of building, which at the close of the war and the removal of restrictions upon the industry was allowed expression and explains the tremendous increase in demand for flooring and other building materials during the period* 1919 *to date. This shortage and the consequent high level of building since* 1919 *is shown in a chart.*

Mr. Johnston: That is Exhibit 14.

A. Exhibit 14." (Vol. II, pp. 662-3.)

Appendix G is a reproduction of the Defendants' Gordon Exhibit 14. (Vol. V, p. 927.)

*"It is apparent that * * * from* 1916 *to* 1918 *the volume of building declined to a level lower than at any other time since* 1900. *The area underneath the line of trend* [1900-1916 *projected*] *will give you an approximation of the accumulation of building shortage."* (Vol. II, p. 667.)

Mr. Gordon also testified:

"The difference in level of price before and after the end of 1919, *it has been shown, was caused by the specialization of the Product, which can be used only as flooring in the construction of new building. The changes in the quantity of new building in these periods offers explanation of the change in relative price levels of these four indices."* (Vol. II, p. 669.)

This falling off in the volume of building was due to the restrictions imposed by the Government during the war. (Vol. II, pp. 666-7.)

Mr. William L. Saunders testified as follows:

"In 1919, there was a marked shortage of good lumber in the market, in fact, at that time it was practically a runaway market. It was only a question of whether you had the thicknesses and grades that were required by the industries demanding such lumber. *During that time we sorted out a large amount of No.* 1 *Common flooring stock and sold it on the market to other industries. The prices of rough maple lumber during* 1919 *and* 1920 *compared very favorably with the prices of maple flooring, although at that time there was a great expansion in the building trades, and owing to a couple of serious fires that occurred in the flooring industry, I think flooring had a tendency to fluctuate a little more in value probably than the rough lumber. The first fire occurred in the dry kiln department of the Horner people, whose plant was located at Newberry. A couple of months later their mill at Reed City burned. The Horner people manufactured*

about 20 per cent or better of the entire output of Michigan or of the so-called Association, and at the time of the fires they had something like 19,000,000 *feet of orders on their books. Their customers immediately attempted to get other manufacturers to supply them with flooring. I took on some of that business at prices which were to be fixed at time of shipment. These prices were to be at whatever I was then selling flooring at. When the Horner supply was cut off and their customers had to buy flooring elsewhere, it made it very difficult for many contractors to get the material for buildings already contracted for. During* 1919 *and* 1920 *the demand for flooring was very great, and it was necessary for my company to allocate almost every carload of flooring to the customer that was pressing us hardest for shipment, so that our warehouses were entirely empty. We were then running continuously and bending every effort to manufacture all we could."* (Vol. I, p. 198.)

Mr. W. L. De Witt testified:

"We have never been a party to any agreement or understanding of any kind to limit our production. We have steadily increased our production since 1918, when it was between three and four million. This year it will be over eight million. *We had a little falling off in* 1920, *as our plant was closed by the I. W. W. strike for a period of about three months. That was in the early part of* 1920, *beginning about May* 1*st and continuing until practically August* 1*st,* 1920. *There had been talk of a strike or a threat of strike for nearly a year before. Practically all the mills in Wisconsin and the Upper Peninsula of Michigan were closed down from May* 1*st to about August* 1*st,* 1920. *This caused a great shortage of flooring and was probably one reason why the prices fluctuated so much. Prices were then very high. There was a great variation in prices during that period. The I. W. W. strike was general among the mills in Northern Wisconsin and the west portion of the Upper Peninsula of Michigan."* (Vol. I, pp. 234-5.)

That during 1919-1920 contractors and others were bidding for deliveries irrespective of price in order to get flooring for building already under construction, see Vol. I, pp. 346-8, 381, 383, 432-3, 446; Vol. II, pp. 458, 574; Vol. III, p. 131.[37] For a statement of the wages paid, the prices of supplies and rough lumber, see Appendices H, I, J, K, L, M and N, which are copies of Defendants' Exhibits K, L, T, T-1, CC-½, OO and PP, respectively. (Vol. I, pp. 224, 229, 268; Vol. II, pp. 769, 797, 798; Vol. IV, 820, 821, 822-5, 834, fol. p. 5505.)

Mr. Gordon also pointed out that there were 21 *commodities mentioned in the United States Bureau of Labor Statistics, Wholesale Price Bulletins that had a higher relative peak price than did "The Product"* (Defendants' Gordon Ex. 15, Vol. II, pp. 670-1, Vol. V, p. 932), *and* 146 *other commodities that had a higher average price for the period of* 1913 *to* 1922, *inclusive, than did "The Product."* (Vol. II, p. 672, Defts.' Gordon Ex. 16, Vol. V, pp. 933-943.)

For Mr. Gordon's summing up, in support of his conclusion that the defendant Association and its predecessors did not control the price of maple, beech and birch flooring, see Vol. II, pp. 673-676.

---

[37] * * * in the English parliamentary debates upon the corn laws about the year 1840 it was estimated upon data furnished by Mr. Tooke in his *History of Prices*, that a deficiency of one-sixth in the English harvest resulted in a rise of at least one hundred per cent in the price of corn; and another estimate by Davenant and King, at the close of the seventeenth century corroborates this apparently excessive statement." (Marshall's *Industrial Society*, p. 414.)

MR. GRANT KEEHN'S TESTIMONY.

Mr. Keehn identified two charts, Defendants' Grant Keehn Exhibits 17 and 18 (Vol. V, pp. 945-7) where the *prices* of "The Product" were compared with the prices of competing wood floorings, viz.: Oak (a hardwood) and Arkansas Soft Pine, Southern Yellow Pine and Douglas Fir, which are soft woods. The second chart above mentioned is a comparison of the *indices* of the prices of all the floorings above mentioned. (Vol. II, pp. 679-683.) Mr. Keehn testified:

"A. This chart, Exhibit 18, indicates that the prices of all five floorings started to rise sharply at about the same time, in March and April of 1919. *The rise of the prices of The Product, however, was not as accelerated as that of the prices of the other four wood floorings.* The last half of 1919 saw a reaction in the advance of the prices of the other floorings, whereas the price of The Product, which as can be seen, was still upon a relatively lower level, continued to advance.

In November and December of 1919 the upward movement was recommenced in all series, with The Product still upon a lower level. This rise was continued by all five wood floorings until early 1920. The soft woods, Arkansas soft pine, Southern yellow pine and Douglas fir reached their peaks coincidently in February of 1920.

The hard woods, oak and The Product, continued to advance and did not reach their peaks until April of 1920. The decline which has set in after the peak prices in all of the five series was broken in all by a slight reaction in the third quarter of 1920, but the precipitous downward movement was again resumed.

The downward movement of all indices was broken only in February, 1921, save for Southern yellow pine, and culminated in the low points in 1921. Douglas fir was the first to reach its low point in

April, 1920 [1921]. The next two months saw a slight reaction in all prices, and, with the exception of Douglas fir, July again brought a decline.

This marked the low point for the other two soft wood floorings, Arkansas soft pine flooring and Southern yellow pine flooring.

The next month saw a sharp rise in the indices of the soft wood flooring prices. The two hardwood floorings, however, continued to decline in price. Oak flooring reached its low point two months later, in September.

Mr. Newman:

Q. What year?

A. September, 1921.

Mr. Johnston:

Q. Yes?

A. *And The Product continued to decline until October, when the bottom was reached. Thus the price of The Product was the last one to advance, having continued its downward movement in the face of the sharp advance in other flooring prices.*

A reaction from the upward trend was felt by *all* of the flooring prices in the early months of 1922; but the upward movement was again resumed in the second quarter of that year, and continued with but few interruptions to May of 1923.

The Product price index has risen since its low point in 1921 *at a slower rate than all other flooring indices except for that of Douglas fir flooring, from their respective low points.*

This comparison indicates the price movements and fluctuations of these competing floorings to have been practically identical with those of the prices of The Product. All have moved together with soft wood floorings and coincidently reached their peaks and troughs earlier than did the prices of the hardwood floorings.

The Product is shown to have advanced less sharply on the upswings, both in 1919 *and again in*

1921. *It would appear that the existence of the Maple Flooring Manufacturers Association has not tended to accelerate the upward movement of the price of its product.*

It would appear further that the Maple Flooring Manufacturers Association could not have had control of the prices of its product when the price of its product did not advance in the face of sharp advances of other flooring." (Vol. II, pp. 683-4.)

Mr. Grant Keehn also testified:

"We investigated the prices of The Product, or the prices realized by the members of the Association [see page 210, *supra*] with their cost of production, and in comparing the prices with the costs of the raw material and the other manufacturing and marketing costs. * * *

The cost of the raw material in the production of maple flooring is approximately three-quarters of the total cost of the finished maple flooring. * * * *In making the comparison of the costs of the raw material and prices realized it was not our purpose to show the relative amount of profit secured at one time as compared to another, but merely to indicate changes in the cost of the raw material and the finished product, and to compare the fluctuations in their price.*" (Vol. II, p. 685.)

Mr. Grant Keehn then identified Defendants' Grant Keehn Exhibit 19, which compares the index of the f.o.b. mill prices of 4/4 rough maple lumber of three grades (Firsts and Seconds, No. 1 Common and No. 3 Common)[38] with the price of "The Product," for the period of 1913 to 1923. (Vol. II, pp. 686-8; Vol. V, p. 949.)

[38] The prices of the three grades of rough lumber were added and the arithmetic average was taken as the price of the combined grades.

"*We could not weight the prices of these three grades in proportion to their use, because we did not have figures on the relative consumption of these three grades by the members of the Association. It was necessary, therefore, to combine them on some arbitrary basis, and the arithmetic average seemed the reasonable method of combining them.*" (Vol. II, p. 687.)

Appendix O is a reproduction of the exhibit last above mentioned.

Mr. Keehn concluded his exposition of the chart in question as follows:

> *"From this comparison it is evident that the prices of The Product, of the Maple Flooring Manufacturers Association, were not unreasonable from the point of view of the cost of raw material. Moreover, from this single point of view it appears clearly that the members of the Association would have been justified in securing a higher price in the years* 1917 *and* 1918 *and the first part of* 1919, *and the last half of* 1920, *and the first one-half of* 1921, *and the first part of* 1923. *The prices of The Product were on a relatively higher level than the price of its raw material for only about one year in the* 11 *under consideration."* (Vol. II, p. 690.)

Mr. Grant Keehn also testified:

> "We made a comparison of the price of The Product with an index of the average manufacturing and marketing costs of the members of 'the Association'. This index includes costs other than raw material. These average costs were made recently quarterly by the Association. * * * The comparison has been made from 1916 to 1923. The only other year in which a survey was made was in 1913, which year we have used as a base. We did not believe it necessary to chart previous to 1916, because it would merely be a straight dotted line from 1913 to 1916." (Vol. II, p. 690.)

The foregoing comparison appears on Defendants' Grant Keehn Exhibit 21, (Vol. II, p. 690; Vol. V, p. 953) which is Appendix P to this brief.

Mr. Keehn concluded his exposition of said chart as follows:

> "It is apparent from this comparison that there

is little similarity, except in general direction, in the movements of these two indices. For approximately half of the period the average manufacturing and marketing costs were upon a higher relative level than the prices of The Product, and during approximately one-half of the period this relationship was reversed.

"*A study of the items which make up the average manufacturing and marketing costs, and the conditions and forces which affect them, will provide an explanation of the divergence and dissimilarity in the movements of these two indices.*

"Of the items which go into Average Manufacturing and Marketing Costs, other than raw materials not here included, labor cost is dominant. Because of agreements with labor and the lack of an immediate necessity to raise wage rates, wages practically always lag after prices of products upon which this labor is expended. So great is the lag that the payments made to labor increase even after the peak in prices has been reached and continues to decline even after the prices have reached their low points and have again started upon the upswing.

"Delay is also caused in the action of labor costs by the increased per unit expenditure after the peak has been reached and the rate of production decreases; and conversely, after the rate of activity has increased the per unit expenditure for overhead and labor decreases. The other manufacturing and marketing costs, which are the overhead expenses, fluctuate in a similar manner, and are less flexible in their fluctuations.

"This comparison indicates the fact that the prices of The Product during the last half of 1917, 1918, and the first half of 1919 were upon a much lower relative level than the average manufacturing and marketing costs.

"As was stated when a comparison was made of the prices realized to the costs of the raw material, the Association would have been justified had it secured higher prices during this period. And it was

pointed out that the cause of the low relative price level of The Product at this period was due to low volume of building construction and the consequent lack of demand for The Product." (Vol. II, pp. 691-2.)

Mr. Keehn stated that he and Mr. Gordon had investigated the relation of the price of The Product to supply and demand. Mr. Keehn discussed the laws of supply and demand, including their relation to *crises*, or Business Cycles, in order to show how they operate *when unhampered by artificial control.* (Vol. II, pp. 692-700.)

A series of three charts were then introduced in evidence. These charts all relate to the supply of and demand for The Product, and show the relations of each to the price thereof for the period of 1912-1923. (Vol. II, pp. 700-705; Defendants' Grant Keehn Exhibits 22, 23 and 24, Vol. V, pp. 955-959.) Mr. Keehn explained the methods employed as follows:

"A. Yes. In order to compare the prices of the product with the supply and the demand, of the product of the Maple Flooring Manufacturers Association, it was necessary to have some indices of the supply and the demand. *We took, to represent supply, in this case, the stocks on hand of the fifteen identical members of the Association, which were used previously, or, whose new orders booked were used previously to represent the demand. To represent the demand in this instance, we used the unfilled orders at the end of the month, of the same identical fifteen members. The reason that we used the unfilled orders instead of the new orders booked in this case, is apparent from the explanation that I gave previously of the effective sources of supply and demand, which was, namely, that while the new demand would be the genesis for the activity of the business over a long period of time, it would be the accumulated demand and the accumulated supply*

which would regulate the necessity for accepting new demand, and at what price the new demand would be accepted. The unfilled orders, obviously, would better represent this accumulated demand than would the new orders booked. That the stocks on hand are represented by the supply actually ready for sale there can be no question.'' (Vol. II, p. 700.)

Appendix Q is a copy of the final chart of the series above mentioned. Mr. Keehn interpreted this chart as follows:

"To discuss in detail, now, this Exhibit 24, which shows corrected indices, *it can be seen that in the first part of* 1912, *demand was low, and the stocks on hand, which represent supply, were high; and as a consequence the price was falling.* Throughout 1912 demand rose steadily, demand represented by unfilled orders, but suffered a temporary reaction in November and December, reaching its high level again in January and February of 1913. During the last half of 1912 stocks on hand, which represent supply, fell, and, after a lag, which we have explained to be natural, the price of the product began a gradual upward trend.

Throughout 1913 the trend of demand was downward, and, with the exception of the last four months, the trend of supply was upward; and as a result, and after the natural lag, the prices of the product reached the peak, in the middle of 1913, started downward. The stocks on hand, representing supply, fell off in the last four months, but not to as great an extent as did the demand, in the last part of 1913. The result of that falling off of supply is seen in the leveling of the prices of the product in the last two months of 1913.

Q. Falling off of supply?

A. Yes. Through the entire year 1914 the trend of supply, stocks, again was upward; demand-unfilled orders—after an abrupt jump to a high level in the first quarter of 1914, declined during the entire

year. *In the face of a situation of declining demand and increasing supply, the price of the product was forced to decline throughout the entire year.*

In the first quarter of 1915, a reaction occurred. *Demand increased, and supply declined. This condition was only temporary, and did not affect the price. In the middle of* 1915, *however, conditions again changed, the demand rising sharply, and supply dropping off. These factors caused the price to advance, after a short period of lag. Through the first half of* 1916, *demand and supply merely maintained the levels secured at the end of* 1915; *and the price also remained* [*at the*] *levels secured at the end of* 1915; *and the price also remained level. In the second half of* 1916, *however, demand again advanced sharply, and supply fell off rapidly. The price, after a short lag, advanced.* The trend of demand was downward in 1917. The trend of supply, with the exception of the first few months, was upward. Prices continued to rise, until this change in conditions was felt, in the middle of the year when the price, as could be expected, declined.

This condition continued through the early months of 1918. *In March, April and May of* 1918, *demand again increased abruptly, with a concomitant falling off in supply. As a result the price of the product advanced sharply in May and June. In June, however, demand fell off heavily, and continued to do so for the remainder of the year. Supply, which had been falling off, increased again in the last half of the year. In consequence of these forces the price discontinued its advance in July, the month after the decline began in demand.* This position was held by the price during the remainder of 1918 and the early part of 1919. *In early* 1919 *a great change took place. Demand started a sharp advance to an unprecedentedly high level, which lasted until January of* 1920; *and supply fell off precipitously throughout the entire year, to an unprecedentedly low level.*

After a few months lag the price of the product inevitably rose to unprecedented heights.

Beginning with the first month of 1920 *demand reached its peak, and started to decline sharply; and supply reached its low point, and started a sharp advance. After a few months lag, during which the prices continued to feel the effect of the great accumulation of orders still unfilled, the price of the product inevitably fell, and continued to do so for the remainder of the year.*

January, 1921, saw a slight reaction in both supply and demand, followed one month later, in February, by a reaction in the price.

Since the beginning of 1921 *the reaction of the price to conditions of supply and demand has been particularly sensitive. Demand had reached an unprecedentedly low level by the end of* 1920. *The return of demand, which occurred in the first three quarters of the year, merely served to bring it up to an ordinary low level. Supply, which was already above normal, continued to rise during this period. As a natural result of these conditions, prices continued to decline, although less sharply. In September, October and November, demand rose sharply, and supply began to decline. This was followed, after two months lag, by a reaction in prices, which advanced slightly in November and December.* In December, 1921, January and February, 1922, demand again decreased heavily. In December, 1921, and January, 1922, supply increased slightly. This increase was followed in January, February and March of 1922, by a slight decline in prices.

In March and April, demand again advanced sharply, and supply continued to fall off. One month later, in April, prices again resumed the upward movement. From May to October the demand hardly more than maintained its level. Supply, for the first three of these months, continued to decline, and then merely maintained its level. *Price, in consequence, advanced less sharply, and in the last three months of* 1922, *advanced not at all.*

In the last two months of 1922, *and through February of* 1923, *the demand increased rapidly, and*

supply declined sharply. As a result, after a short lag, prices advanced sharply.

Thus it is clear that the prices of the product of the Maple Flooring Manufacturers Association fluctuated in harmony with the forces of supply and demand. It is apparent that, with practically every increase in the excess of demand over supply came, with a natural lag, an increase in the price; and with every increase in the excess of supply over demand came, with a natural lag, a decrease in the price of the product.

It can be noted that in the latter part of '18 and the early part of 1919 the price of the product did not decline, but remained level, while demand was decreasing and supply was increasing. *It must be remembered, however, that at this period the cost of the raw materials and the cost of manufacturing and marketing were upon a higher relative level than the prices of the product; that the prices of practically all other commodities were upon a higher relative level; and after the close of the war there was a condition of uncertainty. In addition to these factors, and perhaps most important of all, is the fact that during the latter half of* 1918, *there were restrictions placed upon building. Because of these restrictions people could not build, even though they so desired. A cut in price of the product at that time, therefore, would not have stimulated demand.*

Moreover, it may be contended that the price of the product should not have gone as high in 1919 and early 1920. *Unexpressed demand had accumulated because of the restrictions placed upon new building. It is necessary merely to regard the extent to which the unfilled orders increased in this period, to prove this statement. In addition to the accumulation of demand, production was low and the plant organizations had become disorganized throughout the years of* 1918,—1917 *and* 1918.

It might also be contended that the price of the product in early 1920 should not have continued upon such a high level so long a time, in face of the drastic decline in demand and increase in supply.

It has already been stated that such a condition was a reasonable one, because the manufacturers had on their books enough unfilled orders to maintain production at a high rate, without accepting new orders. Furthermore, stocks were low and could not be brought up to normal. Costs were still high, and many of them rising. It would be unreasonable to expect a producer to cut his prices, in face of these circumstances, until such a step became an absolute necessity.'' (Vol. II, pp. 705-707.)

Other explanatory charts were introduced in connection with the foregoing subject. (Vol. II, pp. 708-712; Defts.' Grant Keehn Exhibits 25, 26 and 27; Vol. V. pp. 961-967.)

Mr. Keehn concluded his summing up of all his testimony (Vol. II, pp. 712-714) with the following paragraph:

"To sum up finally, therefore, *the study which Mr. Gordon and I made developed data and material such as to clearly indicate that the members of the Association did not have the ability to continuously control the prices of maple flooring, or, even if it be assumed that they had such ability, comparisons with other prices, with prices of competing floorings, with the costs of maple flooring, and with the conditions of supply and demand of that product, do not offer any evidence of fixation or unreasonableness.*'' (Vol. II, p. 714.)

There were other charts, but the foregoing ones are the most important.

THE TESTIMONY OF PROFESSORS HETTINGER AND VANDERBLUE.

Professor Hettinger as a statistician, and Professor Vanderblue as an economist, unqualifiedly praised the work done by Messrs. Gordon and Grant Keehn. They stated that the charts and methods used were correct, and that they concurred in the conclusions of Messrs. Gordon and Keehn as stated in their depositions. (Vol. II, pp. 722-739, 740-769.)

The discussion by the District Court of the foregoing evidence strikes as being wholly inadequate. (Vol. I, p. 59.)

From the mere fact that there were other associations in the lumber industry, there can be no legitimate inference that the manufacturers of competing floorings illegally fixed the prices thereof.

Comparisons of one industry with other industries are of the greatest value; and such comparisons are made by economists, by bankers, investment brokers, speculators, captains of finance and industry, sociologists, legislative committees, and every person of scientific training or habits of mind. Such a method substitutes information for ignorance, it discloses relations, it develops standards, it provides proper *data* as grist for the mills of the mind, which otherwise would produce only the chaff of *a priori* conclusions from a heterogeneous mass of vagaries, unjustifiable assumptions and phantasies.

The statement that "every industry is so *dependent* upon and intertwined with others that the trends of prices and market conditions *necessarily must be* in the *same* general direction in *all*" is a dogmatic and unjusti-

fiable misstatement of the principle that in the present phase of capitalist industry the prices of all commodities have a *tendency* to move in the same general direction. So, the air has a *tendency* to maintain a certain pressure; the ocean has a tendency to keep its level. All terrestrial things *tend* toward the center of the earth. In modern times there is even the augmenting tendency of all citizens to participate according to their needs in the intellectual, moral, esthetic and economic wealth of civilization. But the most appalling inequalities still exist.

Have copper companies participated in the recovery from post-war depression? Has the grower of wheat and other farm products? Have the leather manufacturers? or the railroads? or the packers? During the war steel and iron companies piled up millions while other other industries were going broke. Shortly after the war automobile companies reaped a harvest, while the producers of oil products were in the dumps. In 1919-1920 the buildings trades were in clover, while the merchants, wholesale grocers and others were in the slough of despond.

There always exist these diversities even in ordinary times, although, of course, all industries are responsive to the systole and the diastole of inflation and depression. But their degree of response varies greatly, as reference to Defendants' Gordon Exhibits 15 and 16, Vol. V, pp. 932-943 will abundantly prove.[39]

[39] And of course *every* industry is not dependent upon *all* other industries; else the 'death' of one would be the end of all. In the industrial, no less than in the organic, world, there is a strenuous and constant struggle for existence. The past history of industries may be condensed into as few words as *l'histoire des hommes: "ils naquirent; ils suffrirent; ils moururent."* Like creeds, philosophies, nations, they rise, flourish and pass into the maw of Time,—and leave not a wrack behind!

Furthermore, the conditions pertaining to the maple flooring industry, or, rather, *to the business of the defendants*, were *specifically* investigated by Messrs. Gordon and Grant Keehn. The evidence of these gentlemen, especially when it supplements and is supported by a great mass of other undisputed evidence, cannot be lightly brushed aside by means of unoriented generalities.

VIII.

The Government failed to support by proof the essential allegations of the petition with respect to the activities of the present Association, which was organized on March 29, 1922.

A.

GENERAL PROVISIONS OF ARTICLES.

That the defendant Association was not organized until March 29, 1922, see page 101, *supra.*

For the present Articles of Association, which differ markedly from all previous articles, see Government's Exhibit 8, Vol. III, pp. 64-74.

Membership in the Association is open to any manufacturer of maple, beech or birch flooring. (Vol. III, p. 65, Vol. I, p. 286; Vol. II, p. 789.)

For the provision concerning the Membership Fee Fund, see Article XIII, Vol. III, p. 68. For the evidence regarding said article, see Vol. I, pp. 149-150, 173-4.

> "The *total* yearly expenditures of the Association do not amount to more than a quarter of one per cent, or three-tenths of one per cent of the value of the flooring sold by the members." (Vol. I, p. 174.)

For the different committees, see Vol. I, pp. 126, 171.

For the evidence concerning the Expense Fund (Article XVI), see Vol. I, p. 150.

The Advertising Fund (Article XVII) has been discussed on page 164, *supra.*

The obligations of members are merely to pay all dues and assessments. (Article XIX, Vol. III, p. 72.)

There are no fines or penalties prescribed for failure to make reports, or to attend meetings. The only penalty prescribed by the articles is for failure to pay dues or assessments. (Vol. III, p. 72.)

B.

ASSOCIATION MEETINGS.

The allegations concerning the holding of meetings are set forth on pages 20-21, *supra*. As there pointed out, no infraction of the Sherman Act is charged by the Government. Surely, it has not become unlawful for business men to hold monthly meetings for the purpose of discussing the supply and prices of the raw material used by them, manufacturing and marketing costs, and general trade conditions. *United States* v. *U. S. Steel Corporation*, 223 Fed. 55, 154-55.

The District Court stated that it was a heavy tax on one's credulity to believe that at Association meetings the members turned their eyes solely to the past and "carefully avoided, in both conversation and discussion, all reference to the highly important subjects of present trade conditions, and future trade outlook." (Vol. I, p. 58.) Such a statement is merely another evidence of how easily important facts in a voluminous record may be either forgotten or remembered without discrimination. No such evidence was given by the defendants, nor was any such contention advanced by counsel.

The evidence—*the undisputed and wholly credible evidence*—was that *future prices* for maple, beech or birch flooring were not discussed, because before the organization of the present Association Mr. Newman gave explicit written instructions that such matters should not

even be discussed. (Vol. I, pp. 132-34, 174, 178, 206-208, 213, 236, 210, 212, 295-98, 330, 332.)

There is nothing strange or sinister in the fact that meetings of the defendant Association were held monthly. There were several committees which were engaged in important work. Manufacturing difficulties, marketing problems, advertising matters, traffic questions, the Canadian tariff on flooring, freight rates, labor troubles, manufacturing costs, the rough lumber market, and other matters which affected all members were constantly recurring. Moreover, great quantities of flooring and lumber are daily sold in Chicago. All members have customers there. Chicago also affords opportunities for both instruction and diversion that are not available in smaller communities. *And inasmuch as the expenses of members to and from the monthly meetings were paid by the Association* (Vol. I, p. 150), *it is not surprising that a majority of the members usually attended these meetings.* After a session of a few hours and a good lunch, most members called on their representatives, or customers, or went to theatres, ball games, etc. These meetings also afforded manufacturers of rough lumber opportunities for selling it to other members, and for different members to sell surplus flooring to others who were short certain sizes or grades. (Vol. I, pp. 205-6, 330, 332, 295-8, 132, 134, 178, 206, 208, 236.)

The Government does not even charge that at such meetings there was any understanding or agreement, either express or implied, with respect to prices.

There are about 1800 trade associations in the United States. (*Trade Association Activities*, p. 304.) There are probably tens of thousands of fraternal organiza-

tions, lodges, clubs, societies, etc. All of them grow out of the fact that man is a social animal. Individuals desire new experience, response, recognition. And when associations, lodges, etc., are once organized and habits of attendance at meetings are formed, continued attendance follows almost automatically by virtue of the well-known laws of habit. The meetings also afford opportunities of escape from monotony, business worries, other troubles, or self. Most men cannot long endure solitude. They must rejoin the herd, even though they derive but little, if any, personal profit or satisfaction from it, other than a mystical feeling of identity with the herd—a fleeting illusion that the individual self is not utterly alone in the universe. This desire for association with one's fellows is often so strong that even a solitary person will often seek the society of others, although he knows from past experience that he will either offend his fellows, or be inexpressibly bored by them.

During his argument Mr. Johnston stated that the defendants placed no particular importance upon the monthly meetings; and that if the District Court felt that they were contrary to either the letter or the spirit of the Sherman Act "we are perfectly willing to have those meetings enjoined." And Mr. J. Stanley Thompson, of counsel for the Government, will recall that he and Mr. Darby (of counsel for defendants) agreed that the foregoing statements might be incorporated in the Certificate of Evidence, but that the District Court refused to sanction such agreement, for the (to us rather curious) reason that the said statements merely had been made during the course of argument and were not binding upon the defendants!

lower and more peaceful sorts of men did money-lending and commerce begin to be recognised as means to get money by the use of money. 'Economic Rationalism' is the suggestive name which Sombart gives to the change of spirit from the romantic, adventurous money-hunting of the Middle Ages to the pursuits of modern commercialism. *In this process he assigns a very significant part to the discovery and use of technical business methods in account-keeping, the application of exact calculation to Industry.* Two names mark the early advances towards modern book-keeping—Leonardo Pisano, whose *Liber Abbaci*, published in 1202, may be said to indicate the beginning of modern industry, coinciding as it did with the Venetian assault upon Constantinople; and Fra Luca, whose completed system of double entry was essential to capitalistic account-keeping. The development of book-keeping, accompanied as it was by a wide general application of rational and mathematical system throughout commerce, in the shape of exact measurement of time and place, forms of contract, land surveying, modern methods of weights and measures, city plans, public accounts, was at once an indispensable tool and an aspect of modern industry. *It rationalised business, releasing it from caprice and chance, and giving it a firm objective character from the profit-making standpoint.* This was the most definite and direct contribution to industry of the Renaissance, with its emphasis on individual interests, personal responsibility, and free competition—the same spirit which wrought in art, literature, religion and politics." *

Economists roughly distinguish four stages in the history of industry during mediaeval and modern times. "It is common to speak of them as (1) the *family* or *household* system, (2) the *gild* or *handicraft* system, (3) the *domestic system* or *house industry*, and (4) the *factory system*."[12]

[12] See also *Industrial Society* (Marshall). pp. 166 *et seq.*

* *The Economic Organization of England*, (Ashley) pp. 35-36.

Bookkeeping was not of much importance when the craftsman worked on either the customer's materials or his own, and was in direct contact with his "market." It was of considerable importance in the *domestic system* of industry, where the entrepreneur financed production and maintained business relations with numerous workmen who performed different operations at their homes. Bookkeeping, like industry, was then a comparatively simple matter.

But we have come a long way from that comparatively simple organization of industry. The slow accumulation of wealth, increase in population, the discovery and exploitation of deposits of precious minerals, the contributions of mathematics, chemistry, physics and biology which resulted in multitudinous inventions and labor-saving devices, improved means of communication and transport, and the raising of production and consumption to the *nth* degree, have made cost-accounting of tremendous importance.

Simple bookkeeping has evolved into the science of accounting, of which cost-accounting is a recent development. It was a necessary incident to large-scale production and distribution and the hazards of capitalist production. Large corporations have developed cost-accounting to a very high degree of efficiency, but it is notorious that, until recent years, the average manufacturer knew but little, if anything, of such methods, while the small business man, even now, knows no more about cost-accounting than he does about relativity.

The essentially *hazardous* nature of capitalist production is demonstrated on pages 474-519 in Marshall's *Industrial Society.* Aside from *static* risks, such as damage by lightning, hail, earthquake, storms, disease, fires, bankruptcies, accidents, etc., there are the *dynamic* risks, such as changes in the wants of society, changes in the methods of production, growth of population, increase of capital, seasonal fluctuations, labor disturbances, etc., etc.

Moreover, the dependence of all industries upon transport and finance (Marshall, p. 404), the complementary or subsidiary relation that most industries and trades bear to certain other industries or trades (405), the interdependence of prices (408), the relation of crops to industry (412), the action of government, etc., are also of far-reaching effect. We set forth in the margin Professor Marshall's excerpt from Professor Irving Fisher's *Elementary Principles of Economics*, which is prefaced by the statements:

> "Ours is a pecuniary society. Industry is conducted on a price basis. This selection shows how numerous are the risks of the business man, *no other factor than change of price being considered.*"[43]

---

[43] "We may now fitly review the theory of prices by enumerating the various possible causes which might decrease the price of, let us say, pig iron in New York. Its price might fall for any one or more of the following reasons:

I. A RISE IN THE MARGINAL DESIRABILITY OF MONEY DUE EITHER TO—

A. A rise in the purchasing power of money through

1. A decrease in money or deposit currency, or

2. A decrease in their velocities, or

3. An increase in the volume of trade; or to

B. An impoverishment or reduction of incomes.

II. A FALL IN THE MARGINAL DESIRABILITY OF PIG IRON DUE EITHER TO—

A. An increase in the amount of pig iron used, through

1. Importation of pig iron from other places where its price is lower than in New York, or

2. Short sales of pig iron for future delivery in expectation of a fall of price, thus releasing to present use such stocks as would otherwise be held over for the future, or

3. A decrease in its cost by

(a) A saving of waste,

(b) A saving of labor,

Man's inability to cope with these inconstant and incalculable factors results in periodic crises with their

(c) A decrease in the price of iron ore or other prices entering into its cost,

(d) An increase in the price of by-products, or

4. A trade war; or to—

B. A fall in the marginal desirability of a given quantity of pig iron, through—

1. A decrease in the price of iron products through decrease in marginal desirability of the satisfactions they yield, because of

(a) An increase in their amount,

(b) A change in fashion, etc., or

2. An increase in substitutes for pig iron, or

3. A decrease in complementary articles, or

4. An increase in the rate of interest whereby the value of pig iron is obtained (by discounting the value of iron products) through an increase in the marginal rates of impatience,

(a) From a change in human nature

(1) By decreasing foresight,

(2) By decreasing self-control,

(3) By increasing shiftless habits,

(4) By decreasing regard for posterity, or

(b) From a change in incomes

(1) By shifting their distribution in time toward the future,

(2) By reducing their size,

(3) By increasing their uncertainties.

Back of these causes lie other causes, multiplying endlessly as we proceed backward. But if we trace back all of these causes to their utmost limits, they will all resolve themselves into changes in the marginal desirability or undesirability of satisfactions and of efforts, respectively, at different points of time, and in the marginal rate of impatience as between any one year and the next." *Industrial Society*, pp. 483-485.

huge toll of business mortality and social injury. Any means whereby the hazards of business may be minimized without social injury, or violation of law, is of course desirable.

INVESTIGATION AND RECOMMENDATIONS OF THE FEDERAL TRADE COMMISSION.

In Jones' *Trade Association Activities and the Law*, it is said:

> "The Federal Trade Commission, by its educational campaign several years ago urging the importance of an accurate knowledge of costs in our various industries, greatly stimulated the interest of businessmen and trade associations in this subject.* Many trade associations have developed uniform cost accounting systems within the past few years." (p. 62.)

A list of some 60 associations which had adopted or were then planning to adopt cost accounting systems is given by the author above mentioned.

In an address by Hon. Edward N. Hurley, Vice Chairman of the Federal Trade Commission before the Boston Commercial Club on March 28, 1916, it is said:

> "The Federal Trade Commission has been in existence one year, and after surveying the field we found from a preliminary investigation that 200,000 corporations out of a total of 260,000 engaged in the manufacturing and mercantile business of the United States were eking out an existence; 100,000 of them did not earn a penny. Out of 60,000 suc-

*"The Commission has issued the following pamphlets on cost accounting which have had a very large circulation: 'Fundamentals of a Cost System for Manufacturers,' July 1, 1916; 'A System of Accounts for Retail Merchants,' July 15, 1916. See also numerous addresses of E. N. Hurley while Chairman of the Commission."

cessful corporations doing a business of $100,000 a year, over 30,000 charged off no depreciation whatever. Only 10 per cent of our manufacturers and merchants know the actual cost to manufacture and sell their products; 40 per cent estimate what their costs are, and 50 per cent have no method but price their goods arbitrarily. Most of the manufacturers and merchants who do not know what their goods cost are basing their selling price on what their competitors sell for and with only this knowledge for a basis they are frequently cutting prices and demoralizing the industry in which they are engaged.

There were over 22,000 business failures in the United States last year; more than 20,000 of them were small concerns. We all know that a large percentage of business is run at loose ends, haphazard and without the proprietors really knowing at any time how they stand or whether they are making a profit or a loss. * * * *

When business was done on a large percentage of profit, questions of accurate cost and of operating efficiency were not so important, but in most lines of industry to-day the large percentage of profit has passed. Manufacturers are working on smaller margins and must absolutely know what their goods cost. With margins of profit so close, any unreliable method of arriving at cost of production must be eliminated.

It is a fact well understood among business men that the general demoralization in a large number of industries has been caused by firms who cut prices not knowing what their goods actually cost to manufacture, and the cost of selling, which is equally important, is almost wholly lost sight of. Are the officers of the companies who are cutting prices right and left, irrespective of their costs, fair to their customers, stockholders, or competitors?

A manufacturer who does not know with a close degree of accuracy what it costs him to produce the different articles he manufactures, and what it costs him to sell them, is not in a position to meet intelligently competition and invites business disaster.

Many of the larger manufacturers have thorough cost accounting systems, which they recognize as necessary in order to give them the information essential to successful management. On the other hand, the number of small manufacturers who have no adequate cost accounting system and who price their goods arbitrarily is amazing.

Proper accounting for the smaller manufacturer is most essential. It is necessary for his success that he knows on what particular article he is making a fair profit and on what he is making only a narrow margin of profit or losing money. If he has this information he can concentrate on the manufacture and sale of the product on which the profits are satisfactory.

Whole industries, in many instances, are suffering from a general lack of intelligent knowledge of cost.

HOW THE COMMISSION CAN HELP.

How can the Federal Trade Commission help to improve this situation.

The Commission has no intention and no desire to use compulsory methods. But it does hope to reach the desired end by encouraging improvements in accounting practice, by indorsing standard systems of bookkeeping and cost accounting, and by assisting in devising standard systems, either at the request of individual merchants and manufacturers, or through the association that represents the industry.

It is recognized that no one standard system of accounting is applicable to all classes of business, but that special systems are required for each group or class of commerce and industry.

The Commission, however, while recognizing the commercial advantages to be derived from uniformity of systems, does not advise making a change where systems already installed give adequate information and are economically operated."

DEPARTMENT OF COMMERCE.

Defendants' Exhibit NN-1 (issued by the Government Printing Office) "presents the results of an inquiry made by the Department of Commerce to ascertain and illuminate those activities of trade associations which contribute to public welfare." (Vol. II, p. 795.) It is called *Trade Association Activities.*[45] On page 4, Mr. Secretary Hoover states:

> "Goods must be sold at a profit or industry and commerce will not survive. Truly remarkable were the findings of Government agencies in the war years regarding the knowledge and understanding of costs in production and distribution. Losses often were confused with profits, all for the lack of knowledge of the fundamentals of cost accounting. *So to-day the trade association is proving itself the most potent organized influence in the study of costs in industry and trade. Standard costs systems applicable to the peculiar conditions are being developed within each business group. All tend to more scientific knowledge of business and ultimately lowered costs.*"

Among the advantages of a cost accounting system, Jones names the following: Sound basis for determination of price, location and elimination of waste, improvement of quality, stimulation of production, better credit standing, increased trade, aid in making tax returns, etc. (Jones, *Trade Association Activities and the Law*, pp. 64-68.)

---

[45] This report was not printed, because of its length, and for the reason that it was issued by a department of Government.

SECTIONS 1 AND 2 OF ARTICLE XIV.

In Section 1 the defendants merely record their acceptance of the principle that manufacturers should carefully consider the question of the cost of production and distribution, which the Federal Trade Commission had advocated. There was no agreement that the members would not sell their flooring for less than cost.

Section 2 merely provides that surveys of cost shall be made from time to time in order to arrive at the *average* cost of manufacturing and marketing maple, beech and birch flooring, and that the results shall be furnished to Association members and filed with the Federal Trade Commission.

The defendant Association has more than 20 members, among whom exist great differences. (Pages 66-75 *supra.*) Manifestly, the *Association* could not undertake to furnish its *members* with the *cost* of producing and distributing maple, beech and birch flooring. As said in 1 Taussig *Principles of Economics* (3d edition revised, 1922) p. 172:

> "Cost is never actually equal for all producers. In the previous exposition, such equality has been assumed. The fact that a general change in cost may take place, affecting all producers, does not necessarily alter the application of the reasoning. An invention or improvement may lower cost for all; the horizontal supply line on the diagram may be lowered; but the result is merely adjustment to a new level, not the introduction of a new set of conditions. If, however, the lowering of cost takes place not at the same time for all the producers, nor in equal degrees, we have a new principle and a different case—production at varying cost. This is what in fact happens when inventions bring about a

reduction in cost. The change takes place by successive steps. The more shrewd and enterprising of the competitors introduce the improvements first; others follow suit; gradually all adopt it. And by the time all have adopted one improvement, another may be introduced, and the same steps are again gone thru. If there be a succession of changes—and such are likely in the highly progressive modern industries—equality of cost never exists. There are always some producers who are turning out their goods at lower cost than others.

None the less, over probably the greater part of the industrial field there is a tendency to equality of cost. The differences in cost are not permanent; the process is simply one of gradual and irregular adjustment to the new level, instead of prompt and even adjustment."

All that the Association could do was to undertake to furnish its members with the *average* cost of the production and distribution of maple, beech and birch flooring. Of course, this means the average cost of members of the defendant Association. However, the members themselves ascertained their own actual costs, and the secretary merely determined and announced the average.

It should be noted that there was no agreement that any Association member should sell his flooring at any price whatsoever. Each member was left perfectly free to do as he pleased.

SECTION 3 OF ARTICLE XIV.

In the Government's petition it is charged that "the elements specified as entering into costs * * * contain many items of *profit*", and that the average costs as determined by the Association "in fact have represented and now represent *all possible elements* of actual cost and also *large* profits to the defendant corporations." (Vol. I, p. 5.)

In Marshall's *Readings in Industrial Society*, pages 451-453, appears the following adaptation of pp. 24-32 of J. L. Nicholson's *Cost Accounting:*

"Production costs are classified into three principal divisions, known as the elements of costs: (1) material; (2) labor; (3) expense. These may be subdivided into:

(1)	Material	Direct Indirect
(2)	Labor	Direct or productive Indirect or non-productive
(3)	Expense	Direct Indirect

Direct charges. 'Direct charges' is that element of cost that enters into, and can be charged directly to, the product.

The cost of the substance out of which the product is made is the direct material charge; the cost of the labor applied directly to the productive process is the direct labor charge; and any other expense that can be charged directly to an order, job, or process may be included as a direct charge under the caption 'direct expense.' The expense of workmen in traveling to and from a job, as well as their hotel expenses while engaged out of town on a particular job, are examples of direct expenses.

Indirect charges.—Indirect material consists of such material as factory supplies, which, while used in processes, either does not enter into the product itself, or else enters in such a way as not to be chargeable conveniently to any particular article.

Indirect or non-productive labor is that used in repairing, handling, supervision, etc.—in short, any labor not expended directly on the article or process itself.

Indirect expense as used here refers only to those expenses incurred in the manufacturing end of the business which are properly a part of the cost of production; e. g., supervision, repairs, light, power, depreciation, etc.

Items composing the indirect charges.—The following list shows some of the more constant items which compose the indirect charges. The classification will vary in almost every factory, but the items listed almost invariably appear.

Indirect material	Interest
Oil	Depreciation
Supplies	Maintenance
Insurance	Repairs

Freight and express inward, when not charged to direct material cost.

Indirect labor	Taxes
Supervision	Power or power plant
Inspection	Light
Expermiental work	Heat
Rent	Small tools

Wastes of material, shrinkage of weight, defective work.

Production costs and selling costs.—A clear distinction must be made between production costs and selling costs. The latter include the selling expenses, such as advertising, commissions, salaries, etc., which are necessary elements in determining the price for which an article may sell, but have no direct bearing on the cost of producing the article itself. The cost of production ends when the finished stock is ready for sale.

The expenses that arise from advertising, commissions, salaries of officers, etc., are known as commercial or selling and administrative expenses.

The segregation of administrative expenses, as a distinct class, is sometimes a matter of convenience. In the majority of cases the time of the administrative force is spent in supervising the selling organization, in solving problems of production, and in looking after the finances of the business. Therefore, administrative expense is partly a production cost, and partly a selling cost. The purposes of cost-finding are best served by separating expenses of such a nature from those expenses which arise from production proper and its direct supervision.

In Marshall's *Readings in Industrial Society*, pages 451-453, appears the following adaptation of pp. 24-32 of J. L. Nicholson's *Cost Accounting:*

"Production costs are classified into three principal divisions, known as the elements of costs: (1) material; (2) labor; (3) expense. These may be subdivided into:

(1)	Material	Direct Indirect
(2)	Labor	Direct or productive Indirect or non-productive
(3)	Expense	Direct Indirect

Direct charges. 'Direct charges' is that element of cost that enters into, and can be charged directly to, the product.

The cost of the substance out of which the product is made is the direct material charge; the cost of the labor applied directly to the productive process is the direct labor charge; and any other expense that can be charged directly to an order, job, or process may be included as a direct charge under the caption 'direct expense.' The expense of workmen in traveling to and from a job, as well as their hotel expenses while engaged out of town on a particular job, are examples of direct expenses.

Indirect charges.—Indirect material consists of such material as factory supplies, which, while used in processes, either does not enter into the product itself, or else enters in such a way as not to be chargeable conveniently to any particular article.

Indirect or non-productive labor is that used in repairing, handling, supervision, etc.—in short, any labor not expended directly on the article or process itself.

Indirect expense as used here refers only to those expenses incurred in the manufacturing end of the business which are properly a part of the cost of production; e. g., supervision, repairs, light, power, depreciation, etc.

Items composing the indirect charges.—The following list shows some of the more constant items which compose the indirect charges. The classification will vary in almost every factory, but the items listed almost invariably appear.

Indirect material	Interest
Oil	Depreciation
Supplies	Maintenance
Insurance	Repairs

Freight and express inward, when not charged to direct material cost.

Indirect labor	Taxes
Supervision	Power or power plant
Inspection	Light
Expermiental work	Heat
Rent	Small tools

Wastes of material, shrinkage of weight, defective work.

Production costs and selling costs.—A clear distinction must be made between production costs and selling costs. The latter include the selling expenses, such as advertising, commissions, salaries, etc., which are necessary elements in determining the price for which an article may sell, but have no direct bearing on the cost of producing the article itself. The cost of production ends when the finished stock is ready for sale.

The expenses that arise from advertising, commissions, salaries of officers, etc., are known as commercial or selling and administrative expenses.

The segregation of administrative expenses, as a distinct class, is sometimes a matter of convenience. In the majority of cases the time of the administrative force is spent in supervising the selling organization, in solving problems of production, and in looking after the finances of the business. Therefore, administrative expense is partly a production cost, and partly a selling cost. The purposes of cost-finding are best served by separating expenses of such a nature from those expenses which arise from production proper and its direct supervision.

> *Relation of cost elements to selling price.*—The sum of the direct material and labor cost is known as the 'prime cost'. This, combined with the indirect costs, gives the final 'factory cost'. The total of the selling and administrative expenses, plus the factory cost, shows the cost of making and marketing the article; and this total—plus the profit—gives the actual selling price."

See also *Trade Association Activities,* issued by the Government Printing Office for the Department of Commerce, pp. 76-77.

Certainly element (a) of Section 3 of Article XIV—"the actual market value of the raw material, as established from time to time by *current* sales of *rough flooring lumber* on the *open market*"—is a proper element of cost. As we have already seen, only 14 members of the defendant Association own timber; in 1920 there were more than 600 producers of rough maple lumber in the States of Michigan and Wisconsin alone. (Pages 26-27 *supra.*) The market was, therefore, free and uncontrolled, especially in view of the fact that in 1923 the members of the defendant Association owned less than 2 per cent of the total stand of maple, beech and birch timber in the United States, less than 4 per cent of the stand of such timber in the Lake States and less than 1 per cent of the stand in the Middle Atlantic States. (Pages 26-27, *supra.*)

Rough lumber fluctuates in price. And Surveys of costs are properly based upon the market value of such lumber as established by *current* sales.

Aside from ascertaining profit or loss, an inquiry into the cost of production and distribution at a given time in a going business is for *the purpose of obtaining data upon which to base an opinion as to what prices should*

be. And it is the *present* cost, based upon *present conditions,* not upon conditions that obtained several months ago, provided, of course, there has been no substantial change, that should control.

Even if rough lumber had been purchased months before at a lower price, the *present* value should be taken, for the reason that the *rough lumber having such a value* is converted into flooring. It is a common business practice for manufacturers and other buyers of raw material, and even merchants, to take advantage of the appreciation in value of raw materials and stocks of goods. They are forced to do this in order to compensate the losses that are sustained where the market value of stocks of goods or raw materials decline in value before they can be disposed of or converted into finished products and sold.

So far as determining the *profits* of a manufacturer, the actual cost of the rough lumber should be taken. But the *individual* members must determine that for themselves. They must determine their own selling prices also, in view of their own manufacturing and marketing costs, what their own supplies of rough lumber cost them, and all the other conditions that obtain at any given period.

For the purpose of arriving at the *average costs* from time to time and placing such information before each individual member for such action as he may think proper, the method used by the defendant Association is entirely correct.

Some members produce all their rough lumber, others produce a part only, still others produce a surplus and sell it on the market, while some members are forced to

buy all their rough lumber. Some may have large stocks of raw material, others may have practically none, etc., etc. The *average costs* at a given time for a group so differently situated, could be best and most fairly arrived at by taking the *then* market value of rough lumber. And of course there should be no distinction between members who produce all or a part of their rough lumber and those who buy all they need. The only *evidence* on this subject is set forth in the margin.[46]

---

[46] "A. By no means—there should be no differentiation, because there will be only one market price, which will include the costs of what is known as the marginal producer. By marginal producer is meant that last producer who will be induced to produce and can produce, at a profit, at the market price. It is used in connection with changes or with differences in the expenses of production. The members who own their own timber and process it into hard maple lumber, or rough maple lumber, and then into maple flooring, could, if they were not permitted to secure a profit on both operations, sell their rough maple lumber in the open market, and secure a profit on both operations,—sell their rough maple lumber in the open market, and secure a profit, selling it at the market price; they could then purchase the rough maple lumber and process it into maple flooring, selling it at the market price for maple flooring. It is only reasonable that they should secure a double profit, because of the double operation, that is, more profit than a manufacturer who merely buys the rough maple lumber in the open market and processes it into maple flooring, this because he has need of a greater organization, he has need of a greater investment, and it also necessitates greater managerial worries and functions than in the case where there is only the one operation. To continue, on that: It is only reasonable that the manufacturers who perform both functions in this particlar industry, namely, cutting the rough lumber from the timber, and the processing of it into flooring, should consider as their raw material costs the market price which the rough maple lumber which they are using brings." (Vol. II, p. 722.)

That the defendant J. W. Wells Lumber Co., a producer of rough lumber, charged its flooring factory much less than the market value of the rough lumber, see Defendants' Ex. CC-½, Vol. III, p. 834, which is Appendix L to this brief.

The other subsections of Section 3 are not sufficiently definite, and hence it now becomes necessary to ascertain the methods actually used by the defendants.

The investigations and recommendations of the Federal Trade Commission resulted in the action taken by the predecessors of the defendant Association with respect to ascertaining average costs. (Vol. II, p. 794.) On July 14, 1915, the Association then in existence filed a petition with the Federal Trade Commission for the approval of a minimum price plan based upon average cost plus a reasonable profit, the books and activities of the Association to be under the supervision and control of the said Commission. (Gov. Ex. 10, Vol. III, pp. 76-78.)

The Surveys of Cost made by the *defendant Association* are based upon (1) reports by members of manufacturing and marketing costs, which are forwarded to the Secretary, (2) reports of the Cost Surveys Committee of sales of rough lumber, and (3) test runs made by members. These test runs are the working up of a given quantity of rough lumber, during which the percentage of waste, the exact quantity of each size of flooring produced, etc., are carefully ascertained. From these data, the Secretary computes the *average costs* and informs the members of the results. Let us look at—

THE MANUFACTURING AND MARKETING COSTS.

We set forth in the margin Government's Exhibit 25, Vol. III, p. 279.[47] Mr. George W. Keehn testified that he sent out questionnaires from time to time to *Association members* who forwarded to him "itemized statements of costs." (Vol. I, p. 104.)

These manufacturing and marketing costs are sent in quarterly. (Vol. I, pp. 99, 104, 107.) The Government in-

---

[47] SURVEY OF COSTS.

MANUFACTURING AND MARKETING COSTS PER 1 M FEET OF FLOORING PRODUCED DURING JANUARY, FEBRUARY AND MARCH, 1922.

Average of replies received.	Per 1 M ft. of flooring produced
1. Labor taking lumber off of dock, car, pile or wagon and placing in dry kiln, including expenses of night fireman	$1.16
2. Cost of manufacturing into flooring and putting flooring in warehouse, including twine, oil, belting and other factory supplies, and factory repairs and including manufacturing administrative expenses	8.34
3. Warehouse expense and loading into cars or on wagons	.90
4. Insurance and taxes. (Divide ¼ of annual amount by quantity of flooring produced during January, February and March)	1.07
5. Interest at 6 per cent on value of plant and on value of average stock carried of rough flooring lumber and of finished flooring. (Divide ¼ of annual amount by quantity of flooring produced during January, February and March)	1.92
6. Selling expenses, including commissions and advertising, and office expenses including selling administrative expenses	3.75
7. Cash discount	.80
8. Annual depreciation on flooring plant as is usually allowed by the United States Government. (Divide ¼ of annual amount by quantity of flooring produced during January, February and March)	1.37
9. Total per M Feet	19.31
10. Less net profit from wood and other by-products of flooring lumber per 1 M feet of flooring produced during January, February and March	1.32
11. Actual Manufacturing and Marketing Costs per 1 M feet of flooring produced during January, February and March	17.99

May 31, 1922.

introduced no proof that they were not made honestly and accurately made. The Government introduced no evidence whatsoever by accountants or others that any of the items mentioned in Government's Exhibit 25 contained profit, or were improper from an accounting standpoint. The undisputed evidence was to the contrary. (Vol. I, pp. 107, 151.) We set forth below a few excerpts from minutes of meetings, letters, statistics, etc., with respect to these costs.[48]

February 8, 1922: "At this writing we have received 8 Surveys of Costs for the last quarter of 1921 and they show a substantial reduction. The average cost is about $17.00.

It is earnestly urged that other members will send in their Surveys in a few days, so that our compilation to be submitted to the meeting will be more complete and represent a larger proportion of the industry." (Vol. III, p. 153.)

July 13, 1922: "It is hoped that the members who have not yet sent in their reports of Manufacturing and Marketing Cost during the second quarter of 1922 will do so at once so that the data can be compiled in advance of the meeting." (Vol. III, p. 175.)

August 16, 1922: "Mr. Dewey also stated that the reports from eleven members giving their Manufacturing and Marketing Costs during the second quarter of 1922, showed an average of $16.93 compared with $17.99 for the first quarter of 1922, and that the average waste in the second quarter was 23.5 per cent compared with 22.4 per cent in the first quarter." (Vol. III, p. 183.)

October 17, 1922: "At this writing only a few members have sent in their reports of their Manufacturing and Marketing Costs during the third quarter of 1922, but it is hoped that other members who can do so will make this report by the end of this week so that the Committee on Cost Surveys will have sufficient information upon which to base a report that will represent average conditions in the industry during the past few months." (Vol. III, p. 185.)

April 9, 1921: "Reports for the last Survey of Costs were made by ten members, and the average was $25.13 instead of an average of $22.00, as was hoped might be the case when the Tables of Values Based Upon Average Costs was compiled as of January 0, 1921." (Vol. III, p. 313.)

March 2, 1921: "You can appreciate the importance of our Survey of Costs being kept up-to-date and that the more reports we receive

It will have been observed that an honest effort was made to obtain typical results. Also that some members

---

from the members the better will our compilation of average cost prove representative of conditions in the industry as a whole. We are enclosing blank forms to those members who have not yet sent in their Survey of Costs." (Vol. IV, p. 451.)

August 4, 1922: "At the last general meeting of the Association, I was instructed to write to the Members who have not yet sent in their survey of Manufacturing and Marketing Costs during the second quarter of 1922 and to request and urge them to send in their Surveys as soon as possible, so that our averages will portray typical conditions in the industry.

Several of the Members who were present at the last meeting said they had already compiled their Surveys, but did not feel that it is incumbent upon six or seven Members to do all this work for the benefit and information of the other Members and that they were of the opinion that the other Members should do their part and make this report, as provided for in the new Articles of Association.

You will also recall that our attorney, Mr. Newman has strongly urged at several of our meetings that all the Members should make this report and that if some of them could not make it with exact accuracy, that they should do the best they could in computing their Manufacturing and Marketing Costs.

The following Members made this report some time ago—three of the reports were received early in July and the other one since the meeting was held:

Holt Hardwood Company, Oconto, Wisconsin.
East Jordan Lumber Company, East Jordan, Michigan.
Northwestern Cooperage & Lumber Co., Galdstone, Michigan.
North Branch Flooring Company, Chicago, Illinois.

Hoping to hear from you early next week, so we can have the Surveys tabulated and the averages compiled in time for the general meeting on the 16th, we are

Yours very truly,

GEORGE W. KEEHN,
Secretary."

(Vol. IV, p. 464.)

were indifferent to what was really important. The Government would have this Court believe that the defendants were an alert band of conspirators who used the average costs for the purpose of agreeing upon prices. If this were so, every member would have sent in his costs, so as to be sure that his costs would be taken into account in arriving at the average.

During the trial, while Mr. George W. Keehn was testifying as a Government witness, the following proceedings were had:

The Court: What you are lacking thus far, is the details of the manufacturing costs.

A. Yes.

The Court: And selling costs.

A. I am going to get to that now, your Honor. Suppose we use this one as an illustration, the one of November 10, 1923. November 10, 1923, we have a manufacturing and marketing cost, the third quarter of 1923, $18.34. *Here are the reports of the members of the Association who made these reports.*

The Court: You take into consideration all of the reports which you received from your members.

A. All of them.

Mr. Darby: Not all of them.

A. Except in this case, we had the report from the Grand Rapids Trust Company, Receiver, for William Horner, showing their cost was $34.81, and we concluded that was abnormally high, so we omitted it from this calculation. If we put their cost in to get the average, our average marketing and manufacturing costs would have been about $21.00, and we would have been justified in using it instead of $18.34.

Mr. Fowler: They are sometimes abnormally low.

A. We always put in the low ones.

Mr. Fowler: Always exclude the high ones.

A. When they are shut down or something like that. This is a fair illustration; there we have the actual manufacturing and marketing cost on this schedule, which I will read to you. 'Survey of Costs.'

* * *

Now, we have this tabulation as to number five, Cobbs and Mitchell, Inc., Total cost 16.44; less wood, etc. 1.09; actual manufacturing and marketing costs 15.35; percentage of waste 10½%.

No. 26, East Jordan Flooring Company; total cost 18.58; wood 1.22; actual manufacturing and marketing costs 17.36; percentage of waste 26.4%.

No. 34, Foster and Latimer Lumber Company; total cost 19.661, less wood, etc. 1.74; actual manufacturing and marketing cost 17.92; percentage of waste 27.6%.

No. 42, J. W. Wells Lumber Company; total cost $21.50; less wood, etc. 4.09; actual manufacturing and marketing costs 17.41; percentage of waste 31%.

No. 48, North Branch Flooring Company, total cost 26.60; less wood 2.92; actual manufacturing and marketing costs 23.68; percentage of waste 23%, a total of 102.78 in the first column; the wood is 11.06; actual manufacturing and marketing costs 91.72, and the simple average total cost 20.55; less wood, etc. 2.21, and the actual manufacturing cost 18.34, and the percentage of waste it so happens is 24%.

Mr. Darby: Your Honor, may we read what the manufacturing cost of the Grand Rapids Trust Company, Receiver was?

A. Yes, I am going to do that now. Here is the survey of costs third quarter 1923, manufacturing and marketing costs per thousand feet of flooring produced during July, August and September, 1923. The same set of question and answers set opposite each question.

Mr. Fowler: What is the date?

A. The date of their report is—our blank is dated October 5, 1923.

Mr. Newman: Whose report is that?

A. Grand Rapids Trust Company, Receiver for William Horner. Their total cost figured at 37.34, less net profit from wood and other by-products for one thousand feet of flooring produced 2.53; actual manufacturing and marketing costs during July, August and September 34.81; quantity of flooring was nearly 3 million. Their waste was about 18%, so we did not use that in our calculation in arriving at the arithmetic average.

Mr. Darby: Was any explanation given you as to those costs?

A. I spoke to Mr. Klesner; he said he would try to look it up when he arrived home. It may be explained in their letter transmitting it.

Mr. Darby: They did not explain why their costs were high?

A. No, I spoke to Mr. Klesner about it. This same method has been pursued at different times and we have a number of those calculations going way back to 1913, and of course, we can repeat them and repeat them, but the Government, I think, has a record of all these things; they have a record of every survey of costs that we could find in our office, going back to 1913, 1914, 1915, but you haven't any very recently; I think the last one I gave to Mr. Frank some time in May or June, 1922.

Mr. Newman: Who is Mr. Frank?

A. A special agent of the Department of Justice." (Vol. I, pp. 107-108.)[49]

Mr. Keehn asked one of counsel for the defendants

---

[49]Mr. Klesner explained that the high costs of The Grand Rapids Trust Co., as Receiver, were due to their setting up a reserve in order to cover interest on large claims against the estate and receivership expenses. He also testified that Mr. Keehn "told me that our costs were too high, and that he could not use it because it would throw the average costs too far out of line." (Vol. I, p. 333.)

whether he might read into the record the individual figures of reporting members, for the reason that no information received by him as Secretary from members is divulged to other members except in the regular reports. (Vol. I, p. 173.) So far as costs are concerned, only the *average* is given to members.

Let us now consider the elements contained in the reports of Manufacturing and Marketing Costs, a specimen of which appears in the margin on page 252, *supra*. There can be no question as to the propriety of including items 1, 2, 3, 6, 7; and we assume that the Government will not object to the defendants' deducting from the total manufacturing and marketing costs the value of the wood and by-products.

According to Mr. Hurley and Mr. Nicholson (cited as and authority by Professor Marshall) insurance and taxes are proper elements of cost. And inasmuch as the manufacturing and marketing costs are determined quarterly, no fairer division could be made than to take one-fourth of the annual amount expended for insurance and taxes. Depreciation is also proper; and the annual depreciation allowed by the Federal Government for the purpose of arriving at income taxes is at least *prima facie* fair and reasonable. The Government put in no evidence to the contrary.

That item 5 is proper—or at least does not exceed what would be proper to include for items which have not been included, the following discussion in Professor F. M. Taylor's[50] *Principles of Economics* (8th edition, 1923), abundantly proves:

---

[50]Professor Taylor is Professor of Economics in the University of Michigan.

"Cost and Supply Prices.

The most obvious, as also the most important, fact about the normal supply schedules of producible goods is that the *supply prices* of such a schedule, that is, *the prices on which depends the forthcoming supply,* are fixed by *costs of production,* including, of course, suitable remuneration for such contributions as are made by the entrepreneur himself. If a certain price will insure to the entrepreneur that he will get back the money he has put into a product and in addition will get a reasonable return for his own direct contributions, he will surely be ready to furnish the product at that price. Doubtless he would be glad to get a higher price; and, under some conditions, he may be able to do so. But that fact has no relation to our present problem, which is concerned solely with the normal supply schedule—the series of mutually dependent supplies and prices. What price will be necessary to secure the forthcoming of a given supply? or what volume of supply will follow the appearance of a given price?—these are the questions of immediate interest. And the general answer is that the price which will be necessary to bring forth a given supply is that *price which equals the greatest cost of producing said supply, supposing differences of cost to exist;* and the volume of supply which will follow the appearance of a given price is that volume which will have as its greatest cost an amount equal to said given price.

Test of a Cost.—It follows from the relation between cost and supply prices above brought out that *one method of testing whether or not a given element is a cost is to see whether or not it appears in the supply price. Supposing competition to be free, does the producer insist on getting a price higher than would otherwise be necessary just because the element under consideration has to be supplied? If the answer is 'yes,' that element is certainly a cost; if the answer is 'no,' that element is not a cost.*

Money Costs: Explicit and Implicit.—The largest constituent in entrepreneur's cost is usually direct *money* cost—the money outlay for factors of differ-

ent sorts which he *buys on the open market*, for example, raw materials, fuel, machinery, labor, the use of capital, etc. A closely allied constitutent consists of the *money value* of such of the above purchasable factors as *the entrepreneur* himself furnishes. Thus, the *individual* entrepreneur commonly supplies labor services of much importance which he might purchase on the open market. Again, in almost all cases he is obliged to put in some capital of his own. Further, he may use his own land, instead of renting from some one else. Now, for his labor services, he will naturally try to get as good wages as he would have to pay others for the same services. Similarly, on the capital which he put it, he will of course insist on getting the usual interest. So, for the use of his land, he will expect as large a return as the rent which he would have to pay another landlord. Accordingly, in estimating what the product costs him, he will make allowances for all these items. They will, therefore, constitute a part of the cost of production,—quasi-money costs, we might call them, or *implicit money costs*, as contrasted with his direct money outlay which we may call *explicit money* costs.

Cost of Enterpreneur's Contribution.—We have just remarked on two constituents of entrepreneur's cost, explicit and implicit money costs. There is still a third which must not be ignored. In addition to the various contributions often made by the entrepreneur which he might buy from others,—*implicit* or quasi-money costs,—there is another, *one corresponding to his distinctive function as entrepreneur*. Some person natural or legal must undertake the responsibility of deciding, willing, that production shall go forward, else of course there will be no production. This distinctive function of the entrepreneur is, therefore, a factor in production.

But the fact that the distinctive contribution of the entrepreneur is a necessary factor in production is not sufficient to make it an element in cost. In

order to be such an element, it must also be an *economic* factor, a factor having an economic character, having value. But the question whether this factor has an economic character is not so easily determined as in the case of the other factors which have been considered. Just because the services of labor, of capital, and of land are purchasable on the open market, we have no difficulty deciding whether or not they have value, for that is evidenced by the prices at which they are bought and sold. The distinctive function of the entrepreneur, on the contrary, cannot thus be bought and sold. The assumption of final responsibility and a certain residue of management cannot be separated from the ownership of the business, hence cannot be delegated to anyone else, cannot be hired from anyone else, therefore cannot be bought and sold, so cannot have a price to prove its economic character. It follows that we must look elsewhere for the value element needed to show that the function of the entrepreneur is an *economic* factor. That 'elsewhere' is the price at which the entrepreneur stands ready to supply the commodity in question—his supply price. If said supply price should contain something in excess of the costs hitherto enumerated, the function of the entrepreneur would be an economic factor. Finally, the presence in the supply price of this 'something in excess' would prove that profit, the remuneration of the entrepreneur, is an element in cost.

Meaning of Profit.—But at this point it becomes quite important to avoid a possible misunderstanding as to the meaning of this word profit. Profit is the implicit price of *those services of the entrepreneur which are peculiarly his own, distinctive of his office.* We do not have a profit, in the strict sense, just because we have a return in excess of the money *outlay,* the *explicit* money cost. Such an excess would very likely be necessary to cover the wages due the entrepreneur as a laborer or to cover the interest due him as having supplied a portion of the capital. The excess in return which spells profit must go *beyond the implicit,* as well as the explicit,

money cost. Thus, a small merchant investing $2,000 and clearing $1,600 a year from the business might be thought of as getting 80 per cent on his investment; when in fact $1,300 out of the $1,600 was the wages of his labor as manager, salesman, etc., while $120 was interest on his $2,000 at 6 per cent; *so that his true profit was only* $180 *or* 9 *per cent.*

Profit a Part of Cost.—That this peculiar contribution of the entrepreneur, or the profit representing that contribution, is at the present time a true cost of production can scarcely be doubted, and is seldom denied by economists.[51] Generally speaking, marginal entrepreneurs, those who will drop out if price falls, include in their supply price something in excess of explicit and implicit money costs. During the late war, most governments, when making contracts for supplies and when taxing business, assumed that, as a matter of course, producers must be allowed to make from ten to fifteen per cent gross profit or five to ten per cent *net* profit—profit in excess of interest. It seems to follow that, in the opinion of practical men, true profit commonly is, and in fact must be, an element in cost.

Interpretation of Profit.—We have seen that profit forms a necessary element in the cost of production: the supply price of a commodity—the price necessary to bring out the marginal units of supply—must be great enough to include a profit to the entrepreneur as well as to cover the other items which have been enumerated. This topic, profit, must not, however, be passed without a further word of explanation as to how the word is to be interpreted. There has been from the first, and continues to be, considerable confusion in economic writing in respect to the proper *method of computing profit.* Even business practice is not wholly uniform, though

[51] "Some economists hold that profit would not continue to exist as a cost under a static set of conditions. Some even hold that this element is not a part of cost at present. For comments on some arguments in support of this opinion, see Note 4 in the Appendix."

the interpretation which will here be given is probably the generally accepted one. Profit proper should be computed on the basis of *the capital invested*, not on the basis of *the outlay*. Thus, let us suppose that $50,000 is invested in a given business; that this business yields an annual output of 100,000 units; that the cost per unit—profit not included—is $4; and that the rate of profit proper required is 8 per cent. Under these conditions, the producer does not say: 'Since each unit of product costs me $4, and since 8 per cent of this is $.32, I will supply the commodity in question for $4.32'; instead, he says: 'Since I have in the business an investment of $50,000, since 8 per cent on this is $4,000, and since the other costs equal $4 per unit, I will supply the commodity at $4 plus $4,000 divided by 100,000 units, that is, for $4.04.'[52]

Rent Commonly a Part of Cost.—In the above account of entrepreneur's cost, it was more than once implied that such cost includes *rent*, that which is paid for the use of land unmodified or modified only by such improvements as are practically irremovable and indestructible. We seem to be justified in doing this, in view of the precise nature of the problem before us: What are the elements included in the cost of the individual entrepreneur? For, from this standpoint, rent must, in the great majority of cases, be looked on as a part of cost. The reason for this is that, in the great majority of cases, a given piece of land may be put to many different uses, and the individual entrepreneur will be obliged to compete against other entrepreneurs who want

[52] "This of course does not mean that producers would not be glad to get the larger profit reached by the former method of computation. If they are regulated by government and have to get the consent of government in fixing their price, they often try to induce the regulator to adopt the method of reckoning which gives the larger profit. But where competition is free, producers will in the long run offer to supply the commodity provided the price is high enough to give them *a profit on the capital actually invested*."

> that land for other purposes, just as he would be obliged to compete against them for labor services or capital services. That is, rent would participate *in determining the entrepreneur's supply price* just as truly as wages or interest." (pp. 312-318.)

We have seen that rough lumber requires 9 to 18 months for the air-drying process. This ties up a great deal of capital and ordinarily would require bank loans. That 6% (especially for the Middle West since 1900,—particularly since 1914) is a proper interest rate, see 2 Taussig's *Principles of Economics*, (2nd edition revised, 1920), p. 26.

Flooring has to be carried in stock in large quantities. The demand for it is largely seasonal. (Vol. II, p. 260.) This also necessitates the tying up of a large amount of capital and the borrowing of money. Certainly, most producers would "insist on getting a higher price than would otherwise be necessary just because the element under consideration has to be supplied."

In *Accounts, Their Construction and Interpretation*, by William Morse Cole, Associate Professor of Accounting in Harvard University (Revised and Enlarged Edition, 1915), page 301, it is said:

> "Though the main elements of selling cost are obvious, some are likely to be forgotten without special attention. First, almost all large establishments are obliged in the dull seasons to accumulate stock ready for the demand of the active seasons. We have, therefore, interest, insurance, depreciation and taxes, to figure on this accumulated stock. This is not exactly manufacturing cost, for the manufacturing division cannot always make goods at the variable rate of the demands of the seasons. It must produce them when it can. It is, however, the task of the selling division to keep goods moving as rapidly as possible, and to find such in-

ducements as may be worth while to get them out of the warehouse in the dull season. The most effective stimulus to the selling division for keeping the warehouse clear is to debit this division with the cost of accumulating the stored stock. Though this may sometimes seem a hardship, it is unavoidable; for charging to manufacturing would to some extent nullify the careful cost-keeping, especially in the matter of comparative costs. Some overlapping of function is bound to occur between the manufacturing and the selling division, and that is just why the need exists for a general manager, whose expenses are divided between the two divisions. It is the manager's task to determine how far it is cheaper for the manufacturing division to accommodate itself to the varying demands of the seasons, and how far the task of accommodation shall be laid on the selling division. Whatever cost of this sort is incurred, however, seems properly to belong to the selling division."

Interest on value of plant is also a proper element.

In 15 *Journal of Accountancy*, page 330, Mr. Edward L. Suffern quotes Mr. A. Hamilton Church, as follows:

"Wherever capital is made use of, whether in the power plant, in the erection of buildings, or in the purchase of costly special machinery, the use of such capital has to be paid for, somehow and somewhere. It is only rational that it should be paid for by just those processes (and therefore those jobs) which involve its use. To exclude interest charge from cost of these jobs is to ignore one of the most important matters that we should know, namely—how far this use of capital is economically justified."

The writer of the article (Mr. Suffern), then proceeds as follows:

"The citing of some examples may tend to throw additional light on this most interesting subject.

Take, for example, a textile plant. This plant

comprises a yarn mill, a weaving mill, and a knitting mill. The yarn mill manufactures the yarn for both the other mills. As there are many mills manufacturing yarn exclusively, this company is in position either to buy yarn or manufacture it itself.

The prime question of importance in reference to the yarn mill is whether or not it is profitable to maintain this mill considering the capital tied up. The capital invested in this particular mill, we will say, amounts to $200,000.00. If the yarn were bought instead of manufactured, this $200,000.00 could be invested in other departments of the business, or invested to draw interest for the company, or distributed to the stockholders, thereby allowing them to invest the proportion they receive at interest.

It is the writer's opinion, considering that the total investment is used in manufacturing, that it is necessary to charge the interest of the investment to the cost of production. No true comparison can be made between the cost of the yarn manufactured and the purchase price of yarn, unless the interest is charged as stated."

See also *Cost Accounting, Theory and Practice,* by J. Lee Nicholson, C. P. A., Instructor in Cost Accounting at Columbia University, pages 33 *et seq.*

So is *rent,* which is not included in the costs returned by the defendant members. Neither is there *any* profit.

The Government put in no evidence whatsoever that any of the items mentioned in Exhibit 25 were improper, neither did it even attempt to prove that they contained any *profit* whatsoever. The *undisputed evidence* was to the contrary. (Vol. I, pp. 107, 151.)

The evidence is undisputed that the defendant members also kept their own costs; that by comparing such

costs with the average cost, they were able to reduce the former; and that the activities of the defendant Association and its predecessors had reduced the cost of producing and distributing maple, beech and birch flooring.

The defendant Oval Wood Dish Corporation began to manufacture flooring in June, 1921, and joined the defendant Association in August, 1921. (Vol. I, p. 286.) Mr. Hodges, of that company, testified as follows:

"Q. How about the exchange of manufacturing experience, when you come in contact with these other manufacturers, have you found that helpful?

A. Very helpful, especially valuable on the start; we had no experience in manufacturing maple flooring whatever and we were able to get some very valuable information.

Q. How about these test runs and the average costs reports, have you found them helpful?

A. Very helpful.

The Court: Just in what way?

A. Well the average cost reports are made up in detail showing what each operation costs all the way through. *We kept all our own cost figures and we were able to check them with these, and if we found an item of cost that was abnormally large we were able to check it up and look into it and find out where the trouble was and correct it. We had no experience and some of our costs were abnormally high at the start.*

Mr. Darby: Q. Do you believe that the activities of the association have reduced the cost of manufacture or raised it?

A. Reduced the cost considerably.

Q. They pay a great deal of attention to the cost of manufacture?

A. Yes, sir." (Vol. I, p. 295.)

See Vol. II, p. 789, for the testimony of Mr. George W. Keehn who introduced in evidence a statement that had been taken from the files of the Oval Wood Dish Corporation. This statement shows that the cost of that company for the first quarter of 1922 had been compared in the ordinary course of business with the *average costs*. Within three months the Oval Wood Dish Corporation was able to reduce its own manufacturing and marketing costs $3.60 per thousand feet or $0.37 below the *average* costs, whereas, at the start the costs of said company were $3.23 per thousand feet more than the *average* costs. (Defendants' Exhibit LL, Vol. IV, fol. pp. 5467-5470.)

Mr. T. M. Ralston (who was formerly sales manager for William Horner, but at the time of the trial was sales manager for the Indiana Flooring Co., a non-member), testified as follows:

> "Q. By the way, what was your opinion of the value of those test runs and the data furnished with respect to average manufacturing costs?
>
> A. They were very valuable to us from a standpoint of keeping our own costs in shape and of knowing how our costs compared with those of the other plants. At Reed City we didn't have any accurate cost; at Newberry we had a very thorough one and we were naturally very interested in knowing what the other manufacturers, it cost them to manufacture their stock, and in that way trying to check up and seeing that we were making them as cheap as possible." (Vol. I, p. 328.)

Mr. Walter L. De Witt testified:

> "We keep a very close survey of our costs, and we always try to sell at a price that will get us a profit. This is not always possible." (Vol. I, p. 237.)

And again:

"I personally have derived benefits from the exchange of information with respect to manufacturing costs from different members of the Association. This has helped me to reduce my own costs and enabled some other members to reduce their costs of manufacturing maple flooring.

Mr. Darby: I read a letter from the Kneeland-Bigelow Company under date of August 13, 1923, addressed to the Holt Lumber Company, Oconto, Wisconsin (Defendant's Exhibit U-16):

'We will appreciate it very much if you will advise us what your cost for racking, bundling and tying your hardwood flooring is. Ours for last week was $2.80 and we think this entirely too much, and will certainly appreciate any accurate information on the subject you can give us.

Thanking you in advance for your reply, we are.'

That is the Kneeland-Bigelow Company of Bay City, Michigan, a member of this Association.

The answer of the Holt Hardwood Company dated August ..... and [fol. 455] the date has been punched out—addressed to Charles A. Bigelow, Bay City, Michigan (Defendants' Exhibit U-17): 'Dear Sir: Your letter of the 13th to the Holt Lumber Company was referred to us for reply as we and not the Holt Lumber Company manufacture the flooring. For the period from January 1st to July 1st, 1923, it cost us 97.3 cents per M ft. to rack, bundle, and tie our hardwood flooring.'

The Holt Hardwood Company has no financial or other interest in the Holt Lumber Company, but they turned over the letter to us.

The matter of costs of manufacturing and marketing flooring has been given a great deal of attention by the Association. They send out the average results of test runs every so often and manufacturing costs are discussed quite frequently at Association meetings." (Vol. I, p. 252.)

See also, Vol. I, pp. 200, 213, 260, 397, 431-2.

The defendant, Mr. J. L. Colby, testified on cross-examination as follows:

"Q. You never helped make out one of these cost sheets, did you?

A. Not for a number of years.

Q. You are controlled in your market price considerably by the cost of production, aren't you?

A. Well sometimes that is a factor, of course we always aim to take it into consideration, but for certain items of flooring you can't always say that you are going to get the full cost or more, sometimes you have to sell it for less than that.

Q. *In estimating your cost of production you always use that estimate made by the Association, don't you?*

A. In estimating our cost?

Q. Yes.

A. *No, sir.*

Q. *What do you use?*

A. *We use what we think in our own minds is our own cost.*

Q. Don't you report to the Association your cost of production?

A. No, sir, we have not for a number of years.

Q. You are asked every month, aren't you? Two or three months?

A. We are asked every quarter I believe.

Q. Did you never answer it?

A. Well, I wouldn't say we never answered them but we never gave them the information, that is, we haven't for a number of years.

Q. Why don't you give them your information?

A. *Well, because we have a peculiar condition in that our flooring factory is under the same roof with some of our other business and at least quar-*

terly it is a little bit hard for us to segregate the individual items that are applicable to flooring separately and we don't want to give the Association anything excepting what would be an actual cost. Now if it were yearly instead of quarterly we probably would be in better position to give those costs.

I should say offhand that our cost is probably a little higher than the average cost reported by the Association. Costs are somewhat higher around Cadillac." (Vol. I, p. 219.)

The members making the reports necessarily ascertained their own costs. All members were urged to send in reports. Members checked their own costs against average costs, and some of them were thereby enabled to reduce their own costs. None of them used the average costs for any other purpose.

See also pages 116-120 *supra* for testimony of nonmembers that their prices were usually higher than the prices of members.

See also testimony of manufacturers who testified that they were forced to quit manufacturing maple, beech and birch flooring, because they could not make a profit. (Pages 54-60, *supra.*)

See also the testimony of Mr. Goodman, who manufactured his rough maple lumber, yet testified that he could not manufacture flooring at a profit. (Pages 59-60 *supra.*)

See 54-60, *supra,* and Vol. I, p. 137, for testimony of producers who when unable to manufacture at a profit, bought flooring from the defendants.

See 54-60, *supra,* for the undisputed testimony that the prices of defendants have always been fair and reasonable.

And yet the Government would have this court believe that the defendants' interest in the matter of manufacturing and marketing costs was a subterfuge and a fraud in order to fix prices, eliminate competition and mulct the public by including in their costs "large profits."

COST SURVEYS COMMITTEE.[53]

Mr. James E. Dewey testified as follows:

"I am Chairman of the Cost Survey Committee and have been since it was organized in 1922. The document you hand me marked Defendant's Exhibit 'Z' is a letter that I wrote to Mr. Keehn giving information regarding sales of rough lumber of which I had knowledge, or rather the document is a copy of a letter that I wrote to Mr. Keehn. The copy was taken from my file. I wrote the letter as part of my duties as Chairman of the Cost Survey Committee.

Mr. Darby: I would like to read it to the court.

'June 2, 1922

George W. Keehn, Secretary Maple Flooring Manufacturers Association, Chicago, Illinois:

'I believe it would be advisable to have a short meeting of my committee previous to the general meeting on June 21st, and therefore wish that you would send out notice to the members accordingly. We should have some information regarding the market price on lumber up to that date, and it might be well to appeal to the members of the Association

---

[53] The present Association has never had a Market Conditions Committee. That committee used to make reports on market conditions, and recommendations as to prices to be charged. Mr. George W. Keehn testified as follows:

"The Market Conditions Committee went out of existence in the Summer or Fall of 1921. That Committee and its operations did not extend into the new Association." (Vol. I, p. 173.)

again, although our last effort did not avail much. The following sales are reported for week ending May 27th:

	No. 1 C	No. 2 C	No. 3 C A
1,000,000 ft. 4/4 f. o. b. cars Boyne City	$45.00	30.00	22.00
435,000 ft. 4/4 f. o. b. cars Grayling	45.00	26.00	.....

I had information as to those sales at the time I wrote the letter. The Cost Survey Committee have done very little as a matter of fact. Practically all they do is to gather information regarding the cost of rough lumber and transmit it to Mr. Keehn. Mr. Keehn also receives the results of test runs from members as well as the marketing and manufacturing costs. He tabulates these data and shows us the result of such tabulation. In other words, he gives us the average result of those test runs and the manufacturing and marketing costs. From such data and the price of rough lumber he arrives at the cost of manufacturing and marketing flooring. The Cost Survey Committee has held not more than three separate meetings since its organization. We have had disputes from time to time. *I think Mr. Dregge once objected to the cost as it was arrived at, claiming that it was too low. Dregge's company is located at Grand Rapids where labor and other costs and plant investment are high and his cost was much higher than the average cost quoted by Mr. Keehn. In arriving at the average we did not consider Mr. Dregge's costs because he was operating under peculiar conditions at Grand Rapids. His higher cost was not representative of the cost of mills in smaller communities or mills that are closer to the supply of lumber or timber.*

The Cost Survey Committee does not make any report about market conditions, nor does it make recommendations of any kind. It has never done so. The only report that has ever been made is the report regarding the prices of rough lumber. Our Committee never sees the reports that are made to Mr. Keehn by different members concerning test runs. Those reports are held confidential by Mr.

Keehn. Mr. Keehn merely reports what is the average result of those test runs." (Vol. I, pp. 395-6.)

See also, Vol. I, pp. 399-401, 104-5.

That the Cost Surveys Committee has never expressed any opinion as to the value of flooring, or made or attempted to make any recommendations with respect to the prices to be charged for flooring, or expressed an opinion as to market conditions, or attempted to forecast future conditions, see Vol. I, pp. 297, 171-2, 126.

TEST RUNS AND AVERAGE COSTS.

The test runs are succinctly described by Mr. James E. Dewey as follows:

> "Our Company has made test runs from time to time. We usually take two full kilns of rough lumber—about 80,000 feet, after making a careful inspection of the lumber as to grade. We separate the rough lumber from all the other rough lumber that goes through the mill. We clean up everything ahead of it—clean out the racks of finished product so that our floors are clean of all flooring and all rough stock that has previously gone into or come out of the mill. We then put the 80,000 feet of rough lumber through the mill and keep an accurate labor cost on it and then make a tally of the stock that is produced that goes into the warehouse. We ascertain the percentage of waste from the difference between the tally of the rough lumber and the tally of the finished product. We tally each face and grade of flooring separately in order to know just what is produced. It is considerable trouble to make one of those test runs and it cuts down our production a little because of the time and pains involved in making one. The test runs are very accurate." (Vol. I, pp. 396-7.)

That all members were urged to make test runs in order that a representative result might be obtained, see Vol. IV, pp. 451, 468, 471, 493-495, 502-3.

GOVERNMENT'S EXHIBIT No. 63-G

Average Cost Based Upon Composite Result of Five Test Runs.

These test runs were made as follows: 1 in January and February 1922, 1 in December 1922, and 3 in January 1923.

July 19, 1923.

We set forth on the attached sheet a copy of Government's Exhibit 63-G, Vol. IV, pp. 504-6. This document is explained by Mr. George W. Keehn on pages 105-107 of Vol. I.

Test runs were made by five different members whose separate reports showed the quantity of each grade of rough lumber used, the waste in converting the rough lumber into flooring, and the number of feet of each grade and size of flooring produced. All these reports were consolidated by Mr. George W. Keehn.

Inasmuch as the members making the test runs merely reported the data above mentioned, viz., the grades and quantities of rough lumber used, the waste, and an itemized statement of the flooring produced, *the time of making the test runs is unimportant.*

In order to arrive at the average cost, Mr. Keehn first reduced the "Rough Lumber Used" to a percentage basis for the different grades. He then took the "Present Average Cost of Rough Lumber f. o. b. cars Flooring Mills," (as reported by the Cost Surveys Committee) and the percentages of the grades of rough lumber used in the test runs, and ascertained the value on July 19, 1923, of 1000 feet of rough lumber containing the percentages of the grades used in the test runs.

Inasmuch as the waste in working up the rough lumber amounted to 261,000 feet, or 24 per cent—see upper right-hand column,—1000 feet of the rough lumber which cost $51.04 produced only 760 feet of flooring. 1000 feet of flooring, therefore, cost $67.16, exclusive of manufacturing and marketing costs.

The average manufacturing and marketing costs for the first quarter of 1923—determined as heretofore ex-

plained—were $17.85 per thousand feet. Thus, the average cost per thousand feet f. o. b. cars flooring mills of the 832,000 feet of flooring produced was $85.01.

Referring to the last group of figures on the sheet below, the Court will observe that the percentages of the different sizes and grades are set forth. These grades differ both *quantitatively and qualitatively.* They are used for different purposes and the demand for them fluctuates. (Pages 41-42, 75, *supra.*) The same is true with respect to the different widths or thicknesses even of any one grade. ***And they were all produced at the same time, and the average manufacturing and marketing cost f. o. b. cars, flooring mills of each thousand feet of each grade, width and thickness is*** $85.01.

We have here a condition which is analogous to, and for all practical purposes *identical* with, what economists call *Joint-Cost Products.* In Taylor's *Principles of Economics* (8th edition), pages 344-6, appears the following very illuminating discussion of Joint-Cost Products:

> "In studying not a few producible goods, we strike a complication due to the fact that *several different commodities emerge from the same productive process.* Thus, the dairyman simultaneously and by productive efforts, a large share of which are inseparable, brings into existence milk, butter, cheese, beef, and hides. The refining of petroleum yields not only common illuminating oil, kerosene, but also vaseline, gasoline, and naphtha. Again, the coal tar resulting from the distillation of coal for the making of gas gives us a whole line of by-products, including various drugs, perfumes, and a large number of dyes. Now, in cases like these it is impossible, save in very small measure, to isolate the share in the cost of production which is properly chargeable to each of the several products. This being true, we

surely cannot apply to these goods, without qualification, the principle laid down for other producible goods.

The special theory needed here was set forth by Mill. It is that *the price of each of the individual products must be such as to equalize supply and demand for that product; while the money value of the whole group of products must equal their cost of production.* In consistency with the modern analysis which goes behind demand to significance or utility, we should change the first part of this formula to read 'the price of each of the individual products must tend to be that price which expresses the marginal significance of the quantity of that particular product which is put upon the market.' The second part of the formula can remain unchanged.

The argument in support of this principle is as follows: First, the price of each member of the group of products must be such as to express its marginal significance, because, under the conditions given, the quantity of each of the products is virtually fixed, and hence it comes under the laws of fixed-supply goods. This, of course, does not mean that the supply of each commodity is literally unchanging; but that its changes do not take place in response to conditions which affect that commodity itself only, but rather in response to conditions which affect all the commodities of the group. When, therefore, the price of any one of them is in process of determination, the supply of that one is virtually fixed; and hence the principle governing its price is the one which governs the price of fixed-supply goods. But the principle in question makes the price of these goods depend upon marginal significance; and so marginal significance governs the case now before us.

It is no less certain that the prices of all the members of the group must be such that the sum total of their money values will equal their joint cost of production. This result is bound to be brought about through processes already thoroughly familiar. If at any point the sum total of the group prices

should rise above this total cost of the group products, capital will move into the industry, supply all along the line would increase, marginal significance would fall, and so prices would fall. Conversely, if the total costs were not covered by the total values, capital would withdraw from the industry, the supply of the several commodities would fall off, their marginal significance would rise, and so prices would rise. Doubtless this readjustment would be much more complicated and hence much slower than in the case of isolated individual products, but in the long run it would inevitably come about.

Principle. *The price of each member of a group of joint-cost products tends to be that price which expresses the marginal significance or utility of the quantity of that particular product which is put upon the market, provided that the sum of the money values of all products of the group tends to equal their joint cost of production."*

It is manifestly impossible to accurately determine just how much less it cost to produce and distribute 13/16" x 2¼" Factory maple flooring than the 13/16" x 2¼" Clear flooring, yet the latter will always sell for a great deal more than the former. And in approximating the *"relative average costs"* of the different grades, widths and thicknesses, the Secretary resorts to methods analogous to those stated by Professor Taylor. He thus estimates that the 38 per cent of the Clear grade flooring costs $37.12 per thousand feet; the 44 per cent No. 1 grade, $39.09 per thousand feet, and 15.5 per cent Factory grade, $7.33 per thousand feet, which, plus $1.50 for the 2.5 per cent of other product, makes the total "approximate relative average cost" of all grades, widths and thicknesses of flooring $85.04 f. o. b. cars flooring mills. Some of it must be sold for more than $85.01 per thousand feet, some of it must be sold for less. *Each member must determine that for himself.*

It might be argued *a priori* that the use of the dollar figures in order to arrive at the cost of the different grades, widths, etc., might be used by all the defendants for the prices of their products. As we shall presently see, any such argument would not be supported by the facts.

The relative values of the different grades, widths, thicknesses, etc., fluctuate, of course, but they have been pretty well established by usage and custom during the thirty or more years that maple, beech and birch floorings have been on the market. Custom and usage, as modified by supply and demand, determine the differentials, but all of them respond to the cost of rough lumber. For instance, Mr. George W. Keehn testified as follows:

> "Now, we come to November 10, 1923, with exactly the same information, and according to the best information obtainable through the Committee on Costs, there appears to have been a decline in the average cost of rough flooring lumber of $7.00 per thousand. So this is made on the basis of 57, 37, 27 and 20 dollars, and all these relative costs of the flooring product were horizontally reduced $8.00 a thousand. In other words, on July the 19th, this flooring product cost $85.00. On account of the decline in the market value or cost of the rough lumber it comes down to $77.00, so that makes a difference of $8.00, while the decline in the lumber is $7.00. On account of the waste in the flooring it amounts to $8.00 on the other." (Vol. I, p. 107.)

Furthermore, it is not accurate to say that it costs no more to produce 1000 *feet of Clear grade flooring than it costs to produce the same quantity of Factory grade.* As a reference to the Grading Rules (Vol. IV, fol. pp. 5331-5336) will show, the defects are much more closely trimmed out of the Clear grade than they are in the No. 1, or Factory grades; and they are also trimmed out

much more closely in the No. 1 grade than they are in the Factory. Hence *more labor and machine work* are required in order to produce the better grades. It is also obvious that the *best* portions of *each* grade of *rough lumber* go to make up the *better grades of flooring* and that the proportion of shorter lengths varies inversely as the excellence of the grades. (See Grading Rules.) Hence, while the cost of the several joint-cost products cannot be absolutely determined, it can be said that it costs more to produce the better grades of flooring than it does to produce the inferior grades.

If any portion of the figures are considered objectionable, it would be easy to enjoin their use.

Only the *combined* results are distributed to members by the Secretary—as shown by Gov. Ex. 63-G.

> "With respect to the average cost as disclosed by test runs made by different members, only the *total* is shown. The individual figures of the different members are not. In other words, only the average is shown, and not the individual results of each member." (Vol. I, p. 176.)

Subsection f of Section 3 of Article XIV—5 per cent allowance for contingencies and unforeseen hazards—was annulled, and was never thereafter taken into account in arriving at average costs. (Vol. IV, pp. 811-814; Vol. I, pp. 151-2.)

That the lumber business is an essentially hazardous one, and that an allowance of 5% to cover such hazards was very reasonable, see Vol. I, pp. 151-2, 229, 92, 97; Vol. II, pp. 791-2.

Before comparing the average costs with the prices for flooring it is necessary to examine into certain other practices of the defendant Association.

D.

FREIGHT RATE BOOKS.

The allegations concerning the books above mentioned are set forth and analyzed on pages 17-19, *supra*.

We have already seen that the allegation that

> "the defendants agreed to adopt and have concertedly adopted Cadillac, Michigan, as an arbitrary freight basing point from which they charge freight, regardless of the point from which each may actually ship flooring."

is not true. (Pages 97-103, *supra*.)

We have also seen that the proof does not support the allegations of the petition with respect to uniform commissions, terms of sale, cash discounts, etc. (Pages 104-112, *supra*.)

FREIGHT RATES.

Mr. L. L. Barth, of the Edward Hines Lumber Co., Chicago, testified:

> "I think that we buy about 95 per cent of our flooring f. o. b. cars Chicago. This enables us to know in advance what the flooring is going to cost us here, and we prefer that the manufacturers accept the risks incident to transportation." (Vol. I, p. 412.)

Similar testimony was given by many other witnesses. All lumber, including flooring, is almost universally sold delivered. Purchasers of flooring usually will not buy it on any other basis. (Vol. I, p. 445; Vol. II, pp. 459, 465, 536, 561, 565, 573, 579, 585, 593, 623.)

Mr. George W. Keehn testified:

> "In a vast majority of cases lumber products and maple flooring are sold at delivered prices, because the buyer insists upon knowing the cost of the flooring, we will say in this instance, delivered at destination. Therefore, the flooring manufacturers will quote him the delivered price on the flooring, and when this purchaser receives the flooring he deducts from the invoice for the flooring which is sold to him at the delivered price, the *actual* freight paid from the *point of origin* to destination of the shipment. Then he remits the balance to the manufacturer. In other words, if a lumber dealer at Nashville, Tennessee, buys a carload of flooring and it is shipped from Saginaw, Michigan, that lumber dealer deducts the actual freight that he pays to the railroad company on this car of flooring from Saginaw, Michigan, to Nashville, Tennessee, and remits the balance to the shipper. I think that about 90 or 95 per cent of the flooring produced is sold at delivered prices. The actual freight is paid by the customer from points of origin to point of destination, the customer deducting the freight paid by him from the invoice price of the flooring." (Vol. I, p. 174.)

However, *the defendants have no objection to selling flooring f. o. b. cars flooring mills. The evidence is undisputed that they quote and sell on an f. o. b. mill basis whenever purchasers so request.* (Vol. II, pp. 456, 450, 451, 453; Vol. I, pp. 209, 235, 243, 250, 268-273.)

Most of the members of the defendant Association are located in small towns in Michigan and Wisconsin. It happens that the *average* freight rates from all these producing points in Michigan and Wisconsin to the principal centers of consumption in the United States are approximately the same as the average freight rate from Cadillac, Michigan, to the aforesaid centers of consumption. (Vol. I, pp. 112, 115-7.)

Appendices R and S are copies of Government's Exhibit 36-A, (Vol. I, p. 117, Additional Exhibits, fol. pp. 907-908) and Defendants' Exhibit EE, (Vol. II, p. 779; Vol. IV, fol. p. 5437), and show the freight rates from the said Association mill points to the principal centers of consumption, together with the averages. These diagrams were sent to the members in order that each might be informed as to the differences between the freight rates from several producing points and the *average* or Cadillac rate. (Vol. III, p. 329.)

The Court will observe that in many instances the freight rates from points where members are located are identical with the freight rates from Cadillac, that in others they are slightly less and that in still others they are slightly more. It should perhaps be stated that the freight rates shown in said exhibits are per 100 pounds. 13/16″ x 1½″, 2″ or 2¼″ flooring weighs 2,000 pounds per thousand feet; 13/16″ x 3¼″, 2,250 pounds per thousand feet. (Vol. IV, fol. pp. 5322-25.) ⅜″ x 1½″, 2″ or 2¼″ weighs 1000 pounds per thousand feet. (Vol. IV, fol. pp. 5327-8.) See also Vol. I, p. 155. Appendix A shows the location of the cities and towns where members have mills. There are three mills at Cadillac, Michigan.

For many years the defendant Association has had compiled by traffic experts the freight rates from Cadillac, Mich., to some five or six thousand cities and towns in the United States. In the compilation fractions were disregarded, and letters were used instead of figures. The freight rate books contained the key A=1, B=2, etc. (Vol. I, pp. 111-116, 126; Vol. IV, fol. pp. 5288-5325.)

The necessity for the distribution of freight rate books, and the use made of them by members (so far as

freight rates are concerned) are well stated by the defendant, Mr. Percy S. McLurg, of Phillips, Wisconsin. After stating that in all instances, the purchaser deducted the actual freight paid to the carrier, Mr. McLurg testified as follows:

"In shipping to points where we are not familiar with the freight rates, we use the rate books issued by the Association. Phillips is a very small town and it is very difficult to get freight rates from the railroad agent there. In our regular territory we know what the rates are, but in shipping east or west, we use the rate book in order to ascertain the freight rates. It is imposible to get those tariffs from the railroad agent at Phillips, which is a town of 2,200 inhabitants located on the Soo Line. It would sometimes take a week to get a freight rate from the railroad agent. In shipping to points not in our regular territory, we use the freight rate in the book issued by the Association in order to compute the freight, so that we can quote a delivered price, but the buyer deducts the actual freight from Phillips, which he pays to the carrier.

Sometimes there is a difference between the rate from Phillips and the rate mentioned in the book I know that there might be *slight* differences between the rates quoted in the rate book containing the average rate of freight and the actual freight from Phillips. If we want business, we have to quote on that rate in order to compete with the mills that are located where the rate applies from. It is a matter of competition. *We have an advantage over the Cadillac freight rate to Minneapolis. That is why we market our stuff in that territory. Our rate into Minneapolis is* 11½ *cents and the Cadillac rate is* 27 *cents. We take advantage of our geographical situation. If we ship east, we have to absorb the difference between our rate and the Cadillac rate, or else get a higher price for our flooring. The only time we ship east is when we can't sell in our nearby territory.*" (Vol. I, p. 228.)

Mr. H. H. Shepeck, of the I. Stephenson Co., Trustees, Wells, Mich., testified as follows:

"Our Company is located at Wells, Michigan and *owns* the Escanaba & Lake Superior Railroad, which connects with the Soo Line at North Escanaba and with the Chicago, Milwaukee & St. Paul Railroad at Channing, Michigan. *Our railroad has very full and complete* tariffs and in every case we determine what our flooring should net us f. o. b. mill and then add the *actual* freight to destination before making quotations. We use the freight rate book issued by the Association very little. *If we ship birch flooring to the east, we look in the freight rate book issued by the Association in order to ascertain what the Cadillac rate is to the east for the reason that if we want to move birch flooring, it is necessary to cut the price. On birch flooring shipped to the east, we figure what our price at the mill and what the actual freight is and then cut the price from* $3.00 *to* $7.00 *because we know that other manufacturers can ship into the east more advantageously than we can because of lower freight rates.*" (Vol. I, pp. 259-260.)

Mr. Frank M. Hodges, of Tupper Lake, New York, testified as follows:

"We sell most of our flooring in Boston, New York, Philadelphia and other points in the same territory. We sell our flooring there because they are the broad basic markets of the east. There is a lot of flooring used there, and we also sell our rough lumber there very largely, and of course, it is easier to sell our flooring in the same market in which we sell the rough lumber.

Flooring is shipped into these markets from practically every producing territory in the country. They even ship large quantities of fir flooring from the Pacific Coast by way of the Panama Canal. Oak flooring comes from all points in the south. Maple flooring comes in there from West Virginia, Tennessee, Michigan, Wisconsin, New York, the New

England States, Canada and Pennsylvania, although there are not many mills in Pennsylvania. Hard pine flooring also comes in there in direct competition with hardwood flooring.

We could ascertain the cost of our flooring f. o. b. mill and then add the freight rates to New York and figure on that basis for our flooring, but if we did we wouldn't get any business. Manufacturers can't do that if they want to get into those markets with flooring because the freight rates from any one section won't control the prices. There are so many points from which flooring is coming in there. The manufacturer must get all the information he can as to what prices are being made in those markets, not only on maple flooring or beech or birch, but on oak, pine and every other kind that comes in competition with the flooring he desires to sell. The manufacturer must sell his flooring in New York at what it will bring there if he wants to get into that market. He must begin there to figure and work back to the flooring mill and find out whether he can get into those markets rather than begin at the mill and work the other way." (Vol. I, p. 288.)

Mr. Walter L. De Witt, of Oconto, Wis., testified:

"Oconto is a town of 5,500 inhabitants located on the Chicago & Northwestern and the Chicago, Milwaukee & St. Paul Railroads. We used the freight rate books that were issued by the Associations almost entirely for securing the rate of freight in making our delivered prices. *It happens that Oconto and Cadillac take practically the same rate of freight to all parts of the country with the exception of the west, and we have inquiries coming in every day from all over the United States. If we had to ask the local agent for a freight rate, in a good many instances the point would not be listed in the tariff he had on file, which would result in a delay of anywhere from two days to a week before the freight rate could be obtained. We would have to hold up our quotation to our customer who demands a delivered price in nearly every instance. Consequently, the order would probably be placed*

elsewhere before we were able to quote a delivered price.

The average freight rate from Cadillac to thirty representative markets in the United States on flooring is 44.7 cts. and the average from Oconto is 42.9 cts. *One cent's difference in freight per thousand feet on* 13-16 x 2¼ *maple flooring would be* 20 *cts. Such a difference would not have any material effect upon the delivered price of flooring in Boston, New York, Philadelphia or any other of these thirty representative markets because it is too small to take into consideration.*

I have found that these freight rate books are a great assistance to me in the conduct of our business. In the absence of the freight rate books we would have to secure the rates from the local agent, or through a traffic association *or install a traffic department of our own.*" (Vol. I, p. 235.)

Mr. James E. Dewey, of Bay City, Mich., testified:

"The largest portion of our flooring is sold in the East and Middle West *because the freight rates in that territory are an advantage to us over other manufacturers.* We have the shortest line into the East of any of the manufacturers [in Michigan or Wisconsin]." (Vol. I, p. 393.)

Mr. William H. Greene, of Manistee, Mich., testified as follows:

"We use the freight rate book gotten out by the Association exclusively as a lumber tariff. *The freight rates from Manistee are practically identical to all points in the United States with those from Cadillac.* There may be a few points where there is perhaps a difference of one or two cents per hundred weight, but I do not recall any point where the difference in freight rate between Manistee and Cadillac would exceed 50 cents per thousand on 13/16 maple flooring. *That difference would not ordinarily affect the delivered price of maple flooring.* The average freight rate on carload lots of maple flooring from 17 producing points in Michigan and

Wisconsin to 30 representative markets in the United States from *Cadillac* is *44.7 cents* and the average rate from *Manistee* is *45 cents. That difference would not affect the delivered price of flooring at all.* Manistee has about 9,000 inhabitants and is located on the Pere Marquette and the Manistee & Northeastern. The Manistee & Northeastern is a short line running from Manistee to Traverse City, connecting with the Pennsylvania there and connecting with the Michigan Central at Grayling. Up to a comparatively short time ago we had been more or less handicapped with respect to being able to obtain reliable information as to freight rates and for that reason we found that the rate book published by the Association was very valuable. It also served as a check against the rates quoted by our railroad offices, in which errors often occur. I understand the Association rate book is compiled by traffic experts and we have found it very reliable. *We sell our flooring generally throughout the United States. The morning's mail may contain all the way from 10 to 20 inquiries from Maine to California and as far south as Louisiana.*

Q. I wish you would state what your experience was there in Manistee in attempting to get freight rates from the local agents.

A. We were considerably handicapped when we first went into the business there, back in 1907, by having no railroad office with complete sets of tariffs and files at that time. While Manistee has always been recognized as a lumber manufacturing center, the lumber produced has been hardwoods, hemlock, pine and products of that kind, which were marketed very largely in the State of Michigan, Illinois, Ohio, Indiana, Eastern Pennsylvania, some in the Western part of New York; and the railroad offices in our town were very well equipped with freight tariffs so far as that particular market was concerned. When we went into the maple flooring business, necessitating our shipping our product to *all* markets, like the western markets, intermediate points in the west, we could not get that information, *and very often we lost out on the business as the result of having*

to ask for those rates of our railroad connections, and by the time the rate was quoted me very often it happened the other fellow had the business on his books.

We do not make a separate charge for freight as distinguished from the flooring when we make a delivered price on flooring. The purchaser pays the freight to the railroad company. He pays the actual freight and submits the freight bill to us, deducting the amount of the expense bill from the invoice." (Vol. I, pp. 383-4.)

See also, Vol. I, pp. 322-3.

The Government offered no proof that any different practices obtained. It was undisputed that the purchaser deducted the *actual* freight paid by him to the carrier. (Pages 101-103, *supra.*)

It also appears that there was no *common practice* with respect to freight rates. *No member could take advantage of his geographical position if all members were using the Cadillac freight rate.*

The differences between the Cadillac (or *average*) freight rate and the actual freight were either non-existent or negligible, or else the member used the Cadillac rate merely for the purpose of *estimating* the approximate freight charges in order to quote a delivered price.

No separate charge was made for freight as distinguished from flooring. (Pages 101-103, *supra.*) Some members merely used the freight rate books in some cases in order to arrive at a delivered price, and to more effectively compete with other manufacturers, both members and nonmembers.

The diagrams or charts heretofore mentioned (Gov. Ex. 36-A and Defts.' Ex. EE) gave each member the

freight rates from all other Michigan and Wisconsin (member) mills to the principal centers of consumption, so that in fixing delivered prices, each member knew what the freight charge would be from other producing points. Unquestionably, an allowance was made for such differences as actually existed in order to arrive at a delivered price.

As Mr. Hodges said, the manufacturer cannot begin at his mill, fix a price on his flooring, and then add the amount of the freight. He must begin at the other end—*the market he wishes to get into*—and fix a delivered price in view of competitive conditions that obtain there. *Mills farther away from such markets must absorb the differences that exist between freight charges from their mills and the freight charges from mills more advantageously located.* (See pages 153-4, where Michigan and Wisconsin mills were quoting lower delivered prices in the East than was the Oval Wood Dish Corporation of Tupper Lake, New York.) For instance, at a given time wheat will fetch not more than a certain price in Chicago, regardless of the point from which it is shipped. And the wheat grower in Washington who sells in the Chicago market does not net so much for his wheat as the wheat grower in Iowa, or Minnesota, or the Dakotas. The *consumer* does not always pay *all* the freight. Or if he does, there is great inequality of participation among producers in the delivered prices paid by the consumer.

If all the defendants had ever used the freight rate from Cadillac, Michigan, there would not exist the great differences in delivered prices made in the same centers of consumption. (See Defts. Ex. FF to FF-9, Vol. IV, fol. 5438-5447.)

Large corporations maintain expensive traffic departments. Small manufacturers are unable to do this. And, manifestly, the defendant Association was forced to distribute information as to freight rates in a form that would be of the greatest benefit to the greatest number. The expense of having traffic experts compile freight rates from 22 producing points to six or seven thousand cities and towns in the United States would have been prohibitive.

By comparing the quotations and sales made by the different members (pages 121-43, *supra*), *it will be found that the lowest delivered prices were often quoted by a member from a point having the highest freight rate. The delivered prices always varied, and neither the average costs nor the freight rates offer any explanation of the prices quoted or obtained.*

Furthermore, the Government's allegations with respect to freight rates were merely by way of *inducement*. The freight rate book, and all that was therein contained, were merely factors which resulted in the alleged—but non-existent—uniformity of net delivered prices.

AVERAGE COSTS.

Included in the Freight Rate Books are the *average costs*, arrived at by the methods described on pages 274-280, *supra*. They were printed on loose-leaf sheets for insertion in the freight rate books. (Vol. I, pp. 155, 173; Vol. IV, fol. p. 5326.)

DELIVERED COST CHARTS.

There were *formerly* included in the freight rate books Delivered Cost Charts. These charts merely added the *average* or Cadillac freight per thousand feet (to the cities and towns listed in the freight rate books) and the average costs. (Vol. I, pp. 118, 153-6.)

To a lawyer sitting in his office this seems entirely superfluous. If one knows his own f. o. b. mill manufacturing and marketing costs per M. feet, and the *average* manufacturing and marketing costs and the *average* freight rate per cwt. and market conditions, he ought to be able to readily fix a delivered price per M. feet of flooring to customers in San Francisco, New York City, or any other city in the United States. But this would involve the making of calculations, with opportunities for error. Hence the *delivered average costs per M. feet* of flooring were carefully figured out by skilled persons and put into the hands of the members. Having in mind the differences that existed between the average costs and his own, the average freight and his own, and his warehouse conditions, his financial needs, building conditions, information obtained from his representatives or traveling salesmen as to competitive conditions in a particular market, the offers made by buyers, his past relations with the person who wanted to buy, and many other facts and circumstances, the member could fix a delivered price at a given point by naming a figure which would be the resultant of all these factors. The use of such charts would merely furnish a rough approximation or starting-point for calculations, if one desired to start there and work either forward or backward. *There was no*

common practice. The Government offered no proof on the subject. Each member was free to do as he pleased. And what he pleased to do, can only be inferred from the great range of prices, which has already been shown, *and the relation that existed between the average costs and the prices received,* which we shall show later.

The Delivered Cost Charts do not differ essentially from interest tables and other devices which banks put into the hands of their employes in order to minimize chances of error. In view of the astonishing results obtained by means of intelligence tests during the late war with subjects obtained by a selective process, and the varying degrees of intelligence—and stupidity!—that exist among minor employes in small towns, the use of the Delivered Cost Charts was justified. The mere combination of average costs and average freight (which already appeared separately in the freight rate books) could not reasonably put these useful and lawful books into the *Index Expurgatorius* of the law.

The Delivered Cost Charts were eliminated, and are not used now. (Vol. I, pp. 118, 153-6.)

DIFFERENTIALS.

Until July, 1923, the freight rate books issued by the present Association contained so-called "Differentials." (Vol. IV, fol. pp. 5249-5252.) They were merely the *average costs* of the different grades, sizes and woods, determined as described on pages 274-280, *supra. These data are no longer distributed or included in the freight rate books, except as hereinafter stated.* (Vol. I, pp. 152-3, 155, 201.)

Mr. George W. Keehn testified as follows:

"**The Court:** Let me ask you a question: Have there been any considerable changes in these differentials, so-called, * * * over a period say of two or three years?

A. There may have been changes in the differentials from time to time depending upon the market cost of the raw material, etc. * * *

The Court: For instance, the first differential in this sheet before me is the average cost of beech, 13/16ths dressed and matched, all faces?

A. Yes.

The Court: And clear, that is clear beech, $10 less than maple?

A. Yes.

The Court: Has that been the differential substantially?

A. Not at all times. It depends upon the supply and demand of these different floorings, to what a man's stock conditions are, and the cost of it too. Beech lumber ordinarily costs in the market less than maple lumber and consequently the cost of the beech flooring would not be as much as the cost of the maple flooring.

The Court: I understand, but has the difference been substantially the same over a considerable period of time?

A. I would say yes in a general way.

The Court: And the same would be true as to birch?

A. Sometimes birch flooring brings more than maple, sometimes it sells for less than maple, that depends upon the supply and demand and the stock conditions of the members selling the product. A good many of them don't manufacture beech flooring and a good many of them don't manufacture birch flooring and some manufacture only maple flooring.

The Court: The next that I find is the Average Cost of wide faces. Has there been any substantial change in the differences between prices of the 2¼—which I understand to be standard?

A. Yes.

The Court: And the wider?

A. That might vary from time to time for the same reasons.

The Court: Has it?

A. I think it has.

The Court: Substantially varied?

A. I can look that up and make a comparative statement of the costs during a period of time of those different things.

The Court: The next item is the average cost of thick flooring, as I understand it, the standard is 13/16th?

A. 13/16ths.

The Court: Has there been any change, substantial change, in the differences between the price of 13/16ths flooring and say 17/16ths?

A. *There would be differences back and forth, the 13/16th inch flooring is manufactured from four quarter maple lumber and the inch and 16th maple flooring is manufactured from five quarter thick maple lumber.*

The Court: The difference is caused then by the extra material which is used?

A. *The market cost of the five quarter lumber is generally considerably higher than the four quarter lumber.* On some markets it might be ten dollars, on others eight dollars, on others five dollars, of course that cost would all be regulated by supply and demand. Some of them manufacture thick flooring, many of them don't manufacture it at all. The cost would vary you know with the different conditions. The principal cost I would say—

The Court: That difference would be almost a matter of computation, wouldn't it?

A. A matter of computation, yes, sir. I would say the principal difference would be caused by the difference in the market value of five quarter maple lumber and four quarter maple lumber rough stock. The same thing would apply to those special grades of white clear maple and red clear beech and red clear birch.

The Court: Are jointed floorings as a rule higher in price than dressed and matched?

A. Sometimes it is and sometimes it is not. I think sometimes it brings about the same price and sometimes it brings more." (Vol. I, pp. 153-5.)

The defendant, Mr. William L. Saunders, of Cadillac, Mich.. testified as follows:

"Q. I notice that the Association has distributed from time to time some freight rate books and average costs were in there, and sometimes delivered values, etc. Have you used the figures in there as a price list at any time?

A. Not at all, never.

Q. What did you use the book for, so far as the average cost there, or the delivered values, were concerned?

A. We used that book as a rate book, both for maple flooring and for lumber, because it is more accurately compiled than the freight rates we can get from the depots in the small towns in which we are located.

Q. That is at Cadillac?

A. At Cadillac.

Q. I think I recall that in some of these books there were some data there with respect to differentials or spreads between the different faces, or between the different widths, or between Maple, Beech and Birch, etc. Did you ever follow that as mandatory or binding upon you, that you should charge

those prices; or, if you did not, state how you did use the data that was in those books.

A. *That data was of very little benefit to any of us, particularly us, that is, in our business. Beech flooring has most always been on a lower value than maple.*

Q. *Why?*

A. *Because the rough lumber sells from ten to fifteen dollars less a thousand than the Maple lumber.*

The demand for beech is very limited and is restricted to certain markets. It is more pronounced when there is a scarcity of maple. *In the practical conduct of the flooring business it is impossible to observe any fixed price relations between the different widths or between the different grades or faces or thicknesses. For instance, if we have a long season of demand for 2¼" face, we will naturally run timber that is best adapted for 2¼" face. Later on, however, we must clean up our tag widths and when we get a surplus of these odd widths and various stuff of that kind, we attempt to sell it to the best advantage on the market. The demands for the different widths or faces or thicknesses or grades fluctuate from time to time and never move in harmony. Sometimes there will be a very big demand for factory flooring, at other times for clear, and at other times for No. 1, and inasmuch as all of them are produced at one time, it is necessary to reduce prices on some of them at times to move surplus stocks. That is one reason why no fixed price relation can be observed. The present Maple Flooring Manufacturers Association, which was organized in the early part of 1922, has never taken any formal action with respect to spreads, although there have appeared some data in the freight rate books since 1922."* (Vol. I, pp. 200-1.)

The defendant, Mr. Walter L. De Witt, testified thus:

"Concerning the data in said freight rate books with reference to spreads or differentials between the different grades, sometimes we followed them

and sometimes we didn't, according to whether that spread represented the actual difference in value and the difference in the cost of material. In the conduct of the flooring business, it is not practicable to maintain any fixed price relation between the different woods or between the different grades or between the different thicknesses and faces. That is all governed by supply and demand and the cost of the rough material from which the article is made and the cost of producing it. The demand for each grade or thickness is not always constant, but it is continually fluctuating. Theoretically, the value of inch and 16th flooring is supposed to be greater than 13/16ths, but at times we sell them at exactly the same price. Sometimes the inch and 16th is sold lower than the 13/16ths, at times higher. Just at the present time we are selling inch and 16th by 2¼ factory at a lower price than we are 13/16ths by 2¼ factory on account of the supply and demand. The inch and 16th is theoretically more valuable than the 13/16ths because the inch and a quarter lumber from which the inch and 16th flooring is made is nearly always higher priced than the one inch lumber from which the 13/16ths is made. We get a little more feetage through the machine from the inch and 16th and the actual machine work is a little less, but the cost of the rough lumber is almost always considerably more.

The present Association has no rule with respect to maintenance of differentials or spreads between the different grades, woods, faces or thicknesses of flooring. I consider that I am at all times free to fix any price I please on my flooring." (Vol. I, p. 237.)

For illustrations of Mr. De Witt's testimony, see quotations made by him. (Vol. I, pp. 245, 249, 250, 268, 269, 271.)

As Mr. Klesner testified:

"The matter of spreads depends largely upon demand and stock conditions. For instance, one manufacturer might be very long on No. 1, and we might

be short. Hence the price will vary. Stock conditions are constantly changing.'' (Vol. I, p. 335.)

See also Vol. I, pp. 262-3, 217. For illustrations, see Vol. I, pp. 353, 360, 375, and the quotations set forth or mentioned on pages 121-143, *supra.*

Of course, the matter of spreads is also governed by the diversities mentioned on pages 66-75, *supra.*

So far as the present defendant Association is concerned, the differentials contained in freight rate books have always been merely the *average costs,* determined as described on pages 274-280, *supra.*

WHAT THE FREIGHT RATE BOOKS NOW CONTAIN.

Mr. George W. Keehn testified as follows:

"The differentials and the terms of sales, which were formerly on colored sheets in the freight rate books, are no longer contained in such books and are no longer sent to members in any form. The delivered cost charts have been entirely eliminated from the freight rate book.

The freight rate book now issued by the association contains the freight rates from Cadillac, Michigan, to points all over the country and the average cost chart of 13/16″ maple flooring, F. O. B. cars at flooring mill, according to compilations of average costs that are made from time to time. The freight rate book also contains average cost of ⅜″ beech or maple, F. O. B. cars flooring mills, and the average cost of freight, which is a table showing what the cost of freight would be on 13/16″, and also on ⅜″ flooring on certain rates of freight and on certain weights.

For example, 13/16″, 1½″ x 2″ and 2¼″ face weighs about 2,000 pounds and the rate of 20 cents would indicate that the cost of the freight would be $4.00

a thousand. The 13/16" x 3¼" weighs 2,250 pounds and the cost of freight on that would be $4.50 a thousand. ¾" flooring weighs 1,000 pounds so that the cost of that on a 20 cent rate would be $2.00. This table appears in the back of the book.

The grading rules also may appear from time to time in these or different books. The purpose of the table or chart, with respect to ascertaining the cost of freight, was in order to enable a member to find out what the cost of freight would be on any given rate of freight from point of shipment to point of destination. That is a mere matter of computation and could be left out.

The average cost which appears in the rate book is the average cost of flooring about which I have heretofore testified. This average cost is based upon test runs. For example, our present average cost of maple flooring, F. O. B. cars at the flooring mills, are based upon five test runs which were made by different members of this association since its organization. These average costs are determined from time to time whenever there are changes in the cost of rough maple lumber, F. O. B. cars at flooring mills, and also whenever there are changes in the average manufacturing and marketing costs. We might issue one every two or three months or every three or four months, or oftener if there are violent fluctuations in the cost of rough maple lumber. I have here a rate book which will illustrate just what we are doing today.

(Said rate book marked Ex. F and the data that had been eliminated from said book marked Ex. F-1, and said exhibits were received in evidence.) (Vol. I, pp. 155-6.)

For the exhibits above mentioned, see Vol. IV, fol. pp. 5162-5336.

Before the organization of the present Association the recommended prices, concessions, additions, etc., were contained in the Freight Rate Books. As we have already seen, even then members did as they pleased.

(Pages 196-206, *supra.*) No such recommendations have ever been made by the present Association. (Pages 273-4, 310-313.)

It will be very interesting to ascertain the relation that has existed between the average costs and the prices obtained. However, inasmuch as the prices obtained necessitate an explanation of the statistics compiled and distributed by the present Association, let us first describe the statistics. If the statistics are as potent for evil as the Government has alleged, then the prices obtained should show the trail of the serpent.

E.

THE STATISTICAL REPORTS.

Neither this nor any other court has ever held that the collection and distribution of statistical information by either an association or any other group of business men is unlawful *per se.* This court has merely held that *certain agreements* for the collection and distribution of statistical information by *certain groups, and what was done pursuant thereto,* unreasonably restrained interstate trade and commerce.

Plans for the collection and distribution of business statistics may *vary indefinitely;* the *effect* of such plans may be either noxious or beneficial to society. It all depends upon *circumstances.*

Edmund Burke, the great philosophical statesman, has well said:

> "But I cannot stand forward, and give praise or blame to *anything* which relates to human actions, and human concerns, as it stands, *stripped of every relation, in all the nakedness and solitude of meta-*

> *physical abstraction. Circumstances* (which with *some* gentlemen pass for nothing) give in reality to *every* political principle its *distinguishing colour and discriminating effect.* The *circumstances* are what render *every* civil and political scheme *beneficial* or *noxious* to *mankind.*" (*Reflections on The Revolution in France.*)

Now, whether a plan for the collection and distribution of business statistics is noxious, innocuous, or beneficial—unlawful or lawful—can be legitimately determined by considering, not only the plan itself, but the condition of the group that adopted it; the relations that exist between the various members of the group; what they manufacture; the distribution and control of the raw material; the presence or absence of competing manufacturers; whether the commodities manufactured by the group are necessaries of life; the number of substitutes there are for such commodities; how such commodities are marketed, to whom they are sold, and the relation of such group to buyers; whether the statistics are available to the general public, and if so upon what terms; what buyers say about the members of the group; and if such a plan has been in operation, the *effect* of such plan upon prices, and the relation between the prices obtained by the different members of said group.

Why? Because the plan is a part of reality. It is related in time and space, not only to specific commodities and a small group of manufacturers, but to all other commodities and individuals—indeed, to the rest of reality in all its ramifications. In its operation the plan reacts to and upon all other economic phenomena. And it can be neither sanctioned nor condemned *apart from its relations*—or, in the phrase of Burke, as it stands "in all the nakedness and solitude of metaphysical abstraction."

We should like to reproduce here the 'environment' of the defendants' plan and then set forth the plan itself, so that the Court might envisage the plan in its most important relations, and thus see it as it really is. However, upon second thoughts we have decided to set forth the plan at once, with the request that the Court keep an open mind until the argument, when the plan, its relations and effect will be discussed.

MONTHLY SALES REPORTS.

(To Secretary.)

Article XV of the present Articles of Association is set forth in the margin.[84]

---

[84]SECTION 1. In order that the relations of supply and demand and the statistical conditions existing from time to time in the Maple flooring industry may be known, the following statistical monthly reports shall be made to the Secretary by each member of the Association on or before the 5th day of each month:

(a) Report of Stocks on Hand of Maple, Beech and Birch Flooring at the end of the previous month.

(b) Report of Unfilled Orders on Hand for Maple, Beech and Birch Flooring at the end of the previous month.

(c) Report of the amount in feet of Shipments made during the previous month of all kinds of Maple, Beech and Birch Flooring for use within the United States, except Maple, Beech and Birch Flooring purchased from other members of this Association.

(d) Report of Production of Maple, Beech and Birch Flooring during the previous month.

(e) Report of New Orders Booked for Maple, Beech and Birch Flooring during the previous month.

(f) Report of Average Prices Realized F. O. B. flooring plant, after deducting freight, for 13/16" x 2¼" face Clear, No. 1 and Factory

The forms of the reports made by members pursuant to subsections (a), Stocks on hand; and (b), Unfilled orders—of Article XV are shown by Government's Exhibits 46, 46-A, and 46-B, Vol. III, fol. pp. 2854-6. (Vol. I, p. 123.) It will be observed that each of these reports goes into detail as to the quantity of each wood grade and size.

The form of report made pursuant to subsection (c), Shipments, is shown by Gov. Ex. 48, Vol. III, fol. p. 2858. (Vol. I, p. 124.) This report merely gives a statement (by days) of the *total* amount of feet of maple flooring, the total amount of feet of beech flooring, the total amount of birch flooring shipped during the previous month, without other details.

The form of reports made pursuant to subsection (d), Production, is shown by Gov. Ex. 47, Vol. III, fol. p. 2857.

Maple Flooring, standard grades and lengths, sold during the previous month.

SECTION 2. In addition to the foregoing monthly reports, each member of the Association shall send to the Secretary promptly at the end of each week a report of all sales made during that week of Maple, Beech and Birch Flooring. These weekly sales reports shall state the quantity, kind and grade of flooring sold, the delivered price sold at, the average freight rate to destination of shipment, and the commissions paid, if any.

SECTION 3. All the foregoing statistical reports shall be made upon blank forms furnished by the Association and shall relate wholly and entirely to past and completed transactions. Said reports shall be mailed by the members to the Secretary, who shall report the same to the members. Said statistics shall be filed by the Association with the Department of Commerce, Washington, D. C., and shall also be made known to the public, in such form and manner as the Department of Commerce may approve. (Vol. III, p. 70.)

(Vol. I, pp. 123-4.) This report merely gives the quantity of feet of flooring of *each grade of each wood* produced during the previous month without further detail.

The form of reports made pursuant to subsection (e), New Orders Booked, is shown by Gov. Ex. 47, Vol. III, fol. p. 2857. (Vol. I, pp. 123-4.) This report gives merely the total amount of feet of new orders booked during the previous month for maple flooring, for beech flooring and for birch flooring and the aggregate of the three totals, without further detail.

The form of the reports made by members pursuant to subsection (f) is shown by Gov. Ex. 45, Vol. III, fol. p. 2853. Concerning these reports, Mr. George W. Keehn testified as follows:

"A member also makes a monthly report of average prices realized f. o. b. flooring plant after deducting freight for 13/16" x 2¼" face, clear No. 1 and factory maple flooring, standard grades and lengths (fol. 220) sold by us during the month of.....
That provides for the number of feet, delivered price sold at, the amount extended, and the freight to destination. Applying to the clear grade, the No. 1 grade and the factory grade, those are added up showing the gross amount, then less *freight from our flooring plant* to destination so much, then the net amount, then the net per 1,000 feet of each grade, clear, No. 1, and factory. That report is sent in to us by the different members of the Association but all of them don't make the report at all times.

Q. Does that report show each particular sale?

A. No, it just shows—it might show each particular sale, or it might be an aggregate of the sales. The report that we send out to the members doesn't show the details.

Each particular sale is reported in the weekly reports and it may not be reported in the monthly report because this report only applies to the standard grades and lengths, while the other product is not reported. This only refers to the 13/16 x 2¼" face

maple flooring and does not apply to the beech and birch and the other stuff.

Q. Why is it limited to that particular variety?

A. That is the major part of the product. I imagine it represents about 70% of the maple product and the other would be so voluminous it would be almost impossible to compile the stuff in a practical way.

(The monthly report Blank form marked Government Exhibit 45 and received in evidence.)" (Vol. I, pp. 122-3.) See also page 44, *supra*, of this brief.

Of course, neither the destination of any shipment, nor the name of any purchaser is given.

It should also be observed that in the reports above mentioned the *actual* freight, and *not* the amount of freight computed by using the *average* (or Cadillac) rate of freight, is used by the members in arriving at the net amounts received and the averages. (Vol. IV, pp. 572-3, fol. p. 4587.)

All the foregoing monthly reports made by the members to the Secretary pursuant to Section 1 of Article XV *are received by him between the 5th and the 10th of the succeeding month.* (Vol. I, pp. 123-4.) Before going into the matter of what the Secretary does with reports made to him by members, let us take up Section 2 of Article XV.

WEEKLY SALES REPORTS.

(To Secretary.)

The form of reports made by members pursuant to Section 2 of Article XV—weekly sales reports—is shown by Gov. Ex. 44, Vol. III, fol. p. 2852. (Vol. I, p. 122-3.) It will be observed that each member reports every sale of flooring made by him during the previous week, with

the following details: date, quantity, thickness and face, grade, wood, delivered price, *average* freight rate to destination, and rate of commissions paid, if any.

Neither the name of any purchaser, nor the destination of any shipment is shown. (Vol. I, pp. 123, 127, 155-8.)

Only the *average* (or Cadillac) *rates* of freight on the several shipments are given in the *Weekly* Sales Reports to the Secretary. (Vol. I, pp. 123, 127.) And it is impossible to tell even the section of the country to which any of the shipments moved, for the obvious reason that there are points East, North, South and West having the same rates of freight from Cadillac.

The weekly reports above-mentioned are received by the Secretary at Chicago on the following Tuesday or Wednesday. (Vol. I, p. 121.)

REPORTS MADE BY SECRETARY TO MEMBERS.

The reports made by the members to the Secretary are compiled, and *only the aggregates are distributed to the members.* What each member's report (to the Secretary) shows is known only to such member and the Secretary. Access to such reports cannot be had, and the information therein contained is not available to others in any form, except in the regular reports made by the Secretary. (Vol. I, pp. 158, 163, 173, 176, 390, 399.)

WEEKLY SALES REPORTS MADE BY SECRETARY.

The data contained in the weekly sales reports made by the members are tabulated by the Secretary, who makes a weekly sales report. This report is always sent to the members who furnished the data for it—some-

times to all members. (Vol. I, p. 125.) Numerous sales of small lots are lumped in the Secretary's Weekly Sales Reports without showing the prices. (Vol. I, p. 125.) Such reports also include "a summary of what the average prices realized were during that week." (Vol. I, p. 125.)

All this work is done by the Secretary's office force. (Vol. I, p. 125.)

Prior to and including July 19, 1923, the Weekly Sales Reports made by the Secretary disclosed by whom the different sales had been made. This was done by inserting the *numbers* of the Association members (pages 144-5, *supra*) opposite items or groups of items appearing in the Secretary's Weekly Sales Reports. (Vol. I, pp. 156-158.) That practice was abandoned pursuant to a resolution of date July 19, 1923. The resolution is set forth in the margin.[55] In a communication addressed to members, dated August 2, 1923, it is stated:

> "The Association membership numbers which identify the individual members of the Association have been eliminated from all our reports issued since July 19 and are to be eliminated from all reports issued hereafter by the Association so that the information which is consolidated and transmitted to the members from time to time will not disclose to any member or members any of the particulars or intimate details of any other member's business respecting his Stock on Hand, Unfilled Orders, Shipments, Production and New Orders Booked or which

[55] RESOLVED, That in order to meet the special objections of the Department of Justice, the Association's Counsel in conjunction with the Secretary be and are hereby authorized and directed to make such changes and modifications as they may decide upon in the compilation and distribution of statistical data to the membership of the Association. (Vol. IV, p. 812.)

will identify the average prices he realizes or identify as his prices the prices at which he sells any Maple, Beech or Birch Flooring." (Vol. IV, pp. 813-4.)

Both the letter and the spirit of the resolution and the communication have been faithfully followed in the making of subsequent reports. (Vol. I, pp. 156-9, 162-3, 230-1, 390, 399, 123, 125-6, 127, 130, 204.)

Copies of the Secretary's Weekly Sales Report for the week ended July 14, 1923, and for the week ended July 27, 1923, are shown in Vol. III, pp. 390-7, and pp. 398-403, respectively. See also Defts'. Ex. G (Vol. IV, fol. pp. 5337-9) and Defts'. Ex. G-1 (Vol. IV, fol. pp. 5340-2.)

MONTHLY REPORT MADE BY THE SECRETARY.

The monthly reports received from members are combined into *one* report by the Secretary, who makes only one monthly report to members of the defendant Association. (Vol. I, p. 128-132.) See Gov. Ex. 50, Vol. III, fol. pp. 2861-9, which is explained by Mr. George W. Keehn on pages 128-132 of Vol. I. See also Defendants' Exhibits H, H-1 and H-2, Vol. IV, fol. pp. 5343, 5353, and 5362, respectively, and Vol. I, pp. 158-163, where said exhibits are also explained by Mr. George W. Keehn.

Inasmuch as the Secretary's monthly report is merely a combination of the monthly reports received by him from members, it is unnecessary to go into further detail.

There are no identifying numbers used in such report. (Pages 308-9, *supra.*)

The report is not received by members until sometime after the 15th and before the 22nd of the succeeding month. (Vol. IV, fol. pp. 5352, 5361, 5370.)

QUARTERLY REPORTS.

These reports are merely combinations of some or all the data contained in the preceding monthly reports. (Vol. I, pp. 130-1, 160-2.)

THE REPORTS ARE PURELY STATISTICAL, AND ARE UNACCOMPANIED BY ANY ANALYSIS, COMMENT OR RECOMMENDATION WHATSOEVER.

While Mr. George W. Keehn was on the stand the following proceedings were had:

"**The Court:** * * * In other words, your system is not as complete as it used to be?

A. It doesn't show who has any surplus stocks; it doesn't reveal the identity of any manufacturer as to who has surplus stocks.

Mr. Johnston:

Q. In other words, Mr. Keehn, if a member is to ascertain the facts with respect to stocks on hand, prices realized, or other data, individually as to any member, he must obtain that by going directly to the member himself—it is not disclosed by the Association?

A. That is correct.

Q. Whether that member is willing to disclose those facts to the other member is a matter which rests with him entirely?

A. *That is a personal matter between themselves entirely.*

Q. But there is no understanding or agreement in the Association between the members as members of the Association, that such data will be interchanged upon request by any member?

A. *No, sir; we do not exchange any individual data in any form or manner between different members of the Association, or among any of the mem-*

bers of the Association. Whatever information any member may know about individual stock conditions of the other members, the only way he can obtain it is by correspondence direct with the member. *All reports are now sent out without any comments, analysis or interpretation of any kind. We consulted our attorneys about these different matters some time after the Supreme Court handed down this decision in the so-called Memphis case and they advised us as to how the activities of the Association should be conducted and we have strictly followed their advice in every respect. The statements are now sent out simply as statistical data and without comment, analysis or interpretation for each member to analyze and interpret for himself and draw his own conclusions.* A copy of the opinion of our attorney is attached to the minutes of the meeting, January 12, 1922.

(Said minutes marked Defendant's Ex. I and received in evidence.) [Vol. IV, p. 818; Vol. III, pp. 146-152.]

Q. Now, referring to the first paragraph of that conclusion in Mr. Newman's opinion of January 11, 1922, since the organization of the present Association, that of January 1, 1922, have you as Secretary of the Association or has the Association sent out to its members recommendations or forecasts as to the market prices or market conditions?

A. Not as to market prices, but sometimes as to the results of the month's business, as is shown by what the Government calls 'Forecasts.' We explained that in our previous testimony, where certain data is collected regarding stocks, production, new business for twenty days in the month, and then the estimate is made as to what the business may be, the remaining ten days of the month, and that is compared with the totals of the preceding month. But, there have been no individual figures given. That appears in the minutes of the various meetings.

Q. What are those entitled?

A. It is an estimate of how the business for one

month may compare with the business of the preceding month, based upon the data furnished by the members who may report it. If you will pardon me, you will find July 19th, 1923, and that will tell the story.

Q. That is what we want exactly.

A. That is in a previous exhibit; you have that exhibit already in.

Q. That is the one already in?

A. Yes.

The Court: There have been several of those exhibits. As I remember the testimony, it was this. For instance, if a meeting of the Association was to be held on the 25th day of November and the notice was sent out on the 18th day of November, the data accumulated from the reports of members up to the 18th or 15th, whatever the date might be, would be given, and the statement would be made that the indications are that if production holds up during the balance of the month, the month of November will compare with the month of October, or the month of November of last year in the following manner:

A. Not as to last year; just for the preceding month.

The Court: That may be.

Q. That is the matter that you refer to.

A. Yes, sir.

Q. Now since the organization of the present Association has anything else been sent out to the members of this Association?

A. According to my recollection, we make no comments or interpretations, or forecasts regarding the future in the industry, except as outlined here, what we term classification, etc. The reports speak for themselves. I don't know whether you consider the tabulations of statistics according to grades and faces, a classification or not.

Q. Of course the statistics those are the classification?

A. The statistics themselves speak for themselves.

Q. What I am referring to particularly, is, any interpretation matter going along with or at about the same time with the statistics, either weekly or monthly statistics go out?

A. No, sir.

Q. In which you say to the members 'these show so and so' and 'indicate so and so for the future,' anything of that character?

A. No, sir.

Q. Under the present Association?

A. Under the present Association.

The allotment plans previously mentioned related solely to shipments and had nothing whatever to do with production. The classification of statistics contained in Mr. Newman's letter of January 11th, 1922, embraces all the statistics that we sent out." (Vol. I, pp. 163-5.)

For previous testimony as to monthly forecasts, see Vol. I, pp. 124, 163-4.

THERE ARE NO FINES OR PENALTIES FOR FAILURE TO MAKE REPORTS, AND NO AUDITS OF THE BOOKS OF MEMBERS ARE MADE.

That there are no fines or penalties, see Vol. I, pp. 121, 161, 389.

That no audits have been made since the organization of the present Association, see Vol. II, p. 861.

THE STATISTICS COLLECTED BY THE ASSOCIATION HAVE BEEN GIVEN THE WIDEST PUBLICITY, AND ARE ACCESSIBLE TO WHOEVER MAY ASK FOR THEM. AT THE HEARING, THE DEFENDANT ASSOCIATION OFFERED TO PAY FOR THE PUBLICATION OF ALL REPORTS BY ANY TRADE NEWSPAPER THE COURT MIGHT DESIGNATE.

That the statistics above mentioned are regularly sent to the Department of Commerce and to the Federal Reserve Bank at Chicago, see Vol. I, pp. 165-67; 167-69.

TRADE PAPERS.

Mr. George W. Keehn also testified:

"Q. Now in addition to the Bureau of the Census and the Federal Reserve Bank to what other source has your data been going and since what time?

A. After we returned from Washington we took this matter up at the meeting of the Association, and they instructed me to follow the advice of our attorneys and give to the lumber trade papers such data as might be useful to the public and might be desired by the public, and we took as the foundation of the data which we gave to the lumber trade papers, the statistical data which the Department of Commerce, Bureau of the Census, elected to use, feeling that inasmuch as the Department of Commerce, Bureau of the Census, is functioning for the benefit of the public, that whatever it thought was adequate for the public to have, should be satisfactory; so we simply followed that outline, except that we have gone further and we give them, the lumber trade papers, reports of average prices realized each week, beginning on May 18th, 1922. We wrote a letter to the various lumber trade papers, and here is a sample of the letter:

'American Lumberman, Manhattan Building, Chicago, Illinois.

The Maple Flooring Manufacturers Association gathers the following statistics relating to basic conditions in the industry:

1. Total stocks on hand at the end of each month.

2. Total unfilled orders at the end of each month.

3. Total shipments during each month.

4. Total production during each month.

5. Total new orders booked during each month.

6. Average prices realized F. O. B. cars at Michigan and Wisconsin flooring mills during each month for 13-16 x 2¼" Face Clear, No. 1, and Factory Maple Flooring.

These statistics are portrayed in the form of a barometer, and are filed with Department of Commerce, Bureau of the Census, Washington, D. C., and believing that you may wish to publish them for the information of the public, we shall be glad to send them to you regularly about the middle of the month. We are enclosing the barometer for the month of April, 1922. Yours very truly, Maple Flooring Manufacturers Association, George W. Keehn, Secretary.'

Q. To what other trade papers did you send that communication?

A. Here is a mailing list of this statistical data.

Q. Yes, read it.

'Department of Commerce, Bureau of the Census, Washington, D. C. Federal Reserve Bank of Chicago. Statistical Department, Chicago. American Lumberman, Manhattan Building, Chicago.

They recently requested data regarding the Maple Flooring Industry and we sent it to them. They said they would like to have the information a little in advance of when they might need it for publishing in the lumber trade papers, as a survey of current

business. We mail it out, however, all at the same time to everybody.

'Lumber,' St. Louis, Missouri;

Chicago Journal of Commerce, Chicago;

Hardwood Record, Chicago;

Lumber World Review, Chicago;

Lumber and Veneer Consumer, Chicago;

Southern Lumberman, Nashville, Tenn.;

National Lumber Manufacturers Association, Washington;

S. W. Strauss and Company, Chicago.'

We also send them weekly reports in this form: Maple Flooring Manufacturers Association. Maple Flooring Wholesale prices. Sales by Michigan-Wisconsin Flooring Mills 13/16 x 2¼" maple flooring, average values F. O. B. cars flooring mills during the week ended so and so.

We give clear, Number 1 and Factory, and that is published in the lumber trade papers, the Chicago Journal of Commerce and others. We also send them from time to time quarterly reports showing statistical conditions, and semi-annual reports.

We send only a summary of the weekly reports to the publications above mentioned. We have never refused to furnish any data requested by the trade papers or any one else. The trade papers published the statistics we sent them. The trade papers above mentioned are generally recognized trade publications, having a very wide circulation, and I presume they are taken by every one in the lumber trade and by buyers of lumber products. About 90 or 95 per cent of all the flooring produced by members of the Association is sold through retail and wholesale lumber dealers who take the trade journals above mentioned." (Vol. I, pp. 169-171.)

OFFER TO PAY FOR PUBLICATION.

Mr. George W. Keehn also testified as follows:

"Q. *I will ask you now whether there is the slightest objection on your part or the members of this Association to the widest distribution of all of the data sent to members, to any source that is willing to receive it?*

A. *No objections whatever.*

Q. *Are you and have you been perfectly willing that the trade papers should publish every statistical report, weekly, monthly, quarterly, semi-annually, or annually or whatever it may be that your association puts out?*

A. *We are willing to have them do so.*

Q. You have furnished them with everything that they would publish, they were willing to publish as news?

A. *We furnish them the same material that the Department of Commerce, Bureau of the Census elected to publish in the survey of current business and we have told them about this other statistical data but none of them have ever asked for it. We frequently send them quarterly reports and things like that—every week now and have been for some time, the average prices realized.*

Q. From the sales from the weekly sales reports?

A. From the weekly sales report.

Q. Have you and have you had any objection to the full publication of everything which your office sends out to the members in these weekly or monthly publications or in any other source that will provide distribution of that data?

A. We have no objection so far as I know either on my part or on the part of any of the members of the Association, we have had this up several times at Association meetings. They have always told me

to give the Lumber Trade Papers whatever information they wanted, to give the Department of Commerce, Bureau of the Census whatever information they wanted. We have certainly filed volumes of this stuff with the Federal Trade Commission and the Department of Justice at different times.

Q. *I am talking now particularly of the distribution of these statistics through publications which will reach the public generally or at least that portion of the public which subscribes to and reads the trade papers.*

A. *Yes, we would be willing to do that. As far as that is concerned, if it should be thought that more of our statistical data should be published we would be willing to have it published in any trade paper which the Court might select, like the American Lumberman, and we would pay for it as an advertisement if the publication is not willing to accept it as news items.*

Q. In other words, the publications are not interested in a great deal of this data?

A. It is too voluminous, it is too inconsequential. For instance, see how much space it would take to publish our weekly sales reports and all of these statistical reports, it would take about as many pages of the American Lumberman, as our reports consist of, ten or twelve pages sometimes.

Q. But they do publish and have been for some time publishing or averaging those?

A. They publish the Barometer and they publish the stock conditions from time to time. You will find that in the American Lumberman and other papers and they also publish the prices which we send them not only in the lumber-trade papers, *we also send them to the Chicago Journal of Commerce which is a financial paper published in Chicago.*" (Vol. II, pp. 787-8.)

ASSOCIATION MEMBERS DEAL ALMOST EXCLUSIVELY WITH WHOLESALE AND RETAIL LUMBER DEALERS, WHO ARE EXPERT AND WELL-INFORMED BUYERS AND IN CONSTANT CONTACT WITH BOTH MEMBERS AND NONMEMBERS. THEY ALSO TAKE THE TRADE PAPERS THAT PUBLISH THE STATISTICS FURNISHED BY THE ASSOCIATION AND MUCH OTHER INFORMATION CONCERNING PRICES AND MARKET CONDITIONS.

Besides the testimony of Mr. George W. Keehn on page 316, *supra*, see the testimony of Mr. Hodges on pages 45-46, *supra*. Likewise, the correspondence on pages 148-157, *supra*, and the testimony on pages 121-143, *supra*.

Dealers in flooring circularize both members and nonmembers, work one against the other, offer to buy at certain figures, and are in contact with contractors and consumers. They are in a better relative position than are manufacturers, who cannot circularize dealers in order to find out what they will pay for flooring, and who have no direct contact with contractors and consumers.

The foregoing facts and the publication of Association statistics by numerous trade papers, demonstrate that Association members have no advantage over wholesale and retail lumber dealers.

THE STATISTICS ARE ONLY ONE OF MANY SOURCES OF INFORMATION POSSESSED BY MEMBERS.

Members are in daily contact with buyers, who are "continually * * * telling us what other manufacturers are getting for their product." (Vol. I, p. 211); the members also get information from customers as to competition of other woods. "Hardly a day goes by that we don't get information from our trade as to what we have got to do to meet competition." (Vol. I, pp. 211-2.)

Mr. Hodges testified that he had representatives in Boston, New York and Philadelphia—where he markets most of his flooring—who kept him informed as to prices and market conditions there by means of the telephone and correspondence. (Vol. I, p. 291.) See also the correspondence between Mr. Hodges and others set forth on pages 153-155, *supra*.

Mr. Klesner testified that representatives informed him of prices, of competition, and that he allowed them a leeway of $2.00 per thousand feet in order to meet competition. (Vol. I, p. 335.)

See pages 148-153, *supra*, for specimens of correspondence between the defendant West Michigan Flooring Co. and others. Mr. Greene of that company testified that he was "continually hearing from wholesalers, representatives and other persons with respect to market conditions." (Vol. I, p. 383.) Mr. Greene also testified that he subscribed for the Babson statistical service in an endeavor to anticipate general business conditions, but "I don't know as I get very far with it." (Vol. I, pp. 385-6.)

Mr. James E. Dewey testified as follows:

> "I testified before that we had special representatives all over the United States. We keep in very close touch with them concerning market conditions in their respective territories. We send out a weekly statement giving our stock conditions, orders on hand, surplus items, and usually accompany the same with a letter. Our representatives answer the letter and usually give some idea of what the conditions are in their markets. We hear from our representatives regularly about once a week. *In a great many instances they advise us what flooring is being offered at by other concerns, so far as they are able to ascertain, and of course if our prices are high they usually notify us. The price lists we send*

out are ironclad. In some instances we make concessions on certain items in this weekly statement. In others our representatives notify us that our price on a certain item would be high and we would advise them to meet competition. The concessions that we give from our price lists would be on surplus items that we desire to move so as to keep our stock well balanced. Changes in our price lists or the sending out of new price lists depend upon market conditions. Price lists are sent out practically once a month, but at no fixed times. Market changes determine when they are sent out." (Vol. I, pp. 394-5.)

See pages 135-143, *supra*, for copies of letters that passed between Mr. Dewey and Mr. Phisterer of Philadelphia.

Mr. Dewey also testified that he took "the Babson Service, Brookmeier's [Brookmire's] and Whaley & Eaton's" as well as several trade papers. (Vol. I, p. 397.)

Mr. McLurg kept in touch with competitive conditions through his travelling salesmen. (Vol. I, p. 229.)

Mr. Shepeck testified:

"A. We have four representatives in the State of Wisconsin, and we have a man at Minneapolis, and a man at Chicago, and we get information from them all the time. We also keep very close track of building reports, as to the amount of building that is going on.

Q. Is that through the Dodge Service?

A. Yes, sir; Dodge Service and the Improved Bulletin of Minneapolis, we use that a great deal.

Q. And Lumber and Trade papers?

A. Yes, sir; and newspaper information." (Vol. I, p. 260.)

He also testified that he had the information as to what the prices of competitors were before he received the Weekly Sales Reports from Mr. George W. Keehn. For proof of this assertion, see pages 155-157, *supra*, where copies of the letters are set forth.

Mr. Ralston testified that Horner had personal representatives in all the large centers; that he was in daily contact with them, and that by that means and by visiting all such centers at least once or twice a year he was kept informed as to market conditions, especially as to prices. (Vol. I, pp. 319, 324, 326.)

USE MADE OF STATISTICS BY MEMBERS AND IMPORTANCE ATTACHED TO THEM.

Mr. James E. Dewey testified as follows:

"I analyze the statistics that are furnished us from time to time by the Secretary of the Association so as to get as intelligent an idea as possible of the conditions of the industry. These statistics throw a great deal of light on that subject. I use the statistics in the same way as I use other information regarding general conditions. I prefer light rather than darkness so far as business conditions and the conditions of the industry are concerned. We also take the Babson Service, Brookmeier's [Brookmire's] and Whaley & Eaton's, as well as several of the trade journals. We find that all of them are helpful. *We do not regard the statistics sent out by the Association as conclusive. We consider them, of course, but our own conditions are after all the controlling factor.*

The most important thing to me in the weekly sales reports issued by the Secretary is the quantity that is moved, that is, *the quantity of the different sizes and grades, and the total quantity. That is the important thing. I never considered that the prices shown in the weekly sales report were important because they are from a week to four weeks old;* that

is, *they are based on quotations from a week to four weeks old, and I get information with respect to prices from my own connections before I get it from the weekly sales reports. We get information with respect to prices from different parts of the country from our representatives by letter or telegram.*

The weekly sales reports are based on quotations from a week to four weeks old. For instance, if a quotation were made yesterday to a prospective buyer on the Pacific Coast, it may be two weeks before an order is received, if at all. Then the report of that would not go in until the following Monday. The members of the Association would not get it until the last of that week, so that the sale contained in the report would be based upon a quotation made practically four weeks before.

The reports would be of much *greater value if they covered all manufacturers in the United States.* I have no definite knowledge, but I should say that the members of the present defendant Association manufacture beween 50 and 60% of the total production of maple, beech and birch flooring in the United States.

Q. In the practical conduct of your business, would the mere fact that in one of these weekly sales reports there were certain sales made by some manufacturer, a member of the Association, at prices higher than you had been getting, necessarily and of itself result in your raising your prices?

A. From one manufacturer?

Q. Yes.

A. No, that would not affect me at all.

Q. But say there were several sales?

A. Well, as a rule those prices fluctuate, so that there are as many above me as below me.

Q. I beg your pardon.

A. I say, as a rule the prices fluctuate so that there are as many above me as there are below me.

You are talking about an ideal situation that would not exist.

Q. That does not exist in practical business?

A. It would not exist, no.

In determining what prices we shall charge, *our condition would govern almost entirely. I mean my stock conditions, my orders on hand.* We have a very large output, practically fourteen million feet a year and we have difficulty in keeping that sold. *It is of a great deal more importance to me to have my plant produce to full capacity at all times than it is to raise my prices every time it is possible to do so. We would lose a great deal more money if our plant were compelled to curtail its output than we would by failing to get the top of the market at all times.*

Q. *Has it been your observation that merely because during one week some manufacturers get higher prices, than you do, that that means permanently higher prices, or would conditions fluctuate?*

A. *They fluctuate, of course.*

Q. One week they might be higher and one week lower, and it would be sometime before it could be determined whether the market would be at a higher or a lower level, would it not?

A. As I say, we usually have that information long before it is reflected in those weekly reports.

The weekly sales reports received from the Secretary do not give any identifying numbers of the members making the sales. The fact that a sale is made on a BD or any other rate would not give me any information as to who made the sale or where the shipment went to. We have no means of knowing or finding out who made the sale or where the shipment went to. The Secretary of the Association does not divulge any information as to who makes the sales or where the shipment went to. We cannot tell where the shipment went to because the rate stated in the report might apply to points in any direction.

There are many different points with the same rate or with the same average rate of freight." (Vol. I, pp. 397-9.)

And again:

"In determining our prices on flooring, the first consideration is our costs and then we are governed entirely by market conditions, supply and demand—competition. We fix our prices according to our own discretion without regard to any rules or data furnished by the Association. When we can't sell above cost or at cost, we naturally curtail our operations. We purchase about 50% of our rough lumber from outside sources and naturally if conditions are such that prices for flooring are below cost, we no longer purchase rough lumber from others but run just enough to use up rough lumber of our own production. We have had to do this at various times. Our own situation determines this entirely. We have acted alone in this matter. I know of no agreement with any other person, firm or corporation whereby our production was to be curtailed or limited." (Vol. I, p. 395.)

Mr. J. L. Colby, sales manager for the defendant Cummer-Diggins Co., testified he and the general manager who looked after production always had a conference before making any general change in that company's prices for flooring. (Vol. I, p. 210.) Also that the factors they considered—and the order of their importance—were *first*, "the amount of stock that we have on hand unsold in our warehouse of each particular item of flooring"; *second*, ability to produce certain sizes and grades during the next few months; *third*, the amount of orders coming in, and the attitude of buyers towards existing prices; *fourth*, miscellaneous information concerning market conditions, including the statistical reports distributed by the defendant Association. (Vol. I, pp. 210-212.) See also Vol. I, pp. 215-6.

Mr. Colby also testified as follows:

"I don't want to give any one the impression that we don't pay any attention to the statistics distributed by the Association. I do want to state that the statistics are *not* the *primary* consideration with us. *If they fit in with what we think is the market and with what we think and what we know is our individual stock condition and our own situation with regard to customers, then we give them consideration.* The Cummer-Diggins Company and the partnership that preceded it have been in business for a great many years. They have many customers who have been with them for a great many years and who look to them for their principal source of supply. As a matter of fact, our production of different grades differs from the production of other manufacturers, I think we manufacture more of certain widths. For instance, we manufacture more three and a quarter inch flooring than many other manufacturers do. *We are more concerned with our own supply and ability to produce and with the demand of our own customers than with the supply of some other manufacturer, because we are in such position we can at any time turn this lumber or a large part of the lumber into the market and sell it instead of manufacturing it into flooring.* At times we can make more money by selling the rough lumber than we can by manufacturing it into flooring." (Vol. I, pp. 221-2.)

Mr. Percy S. McLurg testified as follows:

"In determining at what price we shall sell our flooring, we keep in touch with the market principally through our travelling salesman. We also take into consideration the statistics that we get from the Flooring Association and also watch the price reports. The matter of price is governed a great deal by our stock on hand. In the territory that we work there is a big demand for 1½" flooring. The Michigan manufacturers don't have that trade. We are usually oversold on the narrow face, whereas the Michigan manufactures are usually long on it. We have to take that into consideration in making our prices. We very often have to buy narrow face

flooring from other manufacturers in order to take care of our trade. I do not consider that my discretion is in any wise limited in the matter of determining what prices I shall charge for our products. I am not now a party to any understanding or agreement with respect to maintaining any prices for maple, beech or birch flooring and I have never been a party to any such understanding or agreement since the organization of the present defendant Association." (Vol. I, p. 227.)

Mr. McLurg also testified that in fixing prices he relied more on the reports received from his travelling salesmen than he did upon the statistics, for the reason that "we have so much outside competition." (Vol. I, pp. 230-1.) Also:

"In the sale of flooring, we come in competition with the manufacturers in the Northern Peninsula of Michigan and Wisconsin, both members of the Association and nonmembers. The nonmembers in that territory are R. Connor Company, Marshfield, Wisconsin, Robbins Flooring Company, Rhinelander, Wisconsin, and Sawyer-Goodman Company, Marinette, Wisconsin. The R. Connor Company is about 86 miles from Phillips, Wisconsin, and is one of our strongest competitors because it is in the same line of trade that we are. It manufactures lumber in large quantities and sells maple flooring to the small retailer, just as we do. The R. Connor Company also own considerable stumpage." (Vol. I, p. 227.)

Mr. Greene testified that in fixing his prices he considered the statistics and the information obtained as to market conditions from his correspondents. Also:

"A. They are valuable to me, as I just stated, the weekly sales report, the weekly sales report of completed transactions, I use them as one factor in arriving at the prices that I should ask for my product, or try to obtain for it, *and the stock conditions reports are particularly interesting and valuable to me in enabling me to determine or outline a policy of manufacture somewhat in advance of actual oper-*

ation as to the quality of flooring that I shall aim to produce in the largest quantity to take care of the particular trade at the time when that trade demands that particular kind of flooring.

Q. Illustrate what you mean by that.

A. It is generally understood in the manufacture of maple flooring, that in the process of manufacture all three of the grades, Clear, No. 1 and Factory are produced at the same time. *It is also true, however, that a manufacturer can manipulate his rough lumber by putting through certain qualities of rough lumber into his plant to produce the largest percentage of any one grade at any given time.*

Q. What will produce the largest percentage of Clear and No. 1?

A. Well the quality that would run largely to No. 1 common and No. 2 common, particularly No. 1 common.

Q. What will produce the largest percentage of Factory?

A. I would put in my plant 3-A and possibly straight and 3-A and B combined. *I am producing that at the present time. I realize from analyzing those statistics and from other sources of information that there is a great demand for factory flooring right now, and I fully realize most of the manufacturers are loaded up with orders on it, and I am putting through my plant stock No. 3-A and B which I know will produce from experience anywhere from forty to sixty percent of my total grade will represent factory.* On the other hand, if I put through certain stock which I have purchased from the Louis Sands Lumber Company, which is Michigan southern maple, very high grade, running about seventy percent No. 1 Common, thirty percent No. 2, I know that particular lot of lumber when manufactured into flooring, would produce not to exceed fifteen to eighteen factory, the balance 82, 85 No. 1, Clear, therefore I avoid as much as possible the accumulation in my warehouse of Clear and No. 1 during the time this demand for factory is on. *That is one of*

the principal benefits that I receive from those stock reports, stock conditions or stocks on hand, unfilled orders and so forth, and I consider that very valuable to me, for the reason that as a manufacturer who purchases his rough lumber on the open market it is necessary for me to purchase rather large quantities at the present time, in advance of information, and sometimes I am able to manipulate this stock from time to time to suit the market conditions and may be able to turn it over quickly and get away from the congestion in the warehouse.

The Court: Do you not regard that part of the report which deals with unfilled orders of considerable importance?

A. Unfilled orders; all those statistics are taken into consideration, your Honor.

Q. The unfilled orders—what feature in the report gives you an idea of what is short and so you can manipulate your rough lumber and manufacture the grade particularly in the greatest demand, that is the unfilled orders?

A. I know from looking over this report the amount of stock on hand, the amount of business booked against them, I know what unit they had oversold or undersold as the case may be.

Q. What do you do in case it is over sold or under sold?

A. I try to produce the over-sold and produce less that is under-sold.

Q. And that in your opinion is the most valuable of the statistics so far as you yourself are concerned?

A. *That is the most valuable to me so far as I am concerned, yes, sir.*" (Vol. I, pp. 386-7.)

Mr. Greene also testified that he did not receive the Weekly Sales Reports from the Secretary until Thursday of the following week, and that the price information contained therein was stale by then. (Vol. I, p. 389.)

For similar testimony by Mr. DeWitt, see Vol. I, pp. 238-9. Mr. DeWitt also testified:

"A. Well one of the big advantages is the statistical reports that we get; it enables us to find out what the market is doing, and as I testified before on that, then we can put the proper grade of lumber into our mills to produce the grade of flooring that is demanded by the market, and it is not only an advantage to the manufacturers, but it is also an advantage to the consumer. *If we did not do that there would be times when there would be a great shortage of some particular kind of flooring, naturally the price of that would be high and the consumer would suffer, but from the fact that we have that information it gives us a chance to keep our stock pretty well balanced with the requirements of the market;* also that same report gives us the prices being obtained by other members of the association, although that information is generally about two weeks old when we get it, it is valuable to us." (Vol. I, p. 252.)

Mr. Shepeck testified as follows:

"The statistics issued by the Association are a big benefit to us. The information that we gather from these statistics as to stocks on hand, production, new orders booked, also the weekly sales reports, are of considerable benefit to us. They enable us to form an opinion as to what the conditions are and assist us in intelligently handling our flooring business.

Q. How do you handle your flooring business, whether you consider present prices or future prices, or both?

A. We are concerned with both.

We try to figure out what conditions are going to be for thirty or sixty days ahead, because flooring prices in our experience, have fluctuated very fast and to a very large amount, and we have gone through some years when we felt we should get so much money for our stock and we would hold it instead of cutting two dollars, and inside of thirty days we would cut ten, and we are trying not to have that recur if we can. We had that happen

thirty days ago, to give an example, with factory flooring; we were asking, I think, $51.00 at Wells for factory flooring and were piling it up. We went out and took two or three big orders one day from one of the members of the Association at $6.00, I think, under that price. We felt that inside of thirty or sixty days factory flooring would be selling for $40.00, and we would rather cut five or six dollars then, than to cut ten or fifteen dollars in thirty days, based on the sales report. We took one large order from California at a cut of $4.50 from that price, but that did not make us feel bad because we were satisfied with the price obtained.

Q. Because you thought the future condition would make the price of flooring lower still?

A. Yes, sir.

Q. Those statistics set forth in the weekly reports and other reports made by the Secretary do enable you then to form an opinion based upon a certain amount of facts which are gathered as to what future conditions may be?

A. Yes, sir.

Q. And it gives you a good idea of what present conditions are?

A. *The volume of the sales is really more interesting to us, I think, than the prices.*

Q. *Why is that so?*

A. *The information we get from the sales reports as to prices is a little too old to do us much good; we generally have it beforehand.*" (Vol. I, p. 264.)

Mr. Hodges, of Tupper Lake, New York, testified as follows:

"I think the statistics that are furnished our Company by the Secretary of the Maple Flooring Manufacturers Association are very valuable.

A. The weekly reports are valuable as showing a trend of the market, whether the prices are going

up or going down, and another valuable feature is the amount of sales, that enable us to know approximately how much of each grade for instance has been sold within a certain time.

Q. Do you regard the prices there more or less important than the statistics with regard to volume?

A. I think the statistics in respect to volume are fully as valuable as the price statistics, because oftentimes it does not matter to me what somebody in Michigan is getting in prices; if I know my competitor who lives eleven miles from me is getting two dollars less than my figures show, that would influence me more than what I might see in the sales reports.

The Court: And in that same connection I take it that the competition which you meet from your locality, and when I say locality I mean that part of the country, is more potent than the competition which you meet from Wisconsin or Michigan.

A. Yes, sir, because—

The Court: That is because of the freight rates, isn't it, and the difference?

A. Yes, and because those people are—their customers in many instances are my customers. They live in the same territory and they ship to the same points.

Q. Well how old are these statistics when they are received by you.

A. Well usually about ten days or two weeks.

Q. And I believe you say you kept in constant touch with respect to prices, etc., in Boston, New York and Philadelphia, by means of correspondence and telephone?

A. We have representatives in all those markets that keep us informed constantly by phone and letters.

Q. You say they are about two weeks old when you get them?

A. Ten days to two weeks. They are sent in for instance Saturday and Mr. Keehn compiled them and they are sent out along the middle of the week something or in there; usually about ten days or two weeks after the transactions." (Vol. I, p. 291.)

Also:

"A. Well we are in daily correspondence with the big jobbers down there and we get information from them and very often as to what others are quoting. If our prices are too high they don't hesitate to tell us so, and tell us why we can't get the business, and whenever I go down there why I go to see them and talk these matters over with them, and they usually show their cards on the table and tell me what prices I have got to meet in order to get certain business. That is the way I go at it usually." (Vol. I, p. 289.)

With respect to the matter of prices Mr. Hodges gave an answer, which cannot fail to impress anyone on account of the ability and frankness which it evidences:

"Q. Now do you regard the information contained in these reports sent out by the Secretary of the Association as of major importance or as controlling in what you shall do with respect to your own prices or production?

A. No, sir.

Q. What do you regard them as?

A. Well I think the most potent factor is the condition of my stock at the time.

Q. Do you regard the statistical information as one factor, if you don't regard it as of controlling importance? I would assume then you would regard it is one of many factors.

A. Yes, sir.

Q. In looking over those sales reports what would you take into consideration, *what else would you take into consideration in determining what your own prices would be?*

A. *Well, in the first place I think I would take into consideration the economic situation, that is, the general trend of the market, whether it was up or down, and then I would take into consideration my own particular stock conditions. If I had a surplus of some one item and wanted it moved, why I would be apt to make a lower price, particularly if I saw that some one else was making a lower price on that same item. On the other hand, if the general trend of the market was upwards and I had no accumulation of that stock and I saw somebody was getting more money than I was, it may tend to influence me to raise my prices.*

I would also consider my own budget at that time, our plan of operation of the flooring department, whether we were running nights and days or days only or expected to shut down for repairs or anything like that. I would also consider the labor conditions at our plant and our plan of operations for our logging department, political conditions, etc. The mere fact that someone else was charging higher prices or lower prices than I had been would not automatically cause me to lower or increase my prices. I would consider my own stock and the other conditions above mentioned. The fact that someone else was charging higher or lower prices than I was would be considered as one factor and would be given consideration by me." (Vol. I, pp. 292-3.)

Mr. Ralston testified that the statistics were not so valuable as they might be, *for the reason that there were so many nonmember manufacturers.* (Vol. I, p. 324.) With respect to the *prices* shown in the Weekly Sales Reports he testified he did not think they were *"of much value, and I never considered them; in fact, some weeks I never even bothered to look them over or check them up."* (Vol. I, p. 324.) Also that the figures with respect to production, stocks on hand, etc., were more important, because he had the information as to prices from his representatives before he received the Weekly Sales Reports. (Vol. I, pp. 326-7.)

He also testified as follows:

"Q. State whether or not in the conduct of the flooring business, quotations may be made, especially to distant points and the order will not be accepted, or a contract come definitely into existence until maybe a month or two or three weeks after that.

A. That is very often the case. We make a price that goes to, perhaps, a contractor that is just bidding on a job, putting in his figures, and it may be a month, before it is closed. You may say that you will hold that price open for thirty days or such time as he knows he is awarded the contract?

Q. You say that is quite usual?

A. It is so far as we are concerned. I know it has happened a great many times, with us. I can't say as to others.

Q. So if a sale were reported as being made, we will say on December second, it might reflect prices thirty days or six weeks before?

A. Absolutely, in many cases I think it would.

Q. In that respect, the statistics were not so good as they might be?

A. No." (Vol. I, p. 326.)

For the other factors Mr. Ralston took into consideration when making his prices, see Vol. I, p. 327.

As to how members fixed prices; that there was no agreement as to prices, that they never regarded any data distributed by the present Association as in any wise limiting their discretion; that they ran their respective businesses just as they pleased, etc., etc., see Vol. I, pp. 198-201, 211-2, 213, 222, 227, 229, 230-1, 237-8, 243-4, 238, 259, 263-4, 268-285, 288, 290, 292, 303-318, 322, 326-7, 335, 385, 388-9, 389.

And the testimony of *buyers* that individual stock conditions of members control in the making of prices (page 73, *supra*) corroborates the testimony of members.

IX.

A comparison of the prices obtained by members with the Average Costs (prepared by the present Association) and with the Tables of Values (issued by the Association immediately preceding) conclusively demonstrates not only that the Government's charge that there was a uniformity of prices is not true, but that neither the Average Costs nor the Tables of Values were used by members, either as minimum prices, or as a basis for determining individual prices.

It will be recalled that the Government charged that both before and after the organization of the present Association on March 29, 1922, the defendants by means of surveys of costs determined minimum prices or so-called "average costs" and recommended that the defendant corporations should not sell flooring at prices below said minimum prices or below the so-called "average costs." That the defendants accepted and acted upon said recommendations "and have concertedly established and maintained as the basis of their individual selling prices, the minimum prices or so-called average costs"; that by issuing the freight rate books, which contained average costs, delivered cost charts, freight rates, etc., and charging freight from Cadillac, Michigan, regardless of the point from which flooring was shipped, *and by maintaining uniform rules with respect to commissions*, terms of sale, etc., the defendants "have always maintained, and they still maintain, a practical uniformity between themselves" of "*net delivered* prices" and "net f. o. b. selling prices." (Vol. I, pp. 6-7.)

During the hearing of the cause a great many of the Weekly Sales Reports issued by the defendant Association, and its predecessors, were introduced in evidence

by the Government. On the last day of the hearing the Government also introduced in evidence a series of compilations which purported to be based upon said Weekly Sales Reports for the years 1920-1922 inclusive and the first six months of 1923. (Gov. Ex. 79, Vol. IV, pp. 583-796; Vol. II, pp. 847-859.)

The Government's witness, Mr. Lewis, testified that he and others had gone over all (with a few exceptions) the Weekly Sales Reports above mentioned and had compiled therefrom three statements which contained all reported sales of 13/16" x 2¼" Clear, No. 1 and Factory maple flooring.

The witness testified that the Weekly Sales Reports showed the date of the several sales, the quantity, the size, grade and wood—maple, beech or birch—the delivered price, *average* rate of freight, and the commissions, if any. He stated that he had computed the amount of freight by using the *average* freight rate; and that by deducting from each delivered price the amount of freight and *the commissions*, if any, he had thereby arrived at the *"Net Factory Price."* (See Vol. III, pp. 372, 390 for specimens of Weekly Sales Reports, and Vol. IV, p. 583, for specimen page of Mr. Lewis' compilations.) Having thus arrived at the *"Net Factory Prices,"* Mr. Lewis began a series of comparisons of the Average Costs with the *net factory prices* for the 13/16" x 2¼" Clear, No. 1 and Factory maple flooring (or 70 per cent of the flooring output of Association members), but he was able to complete the comparisons for the 13/16" x 2¼" Clear grade only, or but 35 per cent of the output. (See page 44, *supra.*)

But in making the comparisons, for the purpose of arriving at the percentages of flooring which were sold

below, at or *above* the average cost, respectively, Mr. Lewis did not use the *"Net Factory Prices."* He deducted the *average* freight from the delivered prices, but *did not deduct the commissions.* (Vol. II, p. 851.) In other words, after deducting both the average freight and the commissions in order to arrive at the "Net Factory Prices," he added to the "Net Factory Prices" the commissions for the purpose of obtaining "Net Factory Prices" to compare with the Average Costs! These comparisons will be found on pages 583, 586, 589, 591, 593, 595, 597, 599, 601, 603, 605, 607, 609, 612, 614, 617, *et seq.*, Vol. IV. They purport to be based upon the data immediately following each of the pages above mentioned.

At the hearing there was much loose talk by counsel (including counsel for defendants) and the Court as to whether the commissions should or should not be deducted. (Vol. II, pp. 850-859.)

Of the data above mentioned only those which deal with Weekly Sales Reports dated November 19, 1921, to June 30, 1923, inclusive, have been printed.

Before discussing the data, we must first determine whether in arriving at the "Net Factory Prices" the commissions allowed (as well as the average freight) shall or shall not be deducted from the delivered prices.

During the hearing the following colloquy occurred:

> **"Mr. Thompson:** In other words, it seemed to us the theory was that the commission was practically absorbed as a part of the selling expense.
>
> **The Court:** I don't know that it makes very much difference except in this: that in any event it is against the Government. This method of computation [failure to deduct the commissions] is against the Government.

Mr. Johnston: On one theory, but in their favor on another. It is against them on the theory of the Minimum Price, but it is in their favor on the theory of variation, because the prices show greater variation if you take off the commissions.

Mr. Fowler: *We are not insisting on uniformity.*

Mr. Johnston: Well, you couldn't on those figures.

The Court: Let us proceed." (Vol. II, p. 857.)

The District Court was of the opinion that the commissions should be deducted. Also that if the minimum price plans permitted members to allow a commission not exceeding $2.00 per M. feet the correct minimum price was really $2.00 less than the formal minimum price.

However, the compilations and the comparisons appearing in the printed record begin with *the week ended November 19, 1921.* And long before that date both the minimum price plan and the minimum price basis had been formally annulled. The latter was abandoned on *February 4,* 1921, immediately after receipt of Mr. Nebeker's opinion that it was unlawful. (Vol. IV, pp. 799-807; Vol. I, pp. 148-9.) The last minimum price plan passed out of existence on February 12, *1920.* (Vol. IV, p. 529; Vol. I, pp. 144-6.) Hence in determining whether the commissions should be deducted in order to arrive at the "Net Factory Prices," as well as in determining with what such prices shall be compared, neither the minimum price plan nor the minimum price basis can be logically considered.

Naturally the Articles of Association in force during the latter part of 1921, and the subsequent articles should be examined.

The Articles of Association in force during 1921 were those dated July 1, 1919, which were to have continued in force until July 1, 1922, but which were abandoned and discontinued on December 31, 1921. (Vol. I, pp. 143-146; Vol. III, pp. 37-44.)

The Articles of July 1, 1919, throw no light on the inquiry. Recourse must therefore be had to the evidence as to the practices that obtained during the latter part of 1921.

As shown on page 109, *supra,* there appeared in one of the Freight Rate Books during 1921 a statement that a commission not exceeding $2.00 per M. feet might be allowed. But that statement is dated *January 6, 1921.* (Vol. III, fol. p. 695.) And the Minimum Price Basis is also dated *January 6, 1921.* (Vol. III, p. 92.) And the statement in the freight rate book is a copy of a part of Article VI of the Minimum Price Basis. (Vol. III, p. 94.) Manifestly, when the Minimum Price Basis was annulled on February 4, 1921 (page 339, *supra*), the foregoing rule with respect to commissions was annulled.

Furthermore, the undisputed evidence shows that commissions always varied, and that each member did as he pleased in selling his flooring. (Pages 109-112, *supra.*)

It therefore seems to us that for the year 1921 what Mr. Lewis calls "Average Cost" should be compared with the delivered prices, less average freight, less commissions allowed.

In other words, the "net factory prices," or what the *seller received,* should be compared with the so-called "Average Cost."

The same method should be followed in making comparisons for the period beginning January 1, 1922, and ending March 29, 1922, (the date of the organization of the present Association) inasmuch as statistical activities were continued during that period.

As heretofore explained, the present Association has never had any rules or issued any data with respect to commissions. (Pages 109-112, *supra.*) The Surveys of Costs of the present Association differ from the Surveys of Costs made by previous Associations.

The elements contained in the present average costs have been justified item by item on pages 244-280, *supra.* As there pointed out the Government offered no proof that the test runs were not honestly and fairly conducted, or that the prices of the rough lumber were not accurate, or that the average manufacturing and marketing costs were not accurately ascertained. The defendants' proof as to the accuracy of all these data was undisputed.

Other than the mere fact such data were distributed to the members, there is no proof whatsoever that there were any recommendations as to prices during the existence of the present Association. The proof is undisputed that each member is free to do just as he pleases. Besides advertising and protecting and guaranteeing the quality of the flooring sold by members, the present Association's work is purely statistical.

It therefore follows that the *average costs* of the present Association must be accepted as accurate; and that the average costs must be compared with the "Net Factory Prices," which must be ascertained by deducting from the delivered prices, both the average freight and the commissions.

(Although the purchaser always deducted the *actual* freight, the average freight was deducted by Mr. Lewis; and while that does not always agree with the actual freight, the difference is not material for purposes of comparison.)

As heretofore pointed out, the Government's theory is that the average costs, the *average freight* and the *uniform* rules as to *commissions* resulted in a practical uniformity of both "f. o. b. selling prices" and "*net delivered prices.*" In other words, the average costs were minimum prices, and *both* the average freight and uniform *commissions* were *factors which resulted in the uniformity of* "f. o. b. selling prices" and "net delivered prices." If the *average* freight is deducted from the delivered prices of the various members to points throughout the United States why shouldn't the commissions be deducted?

What practical difference is there between a sale at $100.00 per M feet, no commission, and a sale at $102.00 per M feet, subject to a commission of $2.00 per M feet? And of course, where two members sell at $100.00 per M feet, the one that allowed a commission received that much less than the one who allowed none.

Moreover, as we have seen, there was no uniform practice followed by any member, much less by all members, with respect to the allowance of commissions. Net prices were frequently quoted; and the commissions, when allowed, ranged from $1.00 to $4.00 per M feet. The allowance of commissions is merely a means of meeting competition or reducing one's price. (Vol. II, p. 538.) In order to reduce to a common basis for purposes of comparison, the delivered prices made by different members in numerous markets, both the freight and such

commissions as were allowed must, of course, be deducted. Only by the use of such a method can the "Net Factory Prices" of all members be ascertained.

It should also be pointed out that there cannot be a uniformity of "net delivered prices" and a uniformity of "net f. o. b. selling prices," so far as flooring sold delivered at point of destination is concerned. This, for the reason that the freight rates from the different mills vary. It is possible to have a uniformity of prices f. o. b. cars mills, or a uniformity of delivered prices in a given market or in markets taking a common freight rate.

The Government charges that there was a practical uniformity of "*net* delivered prices." It is certain that such prices cannot be ascertained by deducting either the actual or the average freight from the delivered prices. When the freight is deducted, the result is (or may be) the price, *not at point of delivery* or destination, but f. o. b. cars, mills! It *cannot* be the *delivered* price, whether net or otherwise.

Mr. Thompson, of counsel for the Government, stated in open court that in the statements compiled by Mr. Lewis only the sales f. o. b. cars at destination were taken from the Weekly Sales Reports. (Vol. II, p. 858.) Reference to the compilations will show that Mr. Thompson was mistaken. Retail mill sales of small quantities are included. Of course, these sales are usually made at much higher prices than sales of larger quantities.

Although numerous errors occur in the comparisons made by Mr. Lewis, we have compiled his figures just as they are, and have also prepared an accurate compilation of the supporting data identified by Mr. Lewis

and introduced by the Government. In our statement the average freight and the commissions have been deducted from the delivered prices. *Both the figures of Mr. Lewis and our own figures are combined in one statement for purposes of comparison.* (Appendix T.)

By referring to the Appendix the Court will observe that on November 17, 1921, what Mr. Lewis calls the "Average Cost" of 13/16" x 2¼" Clear maple flooring was $90.00 f. o. b. cars flooring mills, or what was then called "Cadillac, Michigan, Basis." The average cost of such flooring had been $90.00 since September 22, 1921. (See Gov. Ex. 28-N, Vol. III, p. 315.)

For the week ended Nov. 19, 1921, the Government's own figures show that there were 66 sales (or 94.2 per cent of the total quantity of feet sold during that week) at *less* than $90.00; 5 sales (or 5.1 per cent) at $90.00; and 2 sales (or 0.7 per cent) for more than $90.00. The corrected figures show 68 sales (or 97.3 per cent) below $90.00; 3 sales (or 2.1 per cent) at, and 2 sales (or 0.6 per cent) for more than $90.00. Also that the prices ranged from $80.00 to $96.50 per thousand feet.

The range for the next week was from $78.50 to $103.25; for the next, from $71.25 to $96.50; for the next from $79.50 to $103.25; for the next from $80.00 to $99.00, although the average cost was still $90.00. The percentages of the total quantity of feet sold below $90.00 for the weeks last above mentioned were 93.3, 75.6, 95.5 and 81.4 respectively. The percentages at $90.00 were 2.8, 2.3, 0.4 and 12.6, respectively, whereas the percentages above $90.00 were 3.9, 22.1, 4.1 and 6, respectively.

We set forth in the margin a summary of our figures.[56]

It should also be observed that Mr. Lewis continued to compare the sales made by members after the organization of the present Association on March 29, 1922, with the so-called "Average Cost" ($90.00) of November 17, 1921.

The first *average costs* calculated by the present Association were dated May 31, 1922. (Gov. Ex. 52-II, Vol. IV, pp. 461-2.) The average cost of 13/16" x 2¼"

[56]

SUMMARY.

	Compared with Average Cost	Percentage of Total Number of Sales	Percentage of Total Feet	Weekly Average Percentage of Feet
1921 (5 weeks)	Below	81.3	89.0	88.6
	At	5.9	2.9	4.1
	Above	12.8	8.1	7.3
		100%	100%	100%
1922 (51 weeks)	Below	64.9	73.9	72.9
	At	10.4	6.6	6.2
	Above	24.7	19.5	20.9
		100%	100%	100%
1923 (26 weeks)	Below	63.9	70.6	61.9
	At	8.9	6.8	7.3
	Above	27.2	22.6	30.8
		100%	100%	100%
Total Averages (82 weeks)	Below	65.6	73.8	70.4
	At	9.7	6.4	6.4
	Above	24.7	19.8	23.2
		100%	100%	100%

Clear maple flooring "f. o. b. cars at Flooring Mill" was also $90.00, on May 31, 1922. (Vol. III, pp. 881-2.)

Mr. Lewis was very unfair in compiling his figures for the weeks ended September 30, October 7, October 14, October 21, and October 28, 1922, in that he compared the prices during those weeks with the *average costs* obtained on *October 25, 1922,* or $95.00, instead of $90.00. The market had been steadily advancing, and

by using $95.00 Mr. Lewis was able to show a greater number of sales *at* the (nonexistent) average cost of $95.00, and thus support to some extent the utterly discredited theory of the Government that the *average cost* was a minimum price, or a recommended price, and not a *bona fide* attempt to arrive at the *average cost* of manufacturing and marketing such flooring. In compiling our figures for the weeks above mentioned, we also used $95.00 just as Mr. Lewis did.

It should also be observed that the average costs follow the market, and that the prices do not follow the average costs. This corroborates Mr. George W. Keehn's testimony that calculations with respect to average costs (based upon test runs) are made from time to time after changes either in the prices of rough lumber or in manufacturing and marketing costs. (Page 300, *supra*, and Vol. I, p. 110, fol. 196.)

The prices shown in this appendix should also be compared with defendants' Grant Keehn's Exhibit 24, Appendix Q, which compares the index of the prices of The Product with the indices of Unfilled Orders and Stocks on Hand. In doing this the Court should also bear in mind the evidence that the demand for the 13/16" x 2¼" Clear maple flooring is usually much greater than the demand for other grades or sizes of maple flooring. Also that ordinarily the variation in the prices for 13/16" x 2¼" Clear maple flooring is not so great as the variation in the prices for other grades and sizes.

In order that the Court might have additional data, we caused the Clerk to print from certain Weekly Sales Reports all the data in said reports with respect to sales of some other grades and sizes. (See stipulation, Vol. V, pp. 975-977.) The additional matter is contained in the Additional Exhibits, pages 1-48. (Certain minor errors appear in the Additional Exhibits.

Such errors do not affect any of our Appendices, for the reason that they are based on the original exhibits in the Clerk's office.)

In Appendix U we have deducted the freight and commissions, and have compared the "Net Factory Prices" with the average costs. For instance, page 1 of Appendix U shows (among other things) all the sales of 13/16" x 2¼" Factory maple flooring made during the week ended March 4, 1922. If Mr. Lewis's theory be adopted, the Average Cost of such flooring was then $25.00 per M. feet f. o. b. cars flooring mill. During the week in question, the prices ranged from $16.25 to $37.50. Nineteen sales, (91 per cent of the total quantity of feet) were at prices less than $25.00; 1 sale (or 5 per cent of the total quantity of feet) was at $25.00; and only 4 sales (or 4 per cent of the total quantity of feet) were at prices exceeding $25.00.

As heretofore pointed out, the costs of members located at Chicago, Grand Rapids and St. Paul are higher than the costs of other members—higher than the average costs—and the prices obtained by members located in the cities above mentioned are usually the highest.

Appendix V contains the figures for all the other weekly sales reports that appear in the printed record.

We set forth on the attached sheet the final figures shown on page 3 of Appendix W. (pp. 62, 64.) In Appendix W we have worked out in detail along the lines indicated on the attached sheet the figures contained in Appendices U and V.

All these figures conclusively demonstrate the utter absurdity of the Government's contention (1) that there was always uniformity of prices; (2) that the average costs of the present Association are recommended or

minimum prices; (3) that the members make prices based upon the average costs, irrespective of their individual costs.

In the District Court's opinion there appears the following assertion;

> "Thus, by the simple process of adding together the 'average cost' of the product, so ascertained and furnished, and the customary percentage of the net profits, each member of the Association, taught by long experience and example, is enabled to, and undoubtedly is expected to, convert the present somewhat vague and concealed price plan into the old definite but obnoxious minimum Price Plan." (Vol. I, pp. 56-7.)

There is not a word of proof in the entire record that any member ever used such a method in determining his prices, or that any member was expected to do so.

And again.

> "While the evidence shows that, at all times, there has been *some* spread in the prices demanded and obtained by the different members of this Association, it also shows that both quoted and accepted prices have *rarely* been below those fixed in the earlier 'Minimum Price' plans and *suggested* in the later 'average cost' plan." (p. 59.)

Only by giving *some* the current slang meaning would the first part of the court's statement above quoted accord with the facts shown by the record. And appendices T, U and V conclusively disprove the latter part of such statement.

As to the price-spreads in other lines of industry, see Vol. II, pp. 539-556, 557-560.

The undisputed proof was that the profits of representative members were very modest. (Vol. II, pp. 785-787.) See in this connection, *Principles of Economics* (Taussig) Vol. II, pp. 439-440.

X.

The present Articles of Association do not even attempt to regulate production, sales, prices or to otherwise limit the discretion of members in the manufacture or sale of flooring. Except the agreement to manufacture flooring of standard quality and to report past transactions each member is left wholly free to conduct his business as he pleases. There is no proof of any other agreement, express or implied, among said members.

In view of the undisputed proof that the PRICES of the members of the present Association for maple, beech and birch flooring

(a) have always been FAIR AND REASONABLE,

(b) were generally lower than the prices of nonmembers, although the flooring manufactured by members is superior to that manufactured by nonmembers,

(c) were never uniform, and were often below the costs of production of both members and nonmembers,

and that the flooring manufactured by members is in all respects satisfactory to the public, it necessarily follows that neither the contract nor the conduct of the defendants has UNREASONABLY restrained interstate trade or commerce.

Since the organization of the present Association on March 29, 1922, the defendants have not done anything except what was authorized by the Articles of Association which were dated back to January 1, 1922. There is no proof whatsoever of any agreement, combination or conspiracy by or among the defendants subsequent to March 29, 1922, other than the articles above mentioned and what was done pursuant thereto.

Aside from the usual provisions for the conduct of the Association, the articles provide for merely the standardization of flooring, the maintenance of an inspection service and the collection and distribution of statistics.

Except the agreement to manufacture flooring of standard quality, each member was left absolutely free to conduct his own business as he pleased. There was no division of territory; there was no restriction placed on production, neither was the discretion of any member fettered in any way whatsoever with respect to when, where, how, to whom or at what price he should sell his flooring. The parties to such agreement were to conduct their respective businesses as they pleased, and to report past transactions. In other words:

1. The present Articles of Association do not *expressly* limit production, fetter competition or otherwise directly interfere with the discretion of the parties thereto in the manufacture or sale among the several states and territories of maple, beech or birch flooring. (Neither is there any proof of any other such agreement since the organization of the present Association.)

The other essential facts may be stated thus:

2. The undisputed proof showed:

(a) That the prices of the members of the present Association for maple, beech and birch flooring were and always had been *fair and reasonable.* (Pages 54-61, *supra.*)

(b) That such prices were generally lower than the prices of nonmember manufacturers. (Pages 116-143, *supra.*)

(c) That the prices of the members of the present Association had an unusual range, and were very often below the costs of production of both members and nonmembers. (Pages 116-143, *supra.*)

(d) That each member in the exercise of his sole discretion and in view of his own stock conditions and financial needs determined for himself at what prices he would sell his flooring. (Pages 335, 72-3, 322-334, *supra.*)

(e) That the flooring manufactured by the members was superior to that of nonmembers, and was in all respects satisfactory to the public. (Pages 47-54, *supra.*)

(f) That the inspection service was honestly and efficiently conducted. (Pages 47-54, 188, *supra.*)

In view of the *nature of the said agreement,* and the absence of any proof of concert of action with respect to prices, how can it be reasonably said that there has been an *unreasonable* restraint of interstate trade or commerce when the undisputed proof shows that the *prices* of the members of the present Association for maple, beech and birch flooring have always been *fair and reasonable?*

An entirely different question might be presented by an express agreement as to prices, even though such prices were fair and reasonable. We do not care to discuss such a question.

But both historically and logically, there can be no doubt that *in the absence of an agreement as to prices or of an agreement which limits the discretion of the parties thereto with respect to production or sale,* there can be no *unreasonable* restraint of trade or commerce if the prices of such parties are *fair and reasonable.*

In other words, our contention is that the agreement (including in such term the conduct of the members of the present Association) in this case is not unlawful *per se,* and that the proof shows that the execution of such agreement has not injured the public. That if such agreement had not been in operation, speculation or *a priori* reasoning as to its *probable* effect upon interstate trade and commerce would be proper. But where it has been in operation for more than two years, the *results* are the only proper criteria by which it can

be tested. And that given such agreement and uncontroverted proof that the prices of the defendants have at all times been *fair and reasonable*, the assertion that there has been an *unreasonable* restraint of interstate trade and commerce is manifestly untenable.

ENGLISH STATUTES.

In

2 Holdsworth's History of English Law (3d ed.), pp. 459 *et seq.*,

it is said:

> "The Statutes of Labourers bear witness to far-reaching economic and social changes. These changes might perhaps have proceeded more silently and have left fewer marks upon the Statute Book had it not been for the Black Death (1349), which swept off nearly half the population. The commutation of the labour services of the villein for money rents, and the new practice of cultivating the demesne farm by hired labour, received a sudden check. Landlords could get neither tenants nor labour, and masters could not get artificers. Labourers of all kinds found themselves in a position to exact what wages they pleased. At the same time the rise of this class of free labourers presented for the first time in its modern shape the problem of the pauper—the man who cannot or will not maintain himself by his work.
>
> The statutes of Labourers were passed to deal with this new situation. They applied to hired servants—not to tenants who held land and occupied themselves thereon. *It is to these laws, as developed by subsequent legislation, that we must look not only for the beginnings of the law as to master and servant, but also for the origins of ideas which in later days gave birth to the Poor Laws and the Combination Laws.* The principles which underlay them were mainly four: (1) All persons coming within the statutes and able to work, must do so. (2) They

must work at a *reasonable* rate. Later statutes recognized that this reasonable rate could not be absolutely fixed, but must vary with the price of the necessaries of life. *But both the wages of labour and the price of necessaries must be fixed at a reasonable rate.* (3) A refusal to work for this *reasonable* wage by those who were able to do so was a criminal offence. It was also an offence to give more wages than those fixed by law; and proceedings, which, like the writ of trespass, partook both of a criminal and of a civil character, could be taken against a servant who left his master's service and against a person who enticed him away. (4) Only the impotent poor were allowed to solicit alms.

The statutes themselves were numerous and detailed. They enumerated many different kinds of labour, and many different kinds of workmen — shoemakers, carpenters, tilers, masons, carriers, and, by later statutes, even chaplains."

The number of such statutes cited by Cunningham in his *Growth of English Industry and Commerce* will astonish most persons. The dominant idea running through all of them is the protection of the public weal by requiring laborers to work for a *reasonable* wage, and *a very large number of craftsmen, purveyors and others to sell* their *goods* or services at *reasonable* prices.

Such statutes and similar regulations by the gilds persisted till the close of the 18th Century[57] In Volume 1 (Part II) of Ashley's *Introduction to English Economic History and Theory,* pp. 168-9, it is said:

"A tree is known by its fruits; and by its fruits the Gild System may well be judged. Within it grew up a wide middle-class of opulent traders and comfortable craftsmen; and it was the appearance of this class by the side of, and, in a sense, between,

[57]Unwin's, *The Gilds and Companies of London.*

Cunningham's *Growth of English Industry and Commerce.*

the lords of the soil and the tillers of the soil that led to the transformation of feudal society into the society of modern times. This middle class, it has become a commonplace to say, has been the peculiar representative and introducer of modern ideas; but such a class had no existence when the gilds first arose; and although it is conceivable that under a strong government it might have arisen without the support and the restrictions of the gilds, still it is to be remembered that as a matter of fact strong government did not exist, and that it was under the Gild System that the 'bourgeoisie' actually came into being. *Then, again, it is the merit of the Gild System that it did for a time, and in a large measure, succeed in reconciling the interests of consumers and producers. The tendency of modern competition is to sacrifice the producers; to assume that so long as articles are produced cheaply, it hardly matters what the remuneration of the workmen may be; but the gild legislation kept steadily before itself the ideal of combining good quality and a price that was fair to the consumer, with a fitting remuneration to the workman.* The method by which this was attempted could not be permanent; it broke down owing to material forces as well as to change of opinion. *But it was something that such an ideal should be aimed at; and the endeavour to view the processes of production and sale in their relation to general social well-being conveys a perpetual lesson to modern economists.*"

An ancient analogue of the statutes providing for reasonable prices is the "just price" doctrine of *Corpus Juris Canonici*[58]. The Physiocrats also believed in a *bon prix*. And in modern times there are the statutes in both England and the United States that provide for the fixation and enforcement of minimum wages[59], and of *just and reasonable* rates by common carriers and others.

ENGLISH DECISIONS.

In

Darcy v. *Allein* (The Case of Monopolies), 11 Co. Rep. 84 b,

it was urged that there were "three inseparable incidents to every monopoly," viz: Inferior goods at *increased* prices and displacement of labor. (P. 87a.)

The idea of *reasonableness* of prices is everywhere present in the English cases. Even *express agreements* as to prices are upheld if the prices are *reasonable.*

27 Halsbury's *Laws of England,* 527-9, it is said:

> "Where an agreement, taken together with all its surrounding circumstances, including agreements made between the parties to it and third persons, discloses an attempt on a very large scale to obtain the control of a market, and particularly of a market in one of the necessaries of life, *and to keep up prices at an artificial figure, by means of restrictions which are more stringent than is reasonably necessary for the protection of a particular or local trade, to the obvious detriment of the public,* such an agreement will not be enforced. *A fortiori* is this the case when there is anything in the methods adopted which tends to mislead the public.
>
> Such a contract is merely unenforceable: it is not unlawful in any criminal sense, nor does it give any cause of action to a third person injured by its operations. The court takes cognizance of its illegality though it is not pleaded.
>
> *It is, however, no monopoly if the control, being lawfully and fairly obtained, is limited to particular persons or places; and an agreement among traders to prevent competition among themselves and even to keep up prices is not necessarily invalid, if it is carried out by provisions reasonably necessary for the purpose and not detrimental to the public.*"

In

Attorney-General v. *Adelaide Steamship Co.* (1913), 109 L. T. R. 258,

it was said:

"The chief evil thought to be entailed by a monopoly, whether in its strict or popular sense, was *the rise in prices* which such monopoly might entail. *The idea that the public are injuriously affected by high prices has played no inconsiderable part in our legal history. It led, no doubt, to the enactment of most, if not all, of the penal statutes repealed by 12 Geo. 3, c. 71. It also lay at the root of the common law offence of Ingrossing, which, according to Hawkins' Pleas of the Crown (Vol. 1, book 1, c. 29, sect. 9), consisted in buying up large quantities of wares with intent to resell at unreasonable prices. It influenced the courts in their attitude towards contracts in restraint of trade.* Although, therefore, the whole subject may some day have to be reconsidered, there is at present ground for assuming that a contract in restraint of trade, though reasonable in the interests of the parties, may be unreasonable in the interests of the public if calculated to produce that state of things which is referred to by Lindley and Bowen, L. J. J. as a pernicious monopoly—that is to say, a monopoly calculated *to enhance prices to an unreasonable extent.* In this connection it should be noticed that the Act of 7 & 8 Vict. c. 24, which abolished the common law offence of engrossing, does not apply to the States of the Commonwealth, and that monopolies in the popular sense of the word are more likely to arise, and if they do arise, are more likely to lead to prices being *unreasonably* enhanced in countries where a protective tariff prevails than in countries where there is no such tariff. *It is, however, in their Lordships' opinion, clear that the onus of showing that any contract is calculated to produce a monopoly, or enhance prices to an unreasonable extent, will lie on the party alleging it, and that if once the court is satisfied that the restraint is reasonable as between the parties this onus will be no light one.*"

See

F. Cade & Sons v. *Daly & Co.*, 1 I. R. 306,

where a manufacturing association had agreed upon a scale of prices for beer, stout, etc., within a radius of sixteen miles from the post office Cork, with two exceptions. The agreement was to run from year to year, terminable upon a month's notice before expiration of each current year. The contract was upheld. The court said:

"In point of fact, when the facts of that case are closely examined, the judgment delivered in the Court of Appeal affirms what I have always thought was the law, namely, *that a covenant between persons interested in a particular trade for the purpose of keeping the trade as far as possible among themselves, and perhaps incidentally of keeping up the prices, or, as I would prefer to put it, not cutting down the prices to a low level, is perfectly legitimate, provided that the parties to the covenant do no more than is necessary or reasonable to effect the object they have in view.* * * *.

This is a covenant of cooperation for what may be a brief period between a few local bottlers, operating within a distance of sixteen miles from the General Post Office in the City of Cork, subject to this important exception, that the towns of Midleton and Queenstown are excluded from the ambit of the covenant. To my mind, when the sphere of operations is 'cabined, cribbed, confined' within such limits of time and space, when there is no prohibition, and can be no prohibition, against outsiders coming in and competing against any one or all of the persons named as parties to the covenant, *the public, at all events, cannot suffer wrong.* The public can suffer no injustice, and, in the ordinary sense of the word, cannot be detrimentally affected. The arrangement seems in reality to have been found necessary by a few local bottlers to prevent some of their number obtaining an undue advantage during a short period by selling at unduly low prices. No one was compelled to execute the deed. But, as be-

tween the firms or individual traders who executed it, the deed prevented 'cutting.' A reputation for low prices once gained by a firm or individual trader sometimes lingers for a long time after normal trade prices have been adopted.

Having regard to all the facts and circumstances of this case, I am prepared to hold out merely that this contract is not *per se* unlawful, but that it is a legitimate and fair arrangement to which a Court of Equity can give effect without infringing upon the principles by which the court is fettered by authority. The prices, no doubt, are prices which impose the maximum prices as the minimum limit. That was stated in evidence, and not contradicted. In other words, the maximum prices which the signatories to the deed were in the habit of getting are the minimum prices set forth in the schedule to the deed. *But the evidence in the case satisfies me that all parties concerned, bottlers and their customers, considered the scheduled prices reasonably fair. How does this circumstance affect or injure the public?* Outsiders are absolutely free to compete, and if the scheduled prices are too high, the publicans can buy elsewhere. I do not think, then, that the prices can render this contract objectionable."

DECISIONS BY THIS COURT (AND OTHERS).

In

United States v. *Trans-Missouri Freight Association*, 166 U. S. 290,

an association composed of eighteen railroad corporations had agreed upon *rates* for all competitive traffic west of the Mississippi River. A majority of the court held that the contract was *reasonable*, but that the Sherman Act prohibited every contract in restrain of trade, whether reasonable or not. Mr. Justice White, with whom concurred Justices Field, Gray and Shiras, argued that inasmuch as the contract was *reasonable* it was not obnoxious to the Sherman Act.

The views of Mr. Justice White were subsequently adopted by this court in the Standard Oil case; and it is now the settled rule of this court that only contracts which *unreasonably* restrain interstate trade or commerce are obnoxious to the Sherman Act.

In the following cases *injury to the public* by means of charging *excessive prices* was emphasized:

United States v. *U. S. Steel Corporation*, 251 U. S. 417.

Montague & Company v. *Lowry*, 193 U. S. 38.

American Column & Lumber Co. v. *United States*, 257 U. S. 377.

Board of Trade of City of Chicago v. *United States*, 246 U. S. 231.

Standard Fashion Co. v. *Magrane-Houston Co.*, 258 U. S. 346.

United States v. *United States Steel Corporation*, 223 Fed. 55.

United States v. *E. I. Du Pont De Nemours & Co.*, 188 Fed. 127.

Manchester & Lawrence R. Co. v. *Concord R. Co. (N. H.)*, 9 L. R. A. 689.

As we have heretofore shown, the Articles of Association do not undertake to fix or regulate prices, limit production or in any wise restrict members as to when, where or to whom they shall sell their flooring. Each member is left absolutely free to determine his own prices, output, terms, customers, etc. There is no proof of any concerted action by members of the present Association with respect to production or prices. Contrary to the allegations of the petition, the undisputed proof showed great and unusual variation of prices. And in view of the undisputed proof that the prices of mem-

bers have always been *fair and reasonable,* how can it be reasonably said that there has been an *unreasonable* restraint of interstate trade or commerce?

This doctrine does not involve any price-fixing by courts.

The proof merely shows that there has been no violation of the Sherman Act. The petition should, therefore, have been dismissed. It is time enough to take action when there is an agreement or conduct which results in an *unreasonable restraint of interstate trade or commerce.*

Even if there had been proof of a much closer approximation of prices obtained by members to the Average Costs, the result would not be different. We may safely assume that (within limits) flooring can be produced more cheaply on a large scale than it can on a small scale. It is a commonplace of economics that given *a perfect competitive market* "the price of diminishing-cost goods tends to equal their cost to producers working on the largest scale justified by the existing conditions of demand."[60] As stated by Ashley: "It has been the doctrine of orthodox English economists that *normal value,* or price (*i. e.,* value expressed in terms of one particular commodity, gold, when the value of the latter itself does not fluctuate), is, in the case of the vast majority of articles, determined by cost of production." The proof was that the Average Costs were honestly

[60] Taylor's *Principles of Economics,* pp. 242-253, 347. Of course in economic theory the term *cost of production* includes ordinary profit upon the capital employed. (Ashley's *Economic History and Theory* (Part I), p. 139.) It is also true that a perfect competitive market never exists.

and accurately ascertained; also that the elements contained therein were proper. The prices of different members varied—*some above, a few at, and the great majority of them below the Average Costs.* Is it strange that there was some relation between the Average Costs and the prices?

To say that the Average Costs were minimum prices, or that there was any agreement, express or implied, that the Average Costs should be maintained, is, of course, to utter nonsense.

XI.

In addition to the undisputed proof that the prices obtained by members of the present Association had always substantially varied; that the prices of such members were fair and reasonable, and that although the flooring manufactured by such members was superior to that manufactured by nonmembers, the prices of members were generally lower than those of nonmembers, there was the following undisputed proof:

(a) by the Government's witnesses, including both competitors and buyers, that competition among the defendants themselves, as well as between the defendants and nonmembers, was strong, active and vigorous;

(b) by dealers, large and small, in the principal centers of consumption, that there was and always had been vigorous competition among the defendants;

(c) by dealers that the defendants were unusually fair, considerate and honorable in their dealings with purchasers of maple, beech and birch flooring;

(d) by economists and statisticians that prices of the said members had fluctuated in accordance with the laws of supply and demand.

No witnesses were produced by the Government to testify to fixation or uniformity of prices, unfair practices or restraint of trade.

In view of the foregoing facts, the Government's petition (under the decision of this court in the Steel Corporation Case) should have been dismissed.

For the evidence in support of the first paragraph of Point XI, see pages 116-143, 54-61, 47-54, *supra;* for that in support of (a), see pages 116-143, *supra;* for that in support of (b), see pages 121-143, *supra;* for that in support of (c), see pages 62-64, *supra;* for that in support of (d), see pages 207-229, *supra.*

In

United States v. *United States Steel Corporation*, 251 U. S. 417, 447-9,

the court said:

"From this digression we return to the consideration of the conduct of the Corporation towards its *competitors*. Besides the circumstances which we have mentioned there are others of probative strength. *The company's officers and, as well, its competitors and customers, testified that its competition was genuine, direct and vigorous, and was reflected in prices and production. No practical witness was produced by the Government in opposition.* Its contention is based on the size and asserted dominance of the Corporation — alleged power for evil, *not the exertion of the power in evil.* Or as counsel put it, 'a combination may be illegal because of its purpose; it may be illegal because it acquires a dominating power, not as a result of normal growth and development, but as a result of a combination of competitors.' Such composition and its resulting power constitute, in the view of the Government, the offence against the law, *and yet it is admitted 'no competitor came forward and said he had to accept the Steel Corporation's prices.'* But this absence of complaint counsel urge against the Corporation. Competitors, it is said, followed the Corporation's prices because they made money by the imitation. Indeed the imitation is urged as an evidence of the Corporation's power. 'Universal imitation,' counsel assert, is 'an evidence of power.' In this concord of action, the contention is, there is the sinister dominance of the Corporation—'its extensive control of the industry is such that the others (independent companies) follow.' Counsel, however, admit that there was 'occasionally' some competition, but reject the suggestion that it extended practically to a war between the Corporation and the independents. *Counsel say, 'They (the Corporation is made a plural) called a few—they called 200 witnesses out of some forty thousand customers, and they expect with that customer evidence to overcome the whole train of price movement shown since the Corporation was formed.'*

And 'movement of prices' counsel explained 'as shown by the published prices * * * they were the ones that the competitors were maintaining all during the interval.'

It would seem that '200 witnesses' would be fairly representative. Besides the balance of the 'forty thousand customers' was open to the Government to draw upon. Not having done so, is it not permissible to infer that none would testify to the existence of the influence that the Government asserts? At any rate, *not one was called,* but instead the opinion of an editor of a trade journal is adduced, and that of an author and teacher of economics whose philosophical deductions had, perhaps, fortification from experience as Deputy Commissioner of Corporations and as an employee in the Bureau of Corporations. *His deduction was that when prices are constant through a definite period an artificial influence is indicated; if they vary during such a period it is a consequence of competitive conditions.* It has become an aphorism that there is danger of deception in generalities, and in a case of this importance we should have something surer for judgment than speculation, something more than a deduction equivocal of itself even though the facts it rests on or asserts were not contradicted. If the phenomena of production and prices were as easily resolved as the witness implied, much discussion and much literature have been wasted, and some of the problems that are now distracting the world would be given composing solution. Of course competition affects prices but it is only one among other influences and does not more than they, register itself in definite and legible effect.

We magnify the testimony by its consideration. Against it competitors, dealers and customers of the Corporation testify in multitude that no adventitious interference was employed to either fix or maintain prices and that they were constant or varied according to natural conditions. Can this testimony be minimized or dismissed by inferring that, as intimated, it is an evidence of power not of weakness; and power exerted not only to suppress com-

petition but to compel testimony, is the necessary inference, shading into perjury to deny its exertion? The situation is indeed singular, and we may wonder at it, wonder that the despotism of the Corporation, so baneful to the world in the representation of the Government, did not produce protesting victims.''

And again on page 451:

"The Corporation was formed in 1901, no act of aggression upon its competitors is charged against it, it confederated with them at times in offence against the law, but *abandoned that before this suit was brought, and since 1911 no act in violation of law can be established against it except its existence be such an act.* This is urged, as we have seen, and that the interest of the public is involved, and that such interest is paramount to corporation or competitors. Granted—*though it is difficult to see how there can be restraint of trade when there is no restraint of competitors in the trade nor complaints by customers*—how can it be worked out of the situation and through what proposition of law? Of course it calls for nothing other than a right application of the law and to repeat what we have said above, *shall we declare the law to be that size is an offence even though it minds its own business because what it does is imitated?* The Corporation is undoubtedly of impressive size and it takes an effort of resolution not to be affected by it or to exaggerate its influence. *But we must adhere to the law and the law does not make mere size an offence or the existence of unexerted power an offence. It, we repeat, requires overt acts and trusts to its prohibition of them and its power to repress or punish them. It does not compel competition nor require all that is possible.''*

It is true that there is considerable evidence in the record which shows attempts to fix prices in the years that preceded the organization of the present Association. But the diversities set forth on pages 66-75, *supra,* and other factors rendered all such attempts

futile just as similar attempts in other lines of industry had been futile.[61] *There was no abandonment of independent ownership and control of their several businesses; there was no direct control over output, nor monopoly of raw material; there were too many non-member manufacturers, too many competing floorings, both wood and composition. It cost too little to engage in the manufacture of flooring. The industry was unprotected by patents or the tariff.* And although various plans were formulated, all of them necessarily broke down in practice, and each member did as he pleased, without the imposition of any penalties whatsoever. All that was accomplished was the improvement and the standardization of flooring.

Even all formal attempts to regulate production or prices were abandoned long prior to the filing of the Government's petition. A new Association was formed. An opinion as to what the members might lawfully do was obtained; and the undisputed proof shows that the explicit directions contained in said opinion with respect to the conduct of the Association have been carefully observed. (Pages 231-2, 273-4, 298, 308-9, 310-313, *supra.*)

The members of the present Association have no power to control prices. There is no proof that they have ever even attempted to do so. According to the rule announced in the Steel Corporation case, the petition herein should have been dismissed, especially in view of the facts stated in our Point XI.

---

[61] Hobson's *The Evolution of Modern Capitalism* (new Edition), pp. 170-173.

Macrosty's *The Trust Movement in British Industry*, pp. 6-9.

Ripley's *Trusts, Pools and Corporations* (revised edition), pp. 1-77.

XII.

The following facts:

(a) fundamental differences that exist among association members;

(b) unstable basis of the maple, beech and birch flooring industry;

(c) relation that association members bear to the flooring industry as a whole;

(d) lack of control of any appreciable proportion of raw material;

(e) fragmentary character of statistics collected and distributed;

(f) publication of statistics collected;

(g) relatively superior position of lumber dealers who buy or handle from 90 to 95 per cent of the flooring manufactured by association members,

and many other facts disclosed by the record conclusively demonstrate that the collection and distribution of statistics by the association cannot injuriously affect interstate trade or commerce.

The necessity for the collection and distribution of trade statistics for the benefit of both buyers and sellers is recognized by all modern economists.

We have already seen that *all* the activities of the present Association, *including the collection and distribution of statistics,* have not restrained interstate trade or commerce. The evidence is undisputed:

1. That the prices of Association members for maple, beech and birch flooring have at all times been fair and reasonable.

2. That such prices have never been uniform; that the spread between the high and the low prices quoted or obtained for any item at a given time has been unusually large, and that ordinarily the prices of Association members for flooring are lower

than the prices of nonmembers, despite the inferiority of the flooring manufactured by the latter.

3. That the prices of Association members for maple, beech and birch flooring have fluctuated in accordance with the laws of supply and demand.

4. That in the sale of flooring there has always existed strong, active and vigorous competition, not only between members and nonmembers, but among the members of the defendant Association.

The record shows that several factors concurred in producing the foregoing results. They are:

(a) The absence of concerted action by the defendants,—their obedience to the directions contained in Mr. Newman's written opinion.

(b) The fundamental differences that exist among Association members.

(c) The unstable basis of the maple, beech and birch flooring industry.

(d) The relation that Association members bear to such industry as a whole.

(e) The nature of the statistical and other activities of the defendant Association.

(f) The publication of the statistics collected by the Association.

(g) The relatively superior position of lumber dealers who buy or handle 90 or 95 per cent of the flooring manufactured by Association members.

Most of the factors above mentioned are constant and fixed. They could be eliminated only by means of a combination or trust with a capital of some $50,000,000. They are the *circumstances* that render the statistics of the present Association innocuous from a legal point of view, and beneficial to both the general public and Association members.

FUNDAMENTAL DIFFERENCES AMONG MEMBERS.

These differences consist in (a) amount of timber owned, (b) quality of timber or rough lumber owned or available, (c) flooring capacity, (d) location of plant, which results in different labor, manufacturing and marketing costs, (e) percentage of capital invested in production of flooring, which ranges from a nominal amount to 100 per cent, and results in diversity of size, equipment, organization, business relations, financial strength, credit, needs, business methods, ability, information and reaction to business conditions, (f) kinds of flooring manufactured, all members producing maple flooring, others beech and birch also, still others beech or birch, (g) grades of rough lumber used, (h) kinds of matchers or flooring-machines used, which vary markedly in capacity, (i) thicknesses and widths of flooring produced, (j) class of trade ordinarily catered to, (k) warehouse capacity, which compels disposition of surpluses (arising from necessity of manufacturing all grades and widths at same time) wherever and at whatever prices can be obtained, (l) marketing methods, and (m) individual brands and trade-marks, which result in preferences among buyers. (Pages 66-75, *supra.*)

Furthermore, the members are merely *manufacturers.* Hobson, who certainly is no champion of the capitalist system, says:

> "Regarding *the single large corporation* as the instrument of monopoly, there is no evidence to show that these *industrial* corporations have yet developed sufficient strength even in America to limit output or to hold up prices for any considerable time except in the case of a small number of commodities. If we add to these Trusts the industrial

pools and other combines, the durable monopoly exercised through industrial combination does not affect any large number of commodities. Regarded as a solid instrument of capitalist control the industrial trust is as yet feebly developed. Local combinations in retail trade in all probability exercise a larger and more widespread influence upon the prices paid by consumers.

With a few exceptions the proved power of capitalist 'monopoly' in America is vested, *not in the industrial trusts*, but, as we shall see, in transport and financial corporations and in corporations handling local services under charters or other privileges. The aggregate influence of the disturbances of price exercised by industrial trusts is doubtless considerable, but their power to hold up prices has hitherto been weak, irregular, and short-lived, so far as the great majority of the commodities they handle are concerned. *It is very doubtful whether a combination of mere manufacturers can maintain an effective monopoly even in a national market for which they obtain tariff protection. The real strength of a manufacturing or industrial trust is commonly, if not universally, derived from non-manufacturing processes with which it is connected.*" (*The Evolution of Modern Capitalism*, pp. 190-1.)

ASSOCIATION MEMBERS HAVE NO CONTROL OF RAW MATERIAL

Maple, beech and birch timber is widely distributed. (Pages 24-25, *supra.*) The members of the present Association own substantially less than 2 per cent of the total stand of such timber in the United States; only 3.94 per cent of the stand in the Lake States, and but 0.78 per cent of the stand in the Middle Atlantic States. (Page 26, *supra.*)

In 1922 there were 2999 producers of rough maple lumber in the United States. In 1920 there were 476

such producers in the States of Michigan and Wisconsin alone. (Page 26, *supra.*)

All writers on economics, all students of monopolies and trusts emphasize the great importance of monopoly or control of raw material so far as the regulation of prices by industrial trusts or combinations are concerned.

The distinguished German economist, Hermann Levy (*Monopoly and Competition*) has said that most cartels and trusts in Germany and the United States are directly based on either monopolization or indirect control of raw materials. (Page 296.)

Also:

"A considerable number of cartels and trusts in all parts of the world are essentially dependent on the existence of mineral deposits which are easily convertible into a monopoly. In the first place, certain minerals, being found only in a single country or in one or two countries, are from the outset a monopoly to the rest of the world. In this connection may be mentioned the powerful monopolies of the potash deposits in Germany, of kaolin in Austria, nitrate in Chili, marble in Italy, petroleum, copper and borax in America, zinc in Germany, Belgium and America, and diamonds in the Transvaal. Secondly, certain areas of production, such as the coal and iron ore districts of America and Germany, hold monopolies, if not in the world's market, at least in a given national area, generally as a result of the freight charges which a foreign competitor would have to face.

The naturally narrow limits of such mineral wealth and the marked tendency of mining from the very beginning to accumulate fixed capital have created relatively early and with comparative ease close monopolist combinations or a semi-monopolist predominance of particular interest in all such areas of production." (p. 179.)

And again:

"In the United States the ore-producing country of Lake Superior belongs to the Steel Trust, which was interested in the years 1902-7 to the amount of 50-60 per cent in the deliveries from this large district, and which by agreement two years ago with the railway magnate Hill obtained power to dispose in the future of the remaining riches of the district. In Germany, Minette iron, now the most valuable iron ore, has been monopolized by the manufacturers of finished products. In Siegerland there is the Iron Syndicate in iron mining proper, while but a small portion of the large iron production of Lorraine-Luxemburg reaches the market directly, most of it being further manufactured by the large iron concerns themselves—a fact which makes any special monopoly organization such as a cartel or a syndicate for the most part superfluous. This is at least true so far as sales to outside smelters in the Minette and Saar regions is concerned, as the big sellers, who are comparatively few in number, can command a complete view of the whole market and check mischievous underbidding without any special system of regulating prices. It is only in the case of the relatively small sales to outsiders in Rhenish Westphalia that Spanish competition detracts from the power of the large mines to influence prices by their monopoly. In the United States the position is similar. The trust and a few similar enormous combines control most of the iron production, and only small quantities come on the market.

In England things are very different. * * * Again, in the case of the quarrying of stones and earths (specially sandstone, slate, limestone, chalk, clay) *monopolization is out of the question owing to home competition. The supply of these minerals is so abundant and distributed through such an extremely large number of competing districts that any monopolist movement is impossible. The trade also in many of the branches of production is extremely small and the plant comparatively undeveloped, so that in these cases even local monopolist associations would give an immediate stimulus to fresh competition.* * * *

Thus in England competition is still the ruling principle in the three most important mineral products. As we shall see later on, the same thing cannot be said of the fourth one, but its importance as compared to the sum of English minerals and of their three chief groups is insignificant.

We can therefore affirm generally: firstly, that England has no raw material in minerals possessing that monopoly in the world's market which favours the development of cartels or trusts; and secondly, that it is precisely in the most important of the existing raw mineral products that the conditions are most unfavourable for monopoly. *Monopolist combinations are consequently for practical purposes excluded from the sphere in which their success in other countries has been most marked.*" (pp. 187-190.)

And on pages 202-3:

"In the United States and in Germany, however, matters are different. Monopolies of raw materials in all kinds of industries make it impossible to start new works in any finishing manufacture. *Witness the American Paper Trust, which owes its power to the fact that, aided by high duties on wood and pulp, it has monopolized the native forests and consequently lamed fresh competition. Witness again the steel trade in America and Germany, in which the creation of new undertakings on a large scale is hindered by the monopolization of the deposits of ore, or the soda cartel in Germany, which has combined with the salt cartels in refusing to supply new works with salt.* Similar cases often occur in countries where extensive monopolies of raw materials exist side by side with finishing manufactures; but they are not to be found in England where there are only isolated monopolies of raw materials, and even these, as we shall see later on, have only a comparatively limited sphere of operation, the great mass of raw material required by English manufacturers being imported duty free and at low freight rates. It might be thought within the bounds of possibility to create a trust in English finishing man-

ufactures by the aid of a foreign raw material monopoly, and one such attempt has been made by the American Borax Trust which owns a few refineries in England. But generally speaking it has not been found possible by monopolizing raw materials to promote monopolies in remote stages of finishing manufactures otherwise exposed to competition.

There are therefore a number of circumstances which serve to explain the continued existence of competition in many English finishing trades. Two of these circumstances—*the existence of a large number of undertakings and the comparative ease with which this number may be increased*—are very marked in one English industry in particular in which the conditions of competition stand in sharp contrast to those in Germany and America. This is the tin-plate industry."

If the members of the defendant Association had a monopoly of maple, beech and birch timber, then the collection and distribution of statistics by them might be harmful, especially if such statistics were not accessible to the public. But the assertion that Association members controlling less than 2 per cent of the stand of maple, beech and birch timber in the United States could maintain prices by any means whatsoever is ridiculous, especially in view of the diversities existing among them and the facts hereinafter set forth. *United States* v. *Quaker Oats Co.* (C. C. A., 7th Cir.) 232 Fed. 499, 502; *United States* v. *Whitney,* 212 Fed. 466, 475. *A fortiori,* the collection and distribution of statistics by such a group can have but little, if any, material effect upon market conditions. And so long as the statistics are available to the general public, what possible harm can result?

The finished product is not a necessary of life; it has numerous substitutes, and is not protected at any stage by either patents controlled by defendants, or a tariff.

That there are 12 competing wood floorings and 11 competing composition floorings, see page 65, *supra.* Matchers or flooring-machines, of which there are several makes, can be freely purchased in the open market, where Association members make their purchases. (Pages 31-32, *supra.*)

In his work on *The Evolution of Modern Capitalism,* Hobson says:

"The real danger of Trusts in their control of prices appears when we consider this control in relation to the various classes of commodities which form the subjects of monopoly.

(a) *The urgency of the need which a commodity satisfies enables the monopolist to charge high prices.* Where a community is dependent for life upon some single commodity, as the Chinese on rice, the monopolist is able to obtain a high price for the whole of a supply which does not exceed what is necessary to keep alive the whole population. Thus a monopolist of corn or rice in a famine can get an exorbitant price for a considerable supply. But after the supply is large enough to enable every one to satisfy the most urgent need for sustenance, the urgency of the need satisfied by any further supply falls rapidly, for there is no comparison between the demand of famine and the demand induced by the pleasures of eating.

A monopoly of a necessity of life is therefore more dangerous than any other monopoly, because it not merely places the lives of the people at the mercy of private traders, but because it will often be the interest of such monopolists to limit supply to the satisfaction of the barest necessaries of life. * * *

As we descend in the urgency of wants supplied we find that the comforts and luxuries form a part

of the standard of life of a smaller and smaller number of persons, and satisfying intrinsically weaker needs, are more liable to be affected by a rise of price.

(b) Closely related to this consideration, and working in with it at every point, is the question of the possibility of *substituting another commodity for the one monopolized. This everywhere tempers the urgency of the need attaching to a commodity.* There are few, if any, even among the commodities on which we habitually rely for food, shelter, clothing, that we could not and would not dispense with if prices rose very high. *The incessant competition that is going on between different commodities which claim to satisfy some particular class of need cannot be got rid of by the monopoly of one of them.* This is probably the chief explanation of the low prices of the Standard Oil. *As an illuminant, oil is competing with gas, candles, and electricity, and unless the monopoly were extended laterally so as to include these and any other possible illuminants, the Trust's prices cannot be determined merely by the pressure of the need for artificial light.* Though to a modern society artificial light is probably even more important than cane sugar, a Sugar Trust may have a stronger monopoly and be able to raise prices higher than an Oil Trust, because the substitutes for cane sugar, such as molasses and beetroot, are less effective competitors than gas, candles, and electricity with oil.

The power of railway monopolies largely depends upon the degree in which their services are indispensable, and no alternative mode of transport is open. Sometimes, however, they miscalculate the extent of their power. The high railway rates in England have recently led in several quarters to a substitution of road and canal traffic in the case of goods where rapidity of conveyance was not essential. So also in other cases sea-transport has been substituted.

The stronger monopoly of American railways consists partly in the fact that distances are so great, and the sea-board or other water conveyance so re-

mote, that over a large part of the Continent the monopoly is untempered by alternative possibilities of transport.

The reverse consideration, the possibility of substituting the article of monopoly for other articles of consumption, and so securing a wider market, has quite as important an influence on prices. The possibility of substituting oil for coal in cooking and certain other operations has probably a good deal to do with the low price of oil." (pp. 231-2.)

In Marshall's *Readings in Industrial Society*, p. 894, appears the following adaptation of page 141 of Professor E. R. A. Seligman's *Principles of Economics:*

"By commodity competition is meant the competition due to the existence of social choices. *Every individual is continually debating with himself whether to purchase one commodity in preference to another. Where he is on the margin of doubt or of indifference the slightest alteration in the price will cause him to substitute something else.* The principle involved is hence called the principle of substitution. *The vendor must constantly be on the watch lest any increase of price cause the disappearance of his sales.* We substitute, however, not only one thing for another, but also one agency of production for another; in the crucible of economic wants everything is finally tested by its capacity to afford the greatest satisfaction. Not only will the consumer choose now this and now that commodity, but the employer will increase now his labor force, now his stock of machinery, so as to secure the best results. The least change in the rate of wages or of interest may lead him to substitute the one for the other. It is only by replacing the less efficient by the more efficient factor that the producer is able to induce the consumer to select one commodity in preference to another. Competition of factors of production is thus really an adjunct to commodity competition. *Competition through substitution is hence important in that it fixes a maximum limit beyond which prices cannot go.* Every economic fac-

tor, like every economic good, may be in either actual or potential competition with another."

Malcolm Keir, Professor of Economics in Dartmouth College, states that the substitution of numerous other materials for wood

> "already accounts for *nearly a fourth* of the lumber formerly cut, and since most of the change has occurred within the last 15 years, we may expect an even greater relative decline in the use of wood in the future." (*Manufacturing Industries in America*, pp. 293-4.)

We have already seen that the flooring industry is not protected by a tariff, and that Canadian manufacturers of maple, beech and birch flooring are important factors in the American market because they dump their flooring here. (Page 31, *supra.*)

All economists are agreed that regulation of commodity prices by even a trust is extremely difficult in the absence of a tariff. Levy attributes England's freedom from cartels and trusts in many industries to free trade, and gives numerous illustrations. (*Monopoly and Competition*, pp. 190-196, 307-316.)

See also Hobson's *Evolution of Modern Capitalism*, pp. 195-6.

The importance of patents, or monopoly of finishing processes at some stage, is, of course, obvious so far as price-control is concerned. (Hobson, p. 193.)

It costs only $30,000.00 to engage in the manufacture of flooring from the ground up.

One producer of rough maple lumber bought a second-hand machine at an expense of $5,000.00, exclusive of costs of installation, and engaged in the production of maple flooring. There are hundreds of these rough maple lumber producers in the States of Michigan and Wisconsin, and practically 3,000 in the United States, to say nothing of manufacturers of fir and oak flooring, who manufacture some maple flooring, and who could produce it on a large scale if the prices made it profitable to do so.

For the evidence in support of the foregoing statements, see pages 31-33, *supra.*

Two members of the present Association have only 1 flooring machine each; three members 2 machines each, and six members 3 machines each. (Page 66, *supra.*)

In Levy's *Monopoly and Competition,* it is said:

> "We have seen that the formation of monopoly depends largely on the number of existing manufacturers, and now we see why it did not result earlier, even where that was small. *It is not the absolute number of competing firms which is decisive, but rather how far they could maintain a monopoly if they combined. If a relatively small concern is economically profitable, so that a slight increase in demand or price gives a new competitor a fair chance of existence, existing makers cannot maintain a monopoly even if they can obtain it.*" (p. 303.)

See also pages 372, 374, *supra,* and the following cases:

United States v. *Quaker Oats* (C. C. A. 7th Cir.), 232 Fed. 499, 502.

United States v. *American Can Co.* 230 Fed. 859, 900.

In his *The Evolution of Modern Capitalism*, Hobson states:

> "Lastly, there is the influence of existing or *potential* competition of other producers upon monopoly prices. Where prices and profits are very high a Trust is liable to more effective competition on the part of any surviving independent firms, and likewise to the establishment of new competitors. This ability of outside capital to enter into competition will of course differ in different trades. Where the monopoly is protected by a tariff the possibility of new competition from outside is lessened. When the monopoly is connected with some natural advantage or the exclusive possession of some special convenience, as in mining or railways, direct competition of outsiders on equal terms is prohibited. *Where the combination of large capital and capable administration is indispensable to the possibility of success in a rival producer, the power of a monopoly is stronger than where a small capital can produce upon fairly equal terms and compete.* If the monopoly is linked closely with personal qualities and with special opportunities of knowledge, as in banking, it is most difficult for outside capital to compete effectively." (p. 233.)

There are also many nonmember manufacturers of maple, beech and birch flooring throughout the United States with a combined capacity much greater than that of the members of the present Association.

Competition between members and nonmembers and among the members themselves has always been active and vigorous.

For the evidence in support of the foregoing assertions, see pages 116-143, *supra*.

The defendants manufacture standardized products, which lowers manufacturing and marketing costs, and increases competition.

See pages 188-194, *supra*.

The statistics collected and distributed by the present Association are manifestly incomplete, not only with respect to the flooring industry, but with respect to the business of members.

The assertion of the District Court that the defendants' statistics cover "in minute detail every phase and feature of the Maple, Beech and Birch flooring industry as conducted by such members," (Vol. I, p. 57), is manifestly inaccurate.

No data are gathered with respect to any of the following matters:

(a) Active and idle units or machines.

(b) Employment conditions, such as number of wage earners on last pay roll by classes, average wages by classes, time employed, labor turnover, etc.

(c) Geographical distribution of shipments.

(d) Names of customers, or distribution by classes, such as brokers, contractors, wholesale or retail lumber dealers, etc.

(e) Details with respect to new orders booked, such as names of customers, or geographical origin.

(f) Details with respect to unfilled orders such as names of customers, or geographical origin.

(g) Names of members having surpluses or stocks on hand. (Only the aggregate stock on hand is shown.)

(h) Rough lumber on hand, grades, when purchased or produced, cost of production or purchase price, etc.

(i) Cancellations of contracts or orders.

(j) Prices quoted, or to whom.

The statistics do not cover the entire industry, for the reason that there are so many nonmember manufacturers.

The price data contained in the Secretary's Weekly Sales Reports are stale by the time such reports are received by the members. (Pages 322-335, *supra*.)

Knowledge of the quantity of flooring moved, of the amount of stock on hand, and of unfilled orders, enables members to produce larger percentages of the grades that are oversold. This is an advantage to the public. (Pages 327, 330, *supra*.)

There is no magic in business statistics. Like other data presented to one's consciousness they must be correctly evaluated and interpreted. What inferences will be drawn from any data depends upon *past experience and present needs*. Even if one draw correct inferences from statistics, ability to shape one's course accordingly might not exist.

As compared with the total stock of economic phenomena the fragmentary statistics distributed by the defendant Association are infinitesimal, in both number and significance. They are the smallest of straws; and who by regarding only them can prophesy whence, when or whither the economic winds may blow?

Other barometers used by bankers and business men are:

"I. Buildings and real estate: (1) including all new building and fire losses.

II. Bank clearings: (2) total bank clearings, (3) bank clearings excluding New York.

III. Business failures: (4) failures, by number, amount of liabilities, and percentages of failures to number of firms in business.

IV. Labor conditions: (5) immigration figures.

V. Money conditions; (6) money in circulation, (7) comptroller's reports, (8) loans of the banks,

(9) cash held by the banks, (10) deposits of banks, (11) surplus reserve of banks.

VI. Foreign trade; (12) imports, (13) exports, (14) balance of trade.

VII. Gold movements: (15) gold exports and imports, (16) domestic and foreign exchange and money rates.

VIII. Commodity prices: (17) production of gold, (18) commodity prices.

IX. Investment market: (19) stock exchange transactions, (20) new securities.

X. Condition of crops: (21) crop conditions and production of other commodities.

XI. Railroad earnings: (22) gross and net earnings, (23) idle-car figures, (24) miscellaneous.

XII. Social conditions: (25) political factors." (Marshall's *Readings in Industrial Society*, p. 514.—adaptation of Babson's "Barometric Indices of the Conditions of Trade.")

The defendants, like most other manufacturers, also get the trade papers, reports from salesmen, representatives, brokers, dealers, customers, etc., etc. One's own stock conditions, financial needs, and a thousand and one other factors, both objective and subjective, determine one's course. Modern business is exceedingly complex. And to attribute any decisive effect to the statistics distributed by the defendant Association is to take an exceedingly simple view of a very complex matter.

Furthermore, the statistics gathered by the defendant Association are (a) published in trade journals (which are read by the persons who purchase 90 to 95 per cent of the flooring produced by Association members), (b) sent to the Department of Commerce (which publishes monthly a Survey of Current Business), (c) forwarded

to the Federal Reserve and other banks, and (d) available at any time to anyone desiring them.

Mr. George W. Keehn offered in behalf of the defendants to pay for the publication of the statistics in any paper that the Court might direct.

The lumber dealers and brokers who buy outright or handle 90 to 95 per cent of the flooring produced by Association members are in constant contact with contractors and other consumers, as well with flooring manufacturers, both members and nonmembers. It is an easy matter for them to circularize all flooring manufacturers and *to play one against the other*. Members sell flooring almost exclusively to dealers in lumber and brokers. In Marshall's *Readings in Industrial Society*, pp. 833 *et seq.* appears the following adaptation of pages 662 *et seq.* of *Industrial Democracy* by Sidney and Beatrice Webb:

"Paradoxical as it may appear, in the highly developed commercial custom of the England of to-day *the capitalist manufacturer stands at as great a relative disadvantage to the wholesale trader* as the isolated workman does to the capitalist manufacturer. First, *we have the fact that the manufacturer stands to lose more by failing to sell his product with absolute regularity than the wholesale trader does by temporarily abstaining from buying. To the manufacturer, with his capital locked up in mills and plant, continuity of employment is all-important. To the wholesale trader, on the other hand, it is comparatively a small matter that his stocks run low for a short time. His unemployed working-capital is, at worst, gaining deposit interest at the bank, and all he foregoes is a fraction of his profits for the year. Moreover, as the wholesale trader makes his income by a tiny profit per cent on a huge turnover, any particular transaction is comparatively unimportant to him. The manufacturer, earning a relatively large percentage on a small turnover, is much more concerned about each part of it. The disparity is no less*

great with regard to that knowledge of the market which is invaluable in bargaining. The manufacturer, even if he has a resident agent at the chief commercial center, can never aspire to anything like the wide outlook over all the world, and the network of communications from retail traders and shipping agents in every town, which make up the business organization of the wholesale trader.

Thus, when the manufacturer negotiates for an order, he is, within certain undefined limits, at the mercy of the wholesale trader. He is told that the price of his product is too high to attract customers; that the shopkeepers find no demand for it; that foreign producers are daily encroaching on the neutral markets; and, finally, that there has just come an offer from a rival manufacturer to supply the same kind of article at a lower price. The manufacturer may doubt these statements, but he has no means of disproving them. He is keenly alive to the fact that his brother manufacturers are as eager as he is to get the order, and some of them, he knows, are always striving to undercut prices. Unless he is a man of substance, able to wait for more profitable orders, or unless his product is a specialty of his own, which no one else makes, he is almost certain to be tempted, rather than lose the business, to accept a lower offer than he meant to. The price he has accepted can only work out in a profit by some lowering of the cost of production.''

The proof shows that lumber dealers and brokers employ these methods against the defendants. (Pages 148-157, *supra*.) They also take the trade papers, and have access to all the statistics gathered by the defendants.

In view of all these facts what possible harm can result from the collection and distribution of fragmentary statistics by the defendants? The buyers testified to the existence of active competition among the defendants, and that they preferred to deal with Association members.

The District Court's assertion that since the spring of 1922 the statistics "have been more voluminous and in greater detail than ever before," (Vol. I, p. 57), is inaccurate. The statistics gathered have varied from time to time. The charts constructed by the statisticians and economists are graphic representations of statistics collected both before and subsequent to 1922. See also the Appendices in the volume accompanying this brief. So long as the statistics are given to both the buyer and the seller the more voluminous they are the better.

THE NECESSITY FOR BUSINESS STATISTICS.

No one who believes in *free competition* can possibly have any valid objection to the collection and distribution of business statistics by a group of manufacturers, provided such statistics are available to the general public. A believer in liberty might, with as much reason, object to constitutional safeguards. One believing in education might as justifiably object to the endowment of schools and institutions for scientific research, the establishment of universities and colleges and primary schools.

What does the phrase *free competition*, which is so glibly used, really mean? Upon what fundamental assumptions does it rest?

Roughly, *free competition* means a free and open market, fair competition, *and a knowledge of all essential facts by both buyers and sellers.* Anything which tends to produce such conditions is highly desirable.

In Marshall's *Readings in Industrial Society*, pages 294-6, appears the following excerpt from H. B. Reed's

"The Combination versus the Consumer" published in the *International Journal of Ethics*, XXIII, pp. 159-69:

"The soundness of the argument for the natural and automatic justice resulting from the competitive system depends altogether upon the truth of the underlying assumptions, namely, *those of fair competition and an open and free market. With reference to the open market it assumes a free flux and change of all the factors of industry.* If the laborer is engaged in an industry in which there is an overproduction, he is free either to withdraw or to change to an industry in which there is a scarcity of production. Similarly, the capitalist can either shut down his plant or take up another line of manufacturing, and the landowner can either withdraw his land or begin growing crops in which production is scarce. That is to say, a laborer is free to stop coal-mining and promptly begin work either as a baker or as an engineer or as a skilled mechanic in a steel plant. The rolling mills in steel could stop turning out steel rails and begin the manufacture of shoes or lumber.

Not only is such a perfect flux required to make the system always yield natural prices; there must be also a pre-knowledge of the conditions and factors that bring about changes in the market price. For example, if, during the next year, there were going to be a dry season in Western Canada and a favorable season in Southern Russia, the Russians, in order to avoid scarcity in the wheat market, would have to know this fact and bring a greater number of fields under cultivation, and the Canadians would have to know it so as to avoid an oversupply of labor and a useless putting out of crops. The oversupply of labor in Canada would either have to move to Russia or find employment in other industries in which there would be a scarcity of production. *In fact, nothing short of an absolute knowledge of the world would satisfy the necessary conditions.*

It is well known that this mobility with respect to industry does not exist. There is an element of permanency to be considered. In the laborer it is habit; in the capitalist, the fixity of machinery; and in

land, the nature of the soil in the relation to the seasons of the year. The laborer cannot change and train his habits for a new trade and in the meantime support his family; nor is he free to withdraw his labor, for he usually has no surplus. The capitalist cannot shut down his plant for a very long time without infringing upon his dividends and credit. Nor can the landowner usually forego his rent without some injury or failure in his business relations. So far, then, as there is permanency in any of the factors of industry, the natural or fair price in an open competitive market will not be obtained.

In this view, then, the assumption of the free mobility of the factors of industry is taken with too much extravagance and in so far invalidates the natural and automatic justice of the competitive system. There is an equal extravagance with regard to the assumption of fair competition. For competitors, *fair competition obtains when the rules and opportunities under which they operate apply equally to all.* It is not so important what the rules are as it is to have them affect all alike. There are many ways in which this condition is violated."

Professor Marshall himself says:

"One illustration will suffice. Under simple industry there grew up a faith in 'free' competition as an efficient organizing force for industrial society. *Free competition involves, among other things, adequate knowledge of the essential facts by all interested parties,* and mobility with respect to productive forces. *Under simple industry these conditions obtained. Men could ascertain essential facts;* furthermore, it was easy to abandon an unprofitable line of activity and easy to take up a new one. *Under complex industry, however, adequate knowledge and mobility of productive forces are not readily secured;* consequently the conditions which would render competition efficient as a universal regulator no longer obtain in large sections of industry. None the less there still rests firmly in the minds of the general public, and, as a result, in the minds of most of our legislators, the conviction that competition is under

all circumstances 'the life of trade.' Accordingly, much of our legislation (witness the Interstate Commerce Act and almost all of our trust legislation) proceeds calmly on the assumption that most matters may wisely be left to 'free' competition. It is, of course, true that competition still has very important functions and possibly an increasing range of functions to perform in our industrial society. Little is gained, however, by attempting to apply eighteenth-century philosophy concerning competition to twentieth-century conditions." (p. 419.)

On pages 935-6 appears the following adaptation of pages 145-54 of Bascom's *Social Theory:*

"An open market is the presupposition of competition. *Competition, as a wholesome law, means no more than the adjustment of the terms of production and of exchange to each other over a certain area, so that each shall have the advantage and render the service that, from the nature of the case, belong to it.* Competition does not create the productive forces, but assigns their relation in reference to each other. The accidents of trade and the tricks of trade and the combinations of trade, which prevent a genuine expression of the facts involved, constitute no part of competition as an economic law, any more than a lie is a constituent of the narrative in which it is embodied. A productive territory, fully represented, is the essential notion of a market. Any limitation is so far a loss of a market. If bad weather prevents the usual attendance in the public square of a city of those who supply it with vegetables, the market, to that degree, fails. If bad roads render this light attendance frequent, the economic forces involved are correspondingly straightened. *Competition alone does not suffice to cure the evil.* The broader conditions of civilization which enclose it are at fault, and demand correction. As a matter of fact, there are comparatively few complete markets. *We are constantly therefore, giving an ideal completeness to the law of competition which does not belong to it. It would possess this perfection only if the way had been perfectly prepared for it.*

If we wish competition to become an adequate and beneficent force, we must intermeddle with it; we must provide the suitable conditions under which it takes full effect.

Not only is any given market seldom adequate; it is seldom open. *By an open market we understand one that gives free admission to all economic forces, and excludes all others. Deception and restriction of all sorts set aside considerations which should guide purchase and sale, or introduce considerations which are not pertinent to them. The open market discloses the facts in the case, and leaves the adjustment of prices to them. Competition which conceals or distorts the facts is no more a law of production than are theft and violence.*"

In Hobson's *The Evolution of Modern Capitalism*, pages 403-5, it is said:

"So far as the waste of economic maladjustment consists in the excessive or defective application of various kinds of productive force at different points of industry, upon the existing basis of individual initiative and control, *the reforms which are desirable must be considered as contributing to the more complete establishment of 'free' competition in industry.*

The complete breakdown of all barriers which impede the free flow of commerce and the migration of capital and labour, the fullest and widest dissemination of industrial information, are necessary to the attainment of the individualistic ideal of free trade. Perfect transparency of industrial operations, perfect fluidity of labour and of wealth would effect incalculably great economies in the production of commercial wealth. The free-trader, in his concentration upon the achievement of the latter economy, has generally failed to do full justice to the importance of the former. He has indeed to some limited extent recognized the value of accurate and extended industrial information as to the intellectual basis of free trade. But, in common with most economists, he has failed to carry this consideration

far enough. It is generally admitted that the increased publication of accounts and quotations of stock, springing out of the extension of joint-stock enterprise, the growth of numerous trade journals, the collection and dissemination of industrial facts by government bureaus and private statisticians, are serviceable in many ways. But the extreme repugnance which is shown towards all endeavors to extend the compulsory powers of acquiring information by the state, the extreme jealousy with which the rights of private information are maintained, show how inadequately the true character of modern industry is grasped. In the complexity of modern commerce it should be recognized that there is no such thing as a 'self-regarding' or a private action. No fact bearing on prices, wages, profits, methods of production, etc., merely concerns a single firm or a single body of workers. Every industrial action, however detailed in character, however secretly conducted, has a public import, and necessarily affects the actions and interests of innumerable persons. Indeed it is often precisely in the knowledge of those matters regarded as most private, and most carefully secreted, that the public interest chiefly lies. Yet so firmly rooted in the business mind is the individualistic conception of industry, that any idea of a public development of those important private facts upon which the credit of a particular firm is based, would appear to destroy the very foundation of the commercial fabric. But, although in the game of commerce a single firm which played its hand openly while others kept their well concealed might suffer failure, it is quite evident that the whole community interested in the game would gain immensely if all the hands were on the table. Many, if not most, of the great disasters of modern commercial societies are attributable precisely to the fact that the credit of great business firms, which is pre-eminently an affair of public interest, is regarded as purely private before the crash. As industry grows more and more complex, so the interest of the public and of an ever-wider public in every industrial action grows apace, and a correspondingly growing recognition of this public interest, with provision for

its security, will be found necesary. So far as the natural changes of industrial structure in the private business fail to provide the requisite publicity, the exercise of direct public scrutiny must come to be enforced. The reluctance shown alike by bodies of employers and of workers to divulge material facts is in large measure due to the false ideas they have conceived as to the nature of industrial activity, which education can do something to remove, but which, if not removed, must be overruled in the public interest.''

In Marshall's *Readings in Industrial Society*, p. 498, appears the following adaptation of pages 427 *et seq.* of Professor Irving Fisher's *Elementary Principles of Economics:*

"Uncertainty being regarded as an evil by practically all normal persons, there is a constant effort to avoid or reduce uncertainties. This may be accomplished in various ways, of which the following are important: (1) by increasng their knowledge of the future; (2) by employing safeguards against mischances; (3) by insurance; (4) by speculative contracts, especially 'hedging.' We shall take these up in order.

1. Risk, being simply an expression for human ignorance, decreases with the progress of knowledge. *The chief lines of progress in industry at the present time may be said to be those which tend to lift the veil which hides the future.* Countless trade journals exist principally to enable their readers to forecast the future more accurately than they otherwise could. This the journals accomplish by supplying data as to past and present conditions as well as by instructing their readers in the relations of cause and effect. Our government weather bureau supplies weather forecasts which somewhat reduce this form of uncertainty for the farmers. Government reports of crop conditions and information as to diseases of plants and animals are more important influences in the same direction."

The collection and distribution of business statistics tends to provide *"the suitable conditions" under which "free competition" takes full effect.* It tends to reduce the hazards of capitalist production. Some of these hazards have been mentioned on pages 235-243, *supra.* Hobson well states another factor:

"Modern methods of production have also brought about a great expansion in the time-area of the market. Competition covers a wider range of time as well as of space. Production is no longer directed by the quantity and quality of present needs alone, but is more and more dependent upon calculation of future consumption. A larger proportion of the brain power of the business man is devoted to forecasting future conditions of the market, and a larger proportion of the mechanical and human labour to providing future goods to meet calculated demands. This expansion of the time-market, or growth of speculative production, is partly cause, partly effect of the improved mechanical appliances in manufacture and in transport. The multiplication of productive power under the new machinery has in many branches of industry far outstripped the requirements of present known consumption at remunerative prices, while increased knowledge of the widening market has given a basis of calculation which leads manufacturers to utilize their spare producive power in providing against future wants. So long as industry was limited by the labour of the human body, assisted but slightly by natural forces and working with simple tools, the output of productive energy could seldom outstrip the present demand for consumable goods.

But machinery has changed all this. Modern industrial nations are able to produce consumables far faster than those who have the power to consume them are willing to exercise it. Hence there is an ever-increasing margin of productive power redundant so far as the production of present consumptive goods is concerned. This excess of productive power is saved. It can only be saved by being stored up in some material forms which are required not for

direct consumption but for assisting to increase the rate at which consumables may be produced in the future. In order to make a place for these new forms of saving it is necessary to interpose a constantly increasing number of mechanical processes between the earliest extractive process which removes the raw material from the earth and the final or retailing process which places it in the consumer's hands. New machinery, more elaborate and costly, is applied; special workshops, with machines to make this machinery—other machinery to make these machines; there is an expansion of the mechanism of credit, the system of agents and representatives is expanded, new modes of advertising are adopted. Thus an ever-widening field of investment is provided for the spare energy of machine-production. The change is commonly described by saying that production is more 'roundabout.' A larger number of steps are inserted in the ladder of production. This increased complexity in the mechanism of production is not, however, the central point of importance. We must realize that the change is one which is essentially an increase in the 'speculative' character of commerce. The 'roundabout' method of production signifies a continual increase in the proportion of productive forces devoted to making 'future goods' as compared with those devoted to making 'present goods.' Now future goods, plant, machinery, raw material of commodities, are essentially 'contingent goods': their worth or waste depends largely upon conditions yet unborn: their social utility and the value based upon it depend entirely upon the future powers and desires of those unknown persons who are expected to purchase and consume the commodities which shall come into existence as results of the existence and activity of these future goods.

The actual time which elapses between the extractive stage and the final retail stage of a commodity may not be greater and is in many cases far less under the new methods of industry. The raw cotton of South Carolina gets on the wearer's back more quickly than it did a century and a half ago. But when we add in the time-elements involved in the

provision of the various forms of intricate plant and machinery whose utility entirely consists in forwarding these cotton goods, and whose existence in the industrial mechanism depends upon them, we shall perceive that the 'roundabout' method signifies a great extension of the speculative or time-element in the market." (*Evolution of Modern Capitalism*, pp. 148-50.)

And again:

"In a word, while it is the interest of each producer of machine-made goods to give regular employment, some wider industrial force compels him to irregularity. What is this force? It is uncontrolled machinery. In the several units of machine-production, the individual factories or mills, we have admirable order and accurate adjustment of parts; in the aggregate of machine-production we have no organization, but a chaos of haphazard speculation. 'Industry has not yet adapted itself to the changes in the environment produced by machinery.' That is all.

Under a monetary system of commerce, though commodities still exchange for commodities, it is an essential condition of that exchange that those who possess purchasing power shall be willing to use a sufficient proportion of it to demand consumptive goods. Otherwise the production of productive goods is stimulated unduly while the demand for consumptive goods is checked,—the condition which the business man rightly regards as over-supply of the material forms of capital. *When production was slower, markets narrower, credit less developed, there was less danger of this big miscalculation, and the corrective forces of industry were more speedily effective. But modern machinery has enormously expanded the size of markets, the scale of competition, the complexity of demand, and production is no longer for a small, local, present demand, but for a large, world, future demand.* Hence machinery is the direct material cause of these great fluctuations

which bring, as their most evil consequence, irregularity of wages and employment." (p. 329.)

See also:

Taussig's *Principles of Economics*, (Vol. I) pp. 391-7.

Marshall's *Readings in Industrial Society*, p. 479.

In order to produce flooring trees have to be felled in the forest, trimmed and sawed to proper lengths; then the logs have to be transported to the saw mills where the rough lumber is made. The rough lumber must be air-dried, *which takes from 9 to 18 months.* Then it must be kiln dried, etc. (Pages 38-40, *supra.*)

Moreover, flooring must be produced and stored in large quantities in advance of sale. And the demand for flooring is largely seasonal. As said by Professor Taussig:

"Among individual industries, some seem to be more than others in danger of occasional, even of recurrent, over-production; that is, of such large output that they must sell at a loss. Industries of a familiar kind, which use a very large plant, seem to be in this case; especially if they are subject to seasonal irregularities of demand." (*Principles of Economics*, (Vol. 2), p. 52.)

COLLECTION AND DISTRIBUTION OF STATISTICS BY TRADE ASSOCIATIONS. RECOGNITION OF IMPORTANCE BY GOVERNMENT.

In *Trade Association Activities*, issued by the Department of Commerce (page 243, *supra*), it is said:

> "Trade associations have been collecting production statistics of one kind or another with increasing momentum for over 60 years." (p. 12.)[62]

In *Trade Association Activities and the Law*, by Franklin D. Jones, it is said:

> "An investigation by the Federal Trade Commission shows 474 associations, or more than thirty per cent of the associations reporting to the Commission, to be compiling and distributing trade statistics." (p. 44.)

The same investigation also disclosed that 150 associations were distributing price information. (p. 60.)

In Chapter I of *Trade Association Activities*, (issued by the Department of Commerce) it is said:

> "The Department of Commerce is charged with the promotion and development of trade and industry. To properly fulfill these duties it is necesary for it to have adequate current information as to the exact state of commerce and industry, and the Secretary of Commerce is empowered to collect from time to time such figures as he deems essential.
>
> Early in 1921 the department organized a division in the Bureau of the Census for the systematic collection and presentation of such current figures. In doing this the department attempted to make use of

[62] Chapter 1, p. 12, written by Richard A. May, of the Bureau of Foreign and Domestic Commerce, and Frank M. Surface, of the Bureau of the Census.

current information so far as this was already available in a satisfactory form from trade associations, technical journals, and other commercial sources, as well as that compiled by Government departments.

The results of this work proved so useful to the executive officers of the Government that it was decided to publish the figures for the benefit of business men. The results are embodied in the monthly 'Survey of Current Business.' *More than* 100 *trade associations are actively cooperating with this department by furnishing their statistics for publication in this bulletin.*

The department believes that through such active cooperation with trade associations more satisfactory results will be obtained than could be done if the department attempted to collect all the information itself. Where no association or other figures are available the department has collected such data as seemed essential. In other instances the Bureau of the Census has supplemented the reports from associations by securing data from nonmember firms and adding these to the association totals. The results of this form of cooperation have proved very satisfactory from the standpoint of the department as well as that of the cooperating association. * * * *Again, it must always be borne in mind that the abuse of statistics, whether they relate to production, stocks, orders, prices, or other movements, lies not in the knowledge of the actual figures but in the improper use made of that knowledge through concentrated action.* * * *Current business statistics, if they are to be of value in guiding business judgment, must be distributed promptly. The Department of Commerce does not possess the necessary organization nor the funds to enable it to insure such prompt dissemination of association statistics as the business of the country demands.* In order to overcome this difficulty and at the same time insure wide publicity to current statistics, considerable attention has been devoted to working out the details of a practical plan whereby this department might cooperate with associations in the distribution of statistics." (pp. 27-29.)

And again:

"Statistical data, properly prepared and properly presented, supply a very necessary insight into the business facts of the day. Someone has said, 'Statistics are as necessary to the navigator on the sea of business as are the compass, sextant, and barometer to the mariner on the high seas.' Statistics present a perspective of the past, whereby a vision of the future is obtained, and are a means of gauging market requirements, a guiding hand to intelligent competition, and thus of immeasurable value to industry and trade and to the public in general. *Statistics, however, offer no royal road to business success. Their greatest and only real value is obtained by individuals properly qualified to interpret their real significance through indicated surface or long-time tendencies. They therefore offer only one additional basis, yet a very fundamental one, in reasoning regarding economic tendencies.*" (p. 9.)

In the same volume Mr. Secretary Hoover states:

"Most trade associations have evidenced active interest at some time or other in the collection, compilation, preparation, and dissemination of statistical material relative to their industries or trades. They have been considered with particular emphasis as to production, stocks, shipments, or cancellations. Sometimes the greatest desire has been for data regarding prices and orders. Statistical activity by trade associations has legal limitations. However, there is no question but that the curves in the business cycle from activity to depression have been less disastrous in those industries or trades where accurate, lawful statistical data have been available to all. Fundamentally it is impossible for business men to form those vital judgments as to their future course of action in the wise and safe direction of their activities unless they are informed as to the changing currents of production and consumption, not only in their own lines but also in other lines of business, which indicate broader currents of economic life. *The only criteria are statistics, and if industry is to march with reasonable profits instead of*

undergoing fits of famine and feast, if employment is to be held constant and not subjected to vast waves of hardship, there must be adequate statistical service. Whether these services are to be maintained by the Government or by trade associations, they must be maintained if we are to have an orderly economic life. To the trade associations are due the vast majority of our statistical services, and if they be conducted alike for the benefit of the producer and consumer they are constructive." (p. 3.)

For a detailed statement of the activities of the Federal Government in the compilation and distribution of statistics, see volume last cited, Chapter XV, pp. 216-270.

PREVIOUS DECISIONS OF THIS COURT DISTINGUISHED.

The District Court was of the opinion that the decision rendered in

American Column & Lumber Co. v. *United States*, 257 U. S. 377,

was decisive of the case at bar. This court has often announced that each case arising under the Sherman Act must be determined upon the particular facts disclosed by the record.

A mere statement of the essential facts in both the *American Column* case and the case at bar is all that is necessary to demonstrate that the decision in the former case is wholly inapplicable to the latter.

PLEADINGS.

In the *American Column* case it was alleged that the defendants' "Plan" constituted a combination and conspiracy to restrain interstate commerce in hardwood lumber by restricting competition "and *maintaining and*

increasing prices." (p. 39.) In the case at bar the Government does not allege that the defendants' plan increased prices. What the Government complains of is that there existed among the defendants *a practical uniformity of both f. o. b. selling prices and net delivered prices.* In the *American Column* case the Government *proved* the esential allegations of the petition, whereas in the case at bar, the Government admitted at the hearing that the alleged uniformity of prices did not exist.

PLANS.

In the *American Column* case the members of the Plan were required to make

> "1. A *daily* report of all sales actually made, with the *name and address of the purchaser,* the kind, grade and quality of lumber sold *and all special agreements of every kind, verbal or written with respect thereto. These reports are to be exact copies of orders taken.*" (p. 394.)

In the case at bar the evidence shows that *no daily* reports are made by members. In the *weekly* sales reports *the name and the address of the purchaser are not given, and there is no means of otherwise obtaining such information.* No copies of contracts or orders are required in the case at bar. (Pages 306-7, 310-311, *supra.*)

In the *American Column* case the defendants were required to make

> "2. A *daily* shipping report, with exact copies of the invoices, all special agreements as to terms, grade, etc." (p. 395.)

In the case at bar, the evidence shows that only *monthly* shipping reports are made by members, and that these reports contain only "the amount in feet of

shipments made during the previous month of Maple, Beech and Birch flooring'' *without giving grades, thicknesses, widths, names of customers, destination, terms of sale, or copies of invoices.* (Page 304, *supra.*)

In the *American Column* case members were required to make

> "3. A monthly production report, showing the production of the member reporting during the previous month, with the grades *and thicknesses classified as prescribed in the 'Plan.'* " (p. 395.)

The evidence in the case at bar shows that members make a monthly production report of the quantity of feet of each *grade of each wood* produced during the previous month *without further detail.* (Pages 304-5, *supra.*)

The monthly stock report made by members of the "Plan" described in the *American Column* case (p. 395) is substantially the same as the monthly report of Stocks on Hand made by members of the defendant Association. (Page 304, *supra.*)

In the *American Column* case members were required to make

> "5. *Price-lists. Members must file at the beginning of each month price-lists showing prices f. o. b. shipping point, which shall be stated. New prices must be filed with the Association as soon as made.*" (p. 395.)

In the case at bar no price lists whatsoever are either filed or required to be filed with the Secretary. (Vol. I, pp. 173, 213, 308, 335, and pages 303-4, *supra.*)

As Hon. Nelson B. Gaskill, of the Federal Trade Commission, has well said:

"Yet such statistics [statistics of production,

stocks, and *sales prices*] can be collected, tabulated and distributed without taking on the significance of unlawful intent or without producing an unlawful result. * * *

Careful distinction must be drawn between this operation and the Eddy 'open-price' association. Nothing in this discussion has any relation to the 'open-price' plan.

Knowledge of prices at which sales have been consummated is one thing. Exchange of prices proposed to be quoted is quite a different matter. One is the record of a fact which affords an essential factor in the equipment of an individual to deal competitively. The other is a submission of plans which almost certainly results in unanimity of action or agreement in effect if not in form." (Chapter II, *Legal Aspects of Statistics*, p. 42, in *Trade Association Activities*, issued by the Department of Commerce.)

In the *American Column* case members were required to make

"6. Inspection reports. These reports are to be made to the association by a service of its own, established for the purpose of checking up grades of the various members and the 'Plan' provides for a chief inspector and sufficient assistants to inspect the stocks of all members from time to time.

The declared purpose of the inspection service is not to change any member's grading except with his consent, but to furnish each member a basis on which he can compare his prices with those of other members, thereby making all members' reports more intelligible and accurate." (p. 395.)

In the case at bar the evidence shows that the flooring manufactured by members is standardized; also that the information as to prices is stale by the time it is received.

In the *American Column* case

"all these reports by members are subject to complete audit by representatives of the association.

> Any member who fails to report shall not receive the reports of the secretary, and failure to report for twelve days in six months shall cause the member failing to be dropped from membership."

Reports of members of the defendant Association are not subject to audit, and no such audits have ever been made since the organization of the present Association. (Page 313, *supra.*) There are no penalties of any kind for failure to make reports, and all reports are always sent to all members by the secretary, except that weekly sales reports are sometimes withheld from nonreporting members. (Pages 313, 307-8, *supra.*)

In the *American Column* case the Secretary was required to send to members reports which corresponded with the reports received from members.[63] It is necessary to take up only one or two of such reports.

> (a) "A *weekly* report, *not later than Saturday*, of all sales, *to and including the preceding Tuesday*, giving each sale and the price, *and the name of the purchaser.*" (p. 396.)

The *weekly* sales reports of the defendant Association are not sent out by the Secretary until Wednesday or Thursday of the following week. Many of the sales reported result from quotations made a week to four weeks previously. (Pages 322-335, *supra.*) The evidence is undisputed that the information as to prices is stale by the time it is received by members, who receive price information daily from traveling salesmen, representatives, customers, brokers, and other sources. (Pages 319-335,

[63] And of course, the Secretary of the defendant Association is also required to send to members reports that correspond to reports received by him from members. However, the identity of members making sales or having stocks on hand, etc., is not now disclosed by the Secretary. (Pages 308-9, *supra.*)

supra.) The names of neither sellers nor buyers are contained in the weekly sales reports. (Pages 306-7, 310-311, *supra.*)

No *weekly* shipment report is made by the Secretary of the defendant Association; and in the monthly shipment report the identity of members making shipments is not disclosed. (Pages 304, 308-9, *supra.*) Neither is the identity of members now disclosed in the monthly Stocks on Hand report, or in any other report whatsoever. (Pages 304, 308-9, *supra.*)

In the *American Column* case the Secretary was required to send out

> "6. A market report letter * * * to each member, of the Association (whether participating in the 'Plan' or not) pointing 'out changes in conditions both in the producing and consuming sections, giving a comparison of production and sales and in general an analysis of the market conditions.'" (p. 396.)

Since the organization of the present Association no such reports have ever been sent out by either the Secretary or any committee or officer or member of the Association. Each member must draw his own conclusions from the statistics received by him. (Pages 310-313, 272-4, *supra.*)

In the *American Column* case the "Plan" provided for monthly meetings for the discussion "of all subjects to the interest of members." (pp. 396-7.) In actual practice the Southwestern territory was divided into four districts, and approximately weekly meetings were held. (p. 397.)

In the case at bar the evidence is undisputed that at the monthly meetings of the defendant Association future prices for maple, beech or birch flooring were never discussed. (pp. 231-33, *supra.*)

In the *American Column* case the proof showed:

"*Second.* Before each of these meetings a questionnaire was sent out to the members, and from the replies received, supplementing the other reports, the statistician compiled an estimate of the condition of the market, actual and prospective, which was distributed to the members attending each meeting, and was mailed to those not present. There were eleven questions on this list of which the most important were:

'4th. What was your total production of hardwoods during the last month? What do you estimate your production will probably be for the next two months?'

'10th. Do you expect to shut down within the next few months on account of shortage of logs or for any other reason? If so, please state how long mill will be idle?'

'11th. What is your view of market conditions for the next few months? What is the general outlook for business? State all reasons for your conclusions.'

The 'Plan' on paper provided only for reports of past transactions and much is made of this in the record and in argument—that reporting to one another past transactions cannot fix prices for the future. But each of these three questions plainly invited an estimate and discussion of future market conditions by each member, and a coordination of them by an expert analyst could readily evolve an attractive basis for cooperative, even if unexpressed, 'harmony' with respect to future prices." (pp. 397-8.)

Before the monthly meeting of the defendant Association members were asked to report amount in feet of Shipments, Production and New Business up to a day or two preceding the date of the meeting. (Pages 311-313, *supra*, and Vol. IV. p. 457.) The Secretary then computed what the Shipments, Production and New Orders

would be if conditions remained the same for the balance of the month, and compared the (computed) results with the actual figures for the previous month. For instance, from reports (received from 14 members) covering the first 13 days of February, 1923, it was estimated that Shipments would be about 26 per cent less; Production about 21 per cent less and New Orders about 41 per cent less than they were for January, 1923, "if the business during the remainder of February averages about the same as the first 13 days and if the trade experiences of the other 8 members are about the same." (Vol. IV, p. 488.) Such estimate added nothing substantial to the weekly and monthly reports already in the possession of members. They differ materially from the reports in the *American Column* case. In the case at bar members reported only past transactions.

In actual practice the "Plan" in the *American Column* case was also modified as follows:

> "Third. The 'Plan' provided for a monthly 'market report letter' to go to all members of the association. In practice this market report letter was prepared by F. R. Gadd, Manager of Statistics, but his review of the market and forecast for the future were contained, almost from the beginning, not only in these market letters but also in the weekly sales reports, so that they were sent out to all of the members nineteen times between February 1 and December 6, 1919, and they were discussed at all but one or two of the forty-nine meetings which were held. All the activities of the 'Plan' plainly culminated in the counsels contained in these letters and reports." (p. 398.)

In the case at bar, the evidence is undisputed that since the organization of the present association the Secretary's reports consist merely of the statistics without comment, analysis, interpretation or recommendation. (Pages 310-313, *supra.*)

Concerning the "Plan" in the *American Column* case, this Court said:

> "*This elaborate plan for the interchange of reports does not simply supply to each member the amount of stock held, the sales made and the prices received, by every other member of the group, thereby furnishing the data for judging the market, on the basis of supply and demand and current prices. It goes much farther.* It not only furnishes such information, with respect to stock, sales and prices, but also reports, giving the views of each member as to 'market conditions for the next few months'; what the production of each will be for the next 'two months'; frequent analyses of the reports by an expert, with, we shall see, significant suggestions as to both future prices and production; and opportunities for future meetings for the interchange of views, which the record shows were very important. It is plain that the only element lacking in this scheme to make it a familiar type of the competition suppressing organization is a definite agreement as to production and prices." (pp. 398-9.)

In the case at bar only the past transactions are reported, and each member must draw his own conclusions.

The distinguished writer of the majority opinion then brought forth the *homo oeconomicus* of Adam Smith, (an animal that has never existed on land or sea since the beginning of the evolutionary process), and stated that the definite agreement was supplied

> "by the disposition of men 'to follow their most intelligent competitors,' especially when powerful; by the inherent disposition to make all the money possible, joined with the steady cultivation of the value of 'harmony' of action; and by the system of reports, which makes the discovery of price reductions inevitable and immediate. The sanctions of the plan obviously are, financial interest, intimate

personal contact, and business honor, all operating under the restraint of exposure of what would be deemed bad faith and of trade punishment by powerful rivals." (p. 399.)

"The system of reports" in the case at bar informed with reasonable despatch each member of the prices at which other members had sold flooring. *Yet the proof is undisputed that at all times the prices of members varied greatly.* It therefore follows, either that the 'disposition' and the 'sanctions' above mentioned were not active or present in the case at bar, or else that conclusions based upon such a *naif* psychology are untrustworthy. As a matter of fact the history of attempts at price-control by groups of manufacturers decisively shows that the theories of the learned justice above quoted are not supported by the facts. Certainly, universal validity cannot be claimed for them.[64]

---

[64] "Combinations, pools, and price agreements among manufacturers and dealers have been among the most common phenomena of modern industry. *Almost invariably (unless bolstered up by some independent cause conducive to monopoly control) they have gone to pieces of themselves.* The persons forming them have been both shortsighted and covetous. It has often been the case that all would have made larger gains if all had stuck to their restrictive agreements. But each has been desirous of increasing his own particular gains, and each has been suspicious of his associates. *The usual result has been that price combinations are no sooner made than broken, with much lament that there is so little honor among these quasi-thieves. Even where the would-be monopolists have held together for a while, competition from outside has soon caused their compact to crumble away.* Usually the outside competitors also have been covetous and shortsighted, failing to see that their own entrance into the field tended to destroy the very gains in which they were trying to share. *The truth is that few men, in business or in other doings, look beyond the present and immediate future.* Had they a more resolute and intelligent eye to ultimate results, the policy of letting people try at monopoly, but

It seems to us that whether in any case there is "a definite agreement as to production and prices" (apart from an express written agreement), cannot safely be determined by creating defendants in the image of *homo beconomicus*. The *facts* shown by the record must determine the matter.

That the decision in the *American Column* case did not turn on the *a priori* reasoning above quoted is clear. The court continued thus:

> "Obviously the organization of the defendants constitutes a combination and confessedly they are engaged in a large way in the transportation and sale of lumber in interstate commerce so that there remains for decision only the question whether *the system of doing business adopted resulted in that direct and undue restraint of interstate commerce which is condemned by this Anti-Trust statute.*" (pp. 399-400.)

The court then proceeded to "consider what the record shows as to the purpose of this combination and as to its *effect* upon interstate commerce." (p. 401.)

> "The record shows that the lumber market was inactive in the months of January and February and the first part of March of 1919. It grew better late

---

refusing legal sanction to their monopolistic agreements, would have proved much less effective."

Taussig's *Principles of Economics* (3d ed. revised), Vol II, pp. 419-420.

And see pages 365-6, *supra*.

Long before the organization of the present Association the defendants had learned by experience the fundamental truths above stated. They therefore abandoned all attempts at price control.

And the proof shows that the defendants' plan for the collection and distribution of statistics among members and buyers has not caused either uniformity of prices, or unreasonable prices. The proof is undisputed that competition among the defendants is very active.

in March and progressively stronger until in July, when it became very active, with prices high, and so continued until the end of the year we are considering.

In the first quarter of the year the problem was to maintain the war prices then prevailing rather than to advance them, and although the minutes of the various meetings were kept in barest outline, we find that beginning within a month of the consolidation of the two associations, the members of the 'Plan' began actively to cooperate, through the meetings, to suppress competition by restricting production. This is very clearly shown by the excerpts following from the minutes of meetings and from the market letters and sales reports distributed at them." (p. 402.)

There is no such evidence in the case at bar concerning the present Association.

And again:

"Next, *the record shows clearly that the members of the combination were not satisfied to secure, each for himself, the price which might be obtainable even as the result of cooperative restriction of production, but that throughout the year they assiduously cultivated, through the letters of Gadd, speaking for them all, and through the discussions at the meetings, the general conviction that higher and higher prices were obtainable and a disposition on the part of all to demand them.* The intention to create such a common purpose is too clear to be doubted, evidenced as it is by the following excerpts from much of like character in the testimony." (pp. 404-405.)

There is no such evidence in the case at bar.

And again:

"But not only does the record thus show a persistent purpose to encourage members to unite in pressing for higher and higher prices, *without re-*

gard to cost, but there are many admissions by members, not only that this was the purpose of the 'Plan,' *but that it was fully realized.* * * *

These quotations are sufficient to show beyond discussion that the purpose of the organization and especially of the frequent meetings was to bring about a concerted effort to *raise prices regardless of cost or merit,* and so was unlawful, *and that the members were soon entirely satisfied that the 'Plan' was 'carrying out the purpose for which it was intended.'*

As to the price conditions during the year. Without going into detail the record shows that the prices of the grades of hardwood in most general use were increased to an unprecedented extent during the year. Thus, the increases in prices of varieties of oak, range from 33.3% to 296% during the year; of gum, 60% to 343%, and of ash, from 55% to 181%. While it is true that 1919 was a year of high and increasing prices generally and that wet weather may have restricted production to some extent, *we cannot but agree with the members of the 'Plan' themselves, as we have quoted them, and with the District Court in the conclusion that the united action of this large and influential membership of dealers contributed greatly to this extraordinary price increase."* (pp. 407-9.)

In the *American Column* case the decision turned not upon the fact that statistics were collected and distributed, but upon the *effect* of the "Plan" and the conduct of the defendants. Both the purpose of the members and the *effect* of their activities were *unlawful.* The purpose was to limit production and to *"unite in pressing for higher and higher prices, without regard to cost." That purpose was achieved.*

In the case at bar there is no such evidence. The uniformity of prices charged by the Government never existed. The undisputed proof is that competition among members was strong, active and vigorous; that the

prices for flooring were fair and reasonable; that such prices were often below cost and usually below the prices of nonmembers; that the prices fluctuated in accordance with the laws of supply and demand, and in harmony with the prices for rough lumber; that each member determined his own prices, and that there was no limitation of production.

After basing the decision upon the *effect* of the "Plan" and the unlawful activities of the defendants, the writer of the majority opinion then indulged in some *a priori* reasoning as to what genuine competitors do and do not do. The District Court echoed the *dicta* in question:

> "Business rivals do not disclose to each other the minute details of their transactions unless such disclosure is made for some ulterior and unworthy purpose." (Vol. I, p. 58.)

The learned court may be right, "and probably his methods are everything they should be; certainly I cannot go so far as to say that they are wrong: but still, at the same time—!"

Aristotle, Plato, Aquinas, Tertullian, S. Jerome, Augustine and many other wise and holy men were equally positive that buying and selling for the sake of profit is *base in itself, and a form of cheating; that in every bargain there is one that wrongfully gains at the expense of another, and that deceit and wrongdoing are inseparable from trade for profit.*

All the wise men above mentioned and many others were equally positive that to lend out money at interest is infamous.

Philosophy and Political Economy, by James Bonar, pp. 38, 22, 68, 61.

English Economic History and Theory, by Sir W. J. Ashley, pp. 128, 145.

Adam Smith was equally positive of the identity of private and public interests; that merchants are best left to follow their own gain without *any thought of the public welfare,* since an "*invisible hand*" *always overrules their selfishness for the common advantage*"[65]

History of Economic Doctrines, by Gide and Rist, pp. 89, 410.

Philosophy and Political Economy, by James Bonar, pp. 162-63.

Endless examples of erroneous settlement of complex questions by means of *a priori* reasoning or Johnsonian pronouncement might be given.

We may be wrong, but it seems to us that the *facts* as disclosed by the record in the case at bar are deserving of some consideration. Indeed, with all due respect to the learned District Court, it seems to us that his fear of statistics is not unlike the ancient popular fear of engrossing or forestalling, which Adam Smith has compared to "the popular terrors and suspicions of witchcraft." (*English Economic History and Theory,* (Ashley), p. 188.)

The particular "*Plan*" of the defendants in the *American Column* case was also condemned. (pp. 410-411.) The purpose of the minute regulation was to

> "promptly expose to his associates any disposition of any member to deviate from the tacit understanding that all were to act together under the subtle[66]

---

[65] Smith's equal positiveness that only four kinds of business enterprises could be conducted by joint-stock companies, because of the absence of personal interest, is known to every one.

History of Economic Doctrines, by Gide and Rist, p. 96.

[66] Without a misuse of terms can it be said that Mr. Gadd's direction was *subtle?* To us his hortatory letters (pp. 402-407) suggest the Reverend William A. Sunday or Mr. Bryan (W. J.), rather than Bergson or Anatole France.

direction of a single interpreter of their common purposes, as evidenced in the minute reports of what they had done and in their expressed purposes as to what they intended to do." (p. 411.)

In the case at bar there was no tacit understanding as to prices or production. There was no single interpreter. Furthermore, the reports in the case at bar showed that each member did just as he pleased. Therefore, all *a priori* reasoning as to the purpose of the defendants or as to the probable effect of their plan for the collection and distribution of statistics, is beside the case. There is an abundance of undisputed proof that in the case at bar interstate trade or commerce was *not* restrained at all.

Another important distinction between the *American Column* case and the case at bar was stated by the court as follows:

"In the presence of this record it is futile to argue that the purpose of the 'Plan' was simply to furnish those engaged in this industry with widely scattered units, the equivalent of such information as is contained in the newspaper and government publications with respect to the market for commodities sold on boards of trade or stock exchanges. *One distinguishing and sufficient difference is that the published reports go to both seller and buyer, but these reports go to the seller only; and another is that there is no skilled interpreter of the published reports, such as we have in this case, to insistently recommend harmony of action likely to prove profitable in proportion as it is unitedly pursued.*" (p. 411.)

In the case at bar UNINTERPRETED reports go to both BUYER and seller. (pp. 310-316, *supra.*)

In the last paragraph of the majority opinion the Court rested the decision not upon the ground that the collec-

tion and distribution of statistics are unlawful *per se*, but upon the purpose and *effect* of the "Plan" in that case. (pp. 411-412.)

American Linseed Oil Co. et al. v. *United States*, 262 U. S. 371.

In that case certain linseed crushers agreed with the Armstrong Bureau of Related Industries as follows:

1. That each crusher would

"promptly make, have made, forward, and have sent in and to said bureau, as and in the form required by this agreement, full, accurate, complete, signed, and certified reports of all said sales, *quotations*, and *offerings or other information required by the bureau and full, correct replies or answers to any and all inquiries concerning the same or seeking any information in regard thereto.*"

2. That all vouchers, books of account, correspondence, etc., were subject to inspection by the Bureau's auditor.

3. "That 'if any subscriber considers that it has good cause to question the report made by any other subscriber then it may request an investigation or audit to be made by the bureau and, if considered proper by the bureau, it will be so made,' the incident expense to be paid by the party found in error."

4. "That it will deposit with the Bureau not less than one thousand nor more than ten thousand dollars of Liberty Bonds, according to its milling capacity."

5. "That 'should the undersigned subscriber fail, in any manner whatsoever, to comply with any of the terms of this agreement or with any and all reasonable requirements of said bureau, then it shall and does hereby forfeit to said bureau, at its election, all money paid for services and all further benefits and rights under this agreement; which forfeiture, for just cause, may be declared by said bureau, evi-

denced by written notice thereof mailed to said offender by U. S. registered mail, and such subscriber shall thereby forfeit all further right, title, or interest in and to said bonds (so on deposit) in whole or in part,' subject to the right of appeal to a council, of three subscribers, which shall have power to review the entire matter, reinstate the offender or take such other final action as seems proper. No fine shall exceed the deposit with the Bureau."

6. "That it will (a) 'immediately, and when and as hereafter issued, deposit with the bureau *all public price lists* of the undersigned covering raw and boiled linseed oil, cake and meal; (b) also to report to the bureau by prepaid telegraph, and further confirm by mail, duplicate of all quotations made at variance with above price lists, giving better terms to the contemplated purchaser than those quoted; (c) with all reports made in compliance with the above paragraph 'b' of quotations which amount to one carload or more of oil, cake or meal there shall also be reported at the same time and in the same manner the prospective buyer's name, address, and f. o. b. point of shipment; (d) in so far as the above reports 'a,' 'b' and 'c' do not disclose the following, the undersigned 'subscriber' agrees to give the following information in connection therewith, that is: the exact prices, terms, and discounts—and whether made to the jobber, dealer, or consumer—and in what quantities, carload or less than carload, and warehouse or mill prices; (e) also to promptly report all changes in and alterations or withdrawals of the above, of every kind whatsoever, that may be made; (f) also to promptly report by prepaid telegraph, and further confirm by mail, all orders received by the undersigned subscriber in response to special quotations made as above provided in paragraph 'c,' designating the quotation which is the basis of such order and any variance therefrom.' "

7. "That 'directly at the close of each day's business each subscriber shall mail by special delivery to the bureau a complete report of all its carload

sales for that day of oil, cake or meal, not covered by its previous daily sales reports, which report shall disclose the quantity and kind, price and terms, and whether for immediate or future delivery, and if no sale has been so made, this fact shall be likewise reported.'"

8. That for the purpose of compiling a weekly sales report 'a map of the United States shall be divided into zones as agreed upon by all of the subscribers to this service, and each subscriber at the conclusion of the week shall send to the bureau by special delivery, not later than the following Monday night, a compiled report of all its sales of oil, cake or meal into each zone made during the period covered by such report and not previously so reported, specifically setting forth the following: (a-a) Total gallons of oil sold into each zone, also showing the total gallons and price per gallon received for such oil sold; (b-b) Total tonnage of cake and meal sold into each zone, also showing total weight and price received per ton for such cake or meal sold; (c-c) Sales reports on both oil, cake and meal shall differentiate spot and future delivery, giving period of such futures.'"

9. "That all information received from the Bureau or any meeting of subscribers will be treated as confidential."

The Bureau agreed to promptly relay to the crushers all the information called for by the foregoing provisions, and to perform other services. It was also agreed by all parties:

1. "That 'monthly meetings will be held of all subscribers hereto at some convenient center,' with a representative of the Bureau, as Secretary, who shall present the matters pertaining to the industry to be therein openly discussed. Subscribers may send in notice of matters and topics for discussion and if they accord with the agreement and object of the service the Bureau shall cause the same to be docketed and presented. 'All subscribers shall

report at these meetings on all matters and conditions within their knowledge affecting the industry and within the limits of this agreement that they may be there discussed for mutual benefit.' 'Any subscriber failing to attend in person or by said representative at each of these meetings and be in punctual and continued attendance thereon shall be subject to a fine of twenty-five dollars for each offense, the same to be collected by and payable to the bureau. This fine may be remitted by a majority vote of the members present at the meeting where it is incurred."

2. "That 'any subscriber who has made offerings or quotations to a prospective buyer and is advised by such buyer that it is not to be awarded such business shall have the right to immediately advise the bureau of such unsuccessful offering or quotation giving all details of such bid or offering, and may then request the bureau to bulletin all of its subscribers asking specific information regarding any quotation or sale to such prospective buyer by any of the other subscribers and the bureau, on receipt of such request, will immediately bulletin all subscribers asking therefor and on receipt of replies will send out a compilation report thereof to all subscribers, together with the details of sale, if such a sale has been reported, so that all subscribers, including the original inquirer, will have a complete report of this transaction. On receipt of a request for such specific information from the bureau, the undersigned subscribers will immediately reply to same giving full information as to any quotation or sale which it may have made to such a buyer and, if it has made none, so report.' "

3. "That each subscriber will furnish the Bureau, upon request, information pertaining to any buyer of linseed oil, cake and meal and may request the Bureau to secure like information from all other subscribers, whenever it shall have an order or an account with, or an inquiry from, the buyer, and this information will be promptly relayed to all interested subscribers."

After the organization of the combination—

"The United States were divided into eight zones for *price quoting;* and it was stipulated that each member should quote a basic price for zone number one and should add thereto one, two, four, six, seven, eight and eleven cents, respectively for the others. At subscribers' meetings regularly held 'matters pertaining to the industry' were discussed; members were 'put on the carpet' and subjected to searching inquiry concerning their transactions. A meeting held October 29, 1919, adopted the following rule: 'In order to provide that the daily market information as relayed by the bureau shall at all times contain the fullest measure of news value, it is agreed that hereafter no council member shall dispatch changes in his prices as last filed with the bureau to more than one buyer without instantly thereafter telegraphing such full and complete information to the bureau as, and in the form, required by the service contract.' Another meeting 'resolved that it now be recorded that the recommended terms of this council for the sale of oil be 1% discount for cash settlement in 10 days, or 30 days net trade acceptance from date of shipment, and in order that a specific list of the terms of sale of all the council members may now be compiled and distributed, it is further resolved that all council members shall send to the bureau, not later than January 27th, a full explanation of the terms of sale as quoted by them to their trade.'

The Bureau displayed great industry in making inquiries, collecting information, investigating the smallest derelictions and giving immediate advice to subscribers. Hundreds of so-called 'market letters,' relating to divers transactions, were sent to subscribers. A sale of two barrels of oil below schedule was deemed worthy of special attention. Also from time to time it gave counsel concerning 'unfair merchandising' and the necessity for establishing sound policy by constructive cooperation.''

There is hardly a provision in the entire plan that has a parallel in the defendants' plan. The two plans differ

so markedly in all essential provisions that the Linseed Oil case is clearly not in point.

The Court also pointed out that as a *result* of the operation of the plan *"the prices of oil became more stable."* (There is no such proof in the case at bar.)

Also that the agreement in the *Linseed Oil* case destroyed "freedom of action by requiring each" crusher "to reveal all the intimate details of its affairs."

> "All subjected themselves to an autocratic Bureau, which became organizer and general manager, paid it large fees and deposited funds to insure their obedience. *Each subscriber agreed to furnish a schedule of prices and terms and adhere thereto—unless more onerous ones were obtained—until prepared to give immediate notice of departure therefrom for relay by the Bureau.* Each also agreed, *under penalty of fine,* to attend a monthly meeting and report upon matters of interest to be there discussed; *to comply with all reasonable requirements of the Bureau;* and *to divulge no secrets.*
>
> With intimate knowledge of the affairs of other producers and *obligated* as stated, but proclaiming themselves competitors, the subscribers went forth to deal with *widely separate and unorganized customers necessarily ignorant of the true conditions.* Obviously they were not bona fide competitors; their claim in that regard is at war with common experience and hardly compatible with fair dealing."

In the case at bar the undisputed *proof* shows that the defendants deal with expert and well-informed buyers. (Pages 45-46, 316, *supra.*)

The Court also stated:

> *"We are not called upon to say just when or how far competitors may reveal to each other the details of their affairs."*

Of course, in that case *all* the affairs of the crushers were subject to the scrutiny—even the approval—of the Bureau. In the case at bar members were not subject to any such supervision. They agreed to make certain reports, that is all. These reports were few in number, and gave no such details as were required in the Linseed Oil case. *Of course, the Court did not hold that a mere agreement to give certain information in consideration of obtaining like information from others destroys freedom of action so far as the conduct of one's business is concerned.* Certain information concerning past transactions may be divulged by a manufacturer without in any wise restricting his descretion as to *production, prices, etc.*

The Court also pointed out that

> "The situation here questioned is wholly unlike an exchange where dealers assemble and buy and sell openly; and the ordinary practice of reporting statistics to collectors stops far short of the *practice* which defendants adopted. Their manifest purpose was to defeat the Sherman Act without subjecting themselves to its penalties."

The Court then specifically held as follows:

"The *challenged* plan is unlawful" * * *

The plan could be held *unlawful* upon no ground other than that the *proof* showed that in its operation the challenged plan *unreasonably restrained interstate trade and commerce.* There is no such proof with respect to the plan in the case at bar.

The paramount importance of an accurate interpretation and a just application of the Sherman Act impels us to criticize—deferentially, but plainly—certain state-

ments that appear in the opinion in the *Linseed Oil* case. In that case the following assertion is made:

> "In *American Column & Lumber Company* v. *United States*, 257 U. S. 377, we considered a combination of manufacturers got up to effectuate this new conception of confidence and competition and held it within the inhibition of the Sherman Act because of inevitable *tendency* to destroy real competition, as long understood, and thereby restrain trade. Our conclusion there cannot be reconciled with the somewhat earlier opinion and judgment of the court below. They are in direct conflict."

1. We respectfully submit that in the *American Column* case the court did not hold that the "Plan" there considered was obnoxious to the Sherman Act because of its "tendency" to (unreasonably) restrain interstate trade or commerce.[67] We believe that we have demonstrated by means of excerpts from the court's opinion in that case (pp. 410-412, *supra*) that the said combination was declared unlawful because the proof showed an *existing* unreasonable *restraint* of interstate trade and commerce. The decision turned *not* upon the *tendency*, but upon the *effect* of the combination. The court found that the *purpose* of the combination was *to limit production and to increase prices regardless of cost*, and *expressly held* that such *purpose* had been *consummated*.

2. The Sherman Act declares, not that every contract, combination, or conspiracy which *tends* to restrain,

---

[67] "There is a vital distinction, of course, between restraint of competition and restraint of trade. Competition may be restrained in one or more particulars, or, in certain cases, even eliminated, without thereby effecting an unreasonable restraint of trade, as defined by a long line of decisions. (*U. S.* v. *Du Pont de Nemours*, 188 Fed. 150.)

or which *tends* to be in restraint of, interstate trade or commerce, is illegal, but that

> "every contract, combination * * * or conspiracy *in restraint* of trade, or commerce among the several States * * * is hereby declared to be illegal."

The title of the Act reads "An Act to *protect trade and commerce* against unlawful *restraints* and monopolies."

Pursuant to Section 4 of the Sherman Act the Government might petition a District Court to restrain the enforcement of a contract or the carrying out of a combination or conspiracy, recently made or formed, which provided for future action. In such a case the question would be, Is the contract, combination, or conspiracy *in restraint* of interstate trade or commerce? Is it of such a nature that its execution would (unreasonably) *restrain* interstate trade or commerce? If its execution would not (*unreasonably*) *restrain* interstate trade or commerce, would it be rational to hold that such contract, combination or conspiracy was "in restraint" of interstate trade or commerce?

The chancery powers of a District Court are usually invoked in anti-trust cases only after a contract, combination or conspiracy, alleged to be in restraint of interstate trade or commerce, has been operative for some time. The Sherman Act authorizes civil proceedings only for the purpose of restraining *future violations* of said Act. And where the alleged contract, combination, or conspiracy has been in operation a reasonable length of time, the Government must prove (1) the contract, etc., as alleged and (2) that as a *result* of it interstate trade or commerce has been (unreasonably) *restrained*. If proof is made that an (unreasonable) restraint of interstate trade or commerce presently exists, then it would

be reasonable to conclude (in the absence of proof to the contrary) that the continued existence of such contract, etc., would necessarily result in a *future violation* of the Sherman Act, namely, an unreasonable *restraint* of interstate trade or commerce; or, in the language of the Act, that such contract, etc., was "*in restraint*" of interstate trade or commerce. The same conclusion would also be reached if the proof showed that the contract, etc., *in force when the petition was filed* had caused (unreasonable) restraints of such trade or commerce in the past, *provided there were no proof that since the filing of the petition* the said contract, etc., had been so *modified* that its future execution would *not* result in an (unreasonable) restraint of interstate trade or commerce.

If, on the other hand, the proof showed that the alleged contract, etc., after a fair trial had not (unreasonably) restrained interstate trade or commerce, then the practical administration of justice would require a holding that the alleged contract, etc., was not "in restraint" of interstate trade or commerce. Such a case would necessitate the employment of the pragmatic method.[68] It was used by this court in the *Standard Oil* case, the *Steel Corporation* case, the *American Column* case and in several others.

3. The theory that contracts which *tend* to restrain trade are void, never formed a part of the common law doctrine with respect to contracts "in restraint" of trade. The relation between the common law and the Sherman Act needs no explanation in this court.

---

[68] "*The attitude of looking away from first things, principles, 'categories,' supposed necessities; and of looking towards last things, fruits, consequences, facts.*" (*Pragmatism*, by William James, pp. 54-55.)

4. *A tendency is too subtle and uncertain to serve as a legal test.*

It is certain that a mere tendency to restrain interstate trade or commerce would not be a valid test of a contract, combination or conspiracy alleged to be in violation of the Sherman Act. Only a tendency to *unreasonably* restrain interstate trade or commerce could be employed as such a test with even a semblance of logic. Aside from the considerations heretofore mentioned, the use of such test would result in the greatest confusion and uncertainty. Despite the long line of English decisions and later decisions by courts in the United States, both Federal and State, it is often exceedingly difficult, if not impossible, to determine with certitude whether a given contract or combination is "in restraint" of trade. Not only eminent lawyers, but members of this court have often been unable to agree whether certain contracts or combinations had unreasonably restrained, or if carried out or permitted to exist would unreasonably restrain, interstate trade or commerce. The introduction into the Sherman Act of the word *tendency* would open up a wide field for metaphysical speculation. What is a tendency? How many kinds are there? May tendencies be classified as *nascent, hyperkinetic, hypokinetic, conditioned, shifting, springing, contingent?* It is certain that they cannot logically be called *reasonable or unreasonable,* any more than can the odor of a rose. In order to be obnoxious to the Sherman Act, how *strong* must a tendency be? If numerous and conflicting tendencies coexist by virtue of a contract or combination, how shall they be reconciled? Do the books contain formulas for ascertaining the prepotency of conflicting tendencies? By means of what calculus can the *net* tendency of all of them be determined?

5. *There is too little assurance of harmful results to make a mere tendency, the gravamen of an offense subject to drastic penalties. This perhaps accounts for the silence of the books on the subject of tendencies.*

The penalty for violation of Section 1 of the Sherman Act is a fine not exceeding $5,000, or imprisonment not exceeding one year, or both.

Civil proceedings "to prevent and restrain" future violations of the Act are authorized by Section 4.

The seizure, condemnation and forfeiture of any "property owned under any contract or by any combination, or pursuant to any conspiracy (and being the subject thereof) mentioned in section one of this act, and being in transportation from one state to another, or to a foreign country" are provided for by Section 6.

The recovery of threefold damages and costs of suit, including a reasonable attorney's fee, by any person "who shall be *injured* in his business or property by any other person or corporation, by reason of anything forbidden or declared to be unlawful by this act" is authorized by Section 7.

In both the number and kinds of proceedings authorized, as well as in the severity of the punishment which may be visited upon laymen so unfortunate as not to construe aright an act that has caused endless disputes among lawyers and judges, the Sherman Act is unusual.

There is such a lack of proportion between the drastic penalties above mentioned and mere *tendencies* which may *never* result in any *actual injury* to interstate trade or commerce that the construction that such tendencies are inhibited by Section 1 is *unreasonable,* and should be rejected.

In the first place, to say that a contract, combination, or conspiracy has a *tendency* to (unreasonably) restrain interstate trade or commerce is to make use of a metaphor. And while metaphors are flowers of literature they are by no means conducive to clear thinking and accurate conclusions.

Tendency means *movement,* or *inclination* to *move,* in some particular direction or toward some *end* or *purpose; leaning; inclination.* In one sense, tendency is an *objective* motion and not a subjective state. It also means *possibility* of movement in the absence of restraint. **Lack of completion** is an *essential* part of its connotation. In this respect it is like an attempt, *i. e.,* an act or series of acts pointing to another act or series of acts. An attempt to commit a crime is in itself *complete,* otherwise it would not be punishable. It consists in an attempt to commit the crime, performance of some act towards the commission of the crime and failure to consummate its commission. But a *tendency* is not punishable, because it is merely descriptive of a motion (actual, or potential under favorable circumstances). In itself a tendency is not a thing—an object—it is simply the motion or the inclination of an object.

The term may be used metaphorically to describe a state of mind; for example, *John Smith's mind has a tendency to crime.* But even persons with criminal "tendencies" are not punished unless such tendencies result in crimes or misdemeanors. Such persons are then punished for their *crimes,* not because of their susceptibility to certain temptations. Such tendencies may always exist without resulting in infringement of the law.

G. H. Lewes defined a *tendency* as "the *ideal summation* of *statical conditions* which *tend* to a *dynamical result.*" But the dynamical *result* may never happen! All things terrestrial *tend* toward the center of the earth. The earth *tends* to plunge into the sun; it also *tends* to fly off at a tangent. As a matter of fact it does neither. A tendency may continue forever without reaching the goal. The dynamical result may always remain merely a *possibility.* On the other hand, a tendency may always exist without an actual or appreciable advance toward the objective. It may be blocked absolutely by counter-balancing tendencies or objects or forces; it may be slowed down or even overcome, and the object may be carried away towards another goal, or entirely different results may be produced despite the continuous adverse pressure or resistance of such tendency.

When a tendency reaches the goal, or a dynamical result *is* produced, the tendency *ceases to exist.* In such a case *a tendency to restrain trade* would have become *restraint of trade.*

Let us assume that after an analysis of the *mere terms* of a written agreement it could be affirmed that the agreement had a *tendency* to (unreasonably) restrain interstate trade or commerce. However, the agreement could not be viewed *apart from its relations,* or, in the phrase of Burke, "in all the nakedness and solitude of metaphysical abstraction." (pp. 301-2, *supra.*) It must be executed in the real world; *and the condition of the parties to it, their relation to the industry as a whole, their relation to buyers, outside competitors, lack of control of raw material, absence of protection by patents or tariff, numerous substitutes for the article manufactured, small amount of capital required to engage in the production of such article,* etc., etc., (pp. 65-75, 27-33,

369-396, *supra*), or the fact that the statistics collected pursuant to the agreement were given to buyers and others, (pp. 310-316, *supra*), might *decisively counteract or nullify the* tendency to (unreasonably) restrain interstate trade or commerce. Such *tendency* might never achieve its *goal*. It might never produce a *dynamical result*. It might be effectively blocked. Under such circumstances a contract having such a tendency might be absolutely without *any practical effect* upon interstate trade or commerce, or such trade or commerce might be greatly stimulated and increased, to the benefit of the public.

A contract, or combination may *tend* to restrain trade in the sense that *it produces conditions which may afford an opportunity actually to restrain trade*. Casual meetings of competitors on a golf course would afford such an opportunity. However, the Sherman Act is not a law against temptations, or mere opportunities for antisocial conduct, however useful they may be to the Prince of Darkness. The law never undertakes to deal with acts innocent in themselves that may or even do create opportunities for wrongdoing.

The title of the Sherman Act reads "An Act to protect trade and commerce against unlawful *restraints* and monopolies." As heretofore pointed out, a mere *tendency* to restrain is not a *restraint* and may *never* become a restraint.

If a *tendency* to (unreasonably) restrain interstate trade or commerce is condemned by the Act, then in a criminal prosecution, evidence *tending* to prove such *tendency* would be sufficient (if believed by the jury) to send citizens to prison, even though no *actual* restraint —*reasonable* or *unreasonable*— had ever existed! In view of the cumulative and drastic penalties and remedies provided, what an anomaly!

There are, of course, ordinances (and even statutes) providing more or less nominal penalties for *disorderly conduct* "tending to a breach of the peace." But such *conduct* is *in itself* an *invasion of the rights of others.* It usually consists of an *assault, forcible entry and detainer, etc.* The law also provides a penalty for libel,—a *malicious* publication that *tends* to blacken the memory of one dead, or the reputation of one who is alive and expose him to public hatred, contempt or ridicule. The *nature* of one's *reputation* differs *essentially from trade and commerce.* The former may be *irrevocably* ruined by *false* accusations, or even subtle insinuations. Unless trade or commerce is *actually and unreasonably* restrained no *injury* can be sustained by either of them, or by the public or any member of it. Criminal codes also provide that in prosecutions for seduction no conviction shall be had upon the testimony of the woman unless the same is corroborated by other evidence *tending* to connect the defendant with the offense charged. There are also similar statutes respecting the evidence of an accomplice. Such provisions relate merely to the evidence sufficient to convict one, not of a *tendency,* but of a *positive wrong.* All proper evidence *tends* to prove or disprove the *factum probandum.*

That the Sherman Act does not inhibit a mere *tendency* is supported by the provisions of Section 7, that any person "*injured* in his business or property * * * by reason of anything forbidden or declared to be unlawful by this act * * * shall recover threefold the *damages* by him sustained." Surely, no one could sustain an action under the Sherman Act by means of proof that a contract, combination or conspiracy *tended* to cause him economic loss. No one could possibly be

injured *in his business or property* by a mere *tendency* to (unreasonably) restrain interstate trade or commerce. He might very easily be so injured by an unreasonable *restraint* of such trade or commerce.

6. Section 2 of the Sherman Act denounces both monopolies and *attempts* to monopolize. An attempt to monopolize, even if unsuccessful, might unreasonably restrain interstate trade or commerce to the injury of the general public. For instance, an attempt to corner cotton or wheat would undoubtedly increase the prices of such commodities, which would affect not only the prices of flour and cotton goods, but prices in other lines of industry. In other words, an *attempt to monopolize* would undoubtedly result in an *unreasonable restraint of trade.*

The Government's petition in the case at bar is not based upon Section 2 of the Act, or any part thereof. Laying aside the attempt to monopolize, we think that the most that the parties to a contract, combination or conspiracy that neither had (unreasonably) restrained, nor could (unreasonably) restrain interstate trade or commerce, but which *tended* to do so, could be guilty of, would be an *attempt* to (unreasonably) restrain such trade or commerce. But the Sherman Act denounces only attempts to *monopolize.* And other than *such attempts,* it does not inhibit mere *attempts* to (unreasonably) restrain interstate trade or commerce.

The title reads, "An Act to protect trade and commerce against unlawful restraints and monopolies." *Unlawful restraints* are *unreasonable* restraints. And attempts to monopolize are either not included in the title, or else are included. We think they are included be-

cause common experience has proved that attempts to monopolize ordinarily result in unreasonable restraints.

There is a vital difference between an attempt to (unreasonably) restrain interstate trade or commerce by means of an attempt to *monopolize*, and an attempt by other means. For unless the other means were *effective* an *unreasonable restraint* would *not result*. An attempt to *monopolize* is broader in scope; it requires greater capital; it may *fail*, and yet result in an unreasonable restraint of trade. Its achievement may produce suffering and misery. Mere contracts, combinations or conspiracies to restrain trade—if not attempts to monopolize—produce harmful results only if consummated. Even then they are not so potent for evil as a monopoly. They are subject to too many disruptive forces, both internal and external, if not based on monopoly, control of raw material, actual or potential, etc., etc.

It should be observed that, whereas, the Act expressly condemns monopolies and attempts to monopolize, it is not only silent as to attempts to unreasonably restrain by other means, but inhibits only *unreasonable restraints*.

Also that only persons who *make* contracts in restraint of interstate trade or commerce, or engage in combination or conspiracies in restraint of such trade or commerce, are subject to fine or imprisonment. No penalty is provided for an *attempt* to make such contracts, or an *attempt* to engage in such combinations or conspiracies.

Furthermore, *there is no law of civil attempts.*

Whether an injunction will issue in a suit brought to restrain future violations of the Sherman Act must be

determined according to the rules and principles that govern ordinary suits in equity. The civil, as distinguished from the criminal, law takes no notice of mere *attempts.*

For instance, if A shoots at B intending to kill him, but misses him, the act is a criminal attempt, and is punishable. However, the civil law gives B no action for damages in the premises. For the suppression of crime and the repose of society, the criminal law condemns and punishes wrongful motives in action, even though (in some cases) it is *certain* that no actual harm could result. In *criminal* law

> "* * * an *apparent possibility* is all that is required; if there is an apparent possibility to commit the crime in the way attempted, the attempt is indictable, although, unknown to the person making the attempt, the crime cannot be committed because the means employed are in fact unsuitable, or because of extrinsic facts, such as the nonexistence of some essential object. This principle has been applied, for example, to attempts to commit larceny or robbery, where it turned out that, unknown to the accused, there was nothing to be stolen, as in the case of an attempt to pick an empty pocket, etc.; to attempts to commit murder, where because of an impediment unknown to the accused the murder could not be accomplished * * * and to an attempt to commit abortion where, unknown to the accused, the woman was not pregnant, or the drug administered was harmless." (16 Corpus Juris, p. 117.)

There is *no law of civil attempt,* so far as an attempt that *could not* result in damage, or an attempt that has failed to result in any injury, actual or legal, is concerned. Imagine a person's bringing an action for damages against another on the ground that the latter had attempted to commit a negligent act, or had attempted to libel the complainant, but that the attempt had failed.

The civil law does not allow the recovery of damages unless the attempt is *consummated,* and causes either actual harm, or results which the law presumes to be harmful, and for which it allows the recovery of nominal damages, or unless during the attempt some other legal wrong or actual injury is done. In none of the instances above mentioned are damages allowed for an *attempt,* but for an *actual* (or legal) *injury* flowing from a *completed* and *wrongful* act.

A (permanent) mandatory injunction merely restores the *status quo ante.* But in order to *restore* it, the *attempt* must have been *consummated,* or *some other wrongful act* must have been *perpetrated.* Would a mandatory injunction issue upon proof that the attempt to commit a harmful act had failed?

The same principles would apply to cases where a prohibitory injunction is asked. Certainly no such injunction would issue upon proof of merely a past attempt that had failed, for whatever reasons, or however malicious the motives of the intending wrongdoer.

Properly speaking, we think that there is *no law of civil attempt.*

In criminal law an *attempt* is *complete,* and is *always* something that *has happened.* The eye of the criminal law is fixed upon the *past.* The civil law takes no notice of aborted attempts. It scorns mere duds. The eye of equity sweeps the *future,* but equity takes no cognizance of attempts as such. If it did it would restrain conduct or remedy conditions where there was merely an apparent *possibility* of harmful results; or where, unknown to the respondent, injury *could not result.*

Equity is not concerned with *attempts*, but only with *actual harmful results* flowing from *completed acts*, which it rectifies by means of a mandatory injunction, or *imminent* wrongful acts, which in all *reasonable probability* will produce harmful results. These threatened acts it restrains. But whether such acts consist in threatened trespasses, or nuisances, or a multiplicity of suits, or what not, it must be *reasonably* probable (1) that if the injunction does not issue, the wrongful acts will be committed, and (2) that the harmful results will follow. (Pomeroy's Equitable Jurisprudence (2nd Ed.), Vol. V, Secs. 1915, 1937, pp. 4345, 4395; Vol. I, Sec. 251¾, pp. 421-22.) Equity is therefore, unconcerned with mere attempts. Its prohibitive powers are exercised only when past, present or threatened acts will in all reasonable probability actually cause harmful results.

For instance, the criminal law would punish an attempt to monopolize even though the attempt had failed, or even where subsequent events had proved that it could not have succeeded. But equity would not interfere with an attempt to monopolize, if the proof showed that *it could not* be successful. And as heretofore shown, attempts to (unreasonably) restrain interstate trade or commerce by means other than an attempt to monopolize, are not inhibited by the Sherman Act. Equity would interfere with such (misnamed) attempts only where there was a *reasonable probability* that they would be *consummated*. The Sherman Act condemns only unlawful, *i. e., unreasonable, restraints;* and District Courts are given jurisdiction merely to restrain *such restraints.*

A contract, combination or conspiracy that merely *tends* to restrain interstate trade or commerce, does not meet the requirements either of equity or of the Sherman Act.

7. In the case at bar the Government asks for an *injunction*. The petition is based solely upon Section 1 of the Sherman Act.

Is petitioner entitled to such relief in the absence of proof of an existing unreasonable restraint of interstate trade or commerce? If there is no such restraint, is there any proof of a *harmful result?*

Assume for the purposes of argument that the combination in the case at bar *tends* to (unreasonably) restrain interstate trade or commerce. *However, the proof shows that it has never done so, and that it cannot do so.* Is the Government entitled to injunctive relief in the premises. For the following reasons we do not think so:

1. *No harmful result* is present. As a general rule there is no civil liability in the absence of harmful result.[69] Negligence toward another, no matter how aggravated, is not actionable in the absence of damage. In some cases nominal damages are allowed for breach of duty in the absence of *actual* harmful result, for the reason that injury is presumed to flow from an infringement of a duty, as, for instance, a breach of contract.

To impose liability for a mere *tendency* to produce a harmful result is an anomaly.

2. There is no *reasonable probability* that a *harmful*

---

[69] *Sanctions and Remedies*, University of Pennsylvania Law Review (January, 1924), p. 1 *et seq.*, by Professor Albert Kocourek, of Northwestern University Law School. Without in any way making Professor Kocourek responsible for the argument that *tendencies* are not condemned by the Sherman Act, we are glad to record our indebtedness to him for numerous invaluable suggestions and criticisms.

result will follow if the injunction does not issue. In 32 Corpus Juris, pp. 42 *et seq.*, it is said:

> "It is not sufficient ground for an injunction that the injurious acts may *possibly* be committed or that injury may *possibly* result from the acts sought to be prevented; but there must be at least a *reasonable probability* that the injury will be done if no injunction is granted, and not a mere *fear* or *apprehension*. Injunctions will not be granted merely to allay the fears and apprehensions of individuals, which, it has been said, may exist without substantial reasons and be absolutely groundless. In these circumstances the mere fact that an injunction would not injure defendant will not authorize its issuance. *Especially is the principle applicable where the injury is not certain to occur if defendant is not enjoined, and on the other hand an injury would certainly occur if the injunction was granted. An injunction will not issue where it is shown that defendants are without power to accomplish that which it is alleged they are attempting to do.*"

In the *Linseed Oil* case the Court quoted from other decisions as follows:

> "The statute did not forbid or restrain the power to make *normal* and *useful* contracts to further trade by resorting to all *normal* methods, whether by agreement or otherwise, to accomplish such purpose." * * *

The Court then continued thus:

> "Certain it is that the defendants are associated in a *new* form of combination and are resorting to methods which are not *normal.*"

We respectfully submit:

1. That there is no warrant in either the Sherman Act or the entire history of the common law for the use of such tests as *normality, newness* or *usefulness* in determining the *legality* of contracts, combinations or conspiracies. *Every* contract, com-

bination or conspiracy, *whether old or new, whether normal, abnormal or subnormal, whether useful or useless,* which unreasonably *restrains,* or which would unreasonably restrain, interstate trade or commerce, is denounced by the Sherman Act. As stated in the *Standard Oil* case the purpose of the Act was to protect such trade or commerce from such restraint by *any* "methods, whether old or new." (221 U. S. 1, 60.)

2. That contracts cannot be reasonably condemned because they are *new,* nor upheld because they are *normal,* however, much weight was, consciously or unconsciously, attached to such considerations in the formation of the mores of primitive societies. Progress in law, science, ethics, philosophy, literature, art, has never wholly depended either upon holding fast to *normal* methods and *ancient* customs, or upon a Mongolic rejection of the neoterical. "Time makes ancient good uncouth."

3. That contracts and combinations among manufacturers and businessmen for the collation and dissemination of trade statistics are not *new.* As shown on pages 397, 232, 243, *supra,* even trade associations in the United States have been gathering and distributing among their members trade statistics for more than 60 years. Nearly 500 of them are now engaged in doing so. For hundreds of years before The Industrial Revolution organizations of persons engaged in the same line of business furnished their members with all available information concerning trade matters. (Unwin's *The Gilds and Companies of London.*)

XIII.

It is both the privilege and the duty of equity not only to prevent evil but to hold fast to that which is good. Its decrees are, therefore, infinitely various and flexible.

The decree entered by the District Court herein is as unselective as a hurricane or an earthquake. If unleashed it will convert into junk machinery of great pecuniary and social value.

It is undisputed:

1. That at great expense of time, labor and money the defendants have standarized maple, beech and birch flooring.

2. That in order to protect the quality of their product an expert Inspector of Mills was engaged; that he makes periodical visits to all Association mills, instructs graders, criticizes machine-work, etc.

3. That in order to protect both the public and Association members, an efficient and honest Inspection Service was established; that upon request of buyers experts are sent anywhere in the United States to re-inspect flooring sold by Association members.

4. That the standarization of maple, beech and birch flooring by the defendants has greatly improved the quality of such flooring; that architects and lumber dealers unanimously praise the work done by the Association, and that they prefer the flooring manufactured by Association members.

5. That the Inspection Service is honestly and efficiently conducted, and that it has minimized friction be-

tween buyers and Association members and eliminated litigation.

6. That the flooring manufactured by members bears the Association's trade-mark; that all the foregoing facts, and the expenditure of large sums of money in advertising the flooring manufactured by Association members, have built up a good-will of great value.

Must this valuable property right be destroyed? Is it *necessary* to scrap this efficient social machinery, and revert to a state of nature with all its evils and economic waste?

The proof is also undisputed:

7. That the manufacturing and marketing costs of members have been reduced by reason of the attention devoted to such matters by the Association; that the prices of the members are generally lower than the prices of nonmembers; that such prices are fair and reasonable; that uniformity of prices has never existed; that the average costs have not been used as minimum prices; that the elements contained in the manufacturing and marketing costs are proper, and that the Average costs are honestly and accurately ascertained.

Certainly, the defendant's plan for ascertaining average costs cannot be *wholly* evil. If there are objectionable features in it, may not *they* be modified or eliminated, and the good preserved? The public gains through even the *study* of costs by manufacturers, to say nothing of the reduction of costs. Must the Association be *destroyed* because it collects and distributes information with respect to average costs? It is undisputed that each member ascertains his own costs and determines for

himself his own prices. But is it necessary to *destroy* the Association merely in order to eliminate some features that might be thought to be improper?

Must the Association be destroyed because it distributes information with respect to freight rates?

Must it be destroyed because it collects and distributes fragmentary trade statistics? Is not the public adequately protected by the publication of the statistics in trade papers?—by sending the statistics to the Department of Commerce which includes them in its monthly Survey of Current Business?—by giving the statistics to anyone who asks for them?

If there are any objectionable features in the statistics, may not such features be eliminated or modified? May not *some* plan be worked out whereby the Association's undoubted public service may be preserved? Congress has provided that the Federal Trade Commission shall advise the Federal Courts concerning such matters. Let it be assumed that there are some features to which exceptions might be taken. Is all possibility for good to be foreclosed, simply because of the existence of a few matters which may easily be remedied?

If there is a doubt concerning the reformation of any defendants, may not a decree be entered restraining the resumption of practices, which the undisputed proof shows had been abandoned prior to the formation of the present Association? Shall the present Association be condemned on account of what antecedent associations did?

The persistence of trade associations throughout the centuries is proof that they minister to substantial needs.

It is true that like all other human institutions they have all too often considered only their own selfish interests. Nevertheless they are an expression of the principle of free association, which has wrought so mightily for social progress in the past. They are agencies of considerable present and of inestimable potential value. Is it better that they should be blindly and ruthlessly destroyed, or controlled in the interests of society?

Must the law, must *equity* be purely destructive? Can it do *nothing* constructive? Does equity demand the *absolute?* Has it lost all initiative, or interest in experiments which promise much for society? Surely equity has not become so rigid and undiscriminating—so impotent for good—as to be unable to do anything but destroy the defendant Association.

Respectfully submitted,

MAPLE FLOORING MANUFACTURERS ASSOCIATION, W. D. YOUNG & COMPANY, MITCHELL BROTHERS COMPANY, ET AL., Appellants,

vs.

THE UNITED STATES OF AMERICA.

Appeal from the District Court of the United States for the Western District of Michigan.

APPELLANTS' REPLY BRIEF.

MAY IT PLEASE THE COURT:

In this brief we shall for convenience adopt so far as possible the captions used by the Government in its brief.

The Government's brief cannot fail to be confusing to anyone not familiar with the record. Even when purporting to discuss the plan and the activities of the present association, the writer of the Government's brief bases his argument almost exclusively upon the evidence concerning the plans and the activities of *antecedent* associations. Unless the reader keeps this fact in mind he will accumulate more misinformation than facts with respect to the plan and the activities of the *defendant* association that was organized on March 29, 1922.

"STATEMENT OF CASE."

On page 1 it is asserted that the Government's petition "alleges * * * that the defendants, who manufacture a very large per cent of the maple, beech, and birch flooring marketed in the United States * * * *control its production*" * * *. The petition contains no such allegation. Neither is there any proof whatsoever that since the organization of the present association the defendants have ever controlled or sought to control, either directly or indirectly, the production (output?) of maple, beech or birch flooring.

On page 1 it is stated that the petition alleges that the defendants "fix minimum prices" for and control the "production" of maple, beech, and birch flooring by means of "the computation and distribution * * * of alleged average costs, [they] being in fact agreed minimum prices" * * *.

Under the rules the Government's brief in the case at bar should have been filed on Monday, November 10th. We have as yet (November 17th at 11:00 o'clock a. m.) received only 18 pages of galley proof of the proposed brief. By what means the Government intends, at this late date, to support the assertion that the average costs of the present association are in reality "agreed minimum prices" we do not know. At any rate, certain ambiguous allegations of the petition (see Appellants' Brief, pp. 11-12) are now made definite and certain. And it necessarily follows that the Government must show by means of the *record*

(1) An agreement *by the members of the present association* that the average costs distributed by it should be *minimum prices* for maple, beech and birch flooring; and

(2) *That the said members executed said agreement.*

If the average costs were in fact *minimum* prices, then the prices obtained by association members for maple, beech and birch flooring should always at least equal the average costs. If no such relation exists between the average costs and the prices obtained, then it necessarily follows, either that there was no such agreement, or else that it was not carried out. In either event, the Government's contention that the average costs are "agreed minimum prices," and that the de-

fendants by such means control "production" and market prices, is groundless. As shown in appellants' opening brief, there is no evidence of an express agreement of the kind alleged by the Government. And the undisputed proof shows that in the great majority of instances the prices obtained by association members for maple, beech and birch flooring are substantially below the average costs (pp. 336-348). Therefore the only inference that can fairly be drawn from the *facts* is that the *average costs* are what they purport to be. This is especially true, in view of the failure of the Government to adduce any proof that the elements contained in the average costs are improper, or that said costs are not honestly ascertained and reported. In view of the state of the record, the assertion that the average costs are "agreed minimum prices" is manifestly absurd.

It should also be observed that in attempting to state the substance of the Government's petition the writer of the Government's brief fails even to mention the allegations with respect to *uniformity of "f. o. b. selling prices"* and *"net delivered prices."* As shown in appellant's opening brief, the alleged uniformity of prices is the gravamen of the Government's petition (pp. 11-12, 113-114, 195-6). Does the Government intend to abandon such contention here, as it did in the court below? (Appellants' Opening Brief, p. 339.) If it does, what, then, becomes of the Government's entire case?

I.

"PERCENTAGE OF THE COMMODITY PRODUCED AND CONTROLLED BY THE DEFENDANTS."

After stating certain percentage figures with respect to the production of both members and nonmembers of the defendant association (pp. 4-5), the writer of the Government's brief draws the conclusion that "these figures are conclusive evidence that the industry is wholly dominated by the association" (p. 5).

The Government's petition does not charge that the maple, beech and birch flooring industry is dominated by the defendants. As shown on page 33 of appellants' opening brief, the said petition charges—

> "The membership of defendant association comprises *practically all of the manufacturers* of maple, beech and birch flooring within *the States of Michigan, Illinois, Wisconsin and Minnesota,* and it represents approximately *seventy per cent* of the total manufacturing *capacity* of such flooring in the United States" (Vol. I, p. 3, fol. 5).

The *proof* shows:

1. That (if the Wisconsin Land & Lumber Co. be counted as a member) the entire membership of the defendant association numbers only 22.

2. That in 1922 there were in Michigan, Illinois, Wisconsin and Minnesota *alone,* 17 *nonmember*

manufacturers of maple, beech and birch flooring (Def'ts' Ex. QQ, Vol. IV, fol. 5507, which combines certain data collected by both the Government and the appellants. See Appellants' Opening Brief, pp. 26-36).

3. That in 1922 there were 58 nonmember manufacturers of maple, beech and birch flooring in the United States who reported to the Government and/or appellants (Def'ts' Ex. QQ, Vol. IV, fol. 5507).

4. That for 1922, 38 nonmember manufacturers reported a manufacturing *capacity* of 238,610,000 feet of maple, beech, and birch flooring, whereas, the members of the defendant association in 1922 had a manufacturing *capacity* of only 158,400,000 feet (Def'ts' Ex. QQ, fols. 5506-7, Appellants' Opening Brief, p. 33).

5. That aside from the nonmember manufacturers of such flooring who reported to the Government and/or the appellants, there are numerous other nonmember manufacturers of such flooring in the United States, to say nothing of Canadian manufacturers (Appellants' Opening Brief, pp. 26-36).

6. That the defendants own a very small proportion of the total stand of maple, beech and birch timber (Opening Brief, p. 26).

In view of the foregoing undisputed facts, it is wholly beside the case to assert that the maple,

beech and birch flooring industry is "wholly dominated by the association." No such claim is made in the petition. The allegations of the petition above quoted are conclusively disproved by the evidence. The Government charged manufacturing *capacity* and then fell back on *production*.

Furthermore, the proof was that the prices of association members for maple, beech and birch flooring were usually lower than those of nonmembers, although the flooring manufactured by members was superior to that manufactured by nonmembers (Opening Brief, pp. 46-61, 113-162, 169-194).

We also demonstrated in our opening brief that the diversities existing among members, the lack of control of raw material, the number of nonmembers, the number of competing floorings, etc., etc., absolutely preclude the possibility of the domination of the maple, beech and birch flooring industry by either the defendants or any other group of manufacturers (pp. 66-75, 367-380).

Domination by defendants connotes unanimity of action. Yet the proof shows vigorous competition and fair and reasonable prices (Opening Brief, pp. 113-162).

III.

"PREVIOUS ARTICLES OF ASSOCIATION UNDER WHICH MANUFACTURERS OF MAPLE AND BEECH FLOORING OPERATED."

On page 11 of its brief, the Government admits that there were numerous successive associations

that operated under different articles. This admission is contrary to the allegations of the petition, or, rather, to *one* allegation of the petition, which is that

> "the *defendant* association has been in existence since 1895" * * * (Vol. I, p. 4).

In view of the admission above stated, why does the writer of the Government's brief usually discuss together the articles and activities of all the associations? Such a method is not only unfair and illogical, but productive of confusion.

On page 14 of its brief the Government attempts to involve in doubt what is undisputed, viz, that the old allotment plan was abandoned on March 31, 1920, and that it was never thereafter resumed. There is not only oral testimony which is undisputed, but much documentary evidence which does not admit of dispute (Vol. IV, pp. 569, 576, 454-5, 456, 447-449, 560; Vol. III, pp. 61, 63, 130; Vol. I, 77-78, 76, 146, 143-4, 165; Vol. II, p. 794). All statistical activities, as well as the allotment plan then in force, were abandoned on March 31, 1920, because of the advice of counsel given in consequence of the District Court's opinion in the Hardwood case. The allotment feature was never thereafter resumed.

The same methods are used by the Government (pages 14-15) with respect to the tentative articles of association which contemplated the organization

of an association, with an allotment plan, to exist from October 1, 1921, to July 1, 1922 (Vol. III, p. 49). As the correspondence that was introduced in evidence by the Government shows, certain manufacturers refused to sign said articles; it was agreed that unless all old members signed the said articles they were not to be binding upon those who did sign them (Vol. IV, pp. 454-456). And the evidence is undisputed that the said articles were never adopted nor operated under (Vol. I, pp. 146-147, 77-78, 143, 165; Vol. II, p. 794).

In December, 1921, this Court handed down an opinion in the *American Column & Lumber* case, whereupon all statistical activities of the association then in existence were suspended (Vol. IV, p. 818). An opinion was procured from the then association's attorneys, who carefully analyzed the opinion above mentioned (Vol. III, pp. 145-152; Vol. IV, p. 818). The organization of the present association in accordance with the written opinion of the said attorneys was thereafter undertaken (Vol. III, pp. 153-168). The organization of said association was perfected on March 29, 1922 (Vol. I, pp. 78-79, 147, 149; Gov. Ex. 15-GG, Vol. III, pp. 155-6; Gov. Ex. 52-OO, Vol. IV, p. 461).

The articles of the present association are devoid of any allotment plan (Vol. III, pp. 64-74); and there is no evidence whatsoever that the defendants, or any of them, have ever observed any such plan since the organization of said association.

On page 14 of the Government's brief it is asserted that the old allotment plans related to *production.* This is not the fact. They related solely to *shipments.* (Vol. III, pp. 54-55.)

IV.

"MINIMUM PRICE PLAN AND MINIMUM PRICE BASIS."

Under the foregoing caption the Government discusses the mere terms of certain old minimum price plans, but says not a word concerning the undisputed evidence that such plans were never enforced or observed. (See Appellants' Opening Brief, pp. 196-206.) In this connection it is merely said that Mr. George W. Keehn "claimed" that said plans were not enforced; and the distinction made by the witness between *in force* and *enforced* is criticized. The distinction drawn by Mr. Keehn between *in force* and *enforced* (Vol. I, pp. 144-146) is a sound one. The Government should be aware of this distinction by reason of its own experience with the Volstead Act, which indubitably is *in force,* but which (*alas!* or *thank Heaven!* according to one's point of view) is certainly *not enforced! Moreover, all minimum-price plans* (including the one dated July 1, 1916) *were thereafter formally vacated some three years before the Government instituted this suit* (Vol. IV, p. 529; Vol. I, pp. 144-46).

On page 26 of the Government's Brief reference is made to the suggestion of the secretary of the as-

sociation then in existence with respect to the establishing of maximum prices. This suggestion was due to the runaway market which occurred in 1919-1920, which was caused by the accumulated demand that had not been permitted to find expression during war years. The removal of the building restrictions by the Federal Government during the latter part of 1918 coincided with or was subsequently followed by large fires which destroyed important flooring mills. There also occurred during this period the I. W. W. strike, and some mills were forced to shut down. This strike was talked of for some months before it actually occurred. The large building program which was undertaken upon the lifting of building restrictions had not been completed, and contractors and others were bidding for deliveries regardless of price. The conditions that then obtained in the flooring industry were similar to those which obtain on stock exchanges in a bull market. Spreads of $10, $20, $30, $40 and $50 per thousand feet between the high and low prices for the same size and grade of flooring were common. (Vol. IV, fol. 54-55; Appendix E, p. 5, Appendices to Appellants' Brief.) Such chaotic conditions were felt to be an injustice to the public and to the Maple Flooring industry.

During the period last above mentioned the Weekly Sales Reports were inaugurated. It was not long before conditions became more stable, and the market continued to decline throughout the

rest of the year. Of course, we do not wish to be understood as even implying that the action of the market was due to the institution of Weekly Sales Reports. But the fact that shortly after the institution of the Weekly Sales Reports the market declined almost uninterruptedly is positive proof that the apprehensions of the Government with respect to the effect of the Weekly Sales Reports are wholly unfounded.

Counsel for the Government is not fair in his argument with respect to Minimum Price Plans. It is true that recommendations were made that minimum prices should be obtained. The proof, however, is undisputed that these recommendations were disregarded in actual practice. And that such Minimum Price Plans were not enforced is conclusively proved by the undisputed evidence that no fines or penalties were ever exacted, demanded or paid, and that each member did as he pleased.

On pages 44 et seq. of the Government's Brief, learned counsel invokes the provisions of certain tentative drafts which were sent out by the secretary of the association in existence immediately prior to the organization of the present association. From these rough drafts counsel attempts to deduce the intention and purpose of the defendants in the formation of the present association. Of course such purpose and intention must be determined from the articles now in force, especially in view of the fact that there is no contention that

the articles are not complete. The undisputed evidence was that the activities of the present association had been strictly in accordance with the articles of the association now in existence.

And why talk of the Minimum Price Basis dated January 6, 1921, in view of the undisputed proof that upon receipt of Mr. Nebeker's letter dated February 4, 1921, the said Minimum Price Basis was by resolution promptly and unanimously annulled? (Vol. IV, pp. 804, 800-810; Vol. I, pp. 148-9.)

V.

"CONSTRUCTION AND CIRCULATION OF LIST OR BASE PRICES."

Under the foregoing caption the Government confuses the minimum prices (or tables of values) distributed (but not observed) by antecedent associations with the *average costs* distributed by the present association. As we shall demonstrate, there is a vital distinction between the minimum prices (or tables of values) and the average costs. They are composed of different elements; they were distributed from different motives.

On page 46 of the Government's brief it is asserted:

> "In fact the Minimum Price Basis Plan has been in operation, though not under that name, ever since 1913. The members of the Association during the entire time since that date have distributed among themselves by the secretary lists designating

> what are called 'Cost Prices' of the various grades and dimensions of flooring, but which are nothing more nor less than minimum prices that are intended to be, and actually are, observed."

Then Mr. George W. Keehn's testimony is garbled so as to make it appear that he testified that there was no difference between the *average costs* and the prices which were recommended in 1913.

The witness had testified at length concerning average manufacturing and marketing *costs;* the *cost* of rough lumber; test runs, and *average costs* of flooring based thereon. Not once did he use the phrase "*cost price*" (Vol. I, pp. 104-109).

Whereupon *Mr. Fowler* (of counsel for the Government) asked the following question:

> "Q. Now, you have explained in great detail your method of arriving at what you denominate as the cost price of lumber?"

which was answered by the witness thus:

> "A. Yes, on the flooring" (Vol. I, p. 110).

We quote in the margin the garbled excerpt from the transcript as given in the Government's brief,[1] which does not correspond with what actu-

[1] "I think we commenced, originally, in 1913, under what we termed 'scientific list.' That was based on the old work of the Market Conditions Committee.

"We are using it today (Vol. I, p. 110)." (Brief, pp. 46-7.)

ally occurred immediately following the question and answer above quoted:

> "Q. That *method* has been used for how many years?
> "A. I think we commenced, originally, in 1913, under what we termed 'scientific list.' That was based on the old work of the Market Conditions Committee.
> "Q. You have been using that same *method* since—*the same general principles* —and are using it today?
> "A. We are using it today" (Vol. I, p. 110).

In the garbled excerpt contained in the Government's brief the pronoun *it* stands for "scientific list," whereas in the record *it* stands for *method.* The same general *method* has been used from 1913 to date, but the "scientific lists" and the Tables of Values (or Minimum Prices), contained not only the *average costs* of manufacturing and marketing flooring, *but also certain percentages of profit.* As shown on pages 244-280 of appellants' opening brief, the average costs contain *no element of profit whatsoever.*

For instance, Mr. George W. Keehn described the initiation of the "scientific list" as follows:

> "Q. From what source did you obtain this information which formed the basis of your original estimation or determination of these cost items and of the divisions that were to be made to the cost of manufacture?
> "A. What we call our survey of costs, manufacturing and marketing costs was de-

veloped quite a number of years ago and later on it was substantiated as a practical foundation for those elements of cost by Prospectus which we received from the U. S. Forestry regarding the sale of timber in Priest River Valley, Idaho. We have a letter here dated March 10, 1913, addressed to the Maple Flooring Mfg. Association, and signed by H. S. Graves.

"Q. Who is Mr. Graves, do you know?

(fol. 1395:) "A. The forester, United States Forester. In which they endeavored to arrive at a basis for the sale of their stumpage. The letter is rather short, perhaps it wouldn't take very long to read it. It tells the whole story instead of extracts." (Vol. II, 791.)

We set forth in the margin a copy of the letter in question.[2]

Mr. Keehn continued his testimony as follows:

"Now on page 5 of this prospectus there are certain elements we will consider in the

---

[2] UNITED STATES DEPARTMENT OF AGRICULTURE, FOREST SERVICE.

WASHINGTON, *March* 10, 1913.

Secretary Maple Flooring Mfg. Ass'n, 807 Stock Exchange Building. Chicago, Ill.

DEAR SIR: Because of the proposed sale of 267,000,000 board feet of timber in the Priest River Valley, Kaniksu National Forest, Idaho, the inclosed prospectus has been prepared. It shows how the forest service furnishes information to lumbermen who might be interested in bidding on National forest timber.

cost of logging and manufacturing, and etc. There is no use to read them all in detail, but among the ones which are similar fundamentally to what we use, the Association uses "Administration and Supervision, depreciation of equipment, interest charges, taxes and insurance." That is all summed up as to certain chances there.

An unusual feature of this sale is the fact that no part of the area of the forest will be destroyed. The object will be to clear this part of the area for agriculture instead of providing for forest renewal. Provision 8 of the "Sample Timber Sale Contract" and the provision regarding "Agricultural Land" under the head "Rules for Marking and Brush Disposal" illustrate how this will be done.

When the area has been cleared of timber and the slash burned the land will be opened to homesteading under the provisions of the "Forest Homestead Law." If the Forest Service did not sell off the timber before opening the land to entry, the value of the present stand of timber would cause the land to be held speculatively instead of being cleared for farms. But the land will be better employed growing farm crops than growing timber; and hence the Forest (fol. 1396) Service is preparing to put it into the hands of bona fide settlers, under a procedure which will insure agricultural development.

The Federal Government will receive about $650,000 for the timber, of which $225,000 will go to the benefit of the state for public schools and good roads.

The minimum stumpage price of $5 specified for the white pine on these logging chances is unusually high, because this western white pine is the most valuable stumpage on the National forests. The timber is easily worth the price, and no difficulty is anticipated in securing bids on the basis named.

The 12 per cent profit to the lumbermen allowed for in calculating the stumpage rates to be charged is exclusive of interest on the investment, which was figured at 6 per cent.

(fol. 1397:) Then we come to another one on page 6: "Administration, supervision, sealing excepted, and railway operation, maintenance of way, unloading at pond—those are just items again—interest charges, depreciation of equipment, insurance and taxes. Then they deduct for salvage and, etc.

Then we come over to page 7: "The stumpage rates appraised in the notice of sale were determined by deducting the cost of logging, milling and other expenses, plus approximately 12 per cent profit, from the present average selling prices of lumber."

Then they go on and give the stumpage prices. In other words, they appear to have taken the market value of lumber as realized from sales on the market as the foundation for arriving at the selling price of the timber. In other words, they work from there back to the stump and with us we take the market value of the rough maple lumber as ascertained by sales on the open market and we work from that foundation to arrive at the average cost of the finished flooring. It is the same fundamental principle but it is reversed in its application (Vol. II, p. 792).

The minimum prices allow, therefore, for a profit of 12 per cent on every thousand feet of timber sold, over and above interest on capital and all overhead costs. It must be remembered that the manufacture of lumber is a business which, because of the risks involved, requires a high return in order to induce operators to undertake a logging enterprise.

Very truly yours,

H. S. GRAVES,
Forester.

(Vol. II, p. 791-2.)

The method formerly used by antecedent associations is well illustrated by Government's Exhibit No. 28, Vol. III, pp. 291-293. The Court will observe that the method used in order to arrive at what the different grades and sizes of maple flooring should sell at *if 10 per cent profit were to be realized* is identical with the method employed by the present association as explained on pages 244-280, in appellants' opening brief, *except that one-ninth was added to the total costs of such flooring in order to include a profit of 10 per cent.*

The minutes of the annual meeting held on January 28, 1914, read in part as follows:

> "It was suggested that the Market Conditions Committee formulate a table of values showing what flooring would be actually worth and what it should sell for if delivered values were based by [on?] a logical and scientific method in accord with the following fundamental principles:
>
> "1. The market value of the raw material as established by current sales of rough lumber in the open market.
>
> "2. Add the cost of manufacturing and selling.
>
> "3. Then add 1/9 to represent the minimum profit of ten per cent on sales.
>
> "4. Add cost of freight or delivery."
>
> (Vol. III, p. 108.)

The Court will observe that in Government's Exhibit 28, Vol. III, p. 292, it was stated that the prices of flooring should be advanced $3.91 per M

feet *if a profit of 10 per cent on the sales were to be realized.* See particularly Government's Exhibit 28-A (Vol. III, p. 294), which was issued by the association then in existence on January 26, 1917. See also the petition to the Federal Trade Commission dated July 14, 1915. (Vol. III, p. 82.)

There is no dispute that the Tables of Values issued by antecedent associations were intended to show what the flooring should be sold at *if a 10 per cent profit on sales* were to be obtained. It is equally undisputed, however, that each member was free to do as he pleased, and that there existed during all of said period great price variation and intense competition, not only among the then association members, but between said members and nonmembers. (See pages 116-162, 196-206 of Appellants' Opening Brief.)

As shown in our opening brief, the *average costs* computed and distributed by the present association contain no elements of profit whatsoever (pp. 244-280). The inclusion of a certain percentage for profit was abandoned long before the organization of the present association (Vol. I, p. 151). Even the 5 per cent for the hazards incident to the business has been discontinued, although the undisputed proof was that the flooring industry is an essentially hazardous one, and that the said 5 per cent allowance was reasonable (Appellants' Opening Brief, p. 280).

Other than the mere distribution of the average costs (which are merely the average of the costs of reporting members) there is no proof whatsoever that any recommendations with respect to prices have ever been made by the present association. On the contrary, the undisputed proof is that no such recommendations have been made (Appellants' Opening Brief, pp. 310-313); and the great range of prices and the relation between prices obtained and the average costs constitute a conclusive answer to any assertion that the average costs are agreed minimum prices. They also render irrelevant any speculation concerning the probable effect of the distribution of average costs among association members.

It is true that during the existence of antecedent associations there was a Market Conditions Committee which recommended what prices should be. That each member was free to do just as he pleased is conclusively shown by the letter dated November 8, 1920, which the defendant W. H. Greene wrote to the John C. Hill Lumber Company of St. Paul. This letter reads in part as follows:

> "We expect there will be another meeting of the association some time this month although we do not know the exact date. However, in any event, the association does not have ironclad prices. Our Market Conditions Committee after analyzing stocks on hand, production, unfilled orders, new business, etc., merely recommends what in their

> judgment ought to be the asking price. This is merely a guide to the manufacturer and he is at liberty to quote his stock at any old price, either more or less, than the recommended values." (Appellants' Opening Brief, p. 201.)

As pointed out in our Opening Brief, the present association has never had any Market Conditions Committee, nor any other committee even analogous to the said Market Conditions Committee.

The learned writer of the Government's brief next discusses Government's Exhibits 25-A, 26, 27, and 28-N (Vol. III, pp. 280-289, 315-317). Those exhibits show the average costs of maple flooring based on certain test runs. They are dated May 31, 1922, October 25, 1922, February 15, 1923, and September 22, 1921, respectively.

On page 55, the learned writer of the Government's Brief makes the following observation:

> "It appears strange, further, that such a large percentage of No. 1 Common lumber is used in making the test runs, as Mr. Saunders testified that the better end of No. 1 Common rough Maple lumber is not generally used in the manufacture of Maple Flooring because it is not profitable to do so, as a better price can be obtained for it on the market than can be obtained by working it through the flooring factory. (Vol. 1, p. 197.)"

Mr. Saunders gave no such testimony. He testified that the better end of No. 1 Common rough Maple lumber was not generally used in the manufacture of Maple Flooring *"by manufacturers who produce their own lumber,* because it is not profitable to do so." (Vol. 1, p. 197.)

All the members of the Association do not own timber. Eight of them are compelled to purchase all the rough lumber they use. Furthermore, some members of the Assocation "use Selects and Firsts and Seconds * * * *or the entire product of the log in manufacturing flooring."* (Vol. 1, p. 405. See also Test Runs, Vol. III, pp. 276-7 (fols. 360-379), pp. 291-294, 300-304.) There is, therefore, nothing strange in the fact that 51 per cent of No. 1 Common rough lumber was used in the test runs above mentioned. If lower grades of rough lumber had been used, then there would have been a greater percentage of waste as well as greater percentages of Factory and No. 1 flooring.

Learned counsel seems to know nothing concerning either the flooring business or cost accounting, and, apparently, but little of mathematics. He states that he cannot understand how the average cost of the different grades and sizes of maple flooring is arrived at.

The burden of proof was upon the Government to establish not only that the average costs contain large profits, but that the said average costs are in

fact minimum prices. The record is barren of proof concerning what methods were used by the secretary of the association in making the distribution of the total cost among the different grades and sizes of flooring produced as a result of test runs.

There is no explanation whatsoever in the record concerning what the next to the last column of figures appearing on page 31 of this brief mean, or how they were arrived at, neither did the Government adduce any proof whatsoever that the defendants used said figures as prices.

The burden of proof was upon the Government; and having made no proof whatsoever, it is now too late for its counsel to ask questions which should have been addressed to witnesses in the court below.

It might be guessed that the Secretary of the association employs methods which are used by all manufacturers of joint-cost products. From a ton of coal a gas company will produce a certain amount of gas, a certain amount of coke, a certain amount of carbolic acid, as well as divers quantities of perfumes, dyes, and other coal-tar products. From a given quantity of crude oil a refiner will get so much gasoline, so much kerosene, so much lubricating oil, so much vaseline, so much naptha, etc. Naptha always sells for a great deal more than kerosene. Vaseline is sold in small tubes or glass bottles, whereas gasoline is

sold in large quantities. Coke is sold by the ton, perfume by the ounce. Joint-cost products differ in kind, and such products of the same kind differ both quantitatively and qualitatively. Much of one product is obtained and but little of another. The amount of labor expended on the different products varies. Their exchange value also differs greatly. Of course, so far as joint-cost products are concerned, cost accounting is not an exact science. But, according to both common sense and sound principles of accounting, the cost of any one of two or more joint-cost products is closely related to its exchange value. For instance, an oil refiner would soon be in bankruptcy if he determined that naptha cost less to produce than kerosene and fixed his prices accordingly. A manufacturer of maple flooring could easily sell all the Clear grade flooring he could produce at Factory grade prices, but he could not sell any Factory grade flooring at Clear grade prices. Is it strange, therefore, that in prorating the total cost among joint-cost products consideration is given to the exchange value of such products?

So far as the different grades and sizes of maple flooring are concerned, their exchange value is fixed largely by custom, intrinsic value, appearance, utility, demand, supply, necessary labor, waste in manufacture, value of raw material, etc., etc. And such exchange value largely determines what proportion of the total cost shall, as a matter of ac-

counting, be assigned to each of such grades or sizes. No two lumber accountants would make exactly the same distribution, but the percentage of variation would not be large.

The distribution of the cost is of no practical importance. The *total cost* is the thing. *And this total cost is a matter of mathematics.* Discretion has no part in it. The rough lumber costs so much; a given quantity of it produces a definite amount of flooring of different grades and sizes; the manufacturing and marketing costs are so much. The total cost of producing the flooring obtained can, therefore, be easily determined. So can the cost per thousand feet of flooring. This total cost is *certain. And what distribution is made of it among the different sizes and grades is manifestly immaterial so long as the aggregate cost of all grades and sizes equals the total cost.*

All the foregoing facts are elementary and are well known to lumber accountants. The appellants care so little about the distribution of the total cost among the several grades and sizes that they have no objection whatsoever to eliminating it from their surveys of costs.

But what difference does it make what methods the secretary of the association uses in computing the "approximate relative-average costs?" The average costs issued by him are binding upon no one. Each member of the association is absolutely

free to sell his flooring at any price he pleases. And the evidence shows the greatest range of prices. In fact, the great bulk of the flooring produced by association members is sold at prices substantially below the average costs (Appellants' Brief, pp. 336-348). *This wide range of prices is explained by the diversities mentioned on pages 66-75 of our opening brief and by the absence of any agreement with respect to either production or prices.*

Furthermore, the evidence is undisputed that each member keeps his own costs (the secretary merely reports the *average* of the costs of association members), and that each member also independently determines his own prices (Appellants' Opening Brief, pp. 322-335).

The Government did not adduce a word of proof that any elements entering into the average costs are improper; it adduced no evidence whatsoever of dishonesty or inefficiency with respect to the making of any report or test run. The burden of proof rested upon the Government. Its failure to sustain that burden cannot now be obviated merely by means of interrogations which should have been addressed to *witnesses* in the court below.

Learned counsel asserts that

> "there is nothing to show that the waste of manufacture of one grade of rough lumber is greater than that of another" * * * (p. 57).

Of course such a statement is wholly absurd. On page 56 of the Government's brief it appears that the following grades of rough lumber were used in a test run, and that at the time the average costs were ascertained the market value per thousand feet of the different grades of rough lumber used was as follows:

No. 1. Common	$39.50
No. 2. Common	24.50
No. 3. Common A	11.50

The great difference in value of the three grades above mentioned is ample proof that in converting rough lumber into flooring there is considerably more waste in No. 3 Common A than there is in either No. 2 or No. 1 Common.

By referring to Government's Exhibit 24 (Vol. III, pp. 276-77, fol. 360) the court will observe that certain test runs were made by different members. We set forth below the grades of rough lumber used by number 24 (Kerry & Hanson Flooring Company) and number 47 (Grand Rapids Trust Company, receiver for William Horner), respectively, together with the amount of waste, as well as the amount (in grades) of flooring produced.

Rough Lumber Used.

	By No. 24.		By No. 47.	
	Feet.	%.	Feet.	%.
No. 1 Com.....	276,349	46%	68,025	62%
" 2 "	155,381	26 "	32,425	29 "
" 3 " A.....	.....	....	10,304	9 "
" 3 Com.....	169,788	28 "	.....	....
	601,518	100 "	110,754	100%
Flooring Produced:				
Clear	117,534	27%	46,692	51%
No. 1.....	235,335	54 "	34,355	37 "
Factory	82,514	19 "	11,130	12 "
	435,383	100 "	92,177	100 "
Waste	166,135	27.6%	18,577	16.8%

From each 1,000 feet of rough lumber used No. 24 obtained only 724 feet of flooring, whereas No. 47 obtained 832 feet of flooring. It will also be observed that the percentages of the different grades of flooring (which are stated in the order of their excellence) varied markedly.

The grades of rough lumber are also above stated in the order of their excellence; and it is obvious that the large percentage of No. 3 Common used by No. 24 accounts for that member's large percentage of waste.

Learned counsel next asserts:

> * * * "and the cost of manufacturing the different grades of flooring is the same, or practically so" (p. 57).

As pointed out on pages 278-280 of our opening brief, the above statement is demonstrably incorrect.

The learned counsel then proceeds as follows:

> "Therefore the only element upon which to base a difference in the *cost* prices of different dimensions of flooring is the difference in the prices of the grades of rough lumber; and it does appear that the *average* of the grades of the finished product bears about the same relationship to the prices of the grades of rough lumber. That is, the average prices of the different dimensions of 'clear' flooring is a little more than twice as much, as the price of 'No. 1 Common' rough lumber, and the same is true as to No. 1 and factory grades of flooring and No. 2 common and No. 3 common-A of rough lumber" (pp. 57-58).

Of course the cost of rough lumber (or raw material) is not "the only element" that determines the costs of the different grades and sizes of flooring. There are the manufacturing and marketing costs which usually constitute about 25 per cent of the total costs (Vol. II, p. 685); and, as shown in Appendices H, I, J, K, L, and M (pp. 9-17), these costs fluctuate.

The rest of the argument of learned counsel above quoted is wholly unsound for the following reasons:

In Government's Exhibit 25-A (Vol. III, p. 280), the flooring produced was as follows:

Flooring Product.

Clear	646 M ft.	52 %
No. 1	382 " "	30.7%
Factory	215 " "	17.3%
	1,243 " "	100 %
Waste	296 " "	19.2%
Lumber used	1,539 " "	

The flooring product consisted of the following percentages of the several grades, thicknesses and faces, or widths:

Clear:

13/16 x 1¼"	2.5%	$85.	$2.13
2"	3.3 "	87.	2.87
2½"	41.7 "	90.	37.53
3½"	2.1 "	85.	1.79
3/8 all faces	2.4 "	60.	1.44
	52. %		$45.76

No. 1:

13/16 x 1¼"	1.3%	$68.	.88
2"	2.5 "	72.	1.80
2½"	24.9 "	75.	18.68
3½"	.7 "	75.	.53
3/8 all faces	1.3 "	45.	.59
	30.7%		$22.48

Factory:

13/16 x 1¼"	.7%	20.	.14
2"	.9 "	28.	.25
2½"	14.7 "	30.	4.41
3½"	.8 "	35.	.28
3/8 all faces	.2 "	10.	.02
	17.3%		5.10
Totals	100.%		$73.34

The average cost per thousand feet of flooring f. o. b. cars flooring mills was $73.53, which was made up as follows:

Rough Lumber Used.

792 M ft. No. 1 Common	51.5%
562 " " No. 2 Common	36.5 "
185 " " No. 3 Common A	12.0 "
1,539 M ft.	100. %

Cost of Rough Lumber f. o. b. Cars Flooring Mills.

51.5% No. 1 Common @ $51.00	26.27
36.5% No. 2 Common " 36.00	13.14
12. " No. 3 Common A @ 22.00	2.64
100%	
1,000 ft. lumber costs	42.05
[2]808 " flooring costs	42.05
1,000 " flooring costs	52.04
Manufacturing and marketing costs, first quarter 1922, average	17.99
	70.03
Add 5 per cent for contingencies	3.50
Average cost f. o. b. flooring plant of 1,000 ft. of flooring sold	73.53

If by "average *prices* of the different dimensions of 'clear' flooring" learned counsel means the *simple* or arithmetic average of the figures in the next to the last column on page 31, *supra*, it is

[2]Because the waste was 192 feet per 1,000 feet of rough lumber. The total amount of flooring produced from 1,539 M feet of rough lumber was 1,243 M feet. The waste, therefore, was 296 M feet, or 19.2 per cent.

clear that his assertion is not borne out by the facts. The simple averages of the figures for the three grades are set forth below and compared with the prices of the rough lumber multiplied by two:

Simple Averages of Flooring "Prices."		Prices of Rough Lumber Multiplied by Two.	
Clear	$81.40	No. 1 Common,	$51.00 x 2 = $102.00
No. 1	67.06	No. 2 Common,	36.00 x 2 = 72.00
Factory	24.60	No. 3 Common A,	22.00 x 2 = 44.00

The other test runs discussed by learned counsel (Government's Exhibits 26, 27, and 28-N, Vol. III, pp. 284-289, 315-317) give the results set forth in the margin.[4]

It is certain, therefore, that the "average prices of the different" grades of flooring are *not* "a

---

[4] GOVERNMENT EXHIBIT 26, VOL. III, p. 284.

Simple Averages of Flooring "Prices."		Prices of Rough Lumber Multiplied by Two.	
Clear	$84.00	No. 1 Common,	$56.00 x 2 = $112.00
No. 1	72.60	No. 2 Common,	41.00 x 2 = 82.00
Factory	32.00	No. 3 Common A,	26.00 x 2 = 52.00

GOVERNMENT EXHIBIT 27, VOL. III, p. 287.

Clear	87.00	No. 1 Common,	61.00 x 2 = $122.00
No. 1	75.60	No. 2 Common,	41.00 x 2 = 82.00
Factory	37.00	No. 3 Common A,	30.00 x 2 = 60.00

GOVERNMENT EXHIBIT 28-N, VOL. III, p. 315.

Clear	79.60	No. 1 Common,	39.50 x 2 = 79.00
No. 1	54.20	No. 2 Common,	24.50 x 2 = 49.00
Factory	20.00	No. 3 Common A,	11.50 x 2 = 23.00

little more than twice as much" as the prices of the grades of rough lumber.

Learned counsel's theory of relativity is further elaborated as follows:

> "It might be claimed that the prices of the several grades of flooring should be increased or diminished according to the advance or fall of the prices of the corresponding grades of rough lumber. In other words, there are three grades of rough lumber used in the manufacture of the three grades of flooring; *and no doubt most of the clear flooring is manufactured from No. 1 Common, and No. 1 flooring is made from No. 2 Common, and the factory flooring is made from No. 3 Common A lumber.* The witness Green testifies in effect that such is the fact (Vol. I, p. 386). Therefore, there may be reason in increasing or diminishing the prices of clear flooring in proportion to the advance or fall of the price of No. 1 lumber, and the same is true as to No. 1 flooring and No. 2 Common lumber, and factory flooring and No. 3 Common A lumber" (pp. 59-60).

Of course the prices of the grades of rough lumber *do* affect the *total cost* of all flooring produced. They also affect the *costs* of all grades and sizes of flooring, but not in the same proportions, for the simple reasons that different quantities of the several grades and sizes are produced, and that the said grades and sizes have widely varying exchange values. The prices of the several grades of rough

lumber also affect the *prices* of the grades and sizes of flooring produced, but not in the same proportions, for the reasons above stated.

Learned counsel's assertions that clear flooring is made of No. 1 Common rough lumber; that No. 1 flooring is made of No. 2 Common, and that Factory flooring is made of No. 3 Common A, are in direct conflict with the undisputed proof on this subject.

Mr. Hamlin J. Ward (a nonmember manufacturer) testified:

> "Grades of flooring depend very largely upon the grades of lumber used, that is, so far as the *percentage* of each grade is concerned. A thousand feet of lumber will make a *number of items of different grades and sizes.* There are *three grades,* Clear, No. 1, and Factory, and *there are several widths* which *must* be made in order to avoid waste. The *product* of *every* thousand feet of *rough lumber will consist of flooring of each width and grade.* In other words, in manufacturing flooring all three grades are made at the same time" (Vol. I, p. 94).

Mr. William L. Saunders testified:

> "The manufacturer has no choice as to the grades he will produce. *All three grades of flooring can be manufactured from cull lumber.* We *cannot,* for instance, manufacture Clear flooring at one time, No. 1 at another time, and Factory at another" (Vol. I, p. 199).

There is no proof to the contrary, but there is much other evidence along the same line (Vol. I, pp. 239, 386, 389-390; Vol. II, p. 591). Counsel's assertion concerning the testimony of Mr. Greene is not true. Mr. Greene testified as follows:

> "A. It is generally understood in the manufacture of maple flooring, that in the process of manufacture all three of the grades, Clear, No. 1, and Factory are produced at the same time. It is also true, however, that a manufacturer can manipulate his rough lumber by putting through certain qualities of rough lumber into his plant to produce the *largest percentage* of any one grade at any given time.
>
> "Q. What will produce the largest *percentage* of Clear and No. 1?
>
> "A. Well, the quality—that would run largely to No. 1 common and No. 2 common, particularly No. 1 common.
>
> "Q. What will produce the largest *percentage* of Factory?
>
> "A. I would put in my plant 3-A and possibly straight and 3-A and B combined. I am producing that at the present time. I realize from analyzing those statistics and from other sources of information that there is a great demand for factory flooring right (fol. 688) now, and I fully realize most of the manufacturers are loaded up with orders on it, and I am putting through my plant stock No. 3-A and B which I know will produce from experience anywhere from *forty to sixty per cent* factory grade, *that is, forty to sixty per cent of my total grade will*

> *represent factory.* On the other hand, if I put through certain stock which I have purchased from the Louis Sands Lumber Company, which is Michigan southern maple, very high grade, running about seventy per cent No. 1 Common, thirty per cent No. 2, I know that particular lot of lumber when manufactured into flooring, *would produce not to exceed fifteen to eighteen* [per cent of] *factory,* the balance 82, 85 [per cent of] No. 1 [and] Clear, * * *" (Vol. I, p. 386).

See also, the test runs made by member No. 24 (Kerry & Hanson Flooring Company) and member No. 47 (Grand Rapids Trust Company, Receiver for William Horner), which are shown on page 29 *supra.*

It was also testified that "the better end of No. 1 Common rough maple lumber" is not generally used in the manufacture of maple flooring by manufacturers who produce their own lumber, for the reason that they "can get a better price for that class of rough lumber than" they can "by working it through the flooring factory" (Vol. I, pp. 197-198). There have been times when even No. 1 Common sold for more than the best grade of flooring (Vol. I, p. 198).

Learned counsel then asks:

> "But in estimating costs, what justification is there for making a difference in the advance of the different dimensions of the same grade?" (p. 60.)

Learned counsel also asks why should there be a difference in the *cost* of the following items of 13/16-inch Clear maple flooring: 1½-inch, 2-inch, 2¼-inch, and 3¼-inch. He also asks various other questions concerning the other items of flooring listed in Government's Exhibit No. 28-N, Vol. III, p. 315 (Brief, pp. 60-61).

These questions are somewhat belated. Learned counsel should have addressed his questions to witnesses in the trial court. The burden of proof was on the Government. As heretofore explained, the distribution of the total cost among the different grades and sizes admits of the exercise of a limited discretion. The total cost, however, admits of no discretion.

All grades and sizes will not bring the same price. Owing to the widths of rough lumber, there is greater waste in manufacturing some faces than other faces in the same grade. Some faces must be manufactured in order to avoid waste of raw material regardless of the demand for them (Vol. I, p. 199). The demand for all sizes and grades fluctuates, and necessarily all manufacturers of joint-cost products take all these factors into consideration in arriving at the costs of the different products.

And since when has it become unlawful for business men to study costs, or to communicate to one another an opinion as to the "approximate relative average costs" of joint-cost products? So long

as each man determines his own costs for himself and his own prices, who is, or can be, harmed? And, as pointed out in our opening brief, the *proof is undisputed that each member determined his own costs and fixed his own prices* (pp. 322-335).

It is, of course, unnecessary to notice learned counsel's assertions as to what "undoubtedly" happened after the issuance of the various average costs (Brief, p. 68). This is pure speculation on his part. The Government adduced no proof whatsoever on the subject. And, as shown in our opening brief, the *average costs followed the prices and not vice versa* (pp. 345-346).

Learned counsel next asserts that the costs of the different members of the association differ (p. 69). Of course they do; otherwise there would be no *average* manufacturing and marketing costs for the secretary to report.

Counsel also asserts that half the association members produce their own rough lumber, and that they "necessarily have an advantage over those who purchase their raw material." This advantage, however, consists in the profit, if any, that arises from the production of rough lumber. Why should any owner of timber produce rough lumber for his flooring factory at a loss rather than sell his rough lumber on the market at a profit? Mr. Saunders testified that his corporation sold rough lumber when it was unprofitable to convert it into flooring (Vol. I, p. 200). The record does not show

what the other members did. The record *does* show that the following assertions of learned counsel are groundless:

> "And the price lists distributed among the members, and which they are expected to observe, are not based upon the actual cost of production of any one of the members. Each member fixes his selling price upon a *common* cost of production and not upon *the actual cost to him;* and this within itself is a regulation by combination of the price of flooring, and is a restraint of trade within the meaning of the Antitrust Act" (p. 69).

In the first place, mere reiteration that the *average costs* are "price lists" is not proof of anything except the weakness of the Government's case.

Of course, by definition, *average* costs are *not* the *actual* costs of *any* member, except by coincidence.

The assertion of the Government's counsel that "each member fixes his selling price upon *a common* cost of production and not upon *the actual cost to him*" is wholly untrue. There is no evidence whatsoever in the entire record to justify or excuse any such statement. The undisputed evidence is to the contrary (Opening Brief, pp. 319-335).

It is just because the costs of association members differ that the prices obtained by them for

flooring have such a wide range, and that they differ so markedly from the *average* costs.

VI.

"BOOK SHOWING ESTIMATED FREIGHT RATES AND VALUES OF FLOORING AT POINTS OF DELIVERY."

Under the foregoing caption the writer of the Government's brief discusses the contents of the freight-rate books which were issued by the various antecedent associations, as well as the freight-rate books issued by the present association, and, as usual, makes no distinction whatsoever between former practices and present practices. For instance, it is asserted that the freight-rate books showed not only the freight rates from Cadillac, Mich., but also "the prices of lumber [flooring?] delivered at thousands of designated points." (p. 70.) As shown on pages 281-301 of our opening brief, the freight-rate books issued by the present association have never contained any prices whatsoever.

It is true that in connection with the minimum price plans Tables of Values were issued by previous associations. Such Tables of Values were intended to show what the flooring was worth delivered at points mentioned in the freight-rate books, *if* cost plus 10 per cent profit were to be realized. See, for instance, Volume III, folios 697-708, where certain pages of a freight-rate book in

use during January, *1921,* are reproduced. The sheets contained in the book then in use were headed

"TABLE OF VALUES

BASED ON AVERAGE COST."

As heretofore explained, the Table of Values was based on average cost, but there was included a percentage of profit. In our opening brief the undisputed testimony of numerous witnesses, that the minimum price plans were never enforced, and that each member sold his flooring for what he pleased, is quoted (pp. 196-206). In Point IX of our opening brief, pages 336-348, we also demonstrated that the oral testimony above mentioned was true, because a comparison of the Table of Values with the prices actually obtained showed that the great bulk of the flooring sold by members of former associations was at prices substantially below the figures contained in the Tables of Values. *No Table of Values has ever been issued by the present association.* See volume III, folio 881, where a sheet of the freight-rate book in use on May 31, 1922, is reproduced. (The court will recall that the organization of the present association was completed on March 29, 1922.) The sheet last above mentioned is headed

"AVERAGE COST CHART."

It contains the *average cost* of the different faces of 13/16 maple flooring, in the Clear, No. 1, and

Factory grades, f. o. b. cars flooring mill. As heretofore explained, the average costs issued by the present association include no profit whatsoever. (See, also, pp. 234-280 of our opening brief.)

On page 71 of the Government's brief the assertion is made that

> "Cadillac is fixed as the arbitrary point from which freight rates are computed. But the rate charged is not always the actual rate from Cadillac to point of delivery," * * *

For the reasons explained in our opening brief, the freight rates contained in the freight-rate books are the freight rates from Cadillac, Mich., to some six or seven thousand points throughout the United States, for the reason that the average freight rates from Michigan and Wisconsin producing points to the principal consuming centers approximately equal the average freight rates to said markets from Cadillac, Mich. (pp. 281-291). On pages 101-103 of our opening brief the undisputed testimony shows that all purchasers of maple, beech or birch flooring pay to the railroad company the *actual freight from point of origin to point of destination,* and not the freight from Cadillac, Mich., to point of destination, unless, of course, the shipment originated at Cadillac.

The freight rates contained in the book were compiled by traffic experts from official railroad

tariffs, and the said rates are in all respects correct with the exception, however, that fractions of one-half cent and under are disregarded (Opening Brief, pp. 283-291).

The Delivered Cost Charts are misrepresented by counsel. It is, however, unnecessary to go into this matter again, inasmuch as Delivered Cost Charts are not now distributed by the present association. The whole matter of Delivered Cost Charts is covered on pages 292-293 in Appellants' Opening Brief.

Notwithstanding the undisputed evidence that there was never any uniform practice by the members of any of the associations with respect to terms of sale, counsel quotes without comment or explanation the terms of sale that appeared in one of the freight-rate books (pp. 74, 79). This matter is fully covered in Point II of Appellants' Opening Brief, pages 104-112.

The same method is pursued by counsel with respect to the "differentials." Differentials are not now issued by the present association, and there is no proof in the record that the differentials issued at any time were ever observed or that they were ever considered binding upon any members. On the contrary, the undisputed proof shows that they were not observed. (See pp. 293-299 of Appellants' Opening Brief.)

VII.

"STATISTICS."

The writer of the Government's brief is neither fair to the appellants nor frank with this court. A typical instance of this attitude which permeates the entire brief is the reference to

> "a *slight change* which Mr. Keehn *claims* has been made in the system since the institution of the suit" (p. 88).

The "slight change" was as follows:

1. Elimination from freight rate books of
   - (*a*) Delivered cost charts.
   - (*b*) All matters relating to differentials.
   - (*c*) All matters relating to terms of sale and cash discounts.

2. Radical changes in the reporting system pursuant to the resolution of *July 19*, 1923, which is set forth in the margin.[5]

After the changes had been worked out by the association's secretary and its attorneys the mem-

---

[5] "*Resolved*, That in order to meet the special objections of the Department of Justice the association's counsel, in conjunction with the secretary, be and are hereby authorized and directed to make such changes and modifications as they may decide upon in the compilation and distribution of statistical data to the membership of the association" (Vol. IV, p. 812).

bers were advised of them by means of a letter from the secretary, dated *August 2,* 1923, which is as follows:

> "The association membership numbers which identify the individual members of the association have been eliminated from all our reports issued since July 19, and are to be eliminated from all reports issued hereafter by the association so that the information which is consolidated and transmitted to the members from time to time will not disclose to any member or members any of the particulars or intimate details of any other member's business respecting his stock on hand, unfilled orders, shipments, production, and new orders booked, or which will identify the average prices he realizes or identify as his prices the prices at which he sells any Maple, Beech or Birch Flooring" (Vol. IV, pp. 813-814).

3. Elimination from the average costs of 5 per cent for contingencies (Vol. IV, pp. 811, 814).

Another instance of counsel's unfair attitude is the assertion that

> "an analysis of the reporting system clearly shows that there is *no* information withheld by one member from another, and that *every one* is *perfectly familiar,* not only with summaries which show the exact market conditions generally, but also with the *exact condition* of the business of *each* of his fellow members" (p. 100).

Of course the foregoing assertion is not true. As shown in our opening brief, the statistics distributed by the present association are fragmentary. (p. 381.)

The reports made *to* the secretary differ from those made *by* the secretary, especially since the resolution discontinuing the use of identifying numbers. And no member of the association either does or can learn from either the statistics or any other source *"the exact condition of the business of each of his fellow-members."*

Another instance of the Government's unfair attitude is that in the discussion of the statistics not a word is said of the abandonment of comments, analyses, and interpretations of the statistics upon the organization of the present association. Neither is the publication of the statistics by the association mentioned, nor is the association's offer made in open court to pay for the publication of all the statistics as advertising matter.

All efforts made by the defendants in order to conform to the law or in order to meet the objections made in the Government's petition are asserted to have been made for sinister and ulterior purposes. For instance, the defendants' abandonment of the use of identifying numbers in their reports is declared to have been a mere subterfuge without any practical effect. It is asserted that the division of the members of the association into groups for reporting purposes was to enable all

members to identify as nearly as possible the members by whom sales had been made. Of course the foregoing assertion is not true. As the Government's brief shows (pp. 90-91), even when identifying numbers were used, many of the reports gave both the identifying numbers and the groups in which the several mills were located. The practice varied. The evidence was that each association mill endeavored to take advantage of its geographical position in disposing of the flooring manufactured by it (Appellant's Opening Brief, pp. 284-290). This means that some members sold largely in the Middle West, others in the East, others in the Northwest, and so forth. The division of association mills into the following groups: Group No. 1, Eastern Lower Michigan Mills; Group No. 2, Western Lower Michigan Mills; Group No. 3, Upper Michigan Mills; Group No. 4, Wisconsin Mills, and Group No. 5, Chicago, St. Paul and Tupper Lake Mills, is a natural one. Such a division divides the producing mills into different centers of production, with the exception of the St. Paul, Chicago, and Tupper Lake Mills. These mills last mentioned were put into a group by themselves for the reason that they did not belong to any other natural group, and that the three mills had to be put together in order to avoid disclosing their identity (Vol. I, p. 130).

Considerable pains are taken to show that prior to July, 1923, the reports were made in a certain sequence. Counsel asserts that in all reports pre-

vious to the discontinuance of identifying numbers a certain sequence was observed. Counsel next asserts:

> "*The record does not contain any statement as to the present grouping of the members,* but it appears quite obvious * * * that the members constituting each group are now as follows:

Grouping After July, 1923.

"Eastern Lower Michigan Mills.	Western Lower Michigan Mills.	Upper Michigan Mills.	Wisconsin Mills.	St. Paul, Chicago, Tupper Lake.
2	3	7	23	22
24	5	42	34	48
33	14	44	45	51"
49	26	47	50	
	30			
	37			

(p. 94.)

It is then argued:

> "It is only necessary to *assume* that the *same* reporting *sequence* has been followed since July, 1923, to ascribe with absolute certainty the figures as to average prices realized as given by the report dated October 19, 1923 (Vol. III, side page 2863), to the several members of the association. A footnote to this report states that No. 3, which, according to sequence, should appear first in Group 2, made no sales, and that no reports were received from numbers 23, 37, and 45, which, according to the sequence, should appear respectively last in Group 2 and first and third in Group 4" (pp. 94-95).

Learned Counsel then asserts that:

> "Any member of the Association could therefore readily complete this report so as to make it read in part as follows:" (p. 95).

Learned Counsel then sets forth *only a part* of the Report dated October 19, 1923, viz., the average prices realized for *clear* grade flooring—and attempted to apply his sequence system to such prices.

We set forth the report dated October 19, 1923, together with the alleged sequence numbers enclosed in bold-face parentheses:

Range of Average Prices Realized.

F. O. B. Michigan and Wisconsin Flooring Mills in September, 1923, for New Orders Booked for 13/16 Inch x 2¼ Inches Clear, No. 1, and Factory Maple Flooring, Standard Grades and Lengths, After Deducting Freight.

Group 1:

	Clear, September.	No. 1, September.	Factory, September.
Eastern Lower Michigan Mills.	(2) $95.00	(2) $85.64	(2) $47.25
	(24) 96.42	(24) 85.80	(24) 50.10
	(33) 100.33	(33) 90.80	(33) 50.71
	(49) 101.15	.....	.....
Average	98.23	87.41	49.35

Group 2:

Western Lower Michigan Mills.	(5) 93.73	(5) 83.66	(5) 46.47
	(14) 94.89	(14) 84.92	(14) 48.94
	(26) 95.01	(26) 85.01	(26) 52.00
	(30) 95.91	(30) 85.90	.....
Average	94.89	84.87	49.14

Group 3:

Upper Michigan Mills.	(7)	96.40	(7)	83.41	(7)	46.49
	(42)	97.85	(42)	88.70	(42)	47.38
	(44)	98.14	(44)	88.80	(44)	47.85
	(47)	102.18	(47)	89.00	(47)	50.45
Average		98.64		87.48		48.04

Group 4:

Wisconsin Mills.	(34)	97.17	(34)	90.00	(34)	49.11
	(50)	102.36	(50)	90.85	(50)	52.91
Average		99.77		90.43		51.01
All Michigan & Wisconsin Mills, average.....		97.61		87.11		49.14

Includes reports from 14 members.
No. 3 reported "No sales."
No reports from Nos. 23, 37, and 45.
Reports of Nos. 48, 22, and 51 omitted to avoid disclosing their identity.
October 19, 1923.

(Vol. III, fol. 2863.)

Learned counsel asserts that by means of his sequence system it can be determined who received any of the prices contained in the report last mentioned. The assertion is manifestly absurd. The report gives the range of average prices realized by all reporting association members during September, 1923, for new orders booked for 13/16 x 2¼ Clear, No. 1, and Factory Maple Flooring after deducting freight. It will be observed that in every instance the *lowest* prices for each grade are given first, and that the next higher prices follow, and so

on until the highest prices are reached, when the average is given for each group. *In order to apply learned counsel's sequence system* (which resembles the systems devised to beat the bank at Monte Carlo) *it would be necessary for No. 2 always to receive the lowest average prices,* not only for *Clear* Grade Flooring, but also for No. 1 Flooring, and Factory Flooring. It would also be necessary that No. 24 should always receive the next higher prices for each of the three grades above mentioned, and that No. 33 should always receive the next higher prices, and that No. 49 should always receive the highest prices of all the members composing the Eastern Lower Michigan Mills group. It would also be necessary that this same rigid order should be observed with respect to the prices received by the various members constituting the other groups. There is about one chance out of several hundred millions that learned counsel's sequence system would ever work out in actual practice.

It is ridiculous to assume that the member having the lowest membership number always gets the lowest prices, and that the member having the highest membership number always gets the highest prices. According to this system all that a member needs in order to get high prices for his flooring is to have a high membership number assigned to him.

It is manifestly impossible to tell who obtained the averages shown on the report above mentioned. It is equally impossible to determine who made

any particular sale shown in the weekly sales reports after the elimination of identifying numbers.

After asserting in galley proof that his sequence system was as certain as the methods used by astronomers in calculating the courses of the stars, learned counsel in page proof finally makes the following admission:

> "The individual sales appearing on the Weekly Sales Reports as now made up cannot always be attributed with mathematical certainty to the several members of the association." (p. 96.)

The foregoing admission simply destroys the pages of argument and the vast amount of labor which learned counsel has expended upon the discovery and formulation of his *sequence system*. It is obvious that the value of any such system as applied to the reports lies solely in its always producing the same results. Any element of uncertainty incident to its operation would render it worse than useless.

The absurdity of counsel's *sequence system* may be demonstrated by means of an examination of the reports issued after the discontinuance of the use of identifying numbers. For instance, learned counsel asserts that the Weekly Sales Report dated November 9, 1923, shows that for the week ended November 3, 1923, the Eastern Lower Michigan mills made *ten* sales divided among four members of the group; that the Western Lower Michigan

group made fifteen sales divided among five members of the group (No. 37 having made no report); that the Upper Michigan mills made fifteen sales, divided among four members of the group; that the Wisconsin mills made four sales, divided among three members of the group (No. 23 having made no report), and that the St. Paul, Chicago, and Tupper Lake mills made two sales divided among two members of the group (No. 22 having made no report). (p. 96.)

As an inspection of the foregoing report will show there were *thirty-seven* separate items reported by the Eastern Lower Michigan mills, as well as one item of 1,484 feet "in four small sales" and another item of 5,950 feet "in small sales" (Vol. 4, fol. 5340).

Counsel is just as inaccurate in his assertions with respect to the number of other sales made by other members of the different groups. It is to be regretted that learned counsel for the Government did not state in the brief what system, if any, he used in determining the *number of sales* made by the members of the different groups.

Learned counsel asserts

> "An inspection of the report indicates that it is the present practice to report all sales made by each member in the numerical sequence of their order dates so that a *change from a late to an earlier date incurs a change in the reporting member.*" (p. 97.)

It will be remembered that there are four members in the Eastern Lower Michigan mills group (see p. 94 of Government's Brief). We set forth the dates appearing in the report under discussion for the sales made by the Eastern Lower Michigan mills group:

10-16	10-29
10-25	10-30
10-26	10-31
10-27	11- 2 (Vol. IV, fol. 5340).
10-29	
10-30	

Applying learned counsel's formula above quoted, we find that from October 16th to October 30th would represent the sales made by one member, and that from October 29th to November 2d would represent the sales made by another member.

Quaere: What becomes of the other two members?

Mr. George W. Keehn testified:

> "We have no objection to eliminating from our reports all reference to the particular members failing to report, and we will eliminate such references hereafter. We will omit the numbers of members who do not report, but simply state that two or three or four members have not reported, without giving their numbers. We will also omit the surplus-stock statement and dates of reports received" (Vol. I, p. 176).

If any doubt exists as to the good faith of the association in the elimination of identifying numbers, it would be very easy to prescribe a form for the making of reports which would make it impossible to determine by whom the sales reported were made.

From the Government's cross-examination of defendants' witnesses it is apparent that the Government's objection to the making of any weekly sales report was the possibility, or rather the probability, that members who did not receive as much for their flooring as other members would immediately increase their prices.

Such defendants as testified stated that there were many factors taken into consideration in the determination of prices charged by them. These factors were individual stock conditions, individual unfilled orders, the general market trend, information received from representatives and buyers, past relations with prospective purchasers, their financial needs, operating conditions or plans, etc., etc. All the defendants testified that, of course, they wanted to get as much money as possible for their flooring, but that the mere fact that the weekly sales reports showed that some one else had obtained more or less for flooring than they had obtained, would not alone cause them to either increase or lower their prices. That the Government's objection is without merit, and that its apprehensions are groundless may be easily demon-

strated. The wide spread of prices obtained by association members is conclusive proof that association members do not increase or lower their prices merely because the weekly sales reports disclose that some members had obtained higher or lower prices than others. This wide spread has always existed. (See Appendix E, pp. 5-6, Appendices to Appellants' Brief.) If the Government's theory were corect, then the prices obtained by members would be uniform, or else there would be a constant increase in prices.

VIII.

"ASSOCIATION MEETINGS."

Much of the Government's brief is devoted to a discussion of the foregoing caption. We have fully covered the matter of association meetings in our opening brief (pp. 231-233). It is therefore only necessary to point out that the Government's petition does not charge that at such meetings there was any agreement, express or implied, with respect to prices to be charged for flooring. On page 141 of its brief the Government quotes a letter addressed by the North Branch Flooring Company to another member. This letter urges regular attendance at association meetings by such other member. The letter concludes:

> "We can say from actual experience that the personal contact and association with the other members has become very valuable

> to us, and we have been able to capitalize this to a remarkable degree" (Vol. IV, p. 479).

It is obvious that the writer of the letter was speaking of some *personal* advantage which he had obtained by reason of constant attendance. It is not difficult to infer from the evidence what this advantage was. As shown on page 66 of our opening brief, the North Branch Flooring Company of Chicago, Ill., does not own any timber. It is therefore compelled to buy all the rough lumber used by it in the manufacture of flooring. Inasmuch as the proof showed that

> "association meetings afforded manufacturers of rough lumber opportunities for selling it to the other members, and for different members to sell surplus flooring to others who were short of certain sizes or grades (Vol. 1, pp. 205-6, 330, 332, 295-98, 132, 134, 178, 206, 208, 236" (p. 232 of Appellants' Opening Brief),

it is not a strained construction that the North Branch Flooring Company had been able to purchase to advantage both rough lumber and flooring from other members. Personal contact in business transactions, even with friends, is always more satisfactory than correspondence.

IX.

"Results of Combination."

The writer of the Government's brief denies that in the court below the Government abandoned its contention that there existed a practical uniformity of "f. o. b. selling prices" and "net delivered prices." However, it is not disputed that when the Lewis compilations, based upon all the weekly sales reports, were offered in evidence, Mr. Fowler stated to the trial Court:

> "*We are not insisting on uniformity*" (Vol. II, p. 857).

And, strangely enough, this statement was made in order to induce the court below to accept the Government's theory that the commissions should not be deducted from the delivered prices reported by members. These reports gave not only the date, the quantity, the wood, the grade, size, delivered price, and average freight rate, *but also the commissions allowed, if any.*

Now, if the Lewis compilations were not introduced in evidence for the purpose of showing uniformity of prices, then they were irrelevant. As pointed out in our opening brief, practical uniformity of "f. o. b. selling prices" and of "net delivered prices" is the crux of the Government's petition.

It is asserted in the Government's brief that

> "The Government contended during the *argument in the court below,* and it still contends, that the activities carried on, by the defendants through the defendant association * * * have caused a much greater uniformity of prices than could possibly have obtained under conditions of free and unrestricted competition." (P. 152.)

The *record* does not show *what* "the Government contended during the *argument* in the court below."

The Government should not be permitted to take a position here contrary to that taken in the trial court. And the *record* does show that the chief counsel for the Government solemnly assured the trial court:

> "*We are not insisting on uniformity.*"

Moreover, in the Government's petition the ultimate conclusion that there existed an unreasonable restraint of interstate trade and commerce was deduced from the alleged fact that there existed *a practical uniformity among the defendants of both "f. o. b. selling prices" and "net delivered prices."* In the Government's brief, however, we are informed that the Government's contention is that there was *"a much greater uniformity of prices* than could possibly have obtained under conditions of free and unrestricted competition." In other words:

1. *The petition is abandoned.*

2. An unreasonable restraint of interstate trade and commerce is *assumed.*

"Free and unrestricted competition" is a mere economic concept, and is descriptive of no condition that has ever existed since the dawn of time.

The learned writer of the Government's brief therefore proclaims his utter innocence when he solemnly talks of *free and unrestricted competition.*

Furthermore, *it is elementary that competition tends to produce uniformity of price.*

Evolution of Modern Capitalism (Hobson), 146.

Principles of Economics (Taussig), Vol. I, pp. 480-481, 134, 141, 144-45, 147, 146, 153-154, 172-173, 175; Vol. II, p. 38.

Readings in Industrial Society (Marshall), pp. 934, 476-77.

Such is also the undisputed evidence (Vol. II, pp. 544-545). Therefore, when counsel impliedly asserts that free and unrestricted competition produces great price variation he convicts himself of not being familiar with elementary economic principles.

The variation in the prices quoted or obtained by the members of the defendant association is altogether unusual. It should not exist, and would not exist in a perfectly organized society. While

the fact of variation proves *absence of agreement* among the defendants, and that the exchange of statistics has not effected the results feared by the Government, it also proves that the economic mechanism is by no means perfect.

And what proof is there in the *record*—for we assume that counsel's unsupported assertion cannot properly be called *proof*—that the defendants' activities "have caused a much greater uniformity of prices than could possibly have obtained" had the association not existed?

Learned counsel also asserts that the Government has never contended that there was "an absolute uniformity in the prices obtained by the defendants." True, but the petition does charge that the defendants—

> "have always maintained * * * and they still maintain *a practical uniformity* between themselves of net f. o. b. selling prices" (Vol. I, p. 6) and "of net delivered prices" (Vol. I, p. 7).

This means a *substantial* uniformity, and we have shown that it has never existed. In order to close up the wide gulf that exists between the petition and the proof, learned counsel argues that there is a difference in the quality of the flooring manufactured by the different members; that the machine-work of some members is superior to that of others, and that flooring is not a fungible com-

modity, etc., etc., and that these facts find expression in the prices. But all this merely convicts counsel of disingenuousness, or else constitutes an abandonment of another contention made in the petition. In the petition it is charged:

> "The use of the uniform trade-mark and the character of the advertising put out by the association intensify the tendency to establish and maintain uniform prices, and *also practically eliminate* all *competition between the defendants based on the quality of their respective products*" (Vol. I, p. 10, fol. 19).

Moreover, counsel's assertion that—

> "Other witnesses testified that in their opinion the flooring produced by Horner is inferior and is therefore unable to command as high a price as other mills obtain" (p. 153),

is not supported by the facts. One witness and one witness only testified that *before* Horner joined the association his grades were unsatisfactory. No one testified as to Horner's grades *after* he had joined the association (Vol. I, p. 431).

It is next asserted by learned counsel—and his so-called "argument" consists largely of mere assertions—that the defendants' plan and activities—

> "necessarily and inevitably have caused increases in prices to be made more rapidly and decreases in prices to be made less

> rapidly than would have been the case without such operation under the plan." (P. 154).

But where is the *proof* to support counsel's assertion? The *Government* offered *none* whatsoever. The undisputed proof offered by the defendants is to the contrary. See pages 216-226, 209-215 of our opening brief for the undisputed evidence that the price advances in the "Product" were not so sharp as those of other commodities; that the price declines of the "Product" were more precipitious than those of other commodities, and that the relation between the prices of the "Product" and the supply and demand was unusually intimate.

The writer of the Government's brief lacks frankness in the discussion of the proposition that the commissions allowed should not be deducted from the delivered prices in reducing the prices made by defendant association members to a common basis for the purpose of comparison with the average costs. The explanations now given do not accord with the statements made by counsel for the Government to the trial court. We quote from the record:

> "Mr. THOMPSON: * * * We started out first deducting the commission, and then showing the net factory price, less the commission. We found from these *minimum price plan statements* that that was not the method they followed, so we changed."

> The COURT: Very well. Mathematics is an exact science.
>
> Mr. FOWLER: I wish to call your Honor's attention to this Minimum Price Basis" (Vol. II, p. 857).

See also Volume II, pages 854-855, where both Mr. Fowler and Mr. Thompson expressly based their contention upon the provisions of the Minimum Price Plans and the Minimum Price Basis.

Having received a copy of the appellants' brief, wherein it was pointed out that all Minimum Price Plans, as well as the Minimum Price Basis, were annulled and abandoned long before the organization of the present association (p. 339), counsel for the Government found it expedient to change their theory, especially in view of the fact that the Weekly Sales Reports included in the Lewis compilations are mostly sales reports issued by the present association.

The writer of the Government's brief advances no reason whatsoever why the commissions allowed should not be deducted. He merely asserts that

> "It is obvious that it is the Cadillac Base Price which must be considered when determining whether the so-called average costs have been maintained as minimum prices." (P. 157.)

By Cadillac Base Price the writer of the Government's brief means a delivered price that includes

commissions, but that does not include freight. If the proposition were so obvious, it is somewhat strange that counsel did not vouchsafe the reasons therefor, especially in view of the fact that he no longer relied upon the reasons advanced to the trial court by Mr. Fowler and Mr. Thompson.

The use of any term "Cadillac Base Price" is without any justification whatsoever. The test runs issued by the present association determine the "approximate relative average costs of flooring product f. o. b. cars at flooring mills." See the insert in appellants' brief between pages 274-275. The Cadillac Base was used (theoretically) in conjunction with the old abandoned Minimum Price Plans. It is obvious that there could not be minimum prices without a base or zones. The present association has never used any Cadillac Base, and, as above pointed out, the average costs are not average costs Cadillac Base, but average costs f. o. b. cars at flooring mills.

As pointed out in our opening brief, the Government's theory is that the average costs, the average freight, and the uniform rules as to commissions resulted in a practical uniformity of both "f. o. b. selling prices" and "net delivered prices." In other words, the average costs were minimum prices, and both the average freight and uniform commissions were factors which resulted in the uniformity of "f. o. b. Selling Prices" and "Net Delivered Prices" (p. 342). Of course, if freight

is deducted, the commissions allowed should also be deducted. The Lewis compilations relate to shipments to points throughout the United States from the different association mills. In some instances commissions were allowed, but in other instances they were not allowed. The amount of the commissions allowed also varied. In order to determine whether there was either a practical uniformity of prices or whether the average costs were maintained as minimum prices, the commissions allowed as well as the freight should be deducted from the delivered price. *Only by this means can the heterogenous mass of data be reduced to a common basis.* An association mill that quoted a delivered price *not subject to commission* of course received from the purchaser a net amount, which consisted of the delivered price less the freight. On the other hand, an association mill that quoted a delivered price *subject to a commission* received from the purchaser a net amount which consisted of the delivered price less the freight and less the commission. If the Cummer-Diggins Company at Cadillac, Michigan, quoted a Washington, D. C., lumber dealer a delivered price of $108.50 per thousand feet and the freight were $8.50 per thousand feet the Cummer-Diggins Company would realize $100 net per thousand feet for the flooring.

If, on the other hand, Cobbs & Mitchell, of Cadillac, Michigan, should sell another Washington lumber dealer similar flooring at $108.50 delivered, less a commission of $2 per thousand feet, Cobbs &

Mitchell would net only $98 per thousand feet. In other words, both the prices realized by Cobbs & Mitchell and Cummer-Diggins would vary, and the prices paid by the two Washington lumber dealers would vary. Therefore it is clear that in order to determine whether there was a practical uniformity in the prices obtained by Cummer-Diggins and Cobbs & Mitchell, $98 would have to be compared with $100. It is equally clear that in order to ascertain whether the average costs were maintained as minimum prices the average cost of the flooring sold by Cobbs & Mitchell and Cummer-Diggins to the two Washington lumber dealers would have to be compared with $98 and $100. The evidence was that the allowance of commissions is merely a means of meeting competition or reducing one's price (Vol. II, p. 538).

It also appeared that some members allowed a commission of 5 per cent (Vol. II, p. 452). Suppose, for instance, that some of the members of the defendant association should allow commissions similar to those allowed by the hardware trade, viz., a price less 20 per cent, 10 per cent, and 5 per cent. It would be the height of absurdity to compare the gross price with anything whatsoever. Only the net price after the deduction of the chain discount could be used with any regard whatsoever for the substance of things. It is significant that the Government first began to deduct the commissions as well as the freight (Vol. IV, pp. 584-694). The

explanation given for its abandonment of that method was the provisions of the Minimum Price Plan and the Minimum Price Basis. And in view of the undisputed fact that the Lewis compilation is based almost entirely on the Weekly Sales Reports issued by the present association, there is no justification for the change in the Government's method.

The real reason why both commissions and freight should be deducted is stated on page 342 of appellants' opening brief.

The Government's brief is full of inconsistencies. Whenever it suits its purposes to treat all the associations as one association it does so; however, whenever it is convenient to treat the present association as having come into existence for the first time on March 29, 1922, it also does so.

The writer of the Government's brief also asserts that a comparison of the average costs with the prices realized demonstrates the soundness of the Government's contention that the so-called average costs "are in fact recommended prices, and that they exert a strong influence on the members' actual selling prices." The Government's petition alleged *not* that the average costs exerted a strong influence on the "members' actual selling prices," but that the average costs were maintained as *minimum prices* by the defendants, and that as a result thereof there was a practical uniformity of both

"net f. o. b. selling prices" and "net delivered prices." Neither in the putting in of its proof in the trial court nor in the making of its argument in this court has the Government paid any attention whatsoever to the fundamental rules that proof without pleading or pleading without proof is insufficient to support a decree.

X.

"Economic Defense."

The writer of the Government's brief quotes Mr. John Knox Arnold and the trial court in opposition to the testimony given by Professors Hettinger and Vonderblue and Mr. Gordon and Mr. Grant Keehn. Of course, Judge Sessions does not claim to be an economist or learned in that science. We feel that it was unfortunate for the defendants that such was the fact. Even a casual reading of the testimony of Mr. John Knox Arnold will show that he was an extremely partisan witness.

It is absurd to say that the elaborate charts, whose correctness not even Mr. Arnold attempted to impugn, and the other data prepared by Messrs. Gordon and Grant Keehn and endorsed by Professors Hettinger and Vanderblue have no relevancy whatsoever. If the defendants had controlled and manipulated the prices of maple, beech, and birch flooring, as charged in the Government's petition, certainly the charts and other data pre-

pared by Messrs. Gordon and Grant Keehn would have shown some evidence of such control and manipulation. Of course no one has ever contended that the charts are conclusive evidence that there was no fixation of price. But they are strong circumstantial evidence that there was no control or fixation. The writer of the Government's brief attempts to discount the evidence given by Professors Hettinger and Vanderblue and Messrs. Gordon and Grant Keehn by referring to the Minimum Price Plans, etc. However, the undisputed proof by both the Government's witnesses and the defendants' witnesses was that the Minimum Price Plans were never observed or enforced (Appellants' Opening Brief, pp. 196-206).

It is true that logarithmic charts merely show the direction and rate of change and not the extent and magnitude of the change, but what of it? If the index of the prices of the "Product" fluctuated in harmony with the indices of all commodity prices, all building materials, and lumber prices, as well as with the indices of the prices of competing wood floorings, certainly such fact is strong circumstantial evidence that all the prices represented by the indices were determined by natural economic phenomena, and that none of them were fixed by artificial manipulation. If the defendants had the power to control the prices of flooring it is strange that they did not exert it and stop the decline of 13/16 x 2¼ face, clear maple flooring

from $225 in May, 1920, to $93.94 in May, 1921. During the same period of time No. 1 flooring of the dimension above mentioned declined from $189.87 per thousand feet to $76.42, and Factory Flooring of the same dimension declined from $168 per thousand feet to $43.06 per thousand feet (Vol. IV, fols. 5455-57).

The proof also showed that the index of the price of the "Product" fluctuated in harmony with the index of the prices of rough maple lumber. (See Appendix O, p. 24, Appendices to Appellants' Brief.) The undisputed proof, also, was that the index of the price of the "Product" was peculiarly sensitive to the unfilled orders and stocks on hand. (See Appendix Q, p. 21, of Appendices to Appellants' Brief.)

XI.

"Discussion of the Law."

In the Government's brief it is asserted that in order for the Government to make out a case

> "it is sufficient to prove the adoption of a plan or scheme which in its operation necessarily affects the prices." (P. 182.)

It is apparent that the writer of the Government's brief does not agree with the learned District Court, who said that

> "The actual results flowing from such plans, agreements and the execution and performance thereof are of secondary impor-

> tance. Besides, no method has been discovered and probably none can be discovered by which to measure either accurately or even approximately the effect of the agreements and doings of these defendants upon prices, production and competition in the maple, beech and birch flooring industry, for the reason that there are no satisfactory standards of comparison" (Vol. I, p. 59).

Upon the trial court's statement and the principles announced by this court in the Steel Corporation case, the appellants are entitled to a reversal of the decree entered by the District Court. The same principles were announced and applied by this court in the American Column and Lumber Company case. The test there announced was

> "whether the system of doing business adopted resulted in that *direct and undue* restraint of interstate commerce which is condemned by this anti-trust statute."

If, as the District Court held, the proof did not show what effect the activities of the defendants had had upon prices, production or competition, then clearly there was no proof of "that direct and undue restraint of interstate commerce which is condemned by this anti-trust statute."

In the second place, mere proof of the adoption of a plan or scheme "which in its operation necessarily affects the prices" is not sufficient to sustain the decree that was entered by the District Court.

The test stated by the writer of the Government's brief does not accord with the test announced by this court in the American Column & Lumber Company case. Moreover, the decree entered by the District Court must be sustained, if at all, upon the allegations of the Government's petition and the proof, which must agree. Having alleged that the plan and activities of the defendants resulted in a practical uniformity of both "net f. o. b. selling prices" and "net delivered prices," the Government cannot now sustain the decree entered by the lower court upon the theory that the defendants' plan "in its operation necessarily affects the prices."

In the Government's brief it is also asserted:

> "2. The question of fact is: Does the operation of the scheme materially affect the prices or production of the commodity moving in interstate commerce?" (P. 182.)

As above pointed out, such is not the question. The question is "whether the system of doing business adopted resulted in that direct and undue restraint of interstate commerce." In other words, does the proof show an unreasonable restraint of interstate commerce?

In the second place, there is no evidence whatsoever that the defendants' plan has affected production other than the undisputed proof that by means of the statistics the defendants are advised of what

items of flooring there is a shortage, and that thereupon they manufacture such flooring, to the great benefit of the public (Appellants' Opening Brief, pp. 327-330).

The writer of the Government's brief also asserts:

> "3. As heretofore shown, the operation of the association brought about uniformity of price in about fifty per cent of the sales of the most important kind of flooring made between October, 1921, and June, 1923, and prices equal to or in excess of the so-called cost price in at least 82 per cent of the sales during that period. But it is wholly unnecessary to prove that the operation of the scheme or plan does or will produce uniformity of prices." (P. 183.)

The assertion of counsel is based upon the Lewis compilations, which, as we have heretofore demonstrated are inaccurate, for the reason that the commissions allowed were not deducted in arriving at figures with which to compare the average costs.

In the second place "fifty per cent of the sales of the most important kind of flooring" amounts to only 17½ per cent of the total production of the defendants (Appellants' Opening Brief, p. 337). Eighty-two per cent "of the most important kind of flooring" would amount to only 28.7 per cent, inasmuch as 13/16 x 2¼ inches face Clear Grade Flooring amounts to only 35 per cent of the total

output of association members. It should also be observed that the writer of the Government's brief has not a word to say concerning Appendices U, V and W, pages 25-64 of the Appendices to Appellants' Brief. Those appendices cover other grades and sizes of maple flooring.

Moreover, as shown in our opening brief, the essence of the Government's petition is that the defendants' plan resulted in a practical uniformity of both "net f. o. b. selling prices" and "net delivered prices." It will not do at this late date for the Government to assert that it is unnecessary to prove that the operation of the defendants' "scheme or plan does or will produce uniformity of prices." It is elementary that proof without pleading or pleading without proof is insufficient to support a decree.

The writer of the Government's brief also asserts:

> "The question is, are prices made higher or lower than they would be if controlled entirely by the natural law of supply and demand?" (P. 183.)

It is pure speculation whether the prices obtained by the defendants would have been higher or lower if the plan had not been in operation. At any rate, the Government offered no proof whatsoever on the subject. The undisputed proof adduced by the defendants in the court below was that the prices obtained by the defendants were

unusually sensitive to the supply and demand, as shown by the stocks on hand and unfilled orders of the defendants. The statisticians and economists who testified for the defendants stated that in their opinion the evidence showed that flooring prices had been fixed by supply and demand. The proof was undisputed that the prices of association members were generally lower than the prices of nonmembers, although association flooring was superior to the flooring manufactured by nonmembers. The proof also was that each defendant determined his own prices, and that at all times since the organization of the present association each member had been free to conduct his business as he saw fit, and that he had done so. In the face of all of this evidence it is worse than idle for the Government to assert that the prices obtained by the defendants were higher than they would have been if the present association had not existed.

The Government cannot take cover behind the Hardwood Company case, as it attempts to do, by the assertion that in that case "great reliance was had by the members of the association upon the fact that there was never a condition approaching uniformity." From the majority opinion it would appear that the petition in the Hardwood case differed essentially from the petition in the case at bar. On page 391 (257 U. S.) it is stated:

> "The bill alleged in substance that the plan constituted a combination and conspiracy to restrain interstate commerce in

> hardwood lumber by restricting competition and maintaining and increasing prices in violation of the antitrust Act of 1890, c. 647, 26 Stat. 209."

As we have heretofore pointed out, the essence of the petition in the case at bar is the practical uniformity of both "net f. o. b. selling prices" and "net delivered prices."

Contrary to the assertion of the writer of the Government's brief this court, in the Hardwood case, did not hold

> "that while it was perfectly apparent that there was no understanding to fix prices, yet the scheme when operated induced every one to get the highest prices he could and gave him the exact information which enabled him to extort the highest prices." (P. 184.)

As pointed out in our opening brief, the decision of this court in the American Column case turned upon the finding that the purpose of the combination was both to limit production and to increase prices, regardless of cost, and that such purpose had been consummated.

The writer of the Government brief also asserts that "the effort of the association members is to get all they possibly can and to aid each other in getting it."

There is no evidence whatsoever to justify any such assertion. The Government's own witnesses

testified that there was intense competition between nonmembers and members. Lumber dealers were unanimous in their testimony that intense competition existed among the defendants.

The writer of the Government's brief also says:

> "And when they all by tacit understanding have in mind a minimum price it will result in more or less uniformity at or about that price with now and then a sale below and more often a sale above that price. But there will generally be enough variation to enable them to 'point with pride and confidence' to the lack of uniformity and especially to the spread in prices. The spread, however, means but little, as a small sale for peculiar reasons may be made at a very high price while a very large sale may be made at a specially low price; thus making a very considerable spread between them." (P. 185.)

It would be difficult to imagine a more disingenuous argument than the argument above quoted. For Government's counsel to say that average costs were minimum prices, when the great bulk of all the flooring produced by the present association was sold at prices considerably below the average cost, is wholly inexcusable. In the second place, the *Government* and not the defendants raised the question of uniformity. The Government in its petition asserted that the defendants' activities had resulted in a "practical uniformity" of prices.

Moreover, the assertion of the writer of the Government's brief that the spread between the high and low prices received arose out of sales of small quantities at very high prices, "made for peculiar reasons," and sales of large quantities at specially low prices, is not true, as an inspection of Exhibits U, V, and W (pp. 25-64) of Appendices to Appellants' Brief will show. Of course it is true that retail sales of small quantities made by Chicago and St. Paul members were usually at higher prices than sales of larger quantities. But all such sales in the Lewis compilations are recorded as *mill* sales, as, for instance, pages 660-661, volume IV. The percentage of such sales is very small.

The writer of the Government's brief does not attempt to refute the soundness of our criticism of certain dicta appearing in the majority opinion of this court in the American Column and Lumber case, as well as some other *dicta* appearing in the opinion in the Linseed Oil case. It was apparently much more agreeable to the writer of the Government's brief to reiterate *dicta* which, we respectfully submit, are unsound. Inasmuch as the writer of the Government's brief has not attempted to answer our criticisms, there is no need of again going into the matter here.

The height of absurdity is reached in the assertion that

> "there the unnatural relationship was brought about by each member making an

> independent contract with the Armstrong Bureau; while here, as in the Hardwood case, it is consummated through an association composed of the individual defendants." (P. 187.)

The anti-trust act does not condemn unnatural relationships between business men. What is an unnatural contract?

It is asserted in the Government's brief:

> "5. If it be not shown that the necessary effect of the scheme or plan is to restrain interstate commerce, yet its operation should be enjoined if it be shown that it can be so used and that it is the intent of the parties to so use it." (P. 188.)

In the first place there is no proof whatsoever of the intent of the defendants to use their present plan for the purpose of violating the anti-trust act. In the second place, if the *necessary* effect of the plan is not to unreasonably restrain interstate commerce, how can such plan be used to restrain interstate commerce? And under such circumstances what difference does the intention of the parties make? As held by this court in the Steel Corporation case, *it is not the possession of power,* but the *wrongful exertion of it that counts.* If, as in the case at bar, a plan has been in operation for more than two years without resulting in an unreasonable restraint of interstate commerce, an injunction would not be justified, for the reason that the

anti-trust act condemns only contracts, combinations or conspiracies which do or which would if enforced unreasonably restrain interstate trade or commerce. The case of Patten *vs.* U. S., 226 U. S., 525-543, cited by the writer of the Government's brief, does not sustain the contention made in the Government's brief. Neither do the other authorities there cited, and it is unnecessary to criticize them at length. *The Government's petition does not allege that the defendants entered into the present plan with an unlawful intent.* The Government's failure to allege such unlawful intent was urged in the defendants' motions to dismiss said petition in the lower court (Vol. I, pp. 23-24).

It is also asserted by the writer of the Government's brief:

> "9. The contention that the association created only a reasonable restraint upon interstate commerce is devoid of merit." (P. 193.)

The appellants have never made any such contention. Our position is and always has been that the Government failed to prove that an unreasonable restraint of interstate trade or commerce has ever existed since the organization of the present association. We also contended in our opening brief that, inasmuch as the present articles of association do not expressly deal with output or prices, the Government's petition should have been dismissed because the undisputed proof showed

that the defendants' prices were and always had been fair and reasonable. In other words, our position is that in the absence of an *express* agreement as to prices or output or an express agreement which deprives the parties to it of their discretion as to output or prices, there cannot be an unreasonable restraint of interstate commerce, if each party to such an agreement fixes his own prices and determines his own output, provided output is not curtailed and the prices are fair and reasonable.

The Circuit Court of Appeals for the Sixth Circuit, in Addyston-Steel Company case, did not hold that whether a restraint is reasonable or not depends upon the character of the agreement or agency that brings it about, and not upon the extent of the restraint. Even if the court had so held, such a holding would be a pure *dictum* for the reason that the proof in that case showed an express agreement which unreasonably restrained interstate trade or commerce. In that case the agreement by its own terms did so. It was made for no other purpose. It necessarily could not have any other effect. The articles of association in the case at bar have various provisions relating to divers subjects, none of which expressly deal with output or prices. None of the provisions interfere with or in any wise limit the discretion of association members with respect to output or prices; and under these circumstances the test of the unreasonableness of restraint depends upon the extent or degree of the restraint.

Under the caption "10 The relief to which the Government is entitled" the Government asserts that the appellants' position is that

> "the court should specify what particular things the association can do, and so limit the injunction as to exclude such activities from its provisions. But to comply with such contention would be for the court to undertake to construct an association for the defendants which, according to the court's view, would be a legitimate one." (P. 196.)

The appellants have never made any such contention. The appellants do contend that if some part or parts of defendants' plan should be deemed objectionable the injunction should merely restrain the defendants from carrying out such part or parts. This court has frequently done this in cases arising under the anti-trust act and courts have been exercising similar functions since time immemorial, especially courts of equity.

The assertion that no property rights are involved in the case at bar is demonstrably unwarranted. At great expense the defendants have maintained a reinspection service and have standardized the flooring manufactured by them. The proof shows that the defendants have built up a good will of immense value. This good will should not be destroyed and the public should not be injured by depriving it of the benefits of the reinspection service and of standardized flooring. The

court will recall that the proof was that architects specify flooring manufactured by the defendants or flooring manufactured according to its grading rules; that a great many lumber dealers will not buy flooring from non-members, and that all the lumber dealers who testified stated that they preferred to deal with members of the association because of the superior quality of the flooring manufactured by them, and because of the protection that the reinspection service afforded buyers.

IN THE

SUPREME COURT OF THE UNITED STATES.

OCTOBER TERM, 1924.

No. 342.

MAPLE FLOORING MANUFACTURERS ASSOCIATION, W. D. YOUNG & COMPANY, MITCHELL BROTHERS COMPANY ET AL., APPELLANTS,

vs.

THE UNITED STATES OF AMERICA.

APPEAL FROM THE DISTRICT COURT OF THE UNITED STATES FOR THE WESTERN DISTRICT OF MICHIGAN.

APPELLANTS' SUPPLEMENTAL REPLY BRIEF.

May it please the Court:

The Government withdrew its original Reply Brief and filed in lieu thereof a so-called "Substitute Brief" on Saturday, February 28, 1925—only two days before the cause came on for reargument. Within the short time at our

disposal it will be impossible to prepare a complete brief in reply to the Government's Substitute Brief. Therefore we are able only to present, by way of a supplemental brief, our reply to the new matter contained in the Government's last brief; and we respectfully ask the Court to consider, not only this supplemental brief, but also our Original Reply Brief as our reply to the Government's Substitute Brief. The Court will please bear in mind that this Supplemental Reply Brief undertakes to answer only certain portions of the Government's Substitute Brief, and that we rely upon our Original Reply Brief as a complete answer to the remainder of the matter contained in the Government's Substitute Brief.

Average Costs.

We wish especially to call the Court's attention to pages 172 *et seq.* of the Government's Substitute Brief, where it is contended that the increase in the prices of maple flooring during 1922 and 1923 was due solely to the fact that the defendant Association distributed from time to time certain average cost figures.

The proof with respect to the ascertainment of average costs was as follows:

> "These average costs are determined from time to time *whenever there are changes in the cost of rough maple lumber* * * * *and also whenever there are changes in the average manufacturing and marketing costs. We might issue one every two or three months, or oftener if there are violent fluctuations in the cost of rough maple lumber.*" (Vol. 1, pp. 155-6; see also p. 110.)

We pointed out in our Opening Brief that the average costs could not have been recommended prices, for the rea-

son that the proof showed that 1922 was a year of advancing prices (p. 346). Prices obtained by individual members reflected to some extent the increased costs of production far in advance of the ascertainment of average costs by the Association. This was natural, in view of the facts that the prices obtained were *constantly* subject to the influence of increasing actual costs *as well as to an increased demand for flooring,* whereas the average costs were ascertained by the Association at *irregular intervals and only after a marked advance* in the market price of rough lumber. *Prices obtained by individual members for flooring also reflected the combined judgment of both buyers and sellers—members as well as nonmembers—with respect to future conditions. Average costs, however, reflected only actually existing conditions with respect to manufacturing and marketing costs.* We also pointed out that the alleged uniformity of prices did not exist. (See Appendices T, U, and V, pages 24-64, Appendices to Appellants' Brief.) It was also demonstrated that the average costs were not and could not have been *minimum* prices, for the simple reason that the undisputed proof showed that the great majority of the sales were made at prices substantially below the average costs. Even a greater percentage of the total quantity of feet was sold at prices below the average costs. The Government now attempts to meet these incontrovertible facts by the following sophistries:

> "When the first cost price list—really a minimum price list—was distributed some were selling below and some above the prices designated therein. Those selling above were not expected to, and did not reduce their prices to conform to the list, but those sell-

ing below raised their prices, probably gradually, until practically all sales were made at or above the designated prices.

"In the meantime the competition to obtain higher prices than their competitors had caused many members to advance their prices. And when a large per cent of them had made a substantial advance a new list was distributed with prices at a higher level. Of course, while the prices of many then conformed to or exceeded these new prices, some were selling below them, and a short time would be required for the prices of all to be advanced to the new level. New lists would be distributed just as often as the market would stand the strain. Therefore uniformity in figures need not be expected. But we may expect to find that a large per cent of the sales were made at the designated list prices, as it is only the bolder ones who take the initiative in advancing prices, and the others will not follow until they ascertain that the ground is secure. Furthermore, it may be expected that a number of sales will be found below the list prices, but they will gradually decrease after a new list has been adopted until another advance is announced."

The fact is that the year 1922 marked a general recovery after the terrific slump in 1921 (Vol. I, pp. 165-6). The prices of all commodities were advancing. Rough maple lumber increased in price continuously throughout the year. Inasmuch as flooring and all other commodities had sold for more than their intrinsic values during the inflation period that culminated in 1920, they sold for less than their intrinsic values during the deflation period that ended in 1921. Prices of all commodities and wages generally increased during 1922 and the early part of 1923.

The Government's theory is that the "average costs" *alone* account for the increase in the price of maple flooring during 1922 and 1923. Of course such a theory is absurd, as we shall now show in detail.

As shown on Appendix E (p. 5, Appendices to Appellants' Brief) Clear grade maple flooring reached the peak price of $225 per M feet during the month of May, 1920, from which it fell to $76.92 per M feet during September, 1921; the No. 1 grade maple flooring sold for as much as $197.50 per M feet in June, 1920, and for as little as $50.19 in October, 1921; the Factory grade maple flooring sold as high as $168 per M feet during May, 1920, and as low as $16.17 per M feet in October, 1921.

Stocks on Hand (of 15 members) amounted to more than 29,000,000 feet during February, 1922. Unfilled Orders then amounted to only 8,000,000 feet. By June, 1922, Unfilled Orders amounted to more than 19,000,000 feet, whereas in February, 1923, they were more than 30,000,000 feet, which was not far from the record. Stocks on Hand had in the meantime declined to less than 22,000,000 feet (Vol. V, p. 955, Grant Keehn Ex. 22). This, too, despite the fact that the production (22 members) during 1922 was approximately 38 per cent greater than the production during 1921.[1]

---

[1] PRODUCTION OF ASSOCIATION MEMBERS.

	Quantity.	Number of members reporting.
1922	148,313,000 ft.	22
1921	107,719,000 "	22
1920	129,523,000 "	21
1919	119,451,000 "	21

(Vol. IV. fol. p. 5506; Vol. II, pp. 770-1, 861-2.)

See page 21, Appendices to Appellants' Brief, for a graph showing the relation of the prices to demand (Unfilled Orders) and supply (Stocks on Hand). When the demand skyrockets and the supply (despite increased production) crumbles, of course prices rise. They did not greatly increase, as the graph shows, and as Mr. Grant Keehn explained (Opening Brief, pp. 221-6). The increase in price would be the natural consequence of the great increase in demand, even if the price of rough maple lumber had remained stationary. But rough maple lumber did not stand still.

As shown on Defendants' Exhibit PP (Appendix N, p. 18, Appendices to Appellants' Brief), the index number of the prices of rough maple lumber for 1920 was 358; for 1921 it was 179; for 1922 it was 187, and for the early part of 1923 it was 233. These figures are based on actual purchases made by Association members. See also Appendix O (p. 19 of Appendices to Appellants' Brief) for a graph comparing the index of the prices of "The Product" with the index of the prices of Rough Maple Lumber. This graph is explained on pages 218-219 of Appellants' Opening Brief.

Defendants' Exhibit CC½ (Appendix L, p. 16, Appendices to Appellants' Brief) shows that the following prices were obtained for rough maple lumber during January, 1922; December, 1922, and July, 1923:

	No. 1 common.	No. 2 common.	No. 3 A common.
January, 1922	$45	$30	$17
December, 1922	52	32	20
July, 1923	60	40	25

(P. 5 of Appendix L.)

The same statement also shows that the defendant J. W. Wells Lumber Company was during January, 1922, paying common labor in its flooring mill $2.50 per day. In August of 1922 it was paying $2.75 per day. In December, 1922, $3.00 per day; in March, 1923, $3.25 per day, and in May, 1923, $3.50 per day. The statement also shows that the same company (which was a producer of rough lumber) increased the pay of its men in the lumber camps from $26 a month and keep to $50 a month and keep.

The wage index of the defendant Cummer-Diggins Company was as follows:

1920	221
1921	153
1922	171
Part of 1923	195

(Appendix H, p. 9, Appendices to Appellants' Brief.)

The experience of all members, however, was not identical with respect to wages. The prices of mill supplies were also higher in 1922 than in 1921 (p. 11, Appendices to Appellants' Brief).

As Appendix F clearly shows (p. 7, Appendices to Appellants' Brief), the indices of "All Commodities Prices," of "All Building Materials Prices," of "Lumber Prices," as well as the index of the prices of "The Product," advanced throughout the year 1922 and into 1923. (See pp. 210-211 of Appellants' Opening Brief.)

And yet the Government has the hardihood to argue to this Court that the increase in the prices of maple flooring was due solely to the fact that the defendants distributed from time to time statements with respect to the average manufacturing and marketing costs!

The utter unsoundness of this contention is also demonstrated by the facts that each member ascertained his own costs; that the prices obtained by members varied widely; that each member fixed his own prices; that the prices were fair and reasonable; that the prices of nonmembers were generally higher than those of Association members; that buyers generally prefer to deal with Association members; that the Government did not produce a single dealer or consumer to testify that he had been oppressed by the defendants, and that dealers all over the country, as well as nonmembers, unanimously testified to the existence of vigorous competition, not only between members and nonmembers, but among the defendants.

It is a striking fact that the Government's theory, heretofore discussed, consists of hasty generalizations predicated solely upon the market of 1922 and 1923, which happened to be an advancing one. That the market prices are absolutely independent of the average costs issued by the defendant Association or its predecessors is conclusively proved by the market of 1920 and 1921, which happened to be a declining market. As shown by Appendix E, page 5, Appendices to Appellants' Brief, 13/16 x 2¼ Clear grade maple flooring dropped from $225 per M feet in May, 1920, to as low as $99.24 in December, 1920. During the same period the No. 1 grade dropped from $189.87 per M feet to as low as $84.35. The Factory grade dropped from $168 per M feet to as low as $53.13. The market continued to decline throughout the entire year of 1921; and during the times above mentioned the Associations then in existence, strange to relate, were issuing their tables of values. According to the theory of the Government, these tables of

values should have made such a drastic decline absolutely impossible.

It should be borne in mind that the Government in its petition does not rely upon the illegality of the plan outlined in the articles of association, but predicates its right to the relief sought upon the alleged results flowing from the operation of the plan (Vol. 1, pp. 10-11).

The petition alleges that the distribution of average cost figures, the use of the freight-rate book, uniform terms of sale, and uniform commissions have produced a practical uniformity of net f. o. b. mill and net delivered prices for maple, beech, and birch flooring, and that the distribution of trade statistics among the members of the defendant Association has eliminated competition. But the Government, *having offered no evidence to establish the alleged results of the defendant Association's activities, now falls back upon the plan itself as being unlawful per se* and practically rests its case upon the unwarranted assumption that this Court has held in the American Column & Lumber case, that the distribution of trade statistics is inhibited by the Anti-trust Act. As pointed out in our Opening Brief this Court did not so hold. In the last analysis the Government asks this Court to condemn the defendants' plan notwithstanding the fact that the Government offered no proof to establish the alleged harmful results of the Association's activities and notwithstanding the undisputed proof by buyers and witnesses produced by the Government that there exists strong active and vigorous competition among the defendants.

On pages 177-8 of the Substitute Brief appears the following rather curious specimen of reasoning:

> "To determine whether the so-called 'average costs' have been maintained as minimum prices, either of two methods could have been adopted for the purpose of comparing the prices actually obtained (as shown on the sales reports) with the so-called average cost; either the average cost *plus* the freight could have been compared with the delivered price reported (as was done on the sales reports during the operation of the January 6, 1921, Minimum Price Basis, as described heretofore on p. 39), or the delivered price reported *less* the freight could have been compared with the average cost. The Government chose the latter method, perhaps unfortunately, as the use of the former would not have given the appellants an opportunity to claim, as is done on pages 336-348 of their brief, *that the commission allowed, if any, should also have been deducted in order to arrive at the Cadillac base price.*"

Even if the former method had been used, it would still be necessary to determine what was the "delivered price" where sales were made at a price subject to commissions of $1.50, $2.00, or $3.00 per M feet or to a 5 per cent commission after the deduction of freight.

Furthermore, we have never contended that the commission allowed, if any, should be deducted "in order to arrive at the Cadillac base price." We insisted that when allowed, the commissions should be deducted in order to arrive at figures to compare with the average costs, or what the Government calls the "Cadillac base price."

We pointed out in our Original Reply Brief (pp. 64-70) that the Government's theory in the trial court as to why the commissions should be deducted was squarely opposed to the theory advanced by it in this Court. We are now

met with still other theories, as the following parallel columns prove:

Government's Original Brief.	*Government's Substitute Brief.*
"However, no contention can possibly be made that the delivered cost or price at any destination as given by the rate books and tables of delivered values, consists of the average cost, plus the average freight, plus the commission, as no reference to commissions is made in the present articles of association, or in their rate books or tables of values distributed during their operation." (P. 163.)	"(1) *The commission is actually embraced in the estimate of costs.* The questionnaire answered by the members, upon which answers the manufacturing and distributing costs are estimated, contains the following inquiry: '6. Selling expenses, including commissions and advertising and office expenses including selling administrative expenses.' And in compiling the answers to the questionnaire sent out in May, 1922, the average of the replies to this question was $3.75. (See p. 69.) The manufacturing and selling expenses added to the costs of rough lumber, including the waste, constitute the 'average costs,' which are shown in the rate books—and the estimates of costs which are from time to time distributed." (Pp. 178-9.)

The Government failed to put in any evidence whatsoever with respect to what was included in the italicized phrase in the following paragraph:

> "Selling expenses, *including commissions* and advertising and office expenses, including selling administrative expenses."

Some of the defendants employ traveling salesmen on a salary basis; others on a *commission* basis. Others have no

traveling salesmen. Some have exclusive representatives; others have none (Vol. I, pp. 209, 210, 229, 261, 262, 288, 323, 384, 393). Whether the phrase "including commissions" covers *commissions allowed buyers generally, as well as the commissions paid to traveling salesmen who are employed on that basis,* does not appear. Certainly the commissions paid to traveling salesmen would properly be called *"selling expenses."* Commissions allowed to other purchasers would not necessarily be "selling expenses." They would be where a defendant like the Kneeland-Bigelow Company sold flooring through one of its exclusive representatives, who carried the account and who was paid a commission for selling the flooring and carrying the account (Vol. I, p. 393). They would not be *"selling expenses"* for a company like the Cummer-Diggins Company. That company has no traveling salesmen (Vol. I, p. 218), neither has it any representatives of any kind (Vol. I, p. 200). *Yet the company allows commissions* (Vol. I, p. 209). Hence, it cannot be affirmed that "the commission is actually embraced in the estimate of costs."

But what difference would it make if all commissions allowed under any circumstances were actually included in the "average costs"? *We are not concerned with any matter of book-keeping or problem in accounting.* We are concerned with the Government's contention that the "average costs" were actually used as *minimum prices. It therefore makes no difference what elements were included in the average costs.* The question is, *What is the relation between the average costs (regardless of their constituent elements) and the prices obtained by the several defendants?* It is manifest that where a delivered net price is quoted the freight

should be deducted from such price and the result compared with the average cost. *It is also obvious that where a delivered price is quoted subject to a commission of $1.00, $2.00, or $3.00 per thousand feet both the freight and the commission should be deducted from such delivered price. Otherwise we should be dealing with prices which neither the buyers paid nor the sellers received for the flooring in question.*

The Government's assertion that there is no evidence to support our contention that the allowance of commissions is merely a means of meeting competition or reducing prices is not supported by the facts. In the first place, the proposition is self-evident when the various quotations made by members and nonmembers to wholesalers, retailers, and brokers alike is considered. In the second place, there *is* evidence. Mr. Lester N. Godfrey, of the Godfrey Lumber Company of Boston, testified as follows *on cross-examination by the Government:*

> "We dicker with the different manufacturers as to *commissions and prices in order to obtain as low a price as possible* so that we may meet competition. Of course, if a manufacturer gives us a larger commission, his profit would be less. *The purpose of allowing a larger commission is to secure orders,* and the one allowing a *larger commission may underbid the other fellows.* * * * I buy all our flooring outright" (Vol. II, p. 538).

The Government's assertion that commissions are allowed to wholesalers only is inaccurate. Mr. J. L. Colby testified as follows:

> "We sell to both wholesalers and retailers, and allow from $1.50 to $2.00 commission. *We have no set rule that governs commissions.* We use our own judgment and decide whether *a buyer* is entitled to $1.50 or whether he is entitled to $2.00. It depends somewhat upon the volume of business he is turning our way and the length of time he has been soliciting business for our product. Sometimes we quote net instead of allowing any commission. I know of no rule of the present Association with respect to what commissions shall be allowed *or when commissions may be allowed*" * * * (Vol. II, p. 209).

But what if commissions were allowed only to wholesalers? *They are not always allowed to them.* The commissions allowed also vary. Contrary to the Government's contention, the allowance of commissions to wholesalers does not even tend to prove that the average costs were intended to be minimum prices.

On pages 181-2 of the Substitute Brief the Government's statements concerning the District Court's position with respect to the deduction of commissions are misleading. The District Court took the position that if the minimum-price plan or the minimum-price basis permitted the allowance of a commission of $2.00 per M feet the actual minimum price would be $2.00 less than the formal minimum price (Vol. II, p. 855). As pointed out in our Opening Brief, the present Association has never had any rules whatsoever with respect to the allowance of commissions; neither has it had any minimum-price plan or minimum-price basis (pp. 339, 109-112). Hence the reasons relied upon by the District Court do not apply to the sales made by members since the organization of the present Association.

Without giving any citation to the record for the District Court's position, the Government refers to a letter written long previous to the organization of the present Association, and then continues as follows:

> "An examination of all the Weekly Sales Reports for 1922 and 1923 which are printed in the record shows that the following commissions were allowed: 14 of $1.00; 344 of $1.50; 1,244 of $2.00; 3 of $2.50; and 3 of $3.00. The average of these commissions is $1.89, and that undoubtedly represents about the amount included in the average costs for commissions allowed. No average cost figure or price stated otherwise than in even dollars has ever been established, and therefore if the delivered prices less the freight *and less the commission, if any,* are to be compared with the average cost with any pretense of fairness, *two dollars must be deducted from the average cost. As stated by the trial court, therefore, the method actually adopted on the Lewis Exhibit was against the Government.*"

The method used was "against the Government" only upon the hypothesis that the minimum-price plan or the minimum-price basis (which had long since been annulled and abandoned) was still in existence.

In the weekly-sales reports for 1922 and 1923 there were *hundreds of sales made without the allowance of any commissions whatsoever. None of these were included by the Government in arriving at the average commissions of $1.89,* which the Government asserts "undoubtedly represents about the amount included in the average costs for commissions allowed". The foregoing quoted matter is a pure guess,

whereas the average costs are average costs per 1,000 feet of flooring.[2] (See Opening Brief, p. 252.) For instance, if a

---

[2] SURVEY OF COSTS.

Manufacturing and Marketing Costs Per 1 M Feet of Flooring Produced During January, February, and March, 1922.

	Per 1 M ft. of flooring produced.
Average of replies received,—	
1. Labor taking lumber off of dock, car, pile or wagon and placing in dry kiln, including expenses of night fireman	$1.16
2. Cost of manufacturing into flooring and putting flooring in warehouse, including twine, oil, belting and other factory supplies, and factory repairs and including manufacturing administrative expenses	8.34
3. Warehouse expense and loading into cars or on wagons.	.90
4. Insurance and taxes. (Divide ¼ of annual amount by quantity of flooring produced during January, February, and March)	1.07
5. Interest at 6 per cent on value of plant and on value of average stock carried of rough flooring lumber and of finished flooring. (Divide ¼ of annual amount by quantity of flooring produced during January, February, and March)	1.92
6. Selling expenses, including commissions and advertising, and office expenses including selling administrative expenses	3.75
7. Cash discount	.80
8. Annual depreciation on flooring plant as is usually allowed by the United States Government. (Divide ¼ of annual amount by quantity of flooring produced during January, February, and March)	1.37
9. Total per M feet	19.31
10. Less net profit from wood and other by-products of flooring lumber, per 1 M feet of flooring produced during January, February, and March	1.32
11. Actual manufacturing and marketing costs per 1 M feet of flooring produced during January, February, and March	17.99

May 31, 1922.

(Vol. I, pp. 99, 104, 107; Vol. III, p. 279.)

member shipped 1,000,000 feet of flooring and paid a commission of $2.00 per M feet on only 500,000 feet, the *average commission* paid on the 1,000,000 feet sold would be only $1.00 per M feet.

Referring to the figures used by the Government in arriving at the so-called average commissions of $1.89, we find that there was a total of 1,608 sales on which commissions paid aggregated $3,034.50, or an average commission on the *1,608 sales* of $1.89 *per sale, and not* per thousand feet on *all* flooring sold. In other words, all sales of flooring—both where commissions were not allowed and where they were allowed—would have to be taken into consideration in order to arrive at the average commission per thousand feet of flooring. The average commissions only on sales where commissions were actually allowed is wholly irrelevant.

The truth of the matter is that Mr. Lewis first selected the true method, but when it was discovered that the results were unfavorable to the Government specious excuses were given for abandoning that method, and fallacious reasons (subject to change without notice) have since been advanced by the Government in support of its obviously unfair and baseless contention that commissions allowed should not be deducted from delivered prices quoted in order to arrive at correct figures with which to compare the average costs.

On page 62 of the Substitute Brief it is said:

> "And it was altogether improper and illegal to furnish the members with the average cost of production and distribution."

Of course the foregoing statement is inaccurate. As heretofore pointed out, each member determined his own costs

as well as his own prices. The announcement of the average costs did not equalize costs which were otherwise different. Neither did it eliminate competition, as is abundantly proved by the undisputed evidence of dealers in all the large centers of consumption. The great price range also proved that each member fixed his prices having in mind his own costs and not the average costs, which were distributed by the Secretary.

On page 63 of the Substitute Brief it is said:

> "Since the average cost was not the actual cost of any member, why furnish any of them with the average costs? How could it be of any use to any member in computing its costs?"

Of course the foregoing questions are beside the case. Each member ascertained his own manufacturing and marketing costs and reported them to the Secretary, who thereupon announced the average. Of course the average could not assist any member in ascertaining or computing his own costs, especially the members who had theretofore ascertained their own costs and reported them to the Secretary. *The information was of great benefit to all the members of the Association because individual costs were compared with average costs which resulted in the reduction of individual costs.* The proof is undisputed that the activities of the Association have resulted in reduced costs of production. (See Opening Brief, pp. 266-271.) That the Association has been able to reduce costs is also proved by the fact that prices charged by the Association members are usually lower than the prices of nonmembers, although Association flooring is superior to the flooring manufactured by nonmembers. (See Opening Brief, pp. 116-143.)

The Government does not allege in its Petition that the average costs were not honestly and accurately ascertained. All that is charged in the Government's Petition with respect to ascertainment of average costs was that the average costs "now represent all possible elements of actual costs, and also large profits to the defendant corporations." (See p. 8, Opening Brief.) *The Government offered no proof whatsoever that the average costs contained any profit or that any element of the average costs was improper. The proof was undisputed that the average costs were honestly and accurately made.* In view of the foregoing facts, it is too late for the Government to attack, by means of innuendo and interrogation, the average costs announced by the Association. In its latest brief the Government attempts to question the distribution of the average costs by the Secretary. *There is no proof whatsoever as to what method the Secretary used in making the distribution in question.* As pointed out in our Reply Brief, the distribution of average costs is immaterial in view of the undisputed proof that each member ascertained his own costs; that each member fixed his own prices, and that there was no agreement, either express or implied, that flooring should be sold at average costs. The wide range of prices completely refutes any such theory.

On page 3 of the Government's Substitute Reply Brief it is stated:

> "As is customary in this character of case, an effort is made to show that the industry involved is not important in comparison with others; that it is hedged about with competition which threatens its destruction, and can be saved only by drastic and concerted action by those engaged therein." * * *

No such contentions have ever been made by the appellants.

Control of Industry.

On page 4 of the Substitute Brief it is stated that the Maple Flooring Manufacturers Association was organized in 1905. This is not the fact. In paragraph V of the Government's Petition it is alleged that "the defendant Association has been in existence since 1895" (Tr., 4). The evidence shows that the first Maple Flooring Manufacturers Association was organized in 1897, and that in 1898 the Association then in existence "represented about 90 per cent of the supply of maple flooring" (Vol. IV, p. 827).

On page 5 of the Substitute Brief it is stated:

> "The fact is that it [the maple flooring industry] is an industry which nature has practically confined to Michigan and Wisconsin; and it is dominated by appellants, acting through their Association."

This statement is absurd in view of the undisputed proof that both in manufacturing capacity and in numbers the nonmembers greatly exceed the members of the defendant Association. The nonmembers are located in the New England States, in New York, in Pennsylvania, Minnesota, Illinois, Ohio, Kentucky, Tennessee, West Virginia, North Carolina, and Arkansas, as well as in Michigan and Wisconsin. The timber is widely distributed. (See pp. 24-36 of Appellants' Opening Brief.) The entire membership of the present Association numbers only 22; and, as shown on pages 5-7 of the Appellants' Reply Brief, there are in Michigan, Illinois, Wisconsin and Minnesota alone 17 nonmember

manufacturers of maple, beech, and birch flooring. Besides the Canadian manufacturers there are more than 400 manufacturers of rough maple lumber in the States of Michigan and Wisconsin alone, and some 3,000 of such manufacturers in the United States. In view of the foregoing facts and the undisputed proof that the members of the defendant Association own less than 2 per cent of the stand of maple, beech, and birch timber in the United States and less than 4 per cent in the Lake States, it is manifestly erroneous to assert that the maple-flooring industry is dominated by appellants.

If, as asserted by the Government, the defendant Association has had a continuous existence since its organization in 1897, then it has lost ground, even if it be true that it now manufactures about 70 per cent of the flooring produced in the United States. It formerly produced 90 per cent of the maple flooring manufactured in the United States (Vol. IV, p. 827).

Abandonment of Allotments.

On page 19 of the Substitute Brief it is said:

> "Therefore, if in fact the collection and paying out of the allotment fund ceased on March 1, 1920, defendants deserve no credit so far as this proceeding is concerned, as it was not done that their conduct might conform to the law; but it was a mere temporary suspension arising out of the general conditions of the lumber business."

The foregoing statement is demonstrably inaccurate. The undisputed proof is that the allotment plan then in force and all statistical activities were suspended by the Association

then in existence *upon advice of counsel, because of the decision by the District Court in the Hardwood Case. The allotment plan was never thereafter resumed* (Vol. III, p. 130; Vol. IV, pp. 447-449; Vol. I, pp. 77-78, 76, 146, 143-144, 165; Vol. II, p. 794).

Previous Activities.

In the Government's Substitute Brief much emphasis is placed upon the activities of previous associations for the purpose of prejudicing the present Association, which was organized on March 29, 1922. The Government apparently assumes that if it can convict some of the defendants of prior unlawful acts, or of merely an intention to violate the law anterior to the formation of the present Association, that such intention will be presumed to continue and will of itself render unlawful what otherwise would be lawful. Of course such a theory is unsound. The question for this Court to determine is: "Does the proof show an unreasonable restraint of interstate trade or commerce? In considering this question, the Court is confined to the allegations of the Government's Petition. In other words, the question is: *Has the Government proved the existence of the unreasonable restraint of interstate trade or commerce alleged in its Petition?*

The proof is clear that the practices of the different associations have been constantly changing. In other words, there has been a more or less orderly evolution of Association methods from 1897 to the formation of the present Association on March 29, 1922. The insistence of the Government upon the practices of previous associations demonstrates a weakness and expresses a hope. The argument is

that what is being done today is bad or unlawful because unlawful things were done some two or three years or decades before the organization of the present Association. In other words, that there is no such thing as evolution, but that what a thing was in the beginning it will be to the end of time. The same argument would utterly discredit the science of astronomy for the reason that it grows out of astrology. The same argument could also discredit the science and art of modern medicine because they have their source in the beliefs and practices of the ancient medicine man who resorted to amulets and incantations in order to exorcise supposedly evil spirits. The modern chemist is also merely the successor of the medieval alchemist. The proof in the case at bar demonstrates that the practices of the present Association are fundamentally different from the practices of previous associations, and that the present Association was organized in a *bona fide* effort to comply with the law. The Government apparently hopes to confuse the issues by continually harping upon the practices of previous associations. The weakness of the Government's case is strikingly demonstrated by the utter absence of documentary proof of unlawful conduct or intention subsequent to the organization of the present Association. In order to support its contentions as to the illegality of the present Association, the Government is forced to rely almost exclusively upon documentary evidence antedating the organization of the present Association.

The Law.

On page 214 of the Substitute Brief appear the following words—words, words!

> "It is believed that no principles of law can be better settled than those which control the questions involved in this case; and that to refuse to apply them to the facts proven in this record would be in effect to overrule the previous decisions of this Court, and to license trade associations to engage in every practice which they pretend is adopted as a reasonable regulation to promote the general welfare, regardless of how it may effect production and prices, and how oppressive it may be upon the public."

Not at all. This case has nothing to do with what trade associations may or may not do. The question presented by the record in the case at bar is a question of *fact,* viz., *Does the proof show an existing unreasonable restraint of interstate trade or commerce?*

And if the public has been oppressed, it is strange that the Government could find no one to testify to the fact!

With respect to prices, the undisputed proof is that they are now and have always been fair and reasonable.

With respect to production, there is not a scintilla of evidence that production has been curtailed.

The proof is also undisputed that the articles of association (the contract) do not undertake to control either prices or production. Each member is left perfectly free to produce as much or as little flooring as he pleases, and to sell it for as much or as little as he pleases.

Buyers generally prefer to deal with Association members, and all witnesses—including those produced by the Government—testified that competition among the defendants was strong, active and vigorous.

The Government finally falls back upon the defendants' plan. Can the *plan* be so obnoxious, in view of the foregoing results?

Moreover, the Antitrust Act does not concern itself with the *form* of any contract or combination. *The Antitrust Act does not condemn any contract or combination for the distribution of trade statistics.* This Court has no jurisdiction to declare unlawful any contract or combination for the distribution of trade statistics, *except where such contract or combination has caused, or where the Court is reasonably certain that it will necessarily cause, an unreasonable restraint of interstate trade or commerce.*

A contract or plan for the distribution of trade statistics is entirely a matter of *form*. The Antitrust Act concerns itself solely with *content—or, rather, with the effect of the contract or combination upon interstate trade or commerce. The Antitrust Act does not concern itself with whether a contract or combination is old or new. The effect upon interstate trade or commerce is the thing.*

We are fairly familiar with the histories of the common law, the Roman law, and the laws of the leading countries of continental Europe. During a busy practice we have endeavored to familiarize ourselves with the leading writers on theoretical and analytical jurisprudence and philosophy of law. But never yet have we come across any system of law where contracts were divided into *natural, unnatural, normal, old* or *new*. Counsel for the Government are simply attempting to exalt into fundamental principles a few unguarded and (we respectfully submit) manifestly unsound *dicta* which have crept into certain opinions written by members of this Court.

Of course the Roman jurists believed in natural law as opposed to positive law. So did certain medieval and 18th century theorists. But the natural law school is as obsolete

as trial by battle, and as dead as the dodo, so far as modern jurisprudence is concerned. Moreover, there can of necessity be no *natural* contracts, combinations or conspiracies. They must be entered into by personæ. They must be either lawful or unlawful, and whether they are either can not be determined by their "normality" or "newness." So far as this case is concerned, the legality of the contract or combination must be determined by the Antitrust Act, which inhibits only contracts, combinations and conspiracies which unreasonably restrain interstate trade or commerce.

We submit that the decree of the lower Court should be reversed with directions to dismiss the Government's bill.

Respectfully,

JACOB NEWMAN,
CONRAD H. POPPENHUSEN,
HENRY L. STERN,
EDWARD R. JOHNSTON,
HENRY JACKSON DARBY,
Solicitors for Appellants.

XI. Discussion of the law	182
1. It is not necessary to prove a direct agreement to fix or control the prices of the commodity in question. It is sufficient to prove the adoption of a plan or scheme, which in its operation necessarily affects the prices; and to warrant an injunction it must, of course, be also shown that the plan or scheme is in operation	182
2. The question of fact is: Does the operation of the scheme materially affect the prices or production of the commodity moving in interstate commerce	182
3. It is wholly unnecessary to prove that the operation of the scheme or plan does, or will, produce uniformity of prices	183
4. A matter of special inquiry is, does the association scheme or plan bring about an abnormal and unusual relationship as to their business matters between those who are naturally competitors	185
5. If it be not shown that the necessary effect of the scheme or plan is to restrain interstate commerce, yet its operation should be enjoined, if it be shown that it can be so used, and that it is the intent of the parties to so use it	188

Brief and argument—Continued.

XI. Discussion of the law—Continued. Page

6. It is no defense that the defendants did not intend to violate the law, and that they filed copies of their plan with the Department of Justice and the Federal Trade Commission.. 191

7. It is no defense that some benefits may have resulted from the operation of the scheme or combination..... 192

8. It is no defense that the prices of maple flooring were and are reasonable, if such be the fact.. 192

9. The contention that the association created only a reasonable restraint upon interstate commerce is devoid of merit..... 193

10. The relief to which the Government is entitled. 196

In the Supreme Court of the United States

OCTOBER TERM, 1924

MAPLE FLOORING MANUFACTURERS Association et al.
v.
UNITED STATES OF AMERICA
} No. 342

REPLY BRIEF ON BEHALF OF THE UNITED STATES

STATEMENT OF CASE

(Italics in quotations are ours, if not otherwise stated)

This is an action brought by the United States against the Maple Flooring Manufacturers Association and its several members to enjoin an alleged violation of the Sherman Antitrust Act. The original bill was filed on March 5, 1923, and it alleges in substance that the defendants, who manufacture a very large per cent of the maple, beech, and birch flooring marketed in the United States, fix minimum prices upon such commodity, and control its production and prices in the market by the observance of provisions contained in the plan of the association, which provide for the computation and distribution among the membership of alleged average costs, being in fact agreed minimum prices, for the

15221—24†—1

adoption and distribution of freight rate books, for an open price reporting plan, and for meetings of the members of the association. (Vol. I, pp. 1–12.) For the reasons fully set forth in its opinion, a decree was entered by the District Court in favor of the Government (Vol. 1, pp. 52–60), wherein it was adjudged that the articles of association and activities thereunder were violative of the said Antitrust Act; and it was ordered that the association be dissolved, and that the defendants and their agents be enjoined from further engaging in the practices specifically described in the bill and also in the decree (Vol. I, pp. 60–61). Defendants assigned errors, and prosecuted an appeal to this court.

BRIEF AND ARGUMENT

The record is a voluminous one and contains a vast amount of evidence that is believed to be immaterial; and only such points will be discussed and evidence cited as will be sufficient to clearly show the principles and proof upon which the decree of the court below was rested.

I

Percentage of the commodity produced and controlled by the defendants

With but three exceptions the plants of the defendant corporations are located in the States of Michigan and Wisconsin; and the evidence shows that the maple flooring industry is centered in those two states. Some time before the hearing the defendants took the

deposition of Edward B. Gordon, who is on the Research Staff of the Bureau of Business Research of Harvard University; and Mr. Gordon testified that he had searched through the several governmental bureaus at Washington for statistics showing who were engaged in the production of maple flooring, but was unable to obtain any information upon the subject. However, he was finally referred by the Chamber of Commerce of the United States to Hendricks' Commercial Register; and from that he took a list of those engaged in the manufacture of maple, beech, and birch flooring whose names did not appear in a list prepared by Mr. Keehn, the secretary of the association; and the two lists, one prepared by Mr. Keehn and the other by Mr. Gordon, which together purport to show the nonmembers of the association engaged in the business, were filed as Exhibits 1 and 2 to Mr. Gordon's deposition. (Vol. II, pp. 626–7.) To secure accurate data as to the production of such flooring in Michigan and Wisconsin the Government subpœnaed representatives of the several manufacturers appearing upon these lists whose factories are located in those states. And there appears in the record, either by way of evidence given by such representatives or by stipulation, the quantity of flooring produced for the years 1918–1922, inclusive, by such manufacturers. See Vol. I, pp. 83–88, 91–94, 96–98, 119–120, 137, and 140–142. From the data thus obtained and that contained in the barometers issued by the association, which show the amount of lumber produced by the members of

the association, and information obtained from other manufacturers appearing in the lists filed by Mr. Gordon in response to questionnaires sent out by the Department of Justice, Mr. Hughes, an agent for the Government, computed the amount produced by members of the association and by nonmembers respectively, and the percentage produced by the members, and filed as Government Exhibit 68 a statement showing the result of his calculation. (Vol. II, pp. 798–802.) His calculations appear in Vol. IV, p. 518, side pp. 3553–3708, a number of side pages not being printed. Without going into details, it appears from these estimates that the percentage of production of maple, beech, and birch flooring in the United States by members of the association for the years mentioned is as follows: 1918, 78.1%; 1919, 78.9%; 1920, 75.2%; 1921, 71.0%; and 1922, 70.0%. Average for the five years, 74.2%. (Side p. 3556.)

In Michigan the production of members was: 1918, 96%; 1919, 94%; 1920, 92%; 1921, 92%; and 1922, 92%. Average, 93%. (Side p. 3553.)

In Wisconsin the percents produced by the members were: 1918, 47%; 1919, 70%; 1920, 42%; 1921, 31%; and 1922, 49%. Average, 50.8%. (Side p. 3554.)

The production in Michigan is so much greater than that in Wisconsin that the percentages of production by the members in the two states were: 1918, 91.6%; 1919, 89.3%; 1920, 85.6%; 1921, 82.7%; and 1922, 82.8%. Average, 85.8%. (Side p. 3555.)

Mr. Hughes' estimates show the quantities produced in each of the several states. The defendants filed as Exhibit CC a list which also shows the production by nonmembers by states. (Vol. IV, pp. 831–833.) A comparison of the estimates will show no great difference, the defendants' tables more generally showing less production by nonmembers than the estimates made by Mr. Hughes.

In the petition filed by the association in 1915 with the Federal Trade Commission it was said that the members of the association "represent about seventy per cent of the industry." (Vol. III, p. 76.)

A petition to the President of the United States with reference to the Canadian duty on flooring, which was incorporated in the Minutes of the Meeting held March 22, 1923, stated that the members of the Association produce about seventy per cent of all Maple, Beech, and Birch flooring manufactured in the United States (Vol. IV, p. 507), and the answer to a questionnaire sent out by the Department of Commerce, which was incorporated in the Minutes of the General Meeting held April 20, 1922, stated that *the members of the Association represent about 70% of the productive capacity of the industry.* (Vol. III, p. 166.)

These figures are conclusive evidence that the industry is wholly dominated by the association.

II

Plan under which the association was operating when bill was filed

The articles of association under which the defendants were operating when this action was begun purport to run from January 1, 1922, to January 1, 1925, and are filed as Government Exhibit 8. (Vol. III, pp. 64–74.) The parts of this plan which appear material are as follows:

It declared, among other things, that its object was "to exchange information concerning the character and nature of actually completed and closed business transactions of its members; to collect and disseminate statistics concerning the flooring industry"; but it was declared that the association should not, either directly or indirectly, fix, regulate, or control the price, output, purchase, or sale of flooring, or attempt to do so. (Vol. III, p. 64.) The officers are a president, a vice president, a treasurer, a secretary, and a board of trustees, which board consists of the president, vice president, and treasurer, and four members elected by the association. (Vol. III, p. 65.) The board of trustees is vested with practically all of the governing powers (p. 66). It is provided that an annual meeting for the election of officers shall be held on the third Wednesday in January of each year, and that regular meetings shall be held on the third Wednesday of April, July, and October, and that special meetings may be called by the president or by a majority of the board of trustees, and that a meeting of the board of trustees may be held at any

time called by the president or by a majority of the board (p. 67).

Article XIV, which relates to cost of production, reads as follows:

> SECTION 1. The sound business principle advocated by the Federal Trade Commission that manufacturers should carefully consider the question of cost in manufacturing and selling their product is recognized by the Association as the only scientific method of conducting the business of manufacturing and marketing Maple, Beech, and Birch flooring.
>
> SECTION 2. For the purpose of furnishing to its members information regarding the average cost of manufacturing and marketing Maple, Beech, and Birch flooring, Surveys of Costs to ascertain such average cost shall be made from time to time by the Association, and such Surveys of Costs shall be filed with the Federal Trade Commission at Washington, D. C.
>
> SECTION 3. In the judgment of the Association the following fundamental elements enter into and determine the average cost of Maple, Beech, and Birch flooring to the manufacturers when manufactured, sold, and delivered F. O. B. cars at the flooring plant:
>
> (*a*) The actual market value of the raw material, as established from time to time by current sales of rough flooring lumber on the open market;
>
> (*b*) The average cost and expense of manufacturing, selling, and delivering flooring F. O. B. cars at the flooring plant;

(*c*) Interest on the capital actually invested in the flooring business at the rate of six per cent per annum;

(*d*) Annual depreciation of plant as is usually allowed by the United States Government;

(*e*) The usual overhead charges in carrying on the flooring business; and

(*f*) A reasonable allowance to provide for contingencies and unforeseen hazards incident to manufacturing operations. This allowance is estimated at five per cent of the average total cost of Maple, Beech, and Birch flooring when delivered F. O. B. cars at the flooring plant. (Vol. III, p. 69.)

With reference to statistical reports, it is provided in Article XV as follows:

SECTION 1. In order that the relations of supply and demand and the statistical conditions existing from time to time in the Maple flooring industry may be known, the following statistical monthly reports shall be made to the Secretary by each member of the Association on or before the 5th day of each month:

(*a*) Report of Stocks on Hand of Maple, Beech, and Birch Flooring at the end of the previous month.

(*b*) Report of Unfilled Orders on Hand for Maple, Beech, and Birch Flooring at the end of the previous month.

(*c*) Report of the amount in feet of Shipments made during the previous month of all kinds of Maple, Beech, and Birch flooring for

use within the United States, except Maple, Beech, and Birch Flooring purchased from other members of this Association.

(*d*) Report of Production of Maple, Beech, and Birch Flooring during the previous month.

(*e*) Report of New Orders Booked for Maple, Beech, and Birch Flooring during the previous month.

(*f*) Report of Average Prices Realized F. O. B. flooring plant after deducting freight, for $\frac{13}{16}''$ x $2\frac{1}{4}''$ face Clear, No. 1 and Factory Maple Flooring, standard grades and lengths, sold during the previous month.

SECTION 2. *In addition to the foregoing monthly reports, each member of the Association shall send to the Secretary promptly at the end of each week a report of all sales made during that week of Maple, Beech, and Birch Flooring. These weekly sales reports shall state the quantity, kind and grade of flooring sold, the delivered price sold at, the average freight rate to destination of shipment, and the commissions paid, if any.* (Vol. III, p. 70.)

The Association adopted a trade-mark for the use of its members, and the articles set forth a trade-mark agreement whereby the member is permitted to use the trade-mark as long as he retains his membership, but such right shall cease immediately upon his ceasing to be a member. Every member is given a number which appears on the trade-mark for identification. Each member agrees that he will maintain the standard grades which the association may from time to time establish, that an inspector shall have

the right to visit the plant to see that the grades are properly maintained and to protect the association against damage shall the member fail to maintain the standard fixed; and a license fee of fifty dollars is paid for the use of the right to use the trade-mark. (Vol. III, pp. 72–73.) The members are required to pay to the association the following amounts:

1. All new members admitted after May 1, 1922, are required to pay for the benefits which "they will enjoy from the Association trade-mark" the additional sum of $100 for each matcher installed for the manufacturing of flooring, which is a part of the Advertising Fund. (Vol. III, p. 65.)

2. Each member pays a fee of $200 for each matcher, which constitutes a fund called "The membership fee fund." (Vol. III, p. 68.)

3. Each member pays 25c per M feet on all flooring shipped, except flooring purchased from other members, which goes into the "Expense Fund" to provide for the current running expenses of the association. (Vol. III, p. 71.)

4. Each member pays 10c per M feet on all flooring shipped, except flooring purchased from other members, which goes into the "Advertising Fund" (p. 71).

5. An annual fee is paid by each member of $50 as a license for use of trade-mark which also becomes a part of the "Advertising Fund" (p. 73).

These articles of association were actually adopted some time in March, 1922, but were dated back to

January 1, but the former association functioned up to the time of their adoption. (Keehn, Vol. I, pp. 78–79.)

III

Previous articles of association under which manufacturers of maple and beech flooring operated

So far as the record shows the first association was organized in 1905, with headquarters in Chicago. The members of that and subsequent associations manufactured maple, beech, and birch flooring, and some of them also manufactured oak flooring. The association of 1905 continued until 1907 or 1908, when it was succeeded by another association, the articles of which expired about 1909. That association was succeeded by another which lasted until either 1911 or the fall of 1912, when a successor was organized. The articles of that association bear date as of January 1, 1913, and are filed as Government Exhibit 1, being the first articles of association introduced. (Keehn, Vol. I, p. 72.)

There are twenty-two manufacturing companies who are made defendants, and they constitute the membership of the present association. Of these twenty-two members sixteen were members of the association which began to function January 1, 1913. There were thirty members of that association. (Keehn, Vol. I, p. 73.) Among other objects mentioned in those articles were "to exchange information; to collect and disseminate statistics concerning the flooring industry." The officers and their duties,

and the meetings specified, were substantially the same as those provided for in the present articles of association.

A special fund was created by those articles, which was deposited as a guaranty that the member would carry out all of its obligations and if it failed to do so its share of the special fund was forfeited. (Vol. III, p. 5.) There was also created a general fund; and for the purpose of securing moneys for that fund an assessment of $3 per M feet was levied each month on "all shipments during that month in excess of the allotted percentage set opposite the signature of each member"; and it was provided that from such fund each member who had shipped during the month less than its allotted percentage should be paid $3 per M feet on the quantity undershipped down to 75% of its allotment, and if a member shipped less than 75% of its allotment during any one month, it should receive $3 per M on the deficit down to 75% of its allotment, and that the balance should be held until the end of the year; and if at the end of the year it had shipped 75% of its allotment for the year it would be paid the balance, but if it had failed to ship as much as 75% of the allotment the amount retained would belong to the Association. (Vol. III, p. 6.)

It was provided that each assessment for that fund should be paid within five days after the assessment had been made and notice given, and if any member failed to pay his assessment within thirty days the trustee should draw upon the member's share of the

Special Fund, and if the amount was not restored to the Special Fund by the member within ten days after notice he should cease to be a member of the Association, and should forfeit all interest in both the special and general fund. (Vol. III, p. 6.) It was further provided that daily reports should be made by each member of the association to the secretary at the close of business of all deliveries and shipments of all kinds of maple, beech, and birch flooring for use within the United States, except that purchased from other members; and it was specified what such reports should include. (Vol. III, p. 7.)

These articles of association were continued with a few modifications for three additional years until January 1, 1919. (Keehn, Vol. I, pp. 74–75.) The articles in effect during that period are filed as Government Exhibit 2 (Vol. III, pp. 14–21). Of the twenty-two members of the present association seventeen were members during the existence of those articles of association, the membership then being twenty-eight. (Keehn, Vol. I, p. 75.) Those articles were succeeded by another set, which went into effect on January 1, 1919, and continued for six months, or until July 1, 1919. Those articles are filed as Government Exhibit 3. (Vol. III, pp. 25–32.) They contain precisely the same provisions as to allotment and statistical reports as those contained in the preceding articles (Vol. III, pp. 30–31), but a different method was provided for raising the special fund (Vol. III, p. 29). Twenty-one members of the present association were members of that

association, which consisted of twenty-nine members. (Keehn, Vol. I, p. 76.) Other articles of association were adopted and went into effect July 1, 1919, to be effective until July 1, 1922 (Vol. III, pp. 37–44); but Mr. Keehn testifies that the allotment feature was discontinued on March 31, 1920, and that there has been no general fund or allotment payments since that date. But, strange to say, there was no minute made by the association or by the board of trustees showing such fact. On being questioned by the court, the witness claimed that they took this action on advice of counsel, but admitted that he thought there was nothing in the minutes to show such fact. (Vol. I, pp. 76–78.) Instead of the articles adopted July 1, 1919, being continued to July 1, 1922, as was contemplated, as above stated the articles now in effect were adopted in March, 1922, but were dated back as effective January 1, 1922. In the meantime, however, a draft of articles was made, and was signed by a large number of the manufacturers, which purported to extend over the period from October 1, 1921, to July 1, 1922 (Gov. Ex. 5, Vol. III, pp. 49–56); but Keehn says that they did not go into effect because not signed by three or four of the manufacturers (Vol. I, pp. 78–90). Although Keehn says that the allotment feature was discontinued March 31, 1920, *yet it will be noted that in this tentative draft that feature was retained*, but instead of collecting three dollars per thousand on excess production, and paying the same amount on over-production, the amount to be collected and paid was four dollars per thou-

sand. (Vol. III, pp. 54–55.) If all but three or four of the members were willing to sign articles containing such an agreement to extend from October 1, 1921, to July 1, 1922, it can hardly be believed that the allotment feature ceased on March 1, 1920, especially in view of the fact that no record of any such action was made.

The fact of the matter appears to be that for some reason not disclosed by the record, the operation of the allotment articles was *suspended* for a period of 18 months from March 31, 1920, until October 1, 1921, so far as the collection and distribution of the General Fund was concerned. This is established by a number of letters in the record. A letter dated Nov. 22, 1920, from William Horner to Mr. Keehn stated:

> We note by your report of the General Meeting that you do not mention the resolution regarding the allotment plan at all. Please advise us by early mail, if you intend to put the allotment plan into force immediately or if this is to be held in abeyance for the present. (Vol. IV, p. 560.)

Mr. Keehn's answer dated November 29, 1920, said:

> The question of resuming the allotment payments, which have been held in abeyance since March 31st, will be taken up by correspondence with the Trustees and the entire membership in time so that some definite action can be taken at the next general meeting to be held on December 22d. (Vol. IV, p. 560.)

But another letter from Mr. Keehn to William Horner dated December 31, 1920, shows that the meeting on the 22d was a "mixed-up mess", and that nothing was accomplished. (Vol. IV, pp. 560–561.) Apparently nothing more was done about the matter until the proposed Articles of Association dated October 1, 1921 were under consideration, when under date of September 1, 1921, Mr. Keehn sent to each member a copy of the proposed revised articles, stated the changes incorporated in them, and in explanation of the allotment articles stated:

> It would seem that the allotments as agreed upon in our present Articles of Association, which allotments were to be in force from July 1, 1919 to July 1, 1922, should govern from October 1, 1921 to July 1, 1922, because each member has already agreed to his allotment to run to July 1, 1922, and if we begin changing allotments, there will be no end to it. Inasmuch as the allotments were suspended from April 1, 1920 to October 1, 1921, a period of 18 months or one-half of the three-year period originally agreed upon, there should be no particular hardship on any member to reinstate his allotment from October 1, 1921 to July 1, 1922, being the nine months remaining of the three years originally agreed upon. (Vol. III, p. 61.)

The proposed Articles of Association of October 1, 1921, apparently did not actually go into effect because of the refusal of the Nicholas & Cox Lumber Company and of the Holt Hardwood Company to

join with the other members who had expressed themselves in favor of reinstating the allotment feature, unless their allotted ratios in M feet were readjusted to be in harmony with the volume of their production and shipments during a more recent period than the one used in basing their allotted percentages, (Vol. III, p. 63.) In one respect, however, the allotment feature of the July 1, 1919, Articles of Association was actively in force and enforced until the present Articles of Association were adopted, as the first-named articles provided by Article XVI that:

> An Expense Fund to provide for the current running expenses of the Association shall be established and maintained by the payment, as often as required by the Board of Trustees, of assessments levied upon the members of the Association of Twenty-Five ($25.00) Dollars per each one (1%) per cent. allotted to each member under these Articles of Association. (Vol. III, p. 31.)

The Special Fund or Guarantee Fund by Article XIII of the 1919 Articles was also based on the allotted established percentages, and no change was made in the Special Fund or in the method of providing for the current running expenses of the Association, except in the case of one new member, until the 1922 Articles were adopted (Vol. IV, pp. 481–482.)

The provisions relating to determining average cost appeared for the first time in the proposed Articles of October 1, 1921, in practically the same

form as in the Articles under which the Association is now operating, except that the principles stated were recognized *and adopted* as the only scientific method of conducting the business of manufacturing and marketing Maple, Beech and Birch flooring. (Vol. III, pp. 53–54.)

There was an effort on the part of the witness Keehn, who is secretary of the defendant association, to make it appear that an entirely different association operated under each one of the plans above described; but he was forced to admit that he was the secretary of all the associations; that each one functioned until the articles of its successor were adopted; and he did not deny that the office was continued at the same place; and, as above shown, nearly all the members of the present association were members of each one of its predecessors. (Keehn, Vol. I, pp. 73–76.) The continuity of these associations is also undisputably shown in Keehn's cross-examination. (Vol. I, p. 143.)

IV

Minimum price plan and minimum price basis

In addition to the articles of association above described, on August 27, 1915 (Gov. Ex. 10, Vol. III, pp. 76–78), a petition dated July 14, 1915, was filed with the Federal Trade Commission, and on June 27, 1916, an agreement between the petitioners designated as a "Minimum Price Plan," to which a copy of the petition was attached, was also filed with the Commission. (Vol. III, pp. 78–81 and Vol. IV, p.

798). The signatures of twenty-eight manufacturers were attached to the petition, and the signatures of twenty-three were attached to the plan. Fourteen of the defendants signed both the petition and the plan. The plan provided for an amendment to the articles of association, to be operative from July 1, 1916, to November 1, 1917, and Article I of the proposed amendment provided that:

> Pursuant to the petition dated July 14, 1915, which the Maple Flooring Manufacturers' Association submitted to the Federal Trade Commission at Washington, D. C., on or about the 27th day of August, 1915 (a copy of which petition follows this supplemental agreement), the members of the Maple Flooring Manufacturers' Association *hereby agree to establish minimum prices for the sale of Maple, Beech, and Birch Flooring, and agree not to sell any Maple, Beech, or Birch Flooring during the period beginning July 1, 1916, and ending November 1, 1917, below such minimum prices.* (Vol. III, p. 78.)

Article II provided that in order that the minimum prices might be fair and reasonable, the actual average cost of flooring should be determined by the following elements, to wit:

> (*a*) The actual market value of the raw material;
>
> (*b*) The average cost and expense of manufacturing and selling flooring;
>
> (*c*) Interest on the capital actually invested in the flooring business at the rate of five (5) per centum per annum;

(*d*) Annual depreciation of Plant; and

(*e*) The usual overhead charges incurred in carrying on the flooring business. (Vol. III, pp. 78–79.)

Article III provided that minimum prices should from time to time be established under the agreement, but that they should not exceed an amount which would give the member an average net profit over the average actual cost to be determined, in excess of ten per cent.

By Article IV a scale of minimum prices to be observed until altered was established.

By Article V the members were prohibited from selling during the period mentioned flooring at less than the minimum prices established, or to be established, and it was provided that if any member should sell for less than the minimum price, it should pay to the association a sum equal to 10% of the amount received for the lumber so sold.

By Article VI each member was required upon the request of the secretary to furnish a report showing its sales and to whom, and the prices at which made; and the secretary was given the right to examine the records of the members.

Article VII provided that if a member had on hand flooring which it was unable to market at the minimum price, or to any other member of the association without regard to such price, it should offer the flooring to the members through the secretary; and in case it was bought by a member, it should not be resold by the purchaser at a price less than the

minimum; but if not bought by some member within thirty days, then the owner might sell the flooring in open market at any price, not less than the price at which he offered it to the members of the association; and that if a member should violate such provision he should pay the association a sum equal to 10% of the amount received for the lumber.

Article VIII provided that if a member did not pay the 10%, the secretary should cause the same to be paid from any funds standing to the credit of such member. The agreement was signed with the understanding that it should be signed by all the members, and that it should be filed with the Federal Trade Commission. (Vol. III, pp. 78–81.) The petition was attached to copies of different plans, and appears in the record [1] Vol. III, pp. 76–78; [2] pp. 82–84; [3] pp. 89–91; and [4] pp. 95–97.

As stated in the following paragraph from the report of the Market Conditions Committee (the functions of which committee are explained in detail hereinafter on p. 126) dated June 22, 1916, the Minimum Price Plan Agreement was finally signed by all the members, and became effective from July 1, 1916, until November 1, 1917:

Minimum price plan

> The Special Committee is indeed happy to report that Mr. I. N. Bushong, of the Northwestern Cooperage & Lumber Company, attended the meeting and signed the Minimum Price Plan Agreement in behalf of his company.

> *The Minimum Price* Plan Agreement is, therefore, consummated, and will take effect July 1st, 1916, as telegraphed yesterday. The duration of the agreement is from July 1, 1916, to November 1, 1917. As the time between now and July 1st is quite short, and as members may have quotations out which they may not hear from before July 1st, it is understood that any bona fide outstanding quotations may be protected up to July 10th. (Vol. IV, p. 430.)

Even at the time they first adopted and operated under the Minimum Price Plan, some of the defendants were rather uncertain as to its legality, or perhaps quite certain as to its illegality. Under date of September 1, 1916, the East Jordan Lumber Company advised Mr. Keehn that in the opinion of their attorneys the plan was in direct violation of the Federal Statutes and also of the Michigan Statutes (Vol. IV, pp. 545–546), but this difficulty was ingeniously answered by Mr. Keehn in his reply dated September 7, 1916, part of which reads as follows:

> Replying to your letter of the 1st, the submission of the Minimum Price Plan to the Federal Trade Commission takes care of all legal questions pending the reply of the Commission, and if the Commission decides that the Plan is not legal, they will, no doubt, tell us to discontinue its operation.
>
> When the Plan was under consideration, the Association requested its attorney, Mr. Newman, to handle the legal details, and it was understood that the members of the Association would leave it to him instead of each mem-

ber consulting his own attorney. If all the members submitted all Association questions to their attorneys we would have such a diversity of opinion that nothing could be accomplished, and for that reason it has been an advantage to the Association to have an able attorney like Mr. Newman to advise us.

Inasmuch *as the Minimum Price Plan is an amendment to the Articles of Association, and is consequently now a part of that contract,* all I can do, it seems to me, is to send a copy of your letter to the Board of Trustees. (Vol. IV, p. 546.)

Mr. Keehn's letter of September 7, 1916, also shows that the problem had been presented by the Wisconsin members of making the affidavit required by the laws of that State in answer to the question "whether such corporation has entered into any combination, conspiracy, trust, pool, agreement, or contract," etc., and although Mr. Keehn first stated in a letter dated January 17, 1917, that the affidavit could not be signed while a corporation was a party to the Minimum Price Plan, this difficulty was also solved, and under date of February 7, 1917, Mr. Keehn advised the Foster-Latimer Lumber Company that inasmuch as the Association had never received the approval of the Federal Trade Commission to the Minimum Price Plan, and as the matter was still pending, the Plan had never been consummated and had never been in effect. The Foster-Latimer Company nevertheless made its report to the State with the notation: "We are members of Maple Flooring Manufacturers

Association and all matters pertaining to that organization are submitted to Federal Trade Commission." (Vol. IV, pp. 546–548.)

The original Minimum Price Plan was extended from November 1, 1917, to January 1, 1919, to run concurrent with the duration of the allotment articles, by a resolution adopted at the meeting held July 20, 1917, in accordance with a recommendation of the Market Conditions Committed. (Vol. IV, pp. 436–437.)

In a letter to members dated October 14, 1918, Mr. Keehn stated that the allotment contract and Minimum Price Plan would both expire by limitation on December 31, and made the following suggestions as to the renewal of the Plan:

> 6. The M. P. P. to be rewritten to include all modifications adopted to date and its duration to run concurrent with the Allotment Articles.
>
> It would be my thought not to incorporate the Allotment Articles and the M. P. P. in one document, but to have the M. P. P. supplemental to the Allotment Contract as at present, so in case the Federal Trade Commission should advise the cancellation of the M. P. P. it can be done without disturbing the Allotment Contract or vice versa. (Vol. IV, p. 444.)

The plan was accordingly revised as of January 1, 1919, to be in effect from January 1 to July 1 of that year; and it was recited that the revised plan was made pursuant to the petition filed with the Federal Trade Commission on July 14, 1915. (Vol.

III, p. 84.) This plan contained the same provisions as the former, with the addition that each member might register special representatives; who were required to be wholesalers or commissioned salesmen, and whose registration should be confidential, and that a concession of one dollar per thousand might be made to such representatives, and further, that a list of wholesalers and commission men should be adopted to whom a like concession might be made as soon as such list should have been published to all the members of the association, and that nominations for registration should be made in writing to the secretary by members of the association, and all nominations should be bulletined to the members by the secretary, and if no objections were filed within ten days the registration should automatically become valid. Thus a favored class of dealers was provided for. (Vol. III, pp. 88–89.)

The Minimum Price Plan was continued after July 1, 1919, and was finally vacated by the following resolution adopted at the Annual Meeting held February 12, 1920:

> M. P. P. Vacated.—On motion, the following resolution was adopted by unanimous vote:
>
> "Whereas the Minimum Price Plan was submitted to the Federal Trade Commission for its approval on June 27, 1916, and the Commission has taken no action with respect to the same, neither approving nor disapproving the Plan; and

"Whereas said Plan has never been enforced by the Association;

"*Therefore be it resolved,* That said Minimum Price Plan and all resolutions relating to the same, be and they are hereby vacated." (Vol. IV, p. 529.)

This action was undoubtedly taken because recommendations or agreements as to *minimum* prices were a futility in February, 1920, as the annual report of the Secretary which was read at the meeting before the resolution quoted above was adopted, commented at length upon conditions in the industry, and then stated that the time was rapidly approaching, if it had not arrived, when concerted action should be taken by the Association to stabilize the price of flooring, and that *maximum* prices could be established from time to time. At the same meeting, however, the Association adopted the resolution instituting the weekly sales reports which is quoted hereinafter (p. 86) and also the following resolution:

New Table of Values.—On motion, the Secretary was instructed to compile for the information of the members a Table of Values showing what the selling prices of flooring should be if based scientifically upon actual average cost and if a profit is included of 10% reckoned upon selling prices F. O. B. the flooring mill.

It was the sense of the meeting that the following fundamental elements constitute the basis of cost in ascertaining what the selling prices of flooring should be:

(*a*) The actual market value of the raw material.

(*b*) The average cost and expense of manufacturing and selling flooring.

(*c*) Interest on the capital actually invested in the flooring business at the rate of five (5) per centum per annum.

(*d*) Annual depreciation of Plant; and

(*e*) The usual overhead charges incurred in carrying on the flooring business. (Vol. IV, pp. 528–529.)

Conditions in the industry during the latter part of 1920 were not as favorable for the manufacturers as they had been in February, and under date of December 16, 1920, Mr. Thomas, the Chairman of the Market Conditions Committee, wrote to Mr. Keehn and stated:

> From present indications I assume that there will be an insistent demand for the resumption of our M. P. P. at the time of our next meeting, December 22. It seems to me desirable to work out an adjustment of the plan so it can be put into effect the first of the year providing the members all agree to it. (Vol. III, p. 97.)

Then on January 6, 1921, a plan, known as the "Minimum Price Basis," was adopted, which was to be effective from that date to July 1, 1922. This purported also to be based upon the petition filed with the Federal Trade Commission on July 14, 1915; and it was stipulated that "the members of the Maple Flooring Manufacturers' Association hereby estab-

lish a Minimum Price Basis for the sale of maple, beech, and birch flooring." (Vol. III, p. 92.) The elements which entered into the computation of cost were the same as in the former stipulation, except the interest allowed was six per cent on capital invested instead of 5%, and the minimum price should not give a member an average net profit in excess of 5%, instead of 10% as specified in the former agreement. (Vol. III, pp. 92–93.) A table of values was agreed upon, subject to change; and it was stipulated how much commission might be allowed each member's special representatives and also the amount allowed those registered as wholesalers and commission men, and what the terms of sale should be. The only difference between this plan and the "minimum price plans" previously adopted was, that this one did not prescribe a penalty for violation, or provide a method to enforce its observance. It was recited that the plan should be filed with the Federal Trade Commission for its approval, and that *in the event of its disapproval* it should be void. Of course, the Commission expressed no opinion upon the subject, and by its very terms it became effective. This plan was signed by twenty-three manufacturers, of whom eighteen are defendants in this litigation. (Vol. III, pp. 92–94.)

It was first claimed by the witness Keehn that neither the Minimum Price Plan nor the Minimum Price Basis ever went into effect, and when shown the Plan revised as of January 1, 1919, and asked "Did that go into effect on that date?" he replied,

"No minimum price ever was enforced or was consummated. (Vol. I, p. 80.) Later, on cross-examination, he made a distinction between the plans being "in force" and "enforced" and stated:

> Q. When you said in your direct examination that it was never enforced will you explain just what you mean by that? What was done by the association then existing under this minimum price plan, government exhibit 11, if anything?
>
> *A.* Some of the statistical data and lists of surplus stock, etc., were submitted to the association, but no penalties or fines or assessments of any kind were ever made upon or claimed for or ever paid into the general fund or the treasury of the association or were demanded by the association. In other words, the members continued on and so far as my judgment and opinion goes they sold their flooring at whatever prices they pleased. (Vol. 1, p. 144.)

His attention was called to a recital in the minutes of a meeting held January 6, 1921, as follows:

> The committee then made its report and the plan as formulated, to be known as the minimum price basis, was read and fully discussed by the meeting, *and on motion was accepted;*

and the witness drew a distinction between "accepted" and "adopted" (Vol. I, p. 148), as he had previously done between its being "in force" and "enforced" (p. 146).

That the Minimum Price Plan was "in force" and at least in a measure "enforced" ever since it was first devised in shown by many of the exhibits introduced by the Government. Exhibit 31 M (Vol. III, side p. 533) is a page dated July 1, 1916, entitled "Application of Minimum Prices," which was combined with the Table of Values of May 15, 1916, and which reads as follows:

> The Delivered Prices in the Table of Values of May 15, 1916, in the Association Rate Book and Index of Towns, are the basis of the Minimum Prices—not F. O. B. mill prices.
>
> Minimum Prices of $1\frac{1}{16}''$, $1\frac{5}{16}''$, and $1\frac{11}{16}''$ Maple, Beech, and Birch Flooring are based on the Rate Book Full List Delivered Prices of $1\frac{3}{8}''$ D. & M. Maple.
>
> Minimum Prices of $1\frac{3}{8}''$ Jointed Flooring are based on the Rate Book Full List Delivered Prices of $1\frac{3}{8}''$ D. & M. Maple.
>
> Prices of $2\frac{1}{2}''$ face D. & M. or Jointed are based on $2\frac{1}{4}''$ face D. & M.
>
> Prices of $3''$ or wider faces D. & M. or Jointed are based on $3\frac{1}{4}''$ face D. & M.
>
> *A Minimum Price is the bottom price, not an average price.*
>
> *Don't stay at the bottom.*
>
> *When your stock conditions and sales opportunities will not warrant your holding for top prices, insist at least on getting a substantial advance over the Minimum Price.*

That some at least of the members did not ignore their agreement to maintain the minimum prices (which were apparently also the actual current

selling prices) is shown by a letter from the Bigelow-Cooper Company to Mr. Keehn, which the latter circularized to all the members under date of September 14, 1916, and which reads in part as follows:

> We received the following letter from our New England salesman, which we thought would interest you:
>
> "I was very much surprised this morning in trying to secure an order from Blacker & Shepard Co. for a carload of 13/16 x 2¼" No. 1 Maple flooring, *that I was the only one quoting on new basis of prices* . . . I did not get the names of any of the concerns bidding, but it surprised me to think that not one of them was over $41.00, whereas our quotation was $42.50."
>
> The writer does not know of six concerns quoting in Boston Territory who are outside of the Association. It would look as though all your good members are not sticking. *We are continuing, however, to ask the prices.* (Vol. IV, p. 431.)

Action taken by the Association to establish new minimum prices or new spreads in accordance with Articles II and IV of the Plan is shown by the January 26, 1917, Table of M. P. P. Values (Vol. III, p. 245); the minutes of the meeting held July 20, 1917 (Vol. IV, pp. 434–435); the letter to members dated May 23, 1918 (Vol. III, p. 299); the Market Conditions Committee Report dated June, 1919 (Vol. III, p. 246); and the Market Conditions Committee Report dated August 21, 1919 (Vol. III, p. 249). A report entitled

"Listings of M. P. P. Surplus Stocks" illustrates the method of operating under Article VII of the Plan. (Vol. III, pp. 256–260.) The June, 1919, Report illustrates in detail the method of determining and establishing minimum prices and is therefore quoted at length:

> *Current Net Values.*—Current Net Values for June reflect the advance adopted in May, but as the advance adopted in June did not take effect until June 19th, with the customary ten days in which to protect outstanding quotations, it was not to be expected that a large volume of new orders would be booked in June at the new June prices. Current Net Values for July, however, will reflect the June 19th M. P. P. Basis.
>
> *Survey of Costs.*—Surveys of Costs for the 2nd quarter of 1919 were received from ten members whose flooring operations are typical of the average of the industry. Their reports indicate an advance in Manufacturing and Marketing Costs of $1.29 over the previous survey. The gross cost is $22.14 less wood $2.22, leaving the net cost $19.92 compared with $18.63, according to the preceding survey. The market value of rough flooring lumber has also advanced. The Committee felt that it should be conservative and that it would be better to be too low than too high regarding the average current market value of lower Michigan, upper Michigan and Wisconsin 4/4 Maple Flooring stock. Based upon information regarding recent sales, not asking prices, the Committee concluded that $3.00 would represent the advance on the flooring lumber.

This would equal $3.66 advance in the cost of 1,000 ft. of flooring (counting 18% waste) in arriving at the selling basis of the product. Using the composite results of the seven test runs, as per our revised statement of May 15, 1919, it works out as follows:

Cost of 1,000 ft. of flooring sold	$56.34	
To cover $3.00 advance on flooring lumber, counting 18% waste. Add	3.66	
Add increase in Manufacturing and Marketing Costs from $18.63 to $19.92	1.29	
		$61.29
Add one-ninth to give 10% profit on sales		6.81
		$68.10
Value of Seven Test Run flooring product per statement of May 15th.	$58.98	
Add advance of June 19th	6.00	
		64.98
Horizontal advance required		3.12
		68.10

Committee's Recommendations.—In view of cost conditions the Market Conditions Committee recommended a horizontal advance of $3.00 and the recommendation was immediately telegraphed to all the other members of the Association as follows:

"Because of increased costs Market Conditions Committee recommends horizontal advance of Three ($3.00) Dollars effective today. Please wire approval today."

At this writing we have received affirmative replies from all but one member of the Association, and we are expecting to hear from him during the day.

Some of the replies which we quote below favored a larger advance than $3.00. (Vol. III, pp. 246–247.)

After quoting some of the replies favoring a large advance the Report continued:

> So, if any members of the Association feel that the recommendation of the Committee is too low or is at a lower basis than they wish to take new orders at, they can, of course, pursue the same course and ask more than this new M. P. P. Basis.
>
> It should always be remembered that the M. P. P. is a minimum price not a maximum price.
>
> *Values of* 3/8".—The Committee discussed the market value of 3/8 flooring, which is also oversold to a greater extent than ever before in the records of the Association, especially the Clear grade. It was the view of the Committee that a horizontal advance of $5.00 on 3/8" Clear and No. 1 be recommended, and the Secretary was instructed to have a new Table of Values covering the 3/8" printed and mailed to the members. Please bear in mind that the 3/8" prices do not carry any concession, but are net, being subject only to commissions to your Registered Special Representatives and to Registered Wholesalers and Commission Men. (Vol. III, p. 248.)

No report of individual sales were furnished to the members by the association during the life of the Minimum Price Plan, but while the Minimum Price Basis of January 6, 1921 was in force the regular weekly sales reports were being prepared and distributed. Exhibits 20, 20 A, 21 and 22 (Vol. III, pp. 261–76) are the reports dated January 13,

January 20, January 27 and February 3, 1921. Each report gives in successive columns from right to left the date of the sale, the quantity, the dimension, the grade and wood, the delivered price, the new index letters (freight rate symbols), the M. P. B. (the Minimum Price Basis delivered price), the commission, and the identification number of the mill, except that there are not in all cases M. P. B. prices to compare with the actual prices. A tabulation of all the comparisons given, however, shows the following results:

Report dated	Actual prices exactly equal to M. P. B. prices	Actual prices over M. P. B. prices	Actual prices under M. P. B. prices
January 13, 1921	14	20	5 (1 explained as per note 1).
January 20, 1921	31	22	8 (3 explained as per note 2).
January 27, 1921	21	10	11 (10 explained as per note 3).
February 3, 1921	50	20	11 (5 explained as per note 4).

(1) Quotation lowered to meet competition.
(2) One sale to association member, two sales on quotation made prior to Jan. 6, 1921.
(3) Nine sales to association members, ones ale price reduced because of cancellation after car loaded.
(4) Three sales made to association members, two sales made with 50¢ error in freight rate.

Mr. Keehn stated with reference to the Minimum Price Basis:

> The minimum price basis never provided for any penalty of any kind. A man could do just as he pleased about it. It was without force or effect. It was simply a statement of business policy. (Vol. I, p. 82.)

We did not exact any penalties of any kind under the Minimum Price Plan, but in the Minimum Price Basis no penalties of any kind were even prescribed. *It is simply a statement*

operation. I hope some new plan can be worked out that will improve conditions. Vol. IV, p. 563.)

The minutes of the special meeting held April 27, 1921, contain only the following brief reference to the "new plans" under consideration:

> The statistical reports for the month of March, 1921, were submitted to the meeting and briefly discussed, and several plans to remedy the present deplorable conditions in the industry were suggested and considered, but no definite conclusions were arrived at.
>
> It was suggested that the plans proposed be given further thought and that the meeting adjourn subject to the call of the President with the understanding that the President would call such meeting to be held at as early a date as possible. (Vol. III, p. 134.)

But in a letter to Mr. Earle, Mr. Thomas, and Mr. Whedon, dated April 30, 1921, Mr. Keehn stated:

> GENTLEMEN: We have prepared a rough draft of new Articles of Association, effective from May 1, 1921, to July 1, 1922, and are sending each of you a copy for such suggestions in the way of revision as you may wish to make.
>
> Several new features have been incorporated as the result of experience, etc., since the old Articles were formulated. You will note that in Article II, "Objects" we have included some of our creed as it appears in our advertising literature, and that we have inserted a clause regarding actually completed and closed busi-

ness transactions, which, of course, refers to our Weekly Sales Reports; we have also declared our intention regarding Surveys of Cost and what we consider the fundamental elements to be used in arriving at the basis of ascertaining cost to the manufacturer of producing and placing on the market Maple, Beech, and Birch flooring.

It is my thought, when we prepare an Average Cost Chart, that Frame A will represent the average cost F. O. B. cars at flooring plants and subsequent frames will show the cost of delivering to destination, which would mean Frame A plus average cost of freight, and this average cost of freight would be based upon the freight rate from Cadillac, Mich., which we consider represents the average freight rate from all the flooring mills to all the destinations. I thought it unnecessary to mention delivered values in the Articles of Association, as whatever Average Cost Charts are compiled to show the delivered prices would be simply mathematical and a supplemental detail, which would not in any way be contrary to the principles outlined in Article XIV.

We are waiting to hear from Mr. Thomas before proceeding further with the other plan discussed at the meeting, and in this connection, perhaps it would not be out of place for me to say that, in view of the representations made by Dr. Earle as President of the Association, in his last letter to Mr. Nebeker (a copy of which you have), and also in view of the resolution adopted at the general meeting held on February 25, and approved at the meeting

held on April 27, we should carefully consider any new plan, the adoption of which might raise a doubt in the mind of Mr. Nebeker as to the sincerity of the representations in Dr. Earle's letter, evidence of which sincerity the Department of Justice may call upon us for at any time, and also as to the sincerity of the resolution adopted February 25, and approved April 27.

By the way, I see by the newspapers this morning that the Federal Trade Commission has again attacked the Pittsburgh base used by the steel industry and that the Commission is also going into the question of fixing prices by all the steel manufacturers by using the Pittsburgh base. It seems the Commission is divided on the question, three of the members opposing the Pittsburgh base and two of them not opposing it. (Vol. IV, pp. 534–535.)

The record does not contain the minutes of a meeting held May 20, 1921, but in a letter to members dated May 26, 1921, Mr. Keehn stated:

GENTLEMEN: Only three of the members who attended the general meeting on the 20th and who promised then to make the weekly reports of sales did not make their reports for the week ending May 21st. No doubt they are under the impression that the *new Plan under which these reports are to be made by every member of the Association*, would begin with the week ending May 28th, instead of with the week ending May 21st. (Vol. IV, pp. 451–452.)

The record does not definitely establish the nature of the "new plan" referred to, but Exhibit 43 JJ (Vol. III, side pp. 2394–2399) is a report dated October 6, 1921, entitled "Audit Changes, June 2 to July 8, 1921, In Members' Weekly Sales Reports," so it is apparent that the "new plan" required all the members to report all their sales, and provided for an audit to make certain that was done.

In a letter to Mr. Keehn dated May 26, 1921, which was circularized to the members under date of May 28, 1921, the East Jordan Lumber Company stated:

> *We have your favor of the 21st and are exceedingly sorry that the minimum price plan did not go through, as we feel this is the only plan which has ever worked out satisfactorily, and that it would be especially valuable to us at this time.* (Vol. III, p. 313.)

Whatever may have been the fate of the Minimum Price Plan at the May 20, 1921, meeting, the record contains a table dated May 21, 1921, entitled "Concessions and Additions—Table of Values May 21, 1921," which states "13/16" Maple and Birch D. & M. All Grades and Faces, Full List," gives the concessions and additions for other faces, grades, and woods, and also stated the rules with reference to commissions and terms of sale. (Vol. III, p. 326.) A letter to members dated June 3, 1921, shows that this concession sheet had been sent out the preceding day with Tables of Values for 13/16 and ⅜" flooring as new fillers for the Rate Books, and also that the

list of wholesalers and commission men was being revised and reprinted and that the names of unclassified dealers would be passed upon by the committee the same as theretofore before being listed. (Vol. III, pp. 313–314.) Apparently the Trade Relations Committee had charge of that matter, as the call for a meeting to be held July 8, 1921, stated that that committee might have a report to make regarding the list of wholesalers and commission men. (Vol. IV, p. 452.)

A letter to members dated August 11, 1921, calling a meeting to be held August 19th stated:

> Our weekly Sales Reports indicate considerable demoralization in the flooring situation and it seems absolutely necessary that every member should be represented at the meeting so that greater cooperation can be assured and conditions in the industry, which are now much disturbed, can be stabilized. (Vol. IV, p. 567.)

And the action taken at the meeting with reference to that matter is stated in the following paragraph in the minutes:

> *Revise Articles of Association.*—After a prolonged discussion of the demoralized conditions in the flooring industry, the Secretary was instructed to prepare a draft revising the Articles of Association with the view of securing greater cooperation in the industry, and to have the draft of the revision ready to submit to the next general meeting of the Association. (Vol. III, p. 138.)

A letter to members dated September 16, 1921, transmitted to the members the proposed articles of association dated October 1, 1921, the principal features of which have been explained heretofore on pages 14 and 17, and stated:

> GENTLEMEN: In accordance with your instructions at the last general meeting of the Association, the proposed revision of the Articles of Association has been drafted and in order that you may have an opportunity to study them before the next meeting is held, we are enclosing a copy which, for your greater convenience, is in printed form. The printer is holding the type set up so that further revisions can be made, if desired.
>
> Several changes are suggested in this proposed revision, namely:
>
> Article II, "Objects," have been made more general and include "the exchange of information concerning the character and nature of actually completed and closed business transactions of its members." This refers to the Weekly Sales Reports, etc.
>
> Article XIV, "Determining average cost" is entirely new. (Vol. IV, pp. 568–569.)
>
> It is now expected that a general meeting of the Association will be held on Friday, the 23d and that a meeting of the Special Committee will be held on Thursday, the 22d, in order to draft some simple memorandum along the lines suggested at the last meeting and submit same to the general meeting on the 23d.
>
> Conditions in the industry as reflected in the Weekly Sales Reports are greatly demoral-

> ized, as all of you, of course, know, and if any progress whatever is to be made in the work of the Association, it is absolutely necessary that every member be represented at the next meeting, with full power to act, so that definite conclusions can be arrived at then and there. (Vol. IV, p. 570.)

The above letter also appears in the record as Exhibit 6 (Vol. III, p. 61), but as cited under the above quotation the letter is a part of Exhibit 77, and it was introduced in evidence in connection with three undated "Rough Drafts," each entitled "Declaration of Our Business Policy." The three forms are substantially the same, so only Form 2, which is as follows, need be quoted:

> Believing that the sale of any commodity below the cost of production is unfair competition and is certain to be ruinous and destructive to any industry and consequently is detrimental in the long run to public welfare, we hereby voluntarily agree, regardless of what other manufacturers of flooring may do, to pay into the Treasury of the Maple Flooring Manufacturers Association, Ten per cent (10%) on any and all sales we may make of Maple, Beech, and Birch flooring, 13/16" and thicker, of standard grades and lengths at values below the average cost of production, plus the average cost of freight to destination, as ascertained from time to time by the Maple Flooring Manufacturers Association's Survey of Costs and Tables of Values Based Upon Average Cost, after allowing for com-

missions not exceeding $2.00 per M feet to Wholesalers and Commission Men and to our own Special Representatives. And the said Ten per cent (10%) shall be reckoned upon the average cost of said flooring delivered at destination as indicated by the Maple Flooring Manufacturers Association's Rate Book. (Vol. IV, p. 568.)

The record does not contain any other evidence with reference to new plans or proposed Articles of Association until the Articles of January 1, 1922, were under consideration. The provisions of those Articles relating to "Determining Average Cost" have been quoted in full on page 7. Accepting Mr. Keehn's statements with reference to the Minimum Price Basis, that it was simply a statement of business policy and that the Association did not advise it but gave it to the members to use in such way as they wished, the January 6, 1921, Minimum Price Basis and Articles XIV, Determining Average Cost, in the January 1, 1922, Articles of Association, would be identically the same thing except for the omission of the rules with reference to commissions and to terms of sale. Considering all the evidence, however, it appears that the Minimum Price Plan established minimum prices by agreement and prescribed penalties (which may or may not have been enforced) for their nonobservance; that the Minimum Price Basis established minimum prices by agreement without providing for their maintenance except through the comparisons made in the weekly

sales reports, and that the present Articles of Association establish minimum prices without an *express* agreement for their observance, and without the direct comparison being made on the sales reports, while nevertheless making it impossible for any member to prevent his deviations becoming known by requiring such member to report every sale. The evidence with reference to the various "new plans," "declarations of business policy," and proposed Articles of Association considered by the defendants during 1921 after their abandonment of the Minimum Price Basis, establish clearly that it was their purpose and intent to reinstate the Minimum Price Plan in a form which would not be the Minimum Price Plan, and that the present Articles of Association are the result of their efforts along those lines.

V

Construction and circulation of list or base prices

In fact the Minimum Price Basis Plan has been in operation, though not under that name, ever since 1913. The members of the Association during the entire time since that date have distributed among themselves by the secretary lists designating what are called "Cost Prices" of the various grades and dimensions of flooring, *but which are nothing more nor less than minimum prices that are intended to be, and actually are, observed.* Mr. Keehn says:

> I think we commenced, originally, in 1913 under what we termed "scientific list." That

was based on the old work of the Market Conditions Committee.

We are using it to-day. (Vol. I, p. 110.)

The preparation and distribution of the first so-called "cost list" which is variously referred to in many of the circulars, reports, and minutes in the record as the "Scientific List" or "Scientific Price List" (Vol. III, p. 114, p. 207, p. 228, p. 230), the "Recommended List" (Vol. III, p. 205), the "Logical Basis of Values Table" (Vol. III, p. 211) and the "Delivered Table of Values" or Table of Values (Vol. III, p. 213, p. 215, p. 222, p. 238) was authorized at the annual meeting of the association held January 22, 1913 (Vol. III, p. 106 and p. 108). The portion of the memorandum of the meeting covering this matter reads as follows:

> It was the opinion of the members present that considering the present market values of rough lumber and the actual costs of manufacturing and selling flooring, the present values of flooring are entirely too low, and it was suggested that at the next meeting of the Market Conditions Committee, the Committee figure out what the selling values of flooring would be if a logical and scientific method of determining values of flooring were used, that is, if the selling values of flooring were based upon the cost of raw material plus manufacturing and selling costs and plus a reasonable profit. (Vol. III, p. 106.)

The references heretofore given to the first "Scientific List" or "Table of Values" establish that it

was printed under date of May 21, 1913. No other such list or table was prepared and distributed to the members until the Minimum Price Plan was adopted in 1916, when a new rate book containing the Index of Towns and Table of Values of May 15, 1916, referred to in the Plan (Vol. III, p. 79) was printed (Vol. III, p. 242). The memoranda of Association meetings and the Reports of the Market Conditions Committee contained in the record for the period from 1913 to May, 1916, are not complete, but they disclose only one instance during that period, in January, 1915, when a change in the delivered values was recommended on the basis of new data covering manufacturing and selling costs and the current value of the raw material (Vol. III, pp. 230–231), whereas they disclose ten instances where recommendations as to the current price obtainable (in terms of additions to or concessions from the list of May 21, 1913) were made by the Market Conditions Committee solely on the basis of analyses of the association statistics as to stocks, shipments, and production, new business booked, and current net values. These instances are shown by the Reports of the Market Conditions Committee dated respectively March 25, 1914 (Vol. III, pp. 204–205), June 25, 1914 (Vol. III, pp. 210–211), August 22, 1914 (Vol. III, pp. 214–215), September 24, 1914 (Vol. III, pp. 216–220 at 219), October 30, 1914 (Vol. III, pp. 220–222), November 20, 1914 (Vol. III, pp. 222–224), December 18, 1914 (Vol. III, pp. 225–226),

February 25, 1915 (Vol. III, pp. 231–233), April 15, 1915 (Vol. III, pp. 237–239), and May 26, 1916 (Vol. III, pp. 240–242).

That general market conditions had a more controlling effect than actual costs in determining minimum prices even during the time when the Minimum Price Plan was in effect, is shown by the recommendation of the Market Conditions Committee under date of August 21, 1919, for an advance in the minimum price in accordance with the procedure established by Article IV of the plan. This recommendation reads as follows:

> *Raw Material Higher.*—Since the last meeting of the Committee there has been an advance in the market value of rough flooring lumber, according to reliable information given to the Committee in regard to several recent sales on the open market. *If the advance in the rough lumber and the steady increases in Manufacturing and Marketing costs were fully met, an advance of $10.50 in the M. P. P. Basis would be required, but in view of all conditions, the Committee recommends horizontal advances of $6.00 on Clear, $6.00 on No. 1, and $5.00 on Factory* $\frac{13}{16}$″ and thicker Maple, Beech, and Birch floorings, effective immediately with the understanding that old quotations now outstanding may be protected, if desired, up to August 30th, inclusive.
>
> Please advise the Secretary immediately upon receipt of this report whether or not you concur in the recommendation of the Committee, and if the recommendations are

> adopted, new Concession sheets will be printed and mailed you at once. (Vol. III, pp. 250–251.)

And with reference to the computation of costs, Keehn says:

> This same method has been pursued at different times and we have a number of those calculations going way back to 1913. (Vol. I, p. 109.)

There are three general elements that enter into the computation of these so-called cost prices:

> 1. Manufacturing costs;
> 2. The cost price per thousand feet of rough lumber out of which the flooring is made; and
> 3. The percentage of waste in converting the rough lumber into flooring.

With reference to manufacturing costs, the secretary, Keehn, says:

> The information from which we figured out the cost of production came from the members of the association. We had no information from nonmembers regarding their cost of production. Referring to Gov. Ex. 23 (a sheet entitled "Survey of Costs, 3rd Quarter, 1922") we use the same form but employ different calculations. We are still sending out the questionnaire above referred to and by means of them ascertain the average of actual costs. (Vol. I, pp. 104–105.)

The questionnaire now sent out was read into the record by this witness and appears on page 108, Vol. I. The secretary takes the replies from the

several members and makes an average of them all; and a questionnaire with a composite of answers as to marketing costs of lumber produced during January, February, and March, 1922, is filed as Gov. Ex. 25 (Vol. III, p. 279) and is as follows:

	Per 1 M Ft. of Flooring Produced
1. Labor taking lumber off of dock, car, pile, or wagon and placing in dry kiln, including expenses of night fireman	$1. 16
2. Cost of manufacturing into flooring and putting flooring in warehouse, including twine, oil, belting, and other factory supplies, and factory repairs and including manufacturing administrative expenses	8. 34
3. Warehouse expense and loading into cars or on wagons	. 90
4. Insurance and taxes. (Divide ¼ of annual amount by quantity of flooring produced during January, February, and March)	1. 07
5. Interest of 6% on value of plant and on value of average stock carried of rough flooring lumber and of finished flooring. (Divide ¼ of annual amount by quantity of flooring produced during January, February, and March)	1. 92
6. Selling expenses, including commissions and advertising, and office expenses including selling administrative expenses	3. 75
7. Cash discount	. 80
8. Annual depreciation on flooring plant as is usually allowed by the United States Government. (Divide ¼ of annual amount by quantity of flooring produced during January, February, and March)	1. 37
9. Total per M feet	19. 31
10. Less net profit from wood and other by-products of flooring lumber, per 1 M feet of flooring produced during January, February, and March	1. 32
11. Actual Manufacturing and Marketing Costs per 1 M feet of flooring produced during January, February, and March	17. 99

MAY 31, 1922.

The questionnaire read into the record (Vol. I, p. 108), which appears to have been in use in 1923 some time after this action was begun, contains two queries not included in this composite questionnaire, to wit, "Quantity of flooring produced by us during July,

August, and September" and "Our percentage of waste in manufacturing flooring during July, August, and September," but the information thus asked for was obtained in other ways. With reference to the cost of rough lumber, Mr. Keehn says:

> When an estimate of cost was made we also had the market value of the rough lumber as established by sales in the open market. We might have such information from the lumber trade papers or from sales made by sawmill operators of flooring lumber on the market or from members of the Association who had purchased the rough lumber on the open market. We used all sources of information. This information was sent in by members of the Association, sometimes to me, sometimes to the Market Conditions Committee, all for the use of the Market Conditions Committee. Sometimes during the past year we would get this information at meetings of the Association by asking each one what he was paying for rough maple lumber on the open market, actual sales. The Committee on Cost Surveys ordinarily came to the conclusion as to what information was to go out in my reports to the members. The cost of rough maple lumber was taken by using several purchasers—five, six, eight, or ten—and we might take the average the same as the Government does in compiling its data regarding the value of rough maple lumber on the open market. (Vol. I, p. 104.)

From the beginning there has been a Committee who had special duties to perform in regard to con-

structing these price lists of flooring. Formerly it was called the "Market Conditions Committee," but now is known as the "Cost Surveys Committee." With reference to the functions of this Committee, Mr. Keehn says:

> The Cost Surveys Committee does not perform exactly the same function as the Market Conditions Committee did. The Committee on Cost Surveys simply go into the cost of the raw material, the cost of marketing and manufacturing, and takes no notice of any kind of the selling price of flooring. (Vol. I, p. 105.)

However, it is apparent from Mr. Keehn's testimony (Vol. I, pp. 104–110) that the information was all gathered and the computations made by himself, and that the actual work done by the Committee was but perfunctory. In fact, Mr. Dewey, Chairman of the Cost Surveys Committee, testifies to that effect. (Vol. I, pp. 396–399.)

The information as to the amount of waste resulting from converting rough lumber into flooring is obtained by one or more members making what is known as "Test Runs." Sometimes the same member makes several runs, and at other times the runs are made by different members, and the estimates are based upon the average waste resulting from the several runs. The manufacturer making the run keeps a record of the quantity of each grade of rough lumber used and also of the quantity of each grade and dimension of flooring produced, and, of course, the difference is the amount of waste.

The final result is obtained by putting together the three elements mentioned, and then determining the alleged cost price of each grade and dimension. A careful study of the table will show that this work, especially that of distributing the cost price between the various dimensions, is done by a genius. With reference to how often the estimates are made, Mr. Keehn says:

> We make those estimates from time to time according to when the market changes on rough lumber or according to when the manufacturing and marketing costs are changed. There is no definite period. We make them at very irregular intervals. I would say without looking it up we made perhaps three or four during 1922. (Vol. I, p. 110.)

This witness undertook to explain how the estimates are made (Vol. I, pp. 105–106), but, presumably through error of the stenographer in taking figures, but few of the results stated can be obtained from the quantities given, and the estimates can be more readily understood from a study of the tables themselves. Exhibits 25–A, 26, 27, and 28–N (Vol. III, pp. 280–289 and 315–317) are four estimates, all based on "the three test runs of 1921, made by North Branch Flooring Company, Chicago, in January, 1921, and between May 1 and September 10, 1921." For the element of manufacturing and marketing costs the first of these estimates (Exhibit 28–N) was based on an estimate of average of such costs for the first half 1921; the second estimate (Exhibit 25–A)

was based on such costs for the first quarter of 1922 (p. 280); the third estimate (Exhibit 26) was based on such costs for the third quarter 1922 (p. 284); and the fourth estimate (Exhibit 27) was based on such costs for the last quarter 1922 (p. 288).

Taking the first estimate (Exhibit 28–N, Vol. III, p. 315) as an illustration, it may be helpful to separate the table into its three essential parts, the first part of which, showing the amount of waste, is as follows:

Rough Lumber Used

No. 1 Common	792 M Ft.	51.5%
No. 2 Common	562 M Ft.	36.5%
No. 3 Common A	185 M Ft.	12.0%
	1,539 M Ft.	100.0%

Flooring Product

Clear	646 M Ft.	52.0%
No. 1	383 M Ft.	30.7%
Factory	215 M Ft.	17.3%
	1,243 M Ft.	100.0%
Waste	296 M Ft.	19.2%
Lumber Used	1,539 M Ft.	

This part is, of course, the same in all of the estimates.

It appears strange, however, that such a large percentage of No. 1 Common lumber is used in making the test runs, as Mr. Saunders testified that the better end of No. 1 Common rough maple lumber is not generally used in the manufacture of maple flooring because it is not profitable to do so as a better price can be obtained for it on the market than can be obtained by working it through the flooring factory. (Vol. I, p. 197.)

The second part, which purports to show "Average Cost f. o. b. flooring plant of 1,000 feet of flooring sold," is as follows:

51. 5% No. 1 Common, @ $39.50		$20. 34
36. 5% No. 2 Common, @ $24.50		8. 94
12. 0% No. 3 Common A, @ $11.50		1. 38
100. 0%		
1,000 Ft. Lumber Cost		30. 66
800 Ft. Flooring Costs		30. 66
1,000 Ft. Flooring Costs		37. 95
Manufacturing and Marketing Costs, Average First half 1921:		
Avge. of 8 Reports	$22. 28	
Less Value of Wood ——— Average	1. 24	
		21. 04
		58. 99
Add 5% for Contingencies		2. 95
Average Cost F. O. B. Flooring Plant of 1,000 Ft. of Flooring Sold		61. 94

Mr. Keehn claims that by resolution of July 19, 1923, four and a half months after this action was begun, it was directed that the element of 5% for contingencies be eliminated from the calculations. (Vol. I, p. 152.)

In the other estimates the results are different because based on different prices of rough lumber, and different estimates of average manufacturing costs.

There is a fourth section which shows the quantity of each grade and dimension produced. But those figures also appear in the third section, which purports to show the cost price per thousand of each grade and dimension, and is as follows:

Clear:			
11/16 x 1½"	2.5%	$85.00	$2.13
2"	3.3%	83.00	2.74
2¼"	41.7%	90.00	37.53
3¼"	2.1%	80.00	1.68
⅜" All Faces	2.4%	60.00	1.44
	52.0%	------	$45.52
No. 1:			
11/16 x 1½"	1.3%	53.00	.69
2"	2.5%	53.00	1.33
2¼"	24.9%	60.00	14.94
3¼"	.7%	60.00	.42
⅜" All Faces	1.3%	45.00	.59
	30.7%	------	$17.97
Factory:			
11/16 x 1½"	.7%	15.00	.11
2"	.9%	23.00	.21
2¼"	14.7%	25.00	3.68
3¼"	.8%	27.00	.22
⅜" All Faces	.2%	10.00	.02
	17.3%	------	4.24
Total	100.0%	------	$67.73

The first division of this table is easily understood, as is also the second, assuming that the cost prices of rough lumber and cost of manufacturing are correct. But on what principle are the prices divided between the different grades and dimensions of flooring, so as to make up approximately the average cost shown by the second part of the table? There is nothing to show that the waste of manufacture of one grade of rough lumber is greater than that of another, and the cost of manufacturing the different grades of flooring is the same, or practically so. Therefore the only element upon which to base a difference in the *cost* prices of different dimensions of flooring is the difference in the prices of the

grades of rough lumber; and it does appear that the *average* of the grades of the finished product bears about the same relationship to the prices of the grades of rough lumber. That is, the average prices of the different dimensions of "clear" flooring is a little more than twice as much as the price of "No. 1 Common" rough lumber, and the same is true as to No. 1 and Factory grades of flooring and No. 2 Common and No. 3 Common A of rough lumber. But in estimating *costs* why should $\frac{13}{16}$ x 1½" Clear be put at $85 while the same thickness, face 2", is put at $83, that facing 2¼" at $90, that facing 3¼" at $80, and all faces of ⅜" Clear is put at only $60? Here is a spread of $25 between the several dimensions of the same grade. In No. 1 there is a spread of $15, all faces of ⅜" being estimated at $45, while 2¼" and 3¼" face of $\frac{13}{16}$ flooring is estimated at $60. And why should $\frac{13}{16}$" x 3¼" Factory be estimated to cost $27, while ⅜" all faces is computed at $10? *Necessarily these are not COST figures at all, but are the prices the Committee or Secretary Keehn advised the members they should charge for different grades and dimensions of lumber.*

This is further manifested from a comparison of the advances made in the prices of the several grades and dimensions in the four estimates above mentioned. For convenience of comparison a table showing such advances, and also the prices of rough lumber upon which the several estimates were based, and the average prices of manufacture, is here given.

First part

[Showing prices of different grades and dimensions of flooring in the four estimates based upon the three runs made by North Branch Flooring Company in 1921]

	First Est.	Second Est.	Increase	Third Est.	Increase	Fourth Est.	Increase
Clear:							
½ x 1½"	$85	$85	$0	$90	$5	$90	$0
x 2"	83	87	4	90	3	95	5
x 2¼"	90	90	0	95	5	100	5
x 3¼"	80	85	5	80	−5	85	5
¾ All Faces	60	60	0	65	5	65	0
No. 1:							
½ x 1½"	53	68	15	78	10	78	0
x 2"	53	72	19	80	8	85	5
x 2¼"	60	75	15	85	10	90	5
x 3¼"	60	75	15	75	0	80	5
¾ All Faces	45	45	0	45	0	45	0
Factory:							
½ x 1½"	15	20	5	25	5	30	5
x 2"	23	28	5	35	7	40	5
x 2¼"	25	30	5	40	10	45	5
x 3¼"	27	35	8	45	10	50	5
¾ All Faces	10	10	0	15	5	20	5

Second part

[Showing estimated average cost of flooring and the prices of the three grades of rough lumber entering into said estimates]

	First Est.	Second Est.	Increase	Third Est.	Increase	Fourth Est.	Increase
Average cost of flooring per M	$61.94	$73.53	$11.59	$80.33	$6.80	$84.00	$3.67
Price No. 1 Com	39.50	51.00	11.50	56.00	5.00	61.00	5.00
Price No. 2 Com	24.50	36.00	11.50	41.00	5.00	41.00	0.00
Price No. 3 Com. A	11.50	22.00	10.50	26.00	4.00	30.00	4.00

It might be claimed that the prices of the several grades of flooring should be increased or diminished according to the advance or fall of the prices of the corresponding grades of rough lumber. In other words, there are three grades of rough lumber used in the manufacture of the three grades of flooring; and no doubt most of the clear flooring is manufactured from No. 1 Common, and No. 1 flooring is made from No. 2 Common, and the factory flooring is

made from No. 3 Common A lumber. The witness Green testifies in effect that such is the fact (Vol. I, p. 386). Therefore there may be reason in increasing or diminishing the prices of clear flooring in proportion to the advance or fall of the price of No. 1 lumber, and the same is true as to No. 1 flooring and No. 2 Common lumber, and factory flooring and No. 3 Common A lumber. But in estimating costs, what justification is there for making *a difference in the advance of the different dimensions of the same grade? A study of the foregoing table will show that the increase of prices on lumber has no relationship whatever to the advance of the prices of the grades of flooring.* In the second estimate there was an average increase of $11.59 in the price of lumber over the first estimate, and the increase in prices of the *grades* of rough lumber were:

No. 1 Common	$11.50
No. 2 Common	11.50
No. 3 Common A	10.50

But prices of three dimensions of clear *flooring* were not increased at all, while 1¼ x 2″ was increased $4, and 1¼ x 3¼″ was increased $5. Moreover, there was no increase in No. 1, ⅜ All Faces, but the prices of the several faces of 1¼ were increased: 1½″, $15; 2″, $19; 2¼″, $15; and 3¼″, $15; and the prices of factory were increased 3 faces of 1¼, $5; and 3¼, $8; and there was no increase in ⅜ All Faces.

The increase in the third over the second estimate of the average cost of rough lumber was $6.80, this estimate being based upon an increase of price of

$5 each of No. 1 and No. 2 Common, and $4 in the price of No. 3 Common A. In distributing this increase among the grades and dimensions, *three of the dimensions of the Clear grade, including 3/8 all faces, were advanced $5 each, one, 2" face, was advanced $3, and one, 3¼", was reduced $5.* And in No. 1 Flooring, two dimensions were advanced $10 each, one dimension $8, and the other two remained the same. And the prices of two dimensions of factory were advanced $10 each, two $5 each, and the other dimension $7.

The estimated average increase of cost in the fourth estimate was $3.67, which was based upon an increase in cost of $5 for No. 1 Common, no increase for No. 2 Common, and $4 for No. 3 Common A. But distributing this among the several dimensions of *flooring*, three dimensions of Clear were advanced $5 each, and two remained the same, three dimensions of No. 1 were advanced $5 and two remained the same, while all dimensions of factory were advanced $5.

It is perfectly apparent, therefore, that the distribution of the increase or decrease of the so-called cost of production between the different grades and dimensions has no relationship whatever to the advance or decrease in cost; but is based entirely upon other influences, which unquestionably are the prevailing and prospective conditions of the market. In other words, the secretary of the association, aided to some extent by the Committee, surveys the entire situation and makes up a price list which, so far as the relative price of grades

and dimensions is concerned, is wholly arbitrary and not controlled in the least by any of the elements that appear in the cost of production.

In fact Keehn incidentally admits as much. The court pointed out a differential of $10 between "beech, 13/16th dressed" and "matched, all faces" and asked if that was substantially a continuing differential, and Keehn replied:

> Not at all times. *It depends upon the supply and demand of these different floorings, to what a man's stock conditions are,* and the cost of it, too. (Vol. I, pp. 153, 154.)

It is this pretended cost price list that is distributed among the members to be observed as the minimum prices at which the flooring is to be sold.

That the manipulation of the spreads between the different sizes and grades of flooring and between the different woods is not based on cost but is purely arbitrary and designed to reflect current market conditions, is clearly established by the following quotations from letters sent out to the members by the Secretary, from Reports of the Market Conditions Committee, and from minutes of meetings during the period from 1913 to 1922.

M. C. C. Report, March 25, 1914

> The better movement in Factory should be noted because it indicates that better prices should now be obtainable for this grade, especially in view of the fact that 70% of the 2¼" Factory was sold on March 1st as against only 39% on January 1st. (Vol. III, p. 204.)

M. C. C. Report, January 29, 1915

Early in 1913 a Scientific Price List was made which represented a profit of 10% on F. O. B. mill prices. *This was based on the then current values of lumber, the cost of labor, and the selling expense.* The Price List has not been changed since that time. During 1914 it was decided to revise the data to show the present cost of manufacturing and selling flooring. This has been done, and the result is given in our monthly report of this date.

In our monthly reports of market conditions we have endeavored to reflect, as accurately as the available data would permit, what has seemed to us a conservative average of conditions. Based upon statistical information and the prices you have reported, your Committee has made from month to month an estimate of the prices obtainable. (Vol. III, p. 228.)

Letter, Keehn to John Schroeder Lumber Co., Jan. 30, 1915

I would like to urge upon you to carefully read and study the annual reports reviewing the work of the Association during the year, and especially the report of the Market Conditions Committee for December, which covers the data collected regarding manufacturing and selling costs, and to which is attached a table illustrating our so called Scientific List brought up to date. *This table is figured on the basis of the present market value of the raw material, manufacturing and selling costs, and present selling values for flooring as applied to the six test runs which were used in the construction of the original Scientific List in 1913.* (Vol. III, p. 234.)

M. C. C. Report, May 18, 1917

In exchanging trade experiences, members of the Committee report the demand strong for Factory and No. 1, particularly for Factory, and it is their opinion that this demand will continue strong and grow stronger on account of the class of buildings now in course of construction and which are likely to be built during the summer and fall. *It is the view of the Committee that on account of the oversold condition of Factory and the heavy prospective demand for it that much higher prices than present values can be readily obtained.* As the No. 1 grade moved up 62 points during April and as the demand for it seems likely to increase, it should also command higher levels of value.

The opinion was expressed that the present Spreads between Clear and No. 1 and between No. 1 and Factory are larger than are justified by market conditions, and we would be glad to have your views on this subject. The Secretary will send you blank forms requesting an expression from you in the form of a vote for our guidance, so we can consider the question at our next meeting and make some recommendation to the Association. (Vol. III, pp. 243–244.)

Memo. of Meeting, Nov. 17, 1921

Stronger Market.—Trade conditions and our statistical reports for the month of October were discussed. Clear and No. 1 Maple Flooring $\frac{13}{16}''$ x $2\frac{1}{4}''$ face are both in a very strong position, as indicated by their oversold condition, the Clear being sold 232% and the

No. 1 sold 208%. The improvement in the demand for No. 1 is particularly noticeable, as it was sold only 45% on August 1st compared with 208% sold on Nov. 1st.

In view of recent advances in the market value of rough Maple Flooring lumber and taking into account Manufacturing and Marketing Costs and the relations of supply and demand as indicated by the heavily oversold condition of Clear and No. 1, it was the consensus of opinion as follows:

1. That present market values of Maple Flooring $\frac{13}{16}$" are represented by Frame "A" Basis, Table of Values dated 5–21–21, at Full List for Clear and No. 1 and a concession of $5.00 on Factory.

2. That the spread of $7.00 between 2" and 2¼" in Clear and No. 1 is excessive and that a spread of $3.00 would be more representative of the difference in the intrinsic value of the two faces.

3. That the spread between Clear 3¼" and 2¼" be reduced from $10.00 to $5.00, and the spread between Factory 3¼" and 2¼" be changed from $2.00 to $5.00.

4. That the market values of Birch are equal to Maple, and that Beech Clear and No. 1 are $10.00 less than Maple and Birch, and that Beech Factory is equal in value to Maple and Birch Factory.

5. That the Table of Values dated May 21, 1921, covering ⅜" represents the present market value of ⅜". (Vol. III, p. 141.)

The action taken at the November 17, 1921, meeting was recommended by the Market Conditions Committee in a report dated October 28, 1921 (Vol. III, pp. 253–255, at 255), and is shown by circular letters from Mr. Keehn to the members dated November 17, 1921, and December 1, 1921, to have been used as the basis of a new "Table of Values" printed under the same date (Vol. III, pp. 142–143 and p. 318.)

The Government filed a number of other estimates based upon varying numbers of runs made by members, which are:

Exhibit No. 28, Vol. III, p. 291.
Exhibit No. 28A, Vol. III, p. 294.
Exhibit No. 28B, Vol. III, p. 296.
Exhibit No. 28D, Vol. III, p. 300.
Exhibit No. 28E, Vol. III, p. 302.
Exhibit No. 28F, Vol. III, p. 304.
Exhibit No. 28G, Vol. III, p. 307.
Exhibit No. 28H, Vol. III, p. 310.

The first of these was dated January 29, 1915 (p. 293), and the last March 1, 1920 (p. 312). In each of them there was added 10% profit on selling prices f. o. b. mill, and to some a note was added, as, for illustration, to Exhibit 28G, to wit (Vol. III, p. 309):

> To Realize a Profit of "Cost Plus" 10% (the method frequently used by the Government during the war in making its purchase contracts) instead of a 10% Profit on Sales, the profit would be $5.63 instead of $6.26, a difference of 63 cents; in that case the flooring manufactured in these Seven Test Runs,

which have been consolidated and considered one run, should sell for $61.97 instead of $58.98, or $2.99 more than selling basis of May 13, 1919.

In the estimates made during 1922 this 10% profit is omitted, and the witness Keehn says that the estimate as now made contains no element of profit (Vol. I, p. 107). But it will be observed that the answers to the questionnaire, from which the average manufacturing and marketing costs are estimated, add 6% on the value of the plant and the average stock carried of rough lumber and of finished flooring, and, until after this action was begun, in each of the estimates 5% was added for contingencies. *But what difference can it make whether any per cent is allowed on the average estimated cost or not, when the prices upon the several grades and dimensions are manipulated at will?* The advance may be far beyond 10% on those dimensions for which there is a demand and which are being sold in large quantities, and be reduced to nothing on the dimensions for which there is no demand at all.

There is another feature which shows that this estimated cost has really but very little to do with the actual cost of flooring that is manufactured and sold upon the market. In the test runs a record is kept of the relative amounts of the different grades of rough lumber that are used, and the estimates are all based upon the average price of the lumber for those three grades. *But manifestly in the operation of their mills, the relative quantity of these grades is not observed*

at all, and therefore the cost of the lumber actually produced does not correspond at all with the costs upon which the estimates are based. For instance, suppose there is a greater demand in the market for No. 1 flooring than for Clear, then the rough lumber used will be more of No. 2 Common and less of No. 1 Common; or if there is a greater demand for Factory and less for Clear and No. 1, then a very large percentage of the rough lumber will be No. 3 Common A; and the estimates all show that the price of such lumber is less than half of the price of No. 1 Common. Undoubtedly after the second estimate had been sent out, there was a great increase in the quantity of No. 1 flooring produced, and but little, if any, in clear, as the great increase in the prices of No. 1, as compared with the increase in prices of clear, no doubt resulted from the increased demand for No. 1. Therefore, there was a much greater relative quantity of No. 2 rough common lumber used, and a corresponding decrease in the cost of production. And the same may be said as to No. 3 Common A rough lumber after the third price list was sent out, in which there had been a large relative increase in the price of factory flooring.

A thorough analysis of these pretended estimates of cost of production and the formulation of price lists based thereon demonstrates beyond a shadow of controversy that they were a mere device used for the fixing of minimum prices to be observed by the members of the Association.

But let it be supposed that these estimates were based upon actual figures and that the correct average estimates were made. In other words, that the price of each grade and dimension of flooring given in these tables was the exact average cost price of production of such grade and dimension, yet it would destroy some of the essential elements of competition, and would be violative of the Antitrust Act. The foundation upon which competition rests is the ability of one manufacturer to produce his article cheaper than another, which enables him to sell it at a less price than that at which his competitor can sell his product. Necessarily there must be a difference between the actual cost of production by the several manufacturers who are engaged in producing the same article; in fact, half of the members of this association produce their own rough lumber (Keehn, Vol. I, p. 178); and necessarily have an advantage over those who purchase their raw material. But in these pretended cost prices those differences are entirely disregarded. And the price lists distributed among the members, and which they are expected to observe, are not based upon the actual cost of production of any one of the members. Each member fixes his selling price upon *a common* cost of production and not upon *the actual cost to him;* and this within itself is a regulation by combination of the price of flooring, and is a restraint of trade within the meaning of the Antitrust Act.

VI

Book showing estimated freight rates and values of flooring at points of delivery

A further evidence that the members of the defendant association agreed upon and maintained uniform prices is their system of computing freight rates to various points of delivery, and distributing among the members books which not only show such rates, but also contain the prices of lumber delivered at thousands of designated points. In describing the book which was prepared in 1916, the witness Keehn said:

> The index letter following the name of each town indicates the rate of freight from Cadillac, Michigan, to the various points. We do not consider that Cadillac is taken exactly as the base. The rate of freight from Cadillac to about thirty or forty or fifty representative markets in the United States happens to be about the same as the average rate of freight from the seventeen producing points in Michigan and Wisconsin. In this particular book it is true that all the freight rates are estimated from Cadillac because we simply took the rate of freight from Cadillac in having it compiled. It shows the rate of freight from Cadillac to five or six thousand points or seven or eight thousand points, scattered all over the United States. (Vol. I, p. 112.)

From the whole of Mr. Keehn's testimony (pp. 112–117) it appears that the following is the method used in computing rates. Nearly all of the factories belonging to the members of the association are

situated in Michigan and Wisconsin. Three mills are located at or near Cadillac, Michigan; and the rates from that point are about the average of the rates from all of the factories to the numerous points in the United States. Therefore Cadillac is fixed as the arbitrary point from which the freight rates are computed. But the rate charged is not always the actual rate from Cadillac to the point of delivery, as Mr. Keehn testified (Vol. I, p. 114) that the rates take a certain grouping, so that the index letters representing 45, for instance, might also represent 44½ or 45½.

That Cadillac has been adopted and used as a common freight basing point is shown by a number of exhibits in the record. In a letter to members dated December 7, 1917, with reference to establishing a uniform custom among the members of the association in respect to the war tax on freight charges, Mr. Keehn said:

> *As our delivered prices are based upon Cadillac, it would not work out to mention the rate of freight in cents per 100 pounds, because the local rate of freight from points other than Cadillac, to the point of delivery would not be according to our basis used in arriving at delivered prices.* (Vol. IV, p. 433.)

And in a letter dated August 23, 1921, to the Oval Wood Dish Corporation, which had just joined the Association, Mr. Keehn stated:

> We are inclosing the following:
>
> "1. Minutes of Meeting of August 19, 1921.

"2. Copy of letter to members dated August 20th, regarding the consensus of opinion as to the current market value of flooring.

"3. Rate Book containing Tables of Values Based upon Average Cost and index to towns showing the delivered values based upon the rate of freight from Cadillac, Mich. Cadillac is our basing point, as it is practically the geographical center of the production and distribution of flooring, and the rates of freight in a general way from Cadillac would be about the average rate of freight from all the Association flooring mills." (Vol. IV, p. 481.)

For some reason, which Mr. Keehn does not explain (Vol. I, pp. 113–114), the rates in the book are given in letters instead of figures, A representing 1, B, 2, etc., down to J, which represents O.

After the rates from Cadillac to the numerous points are thus ascertained, they and the prices of lumber, determined by the method heretofore detailed, are added together, *and the delivered price of lumber at each of the thousands of points mentioned in the rate book is thus obtained and is given by the rate book.*

The system is fully illustrated by reference to Gov. Ex. 35, Vol. III, p. 328, side pages 737–905. This exhibit is the freight rate book which bears date of May 31, 1922, and which was compiled and distributed about that date. Only enough of this exhibit is printed to fully illustrate the character of the book. The first page, after giving the title, contains a

key showing to what figures the letters correspond, and then explains:

> To ascertain delivered costs at an unlisted point allow 25 cents for each one cent difference in the rate of freight between the nearest listed point and the unlisted point from point of shipment. (Vol. III, side p. 738.)

Then follows the freight rates, designated in letters, to numerous points in each State, which are computed in the manner above described. For instance, in Illinois the freight rate to Abingdon is BG, or 27 cents; to Annapolis, Maryland, DD, or 44 cents; to Middletown, New York, it is DA, or 41 cents, and to all points in Massachusetts it is DC, or 43 cents. There is then given (side pages 881–882) an Average Cost Chart, which shows the average cost of the three grades and four dimensions of flooring ascertained by the method heretofore described. This chart contains costs of only Maple lumber 13/16" in thickness, but there also appears on side pages 878–879 a Table of Differentials, which shows the difference between the flooring described in the Average Cost Chart and—

(1) Average cost of Beech, 13/16, All Faces.
(2) Average cost of Birch, 13/16, All Faces.
(3) Average cost of Wide Faces.
(4) Average cost of Thick Flooring.
(5) Average cost of Jointed Flooring.
(6) Average cost of Special Grades.
(7) Average cost of Extra Shorts.

Then follows what is designated as a "Delivered Cost Chart," which contains the delivered costs as above

described of 13/16″ flooring of the several faces computed upon every rate given in the freight rate chart. For illustration, take the first item appearing on side page 883, where the freight rate is AE, or 15 cents, the delivered prices for the various dimensions of Clear flooring are: $88, $90, $93, and $88.50. The delivered prices of No. 1 are: $71, $75, $78, and $78.50, respectively. The delivered prices of Factory are $23, $31, $33, and $38.50, respectively; and generally with each advance in freight of one cent, there is 25 cents added to the price, although this does not always hold good. If the manufacturer is shipping other varieties of flooring than maple or other dimensions of maple, he has to make his own computation from the table of differentials described. *Thus there is in the possession of each member the exact price which it is intended that he shall charge at the point of delivery for every shipment made by him.* And not content with this, the book specifies (Vol. III side p. 880) what the terms of sale are to be as follows:

> Sixty days net or 2% discount for cash in 15 days, or 1% discount for cash in 30 days from date of invoice after deducting freight.
>
> If the car has not arrived, the discount may be deducted on 90% of the invoice less estimated freight, for cash within proper discount period, the balance with original paid freight bill to be remitted net within 5 days after arrival of car. No cash discount will be allowed after 30 days from date of shipment.

Of course, it would be expensive to have printed and distributed books containing so much matter

every time there is a change in the price. With reference to what is done when a change in price is made, Keehn testifies:

> Q. Now, when another estimate of costs has been made before the issuance of another freight-rate book, what did you do?
>
> A. Well, we might have put in a sheet or might have issued a new table of values.
>
> Q. Well, you would do one or the other?
>
> A. One or the other, ordinarily.
>
> Q. That is, you would send to each member a sheet showing this new estimate?
>
> A. New estimate; yes, sir.
>
> Q. So he could use that in connection with his freight-rate book?
>
> A. He could make such use of it as he desired. Simply sent to him for his information. (Vol. I, p. 114.)

The book of 1922 was made up of loose leaves; and direction was printed in the book showing how the old leaves could be removed and new ones inserted (Vol. III, side p. 738).

When this book was issued in 1922, Mr. Keehn, the secretary, sent out to the membership, under date of June 24, 1922, the following letter:

> GENTLEMEN: 1. For the information of the members of the Association the Committee on Cost Surveys has made a careful analysis and survey of the Average Cost of Manufacturing and Marketing Maple, Beech and Birch Flooring.
>
> 2. The Survey was made in accordance with Article XIV, "Determining Average Cost,"

of the Articles of Association and the results of the Survey are given in the inclosed schedules, which, for brevity, are called "Average Cost Chart" and "Differentials."

3. For the further information of the members, so-called "Delivered Cost Charts" have been compiled. These Charts include the Average Cost of Freight to destination of shipment; in other words, the Average Cost of Freight is added to the Average Cost of the flooring F. O. B. cars at flooring mills to illustrate what the Delivered Cost would be at destination.

4. Copies of the foregoing under date of May 31, 1922, are inclosed herewith.

5. We are also inclosing statement "Survey of Costs" for first quarter of 1922 and an analysis of the "Three Test Runs of 1921" which are also dated as of May 31, 1922.

6. Under the new Articles of Association the new Rate Book will be made up as follows, and will contain only the following matter when completed:

(*a*) Title Page. As per enclosed copy.

(*b*) Key to Freight Rates and Index Letters. As per enclosed copy.

(*c*) Average Freight Rates and Index of Towns. Being the equivalent approximately of the freight rates from Cadillac, Michigan.

Remarks: The freight rates are all being revised to give effect to the reduction ordered by the Interstate Commerce Commission to take effect July 1st.

(*d*) Average Cost Chart. Showing approximate relative Average Cost of the different

grades and faces of 13/16″ Maple Flooring F. O. B. cars at flooring mills.

(*e*) Differentials from Average Cost of 13/16″ Maple Flooring.

(*f*) Delivered Cost Charts 13/16″ Maple Flooring.

(*g*) Average Cost Chart 3/8″ Maple, Beech and Birch Flooring.

(*h*) Delivered Cost Chart 3/8″ Maple, Beech and Birch Flooring. (Vol. III, pp. 318–319.)

Apparently the last book issued before the filing of the bill on March 5, 1923, was dated February 15, 1923, and a copy was filed as Gov. Ex. 37, Vol. III, p. 330, side p. 910, et seq., but only enough pages are printed to illustrate its character. This book contains a table of differentials similar to those above described, and also the same directions as to terms of sale. About 7,600 different points are designated therein (Keehn, Vol. I, p. 118). For convenience of inspection the first three sheets of this exhibit are here reproduced as follows:

Differentials

[From Average Cost Charts of Maple ¼″ D. & M.]

FEBRUARY 15, 1923

Average Cost of Beech $\frac{13}{16}$″ *D. & M., all Faces:*

Clear—$10.00 less than Maple.

No. 1—$5.00 less than Maple.

Factory—Same as Maple.

Average Cost of Birch $\frac{13}{16}$″ *D. & M., all Faces:*

Clear—$10.00 less than Maple.

No. 1—$5.00 less than Maple.

Factory—Same as Maple.

Average Cost of Wide Faces, D. & M.:

2½″ face same as 2¼″ face; 3″, 3½″, and 4″ faces same as 3¼″ face, of same wood, grade, and thickness.

Average Cost of Thick Flooring, D. & M.:

1 1/16″—$5.00 more than 13/16″ D. & M.

1 5/16″—$7.00 more than 13/16″ D. & M.

1 11/16″—$10.00 more than 13/16″ D. & M., of same wood, grade, and thickness.

Average Cost of Jointed Flooring:

13/16″—$5.00 more than 13/16″ D. & M.

1 1/16″—$10.00 more than 13/16″ D. & M.

1 5/16″—$12.00 more than 13/16″ D. & M.

1 11/16″—$15.00 more than 13/16″ D. & M., of same wood, grade, and thickness.

Average Cost of Special Grades:

White Clear Maple, 13/16″, $20.00 more than Clear Maple, 13/16″, same face.

Red Clear Beech, 13/16″, $20.00 more than Clear Beech, 13/16″, same face.

Red Clear Birch, 13/16″, $20.00 more than Clear Birch, 13/16″, same face.

White Clear Maple, 3/8″, $15.00 more than Clear Maple, 3/8″, same face.

Red Clear Beech, 3/8″, $15.00 more than Clear Beech, 3/8″, same face.

Red Clear Birch, 3/8″, $15.00 more than Clear Birch, 3/8″, same face.

Average Cost of Extra Shorts:

Clear Maple, Beech or Birch, 13/16″ x 2″ or 2¼″ Face, under 22″, $35.00 less than standard lengths of Clear, same wood and face.

Clear Maple, Beech or Birch, $\frac{13}{16}$" x 1½" Face, under 22", $40.00 less than standard lengths of Clear, same wood and face.

No. 1 Maple, Beech or Birch, $\frac{13}{16}$" x 2" or 2¼" Face, under 16", $40.00 less than standard lengths of No. 1, same wood and face.

No. 1 Maple, Beech or Birch, $\frac{13}{16}$" x 1½" Face, under 16", $40.00 less than standard lengths of No. 1, same wood and face.

TERMS OF SALE

Sixty days net or 2% discount for cash in 15 days, or 1% discount for cash in 30 days from date of invoice after deducting freight.

If the car has not arrived, the discount may be deducted on 90% of the invoice less estimated freight, for cash within proper discount period, the balance with original paid freight bill to be remitted net within 5 days after arrival of car. No cash discount will be allowed after 30 days from date of shipment.

AVERAGE COST CHART

Average Cost of $\frac{13}{16}$" Maple Flooring F. O. B. cars at Flooring Mill

Maple D. & M.	$\frac{13}{16}$" x 1½" Face	$\frac{13}{16}$" x 2" Face	$\frac{13}{16}$" x 2¼" Face	$\frac{13}{16}$" x 3¼" Face
F. O. B. Mill:				
Clear	$90.00	$95.00	$100.00	$85.00
No. 1	78.00	85.00	90.00	80.00
Factory	30.00	40.00	45.00	50.00

DELIVERED COST CHART

KEY

Freight Rates	1	2	3	4	5	6	7	8	9	0
Index Letters	A	B	C	D	E	F	G	H	I	J

Mr. Keehn claims that there has been a modification of the information thus sent out after the bill was filed and before the trial, in that the book now in use does not show the delivered cost; that is, the

items of freight and the cost of the manufacturer *are not actually added together*, but both items are contained in the book, and all the shipper has to do is to make the addition. As said by the court, "In other words, instead of having a four, he (the manufacturer) has two and two." (Vol. I, p. 118.)

Keehn also claims that the rate book or tables do not now include the differentials and terms of sale. (Vol. I, p. 153.) But he admits that the terms of sale prescribed have generally prevailed in the lumber industry (Vol. I, p. 155), and the differentials as to 70% or 80% of the business are shown in the reports sent to the members (Vol. I, p. 177). And it is not claimed that the association has ceased sending out the so-called cost prices, which show the differentials between the different dimensions of maple flooring, which represents 90% of the business. (Keehn, Vol. I, p. 131.)

Special attention is called to the fact that in the books issued in 1922 and 1923 the tables of delivered prices are designated as "Delivered *Cost* Chart." Prior to that time these tables had been designated "Table of *Values*." See Table issued January 6, 1921 (Ex. 34, Vol. III, p. 322, side p. 554, et seq.). In this book, after the "Concessions and Additions—Tables of Values January 6, 1921," appears the statement "*Established* for First Quarter, 1921." (Side p. 694.) These words were used advisedly, and refer to the values, terms, etc., "*established*" under the minimum-price plan and the minimum-price basis. It was

under those plans that the delivered prices were *fixed;* and they were therefore designated as "*values*" and not "*costs*". Apparently in these charts, the delivered prices were not designated as "*values*" before 1916, the date when the minimum price plan originated. On p. 320, side pp. 419 and 420, appears a number of pages of a book dated May 21, 1913, which is improperly designated as "Gov. Exhibit 26," but which is probably a part of Gov. Exhibit 30 f. They show delivered prices, but are not designated "Table of Values," as appears in the table issued May 15, 1916. (Side pp. 513, 514–521.)

A method of determining the freight rate which the members have included in the price of flooring has been in existence ever since the first association was organized in 1905. Mr. Keehn says, "I was connected with the association on April 1, 1905. I am very familiar with this paper 'Prices on Maple Flooring, effective April 1, 1905,'" and that the paper was a table of prices on maple flooring by geographical zones. (Vol. I, p. 111.) The document spoken of is filed as Gov. Ex. 29. (Vol. III, p. 320, side p. 408, but improperly numbered 498.) That was a simple document as compared with subsequent tables; but it showed the prices which were expected to be charged for lumber delivered at various points in the United States. Some specific points were mentioned, but generally a specified delivered price applied to all, or the greater portion of a state. It appears, however, that by 1911, a table of the nature of those used in recent years and now in use had been devel-

oped. (See Gov. Ex. 30E, Vol. III, p. 320, side p. 417.) And in 1913 the system had about reached perfection. (Gov. Ex. 30f [not 26] Vol. III, p. 320, side pp. 418, 419.)

In order for those producing and selling an article to observe uniform prices, or a minimum price, and thus avoid competition, it is essential that some method be devised whereby they can easily ascertain what the delivered prices of the article are at the various points to which the commodity is shipped.

Different methods have been devised, but this court has so far had presented to it no method so complete in all of its details as the one adopted by this association. Here in most instances no computation was left to be made by the manufacturer; and all he had to do was to turn to his book and find the point to which the shipment was destined, and he had the price before him.

If it was not intended by the members that the prices of lumber should be controlled or in some way affected by this organization, why was each member furnished with a list of fixed or designated prices? To say that these elaborate calculations and their distribution among the members were not intended to have, and did not have, any effect upon the prices charged by the members is to disregard absolutely every element of common sense in determining facts.

VII

Statistics

In the Articles of Association in existence from January 1, 1913, to January 1, 1919, the article relating to reports provided that reports should be made by each member to the secretary at the close of business each day of all deliveries and shipment of all kinds of maple, beech, and birch flooring within the United States except flooring purchased from members of the association: and the secretary was given authority to examine the books and papers of the members to verify statements; and it was also required that a sworn statement showing total deliveries and shipments for each month should be rendered on or before the fifth of the following month (Vol. III, p. 7); but there was no provision made for the distribution of statistics by the secretary among the members of the association. The articles which were in existence for the first three months in 1919 had a similar provision (Vol. III, pp. 20–21). The articles relating to statistical reports in the Articles of Association which went into effect January 1, 1922, and continued until January 1, 1925 (Vol. III, p. 64), have heretofore been copied in full (p. 8); and, briefly stated, they provide that each member shall report monthly on or before the fifth day of each month (a) stocks on hand of the three varieties of flooring; (b) unfilled orders; (c) amount in feet of shipments made during the preceding month within the United States except purchases made from other

members; (d) production for previous month; (e) new orders booked during month; and (f) average prices f. o. b. flooring plant for 13/16" x 2¼" Clear, No. 1 and Factory; and that each member shall report promptly at the end of each week all sales made during the week of the three varieties of flooring, the reports stating quantity, kind, and grade of flooring sold, the delivered price sold at, the average freight rate to destination, and the commission paid, if any; and that all the statistical reports shall relate solely and entirely to past and completed transactions and shall be mailed "by the members to the Secretary, *who shall report the same to the members.*" (Vol. III, p. 70.)

Monthly statistical reports of stocks on hand, of unfilled orders, of shipments, of production, and of average prices realized have apparently been made by the association to its members at least since January, 1912. (Government Exhibit No. 40, Vol. III, side pages 956–960.) The earliest such report printed in the record is dated January 18, 1913. (Gov. Ex. 40A, Vol. III, side pages 1003–1009.) This report gives practically the same bare statistical information as does the report dated April 17, 1923, which is fully described below (p. 97), but it does not give the information in as great detail as does the later report, nor does it contain any of the elaborate comparisons in percentages and by the graphic representation, called a barometer, which the later report makes between the current statistics and those for earlier months and years.

With the exception of a few months during 1914 and during 1916, when an exchange of quotations was operated through the association (Vol. III, pp. 209 and 227, and Vol. IV, p. 430), no detailed reports of actual prices were furnished the members by the association until the weekly sales reports were started in 1920. During this period the only reports of actual prices were the monthly reports of average prices f. o. b. cars at the factory of $\frac{13}{16}$" x 2¼" face maple flooring. Specimens of these reports, then called Current Net Values, dated January 18, 1913, October 28, 1913, and September 19, 1916, are printed in the record. (Vol. III, side pages 1004, 2130, and 1322.) The earliest of these reports merely gives the average price realized for five groups of mills and the general average, but the later reports are in the same form as the report of Average Prices Realized, dated April 17, 1923, which is described below (p. 98).

Mr. Keehn says that he doesn't recall exactly when the weekly reports of sales were started, but that it may have been some time in 1920. (Vol. I, pp. 176–7.) The minutes of the annual meeting held February 12, 1920, establish definitely, however, that the collection and distribution of weekly reports of sales were authorized at that meeting. The pertinent portion of those minutes reads as follows:

> *Weekly Sales Reports.*—In view of the extraordinary business conditions now existing, it was the sense of the meeting that weekly reports of sales should be made in order that

the members of the Association may have as much information as possible regarding current market conditions.

On motion the following resolution was adopted by unanimous vote:

"*Resolved*, 1. That the members make reports to the Secretary on Saturday of each week, giving a complete record of all sales made during that week of one carload or more of Maple, Beech, or Birch Flooring, the reports to give date of sale, quantity sold (if one carload or more), the thickness, face, grade and wood, the delivered prices sold at, and the Rate Book index letters to indicate destination, but the names of towns to be omitted.

"2. The information contained in the reports to be tabulated by the Secretary and exchanged by him among the members only who make the reports." (Vol. IV, p. 528.)

The earliest weekly sales report secured under subpœna and introduced as evidence is dated March 2, 1920, but it indicates that similar reports had been issued for at least several weeks preceding that date. (Vol. III, pp. 356–359.)

Because of the decision in the United States District Court at Memphis in the Hardwood Case, on advice of counsel the entire reporting system was suspended from April 1, 1920, to August 1920. (Vol. I, pp. 146–7.) The weekly sales reports were also omitted for a few weeks in December, 1921, and January, 1922, because of the decision of the Supreme Court in the same case. (Vol. III, p. 152.) The Government filed as exhibits statistical reports which cover

practically the entire period from 1913 to 1923, and weekly sales reports which cover practically every week of the period from January, 1921, to October, 1923, but has had printed only a sufficient number to fully illustrate the entire reporting system from its inauguration down to the present time. As we are now especially concerned with the manner of reporting at the time the original bill was filed, we call special attention only to such reports as illustrate the system then in use, and also to one or two reports made since the filing of the bill which indicate a slight change which Mr. Keehn claims has been made in the system since the institution of the suit.

Government Exhibits 44 to 48, inclusive (Vol. III, p. 404, side pp. 2852–2858), are forms for individual reports to be made by members to the secretary of the association. The first form (Exhibit 44) is for a report showing (1) date, (2) quantity, (3) thickness and face, (4) grade, (5) wood, (6) delivered price at which sold, (7) average freight rate to destination, and (8) rate of commission paid, if any, as to each shipment, and at the bottom the member is asked to report every Saturday, and if no sale has been made during the week, to send the blank in with such notation. (Vol. III, side p. 2852.) Government Exhibit 45 is a form for reporting the average prices realized f. o. b. plant for $\frac{11}{16}$ x 2¼" face Clear, No. 1 and Factory maple flooring, and it shows the number of feet, the delivered price, the quantity, and freight to destination of each grade (side p. 2853). Exhibit 46 is a form showing (1)

maple flooring on hand of each dimension and grade and (2) the unfilled orders on hand of each dimension and grade (side p. 2854). Exhibit 46A gives similar information with reference to beech flooring, and Exhibit 46B the same with reference to birch flooring (side pp. 2855 and 2856). Exhibit 47 is the form of a report showing the amount of production of each grade and new orders booked for each variety of flooring, and Exhibit 48 is a summary of shipments showing quantity of each variety shipped (side pp. 2857 and 2858). Exhibit 44 is a weekly report, while the remainder are reports made at the end of each month.

From the information obtained by these reports the secretary compiles the information which he sends out to the various members.

Government Exhibit 43–FFF (Vol. III, pp. 377–384) is the report of all sales made by every member during the week ending April 1, 1922. As heretofore shown, this was sent out to each member about the middle of the following week. It is dated April 6, 1922. This report shows the date of each sale, the exact quantity of each dimension and grade, the delivered price, the Cadillac freight rate, the commission allowed, if any, and the member by which the sale was made, the member being indicated by its identification number. Government Exhibit 43–ZZZZZ (Vol. III, p. 390) is the report for the week ending July 14, 1923. It was made nearly four and a half months after the bill was filed, and is in precisely the same form as the one made at the end of

April 1, 1922. But Mr. Keehn says that at the meeting held July 19, 1923, the form of this weekly report was so changed that it no longer identifies the particular mill reporting each sale. Government Exhibit 43–AAAAAA (Vol. III, pp. 398–402), the report distributed among the members for the week ending July 21, 1923, which is the first report made after the alleged change, contains exactly the same information as the previous reports except that the number of the member reporting each sale is omitted, but in this report the groups of mills are designated so as to show that the first ten sales were made by members of eastern lower Michigan mills, that the next eight sales were made by the western lower Michigan mills, and the remaining seven were made by the upper Michigan and Wisconsin mills.

It appears from defendants' exhibit G I (Vol IV, side pp. 5340–5342), a weekly sales report dated November 9, 1923, that other changes in the form of the report were made between July 27, 1923, and that date, as the later report has a different grouping system, which is described below (p. —), and also the July, 1923, reports have the following additional information appended, which does not appear in the report dated April 6, 1922:

Averages of Sales Week Ended November 3, 1923

	Clear	No. 1	Factory
¾ x 2¼" face Clear, No. 1 and Factory Maple Flooring, Standard Grades and Lengths:			
Averages of Delivered Prices	$98.62	$87.57	$52.58
Averages of Average Freight Rates	.29	.26	.32
Average Cost of Freight	5.80	5.20	6.40
Averages of Prices Realized F. O. B. Flooring Mill Basis	92.82	82.37	46.18

Total Sales of 13/16 x 2¼" Face Maple Flooring

Clear	620 M feet.
No. 1	416 " "
Factory	260 " "
Total	1,296 " "

(Vol. IV, side page 5342.)

In fact the reports had formerly separated the sales according to the geographical groups of members. The sales reports dated March 2, March 16, and April 20, 1920 (Vol. III, pp. 356–367), separate the sales made according to the groups of the members, but do not show the individual member making each sale. The reports dated January 13, January 20, January 27, 1921 (Vol. III, pp. 261–276), and October 6, 1921 (Vol. III, side pp. 2394–2396), give the identification number of the member making each sale and also separate the members according to groups, although in the last-mentioned report the separation into groups is only indicated by lines across the report. The small volume entitled "Additional Exhibits" contains weekly reports distributed by the secretary beginning with the week ending March 4, 1922 (p. 1), and continuing to the report dated February 24, 1923 (p. 41), although reports are not printed for all the weeks. In the first of these reports the mills were divided into groups, but in the report for the week ending May 20, 1922, and in the succeeding reports they are not so divided. Manifestly the resumption of this division after it had been determined to omit the number of the member reporting was to enable the members to

identify as nearly as possible the members by whom the sales were made.

That this may be done with considerable certainty is manifest from an analysis of the manner in which the sales reports are prepared. The following table shows that a definite and unvaried sequence was used prior to July, 1923, in reporting the sales made by the different members.

Analysis of order in which identification numbers appear on sales reports

Apr. 6, 1922, Vol. III, p. 377	May 24, 1922, Add. Ex.	June 8, 1922, Add. Ex.	June 21, 1922, Add. Ex.	Oct. 4, 1922, Add. Ex.	Oct. 21, 1922, Add. Ex.	Nov. 4, 1922, Add. Ex.	Dec. 7, 1922, Add. Ex.	Feb. 8, 1923, Add. Ex.	Mar. 1, 1923, Add. Ex.	Mar. 21, 1923, Add. Ex.	July 10, 1923, Vol. III, p. 392

48	48	48	48	48	48	-----	-----	48	48	48	48
51	51	-----	51	-----	51	-----	51	51	51	-----	51

A comparison of this table with the reports such as the "Record of Average Prices Realized" dated April 17, 1923 (Vol. III, side p. 2051), and the "Record of Completed Transactions" dated October

6, 1921 (Vol. III, side pp. 2401–2405), in which the individual identification numbers are given under the several groups, shows that this sequence in reporting has always followed the group system even when the groups were not otherwise designated, and has always given the reports for the members in each group in the numerical sequence of their identification numbers. The several groups have therefore been indicated by the lines across the above table. Until some time after July, 1923, the several groups and the numbers of the members in each group were as follows:

Grouping prior to July, 1923

Eastern lower Michigan mills	Western lower Michigan mills	Upper Michigan and Wisconsin mills
2	3	4
24	5	7
33	14	[1] 23
49	26	[1] 34
	30	42
	37	44
	47	[1] 45
		[1] 50

[1] Wisconsin.

One of the pages of the Monthly Barometer Report for September, 1923, dated October 19, 1923 (Vol. III, side p. 2863), shows that after the use of the identification numbers was abandoned, the Upper Michigan mills and the Wisconsin mills were placed in separate groups, and another page of the same report gives in a footnote the following explana-

tion of the present grouping system (Vol. III, side p. 2866):

Group 1.	Eastern Lower Michigan Mills	4
2.	Western Lower Michigan Mills	6
3.	Upper Michigan Mills	4
4.	Wisconsin Mills	4
5.	Chicago, St. Paul, Tupper Lake Mills	3
	Total Mills	21

The record does not contain any statement as to the present grouping of the members, but it appears quite obvious that No. 47, William Horner, with a plant at Reed City in the Upper Peninsula of Michigan, has been transferred to the Upper Michigan group, and that the members constituting each group are now as follows:

Grouping after July, 1923

Eastern Lower Michigan Mills	Western Lower Michigan Mills	Upper Michigan Mills	Wisconsin Mills	St. Paul Chicago Tupper Lake
2	3	7	23	22
24	5	42	34	48
33	14	44	45	51
49	26	47	50	
	30			
	37			

It is only necessary to assume that the same reporting sequence has been followed since July, 1923, to ascribe with absolute certainty the figures as to average prices realized as given by the report dated October 19, 1923 (Vol. III, side p. 2863), to the several members of the association. A footnote to this report states that No. 3, which according to the sequence should appear first in Group 2, made no sales, and that no reports were received from Nos. 23, 37,

and 45, which according to the sequence should appear, respectively, last in Group 2 and first and third in Group 4. Any member of the association could therefore readily complete this report so as to make it read in part as follows:

Range of average prices realized F. O. B. Michigan and Wisconsin Flooring Mills in September, 1923, for New Orders Booked for 13/16" x 2¼" Clear, No. 1 and Factory Maple Flooring, Standard Grades and Lengths, after deducting Freight

	Clear September
Group 1—Eastern Lower Michigan Mills:

45	No report.
50	102.36
Average	99.77
All Michigan and Wisconsin Mills, average	97.61

Includes reports from 14 Members.
OCTOBER 19, 1923.

Under these circumstances the additional statement in the footnote to this report of Average Prices Realized that "Reports of Nos. 48, 22, and 51 omitted to

avoid disclosing their identity" appears to be a magnificent gesture but to mean nothing.

The individual sales appearing on the weekly sales reports as now made up can not always be attributed with mathematical certainty to the several members of the association. Nevertheless, the creation of a separate group for the Wisconsin mills so that one group only includes three mills, three groupes only include four mills apeice, and the other group only includes six mills, must render it comparatively easy for any person well acquainted with the industry to determine with reasonable accuracy which member has made each sale reported. A weekly sales report dated November 9, 1923, is printed in the record. (Vol. IV, side pp. 5340–5342.) It shows for the week ending November 3, 1923, that group 1, the Eastern Lower Michigan Mills, made ten sales divided among the four members of the group; that group 2, the Western Lower Michigan Mills, made fifteen sales divided among five members of the group—No. 37 having made no report; that group 3, the Upper Michigan Mills, made fifteen sales divided among the four members of the group; that group 4, *the Wisconsin mills, made four sales divided among three members of the group,* No. 23 having made no report; and that group 5, *the St. Paul, Chicago and Tupper Lake mills made two sales divided among two members of the group,* No. 22, the St. Paul mill, having made no report. At least the first and last sales in each group can be definitely ascribed to the first and last reporting members of the group, and

there can be very little doubt as to which member made every sale in some of the groups, *as an inspection of the report indicates that it is the present practice to report all sales made by each member in the numerical sequence on their order dates, so that a change from a late to an earlier date indicates a change in the reporting member.*

The monthly reports are illustrated by Government Exhibit 40–5R, Vol. III, p. 350, side pp. 2049–2059. The first page is entitled "Stock Conditions and Barometer for March, 1923," and is dated April 17, 1923. It gives a complete analysis of current market conditions. The first table on the page gives the percentage sold of the available stock of each of the three varieties of flooring and of each grade of each of the three varieties as of March 31, 1923, March 1, 1923, and March 31, 1922, and the second table gives the increases in the percentages sold (stated as "points up") of the three varieties of flooring, of maple flooring, and of maple 2¼" flooring as compared with the same day the preceding month and with the same date the preceding year. Under these tables is a column of statistics as to stocks on hand, unfilled orders, shipments, production, and new orders booked, as of March 31, 1922, and March 31, 1923, and as to each the increase or decrease as of the latter date stated both in actual amounts and in percentages. At the bottom of the page is a comparison of the average values of 13/16" x 2¼" face Clear, No. 1 and Factory Maple Flooring for March,

1922, and March, 1923, and the increase as of the latter date stated both in dollars and in percentage. On the right-hand side of the page are seven columns which illustrate the stocks and unfilled orders on hand March 31, 1923, and the shipments, the production, the new orders booked and the average values for March, 1923, compared with March, 1922, as the measure.

The second page of this exhibit shows the following data as to each member individually for March, 1922, and March, 1923, to wit: "Stocks on Hand," "Unfilled Orders," "Shipments," "Production," "New Orders," and "Stock Changes," showing the increases and decreases. The third page is a record of the average prices realized f. o. b. flooring mills for new orders booked for $\frac{13}{16}''$ x $2\frac{1}{4}''$ Clear, No. 1 and Factory maple flooring, standard grades and lengths, after deducting freight, the members there appearing in groups and the average price being given for each member and for each group. On the next page appears, first, "Shipments of each wood March, 1922–1923," showing the increase, both actually and in percentage; second, "Production by Grades" of each variety of flooring and for all three varieties for the years 1916 and 1922; and, third, the average prices realized f. o. b. Michigan and Wisconsin mills for $\frac{13}{16}''$ x $2\frac{1}{4}''$ face maple flooring, after deducting freights and commissions, for each of the three grades and for the product for March of each year 1916–1923, and the averages for that period, and also for March, 1923, and compares the figures for March of

each later year, with March, 1916, as 100% (side p. 2052). The next page shows, first, flooring of each grade and dimension, all varieties, on hand March 31, 1923, and, second, unfilled orders on hand March 31, 1923, for each grade and dimension (side p. 2053).

Side page 2054 shows, first, maple flooring of each grade and dimension on hand March 31, 1923, and second, unfilled orders for maple on hand March 31, 1923. Side page 2055 shows the surplus maple flooring stock on March 31, 1923, of each grade and dimension. By "surplus" is meant an excess of 100,000 feet. Page 2056 shows maple flooring surplus in M feet March 31, 1923, and also the "Summary of Surpluses." Page 2057 shows, first, beech flooring on hand March 31, 1923, giving each grade and dimension, and second, unfilled orders for beech on hand. Page 2058 gives the same information with reference to birch flooring, and page 2059 is a record of the receipt of March, 1923, reports, and shows the date of the receipt of each report as to stocks and unfilled orders, shipments, production, and new orders, and average prices realized. Monthly reports for other dates are printed, but a study of those cited as Exhibit 40–YYY, p. 346, side p. 1620–1629, which is for May 17, 1919, shows that there is no substantial difference in their contents.

Exhibits 40 and 41–2 U (Vol. III, side pages 991–996 and 2107–2108) are respectively the Annual Statistical Report for the year 1921, dated February

17, 1922, and the Semi-Annual Statistical Report for the first half 1923, dated July 14, 1923. It is not necessary to describe these reports in detail as they are in the same general form as the monthly report. Briefly stated, they summarize and consolidate the monthly statsitics and compare the totals and the averages for the half year and the year with the statistics for the first half of the preceding year and with the preceding year.

An analysis of the reporting system clearly shows that there is no information withheld by one member from another, and that everyone is perfectly familiar not only with summaries which show the market conditions generally but also with the exact condition of the business of each of his fellow members.

The reporting system here in effect is more complete in its details than that used by the Hardwood Association, which organization was held to be illegal in *American Column & Lumber Company* v. *United States,* 257 U. S. 377.

The importance that is attached by the members to the information contained in these reports is not a matter of conjecture or inference as the witnesses in this case have testified with a considerable degree of frankness upon the subject. This will appear from the following citations and quotations from the evidence of a number of the witnesses:

J. L. Colby, of Cummer-Diggens Company, after being cross-examined at length upon the subject (Vol. I, pp. 215–218), on re-examination says: "I don't want to give anyone the impression that we

don't pay any attention to the statistics distributed by the association. I do want to state that the statistics are not the primary consideration with us" (pp. 221–2); and to the question "Why is that price always exchanged between you members if it is not worth anything?" he answered, "It is a matter of statistical information, some members might consider it worth more than others. I assume that the member can consider it or not just as he likes when he gets it" (Vol. I, p. 224). This witness probably was the least willing of all the witnesses to admit the manifest use of the statistics made by the members.

Mr. McLurg, of Kneeland-McLurg Lumber Company, testified as follows:

> Q. You say, Mr. McLurg, that you consider those statistics when you go to make up prices?
>
> A. Yes, sir.
>
> Q. Are you the sales manager?
>
> A. No, sir.
>
> Q. You consider them pretty carefully, don't you?
>
> A. I don't. My sales manager watches them. I pay very little attention to the selling.
>
> Q. You examine and consider those weekly sales reports?
>
> A. He does; yes, sir.
>
> Q. And they show the prices?
>
> A. Yes, sir.
>
> Q. At which the sales were made?
>
> A. Yes, sir.
>
> Q. And you regard that as of value?

A. *Very valuable.*

Q. And you also regard it as very valuable, the reports as to production?

A. Not so much production as I do stocks on hand.

Q. Stocks on hand.

A. I don't care so much about production as I do with what they have on hand.

Q. Why is that valuable if it does not enter into the making of the price?

A. *I said it did enter into my making the price.*

Q. If those statistics showed that those competitors were getting a good, big, high price, why, you follow, don't you?

A. If our stocks are such that we can, and if they are low, we buy from them, try to find out who it is and buy some stock.

Q. But if they get a good high price you follow, don't you?

A. We try to get all we can; yes, sir.

Q. Well, you follow them?

A. We don't follow that as a lead.

Q. If they get a higher price than you do, you try to follow them, don't you?

A. Try to get all we can for our stock.

Q. Mr. McLurg, if they are selling higher than you are, you try to follow them, don't you?

A. Yes, sir. (Vol. I, pp. 229–230.)

Mr. DeWitt, of Holt Hardwood Company, when asked on examination in chief what the advantages of being a member of this association were, said:

Well, one of the big advantages is the statistical reports that we get; it enables us to find out

what the market is doing, and as I testified before on that, then we can put the proper grade of lumber into our mills to produce the grade of flooring that is demanded by the market, and it is not only an advantage to the manufacturers but it is also an advantage to the consumer. If we did not do that there would be times when there would be a great shortage of some particular kind of flooring, naturally the price of that would be high and the consumer would suffer, but from the fact that we have that information it gives us a chance to keep our stock pretty well balanced with the requirements of the market; *also that same report gives us the prices being obtained by other members of the association, although that information is generally about two weeks old when we get it, it is valuable to us.* The standardization has been a very valuable thing. (Vol. I, p. 252.)

And on cross-examination this witness said:

Q. And that is the very reason you take those statistics, isn't it; you want to know what your competitors are getting for their lumber?

A. That was one of the reasons.

Q. Well, that is your main reason, isn't it?

A. No; the other parts of the statistics is also very valuable to us as I have already testified.

Q. It is all valuable.

A. It is all valuable, that part too.

Q. When you go to make your price you consider all those statistics, don't you?

A. Yes, sir.

Q. And you fix the price very considerably by what you learn from these statistics, don't you?

A. That is one of our sources of information.

Q. An important one, isn't it?

A. Important one; yes. (Vol. I, p. 257.)

Mr. Shepeck, of I. Stephenson Company, Trustees, on examination testified:

> The statistics issued by the Association are a big benefit to us. The information that we gather from these statistics as to stocks on hand, production, new orders booked, also the weekly sales reports, are of considerable benefit to us. They enable us to form an opinion as to what the conditions are and assist us in intelligently handling our flooring business.
>
> Q. How do you handle your flooring business, whether you consider present prices or future prices, or both?
>
> A. We are concerned with both. (Vol. I, p. 264.)

And on cross-examination he testified:

> Q. Isn't your dollars and cents in the price which you are able to make on account of these statistics, there are your dollars and cents?
>
> A. Sometimes the statistics cost us money, in order to get out.
>
> Q. How do you lose money out of these statistics?
>
> A. I feel pretty good sometimes, until the statistics come along, and then I feel sick and cut my price.

Q. If you didn't get the sickness you might have to cut more; sickness helps you in that case. If it wasn't for the statistics you wouldn't belong to that Association right now?

A. *No; I don't think we would; we might.* (Vol. I, p. 266.)

And again:

Q. But anyway, you do say that these statistics showing demand and supply and stocks on hand and all those things, and prices paid, are of very great value to you?

A. Yes, sir.

Q. And, of course, that means that they are of great value to you in that they enable you to get more money out of your lumber?

A. Not necessarily; no, sir.

Q. Isn't that what you are striving for, to get more money for your lumber?

A. To a certain extent; yes, sir.

Q. Would you be in business if it was not for the money you get out of it?

A. No, sir.

Q. You are striving for profits?

A. Yes, sir.

Q. And that is all you are striving for, profits?

A. Oh, not entirely; no.

Q. You are not doing it for exercise, are you?

A. No.

Q. Or amusement; you could get amusement somewheres else?

A. I get amusement out of my business.

Q. You are just the same as other men in business; you are in business to make money out of it?

A. Yes, sir.

Q. And the thing that is valuable to you is that which enables you to make more money?

A. It enables us to keep from going broke.

Q. That is the same thing?

A. Yes; to a certain extent.

Q. That is, it keeps you from losing money?

A. Yes, sir. (Vol. I, p. 267.)

Mr. Hodges, of the Oval Wood Dish Corporation of Tupper Lake, New York, who is the only member in or near that locality, testified in chief:

I think the statistics that are furnished our Company by the Secretary of the Maple Flooring Manufacturers' Association are very valuable.

The weekly reports are valuable as showing a trend of the market, whether the prices are going up or going down and another valuable feature is the amount of sales, that enable us to know approximately how much of each grade, for instance, has been sold within a certain time.

Q. Do you regard the prices there more or less important than the statistics with regard to volume?

A. I think the statistics in respect to volume are fully as valuable as the price statistics, because oftentimes it does not matter to me what somebody in Michigan is getting in prices; if I know my competitor who lives eleven miles from me is getting two dollars less than my

figures show, that would influence me more than what I might see in the sale reports. (Vol. I, p. 291.)

And again:

Well in the first place I think I would take into consideration the economic situation, that is, the general trend of the market, whether it was up or down, and then I would take into consideration my own particular stock conditions. If I had a surplus of some one item and wanted it moved, why I would be apt to make a lower price, *particularly if I saw that some one else was making a lower price on that same item.* On the other hand, if the general trend of the market was upward and I had no accumulation of that stock *and I saw somebody was getting more money than I was, it may tend to influence me to raise my prices.* (Vol. I, p. 292.)

And—

The mere fact that some one else was charging higher prices or lower prices than I had been would not automatically cause me to lower or increase my prices. I would consider my own stock and the other conditions above mentioned. The fact that some one else was charging higher or lower prices than I was would be considered as one factor and would be given consideration by me. (Vol. I, p. 293.)

On cross-examination this witness said:

Q. Now, in regard to those statistics, didn't you join this Association very largely to get the information that is contained in those statistics?

A. Yes, sir.

Q. Don't you use it all the time?

A. What do you refer to?

Q. I mean all the statistics; don't you use them all?

A. Why, yes; certainly.

Q. Aren't you studying them continually with reference to your changing prices?

A. I wouldn't say that; but we do study them; we look them over whenever we get them and take them into account. *That is one of the factors that determine our price.*

Q. If it wasn't for those statistics you wouldn't belong to the Association, would you?

A. *I don't think so; it would be of no value to us.* (Vol. I, p. 300.)

Mr. Ralston, formerly Sales Manager for the Receiver of William Horner, in chief testified:

A. The Statistics, as a rule, *are very, very, valuable,* especially as regards the production and the stocks on hand and the general information given in these statistics that we received from time to time. (Vol. I, p. 324.)

And on cross-examination he testified as follows:

Q. You said these statistics that you get from the Association you regard as very valuable?

A. In the main; yes.

Q. And you emphasized the "very"—as a matter of fact, you repeated it. You regard that as one of the most valuable activities in which the Association engaged, don't you?

A. The statistics?

Q. Yes.

A. Yes; as to costs and production, and etc.

Q. Taking statistics as a whole, regardless of prices and production?

A. I said before that there are some features of those statistics that I don't regard of any value at all, and never did.

Q. And there are some other features that are more valuable than other features?

A. Absolutely.

Q. And of course those statistics are valuable in that they aid you in getting more money for your lumber?

A. For our flooring?

Q. More money for your flooring?

A. Some cases, and some cases the opposite.

Q. If it didn't aid you in getting more money for your flooring, they wouldn't be of any value, would they?

A. There is something in that; true.

Q. Isn't that absolutely true?

A. Not always. (Vol. I, pp. 329–330.)

Mr. Klesner, the representative of the receiver for William Horner, testified as follows on cross-examination:

Q. If you were selling at 90 and they were selling at 95, and you got the information through that report of the fact that they were selling at 95, you would go up to 95 at once, wouldn't you, or you will go at least to 94?

A. Well, possibly.

Q. Well, wouldn't you do it, isn't that common sense?

A. Yes; that is common sense.

Q. Why, of course, and that is the way you run your business, isn't it?

Q. I will tell you, as I say, we pay very little attention to the report; we are simply governed by the market conditions, the price for lumber, the cost of manufacture, we try to get as near that price as we can, but if we can't get our price and we have to meet legitimate competition, naturally we do it if we need the business.

Q. When you speak of market conditions the price is a part of the market condition?

A. Yes, sir.

Q. And the price revealed in those statistics is a part of the market conditions, isn't it?

A. Yes, sir.

Q. And the stock on hand is a part of the market conditions; that is true, isn't it?

A. Yes, sir.

Q. That is, the stock that belongs to everybody else and the stock that you have got is a part of your market conditions?

A. Yes, sir.

Q. And you are controlled by all of those things; as a matter of fact, you are controlled by the stock on hand and the price at which the flooring is moved—that is the fact, isn't it?

A. That is the fact.

Q. And all those things are revealed by those statistics, aren't they?

A. Yes, sir. (Vol. I, p. 338.)

Mr. Greene, of the West Michigan Flooring Company, after a lengthy cross-examination upon the subject, said:

Q. Let us see about working both ways. As a matter of fact you always want to get all you can for your lumber?

A. We are in the business for that purpose.

Q. And now after you get those reports, and those reports show, say, that you are selling at 95 and that your competitors are selling at 90, just as long as you can get 95 you will get it, won't you?

A. I presume I would; yes, sir.

Q. Yes; of course you will; never come down until you have to, of course.

A. But it is fair to say——

Q. Is that true?

A. I come down to meet market conditions.

Q. You never come down until you have to, until pressure is brought to bear on you from the demand; isn't that true?

A. That is usually immediately; yes, sir.

Q. Whether it is usually immediately or not, just as long as you can get your 95 you are going to get it, aren't you?

A. Yes, sir.

Q. But if you examine those reports and you are selling at 90, and they are selling at 95, you immediately are going to get your 95 if you possibly can, aren't you?

A. Not necessarily, if my stock condition does not warrant it.

Q. Not necessarily, but you are going to get it if you can, aren't you?

A. Within a period of time; yes, sir.

Q. Just as quick as you can?

A. I presume so.

Q. Don't you know? You run your business that way to get all the money you can out of it?

A. Yes, sir. (Vol. I, p. 391.)

Mr. Dewey, of Bigelow-Cooper Company, described his use of the statistics as follows:

> I analyze the statistics that are furnished us from time to time by the Secretary of the Association so as to get as intelligent an idea as possible of the condition of the industry. These statistics throw a great deal of light on that subject. I use the statistics in the same way as I use other information regarding general conditions. I prefer light rather than darkness, so far as business conditions and the conditions of the industry are concerned. (Vol. I, p. 397.)

The exhibits introduced in evidence by the government also contain many statements showing the great value and importance attached by the members to the information contained in the statistics, and especially in the price statistics, furnished to them by the association. As stated heretofore, no detailed reports of sales were furnished to the members until March, 1920, and the statements made prior to that date with reference to the current net-values reports, which were monthly reports of average net prices f. o. b. mills and to their effect in stabilizing, maintaining, and increasing prices, must be much more applicable to the effect of the present

detailed weekly reports of individual sales. Some of these statements are as follows:

Market Conditions Committee Report, December 19, 1913

As the present method of reporting Current Net Values was adopted by the Association, it is a matter of deep regret to the Committee that all the members do not make this report, as the Committee would then have complete data upon which to base its conclusions. As it now stands, the 23 members who exchange this report are advised of the prices obtained by each other, but they have no knowledge of the prices obtained by the six members who do not report, while each of the six members is traveling along, and in the dark as to the prices obtained by the other 28 members of the Association. These conditions can not but have a depressing effect upon values, as all the members are not in the position to refute statements made by buyers regarding low prices, which they would be in if they knew from the reports of the member himself the prices he is getting for his Flooring. *All the steps taken during the past two years in the work of the Association, tending to greater publicity and a freer and franker exchange of information among the members themselves, have been of benefit to them, and in times of slackened demand and stories and rumors of low prices team-work among those who are vitally interested in maintaining stable conditions in their own industry has the greatest value to them.* (Vol. III, p. 203.)

Market Conditions Committee Report, January 28, 1914

The improved method of reporting current net values should also be noted. The old plan was to report the sales during the month which were shipped during the same month. Now all of the sales of the specified items during the month are reported, regardless of when shipment is made. This covers a larger range of transactions and more clearly indicates the trend of prices from month to month. (Vol. III, pp. 207–8.)

Market Conditions Committee Report, February 13, 1914

It has been hoped that the few members who do not make the Current Net Values report would conclude to do so in order that every member may have the benefit of knowing what every other member is getting for his Flooring, as there is no question but that some of the members, who do not make this report, are led to believe that other members are selling for less than they are actually getting, and the same condition applies to the members who do report, respecting the prices the members who do not report are said to be selling at. This, as you will readily see, can cause much demoralization in values, because if a buyer tells you that so-and-so is selling his Flooring at such a price, you are not in a position to refute his statement because you are not fortified with the information from the member himself of what he is getting for his Flooring. Whether or not all the members report, it would seem

that the interests of the Association can be best served by sending to every member the individual reports of Current Net Values, so I trust the members who are making these reports will waive the reciprocal conditions under which their reports are made and permit the information to be sent hereafter to the entire membership with the other regular monthly reports. (Vol. III, pp. 331–332.)

Market Conditions Committee Report, March 25, 1914

In view of this data, the present selling values of flooring may be considered $3.50 off on Clear, $2.00 off on No. 1, and $3.50 off on Factory from the Recommended List of May 21, 1913, and while these values are lower than our statistics, the demand for our goods and the market price of the raw material warrant, *the Committee is convinced that without the exchange from month to month of the information in the individual reports of Current Net Values prices would have gone much lower because of the dull season of the year and the general uncertainty and apprehension regarding the business outlook for 1914.* (Vol. III, p. 205.)

Market Conditions Committee Report, September 24, 1914

In view of the complicated situation it would indeed seem prudent to go slow and be guided by a careful study of our statistics from month to month, pursue a policy of "watchful waiting" in respect to production, and safeguard ourselves all we can by a liberal exchange

among ourselves of all available information regarding trade conditions as they develop. (Vol. III, pp. 219–20.)

Tenth Annual Report of the Secretary, January 29, 1915

You have already received the annual statistics, and while they will be reviewed in detail in the report of the Market Conditions Committee, I would like to submit a contrast of stock conditions and current net values during the past three years. It proves beyond a doubt that cooperation can be made helpful in bad times as well as in good times. (Vol. III, p. 116.)

Market Conditions Committee Report, February 25, 1915

Because of the critical situation we are now in it is of the utmost importance that our statistical reports be in the hands of the membership very early in the month in order that the information in the reports may be of greater value to the association.

May we not depend upon your cooperation in this respect, because after all it takes no more time to make out your reports on the 2d or 3d of the month than it does to make them out two or three weeks later, and at this particular time of all times there is nothing more important to us all than to have accurate information as quickly as possible regarding conditions which have such a direct bearing upon our own welfare. (Vol. III, p. 233.)

> The members who make the monthly reports of Current Net Values are in a position to analyze in detail the net prices obtained by other members and by each geographical group. If you are not making this report you are missing information that has proven to be of great value in handling sales. (Vol. III, p. 124.)

The great value both of the weekly sales reports and of the statistical reports, and the importance of their analysis by the members before attending the association meetings, were emphasized in the Report of the Market Conditions Committee dated October 28, 1921, part of which reads as follows:

> *Weekly Sales Reports.*—The importance of making the Weekly Sales Reports regularly and promptly was discussed and the great value of the information contained in the reports regarding the current state of the market was conceded, and three of the members of the Committee who are not making these reports promised to do so. All the other members of the Association who are not making these reports are earnestly urged to do so, in order that every member of the Association may keep in close touch with conditions instead of working in the dark.
>
> *More Cooperation.*—We wish to make the following recommendations in order that there may be more cooperation in the work of the Association:
>
> 1. That Dr. Earle, as President of the Association, is requested to call a general

meeting of the Association to be held as early in November as possible.

2. That all the members of the Association make their Weekly Sales Reports regularly and promptly.

3. That all the members send in during the first week in November their statistical reports for the month of October so that a conference can be held on November 16th or 17th.

4. That if the Secretary receives by November 7th all the October reports from all the members, that his report be made out and mailed to the members on November 10th or 11th, so they will receive the October statistics in advance of the meeting and have an opportunity to analyze them and can come to the meeting fully informed respecting trade conditions as reflected by the statistical reports. (Vol. III, pp. 254–255.)

A letter from Mr. Keehn, dated December 3, 1921, to the three members who were not then contributing to the weekly sales reports, again emphasized the value of the information contained in them, and especially of the information as to the current movement of flooring—a feature of the reports to which great importance was attached by several of the witnesses examined. This letter reads as follows (Vol. IV, pp. 535–536):

DECEMBER 3, 1921.

HOLT HARDWOOD COMPANY,
Oconoto, Wisconsin.

GENTLEMEN: One of the members of your Market Conditions Committee, writing about our latest weekly Record of Completed Trans-

actions, states that it is very gratifying to note the number of members who are now reporting regularly. They feel confident that the members who do not report, evidently having discontinued their reports because other members had neglected to report, now fail to realize the importance of the valuable information contained in our weekly reports and that all but three of the members are reporting.

We believe our Weekly Sales Reports to the members have a number of very good features. Aside from their indication of the current trend of the market, the demand for each grade, face and thickness in each wood, the total volume alone of weekly bookings in each group, and the total of all groups, is enlightening.

You probably had an unusually large volume of flooring orders for the week ended November 16th, and assumed that the experiences of the other members were similar, but could any member have known (or estimated) without the existence of our Weekly Sales Reports that the total New Business Booked of 19 members for the week ended November 19th was very close to five millions? Without these reports they could have knowledge only of an increased demand for Maple, Beech, and Birch Flooring, but the real extent of this demand as affecting the different grades and sizes of our flooring in combined volume would not be known until weeks later, upon the compilation of our November statistical reports.

It has occurred to us that you may feel that you can not afford to be without this exchange of information when you learn that all but three of our members have indicated they want this information by taking a minute or two of their time to daily record all sales on the blank forms provided and mailing them to us at the close of each week. And we and the reporting members would like to have our weekly reports show our members' sales 100% reported. We can do this if you, and the other two missing members we are writing to-day, will kindly send us the report of sales for week ended to-day. May we count on your cooperation?

Yours very truly,

GEORGE W. KEEHN,
Secretary.

The entire matter of the analysis and interpretation of the monthly, semiannual, and annual statistical reports which the members have regularly received from the association for many years, and of the value of those reports as a basis for estimating future conditions, is fortunately covered very adequately and fully in the Semiannual Report of the Market Conditions Committee dated July 20, 1917, and no comment other than to quote that report in its entirety is necessary. The report is as follows (Vol. IV, pp. 438–440):

To members:

GENTLEMEN: The statistical reports prepared by Mr. Keehn for the first half of the

year give all the available data of that character. Whether such reports are regarded as merely a comprehensive review and record of a past period or whether they have an additional value as a guide for the future, depends largely upon the method of their analysis and interpretation. When the significance of each of the various factors of the statistical data is determined and the influence of other factors, such as outside competition, building activity, and manufacturing costs, buying seasons and the character of the demand, is properly estimated, we have acquired the Eyes of Business, can see ahead with greater clearness, and can plan for the future with greater confidence of success.

As an aid in the analysis of statistics a barometer has appeared in our monthly reports during the past year to show a graphic comparison of conditions with the corresponding month of the previous year. The barometer gives a birdseye view of conditions but does not estimate the comparative value of its various factors. However, before discussing this feature, an explanation of the construction of the barometer, how and why it is thus made, may be informative and increase its value.

During January and February we had 25 members, during March 24, and during April, May, and June 23. The barometer is adjusted to these changing conditions in the following manner:

The first shaft is the Measure, and you may have noted that it is always the same height. It is an arbitrary yardstick.

The relative heights of the other shafts are determined by the percentage of increase or decrease of the various factors based on the reports of the same members for corresponding periods. Consequently the June, 1916, business of the two members who have dropped out since the first of this year was not considered in making the barometer for June, 1917.

The barometer each month reflects a comparison under like statistical conditions with the same month of the previous year.

Returning now to the comparative values of the various factors of the barometer:

The factors are:

Stock on Hand.
Unfilled Orders.
Shipments.
Production.
New Business.
Average Values.

Inasmuch as the value of any factor may change with the changes in surrounding conditions, it is impossible to formulate any arbitrary or fixed rules for determining market conditions. The monthly combination of factors is kaleidoscopic—never twice the same. Consequently the significance of the various factors of the barometer must be estimated by judgment based on experience.

This may be illustrated by the barometer for June. Based on the half year, it shows slightly less than the average "Stocks on

Hand," the lowest "Production," and the highest "Average Values" of the period. These are important factors and if considered by themselves would seem to foreshadow good results for July. But the other statistical factors show that relatively "Unfilled Orders" fell 26 points in June and that "New Business" and "Shipments" are the lowest in six months. This gives us comparative results based on corresponding periods last year.

To show the trend of current conditions, a comparison of May and June this year indicates that during June:

Stocks on Hand decreased 1 Point.
Unfilled Orders decreased 11 Points.
Shipments decreased 15 Points.
Production increased 4 Points.
New Business decreased 36 Points.
Average Values increased 3 Points.

The reduced volume of New Business in June may be due to earlier booking in anticipation of advancing prices, but the falling off in Shipments should be seriously considered. And it should also be noted that the first of this month records the smallest volume of Unfilled Orders shown this year.

It is obvious that right here the nonstatistical factors demand attention. These are:

1. Building Activity.
2. Character of Demand.
3. Manufacturing Costs.
4. Outside Competition.
5. Buying Seasons.

We know (1) that there is a material decrease in building activity that requires hardwood flooring; (2) that the demand for Clear is relatively less than for No. 1 and Factory; (3) that the manufacturing cost of flooring was never before so high as it is now and that costs are increasing; (4) that outside competition is active and aggressive; and (5) that July is normally a quiet month for new business and is more likely to be so under present conditions.

The foregoing brief analysis of conditions the first of this month affords a basis for the conclusion that the volume of Shipments and New Business for July will be less than normal, but that the special demand for No. 1 and Factory may support some advance in prices of those grades. It is also evident that at present the demand can not be increased by price concessions. Also that prices are not likely to be reduced on account of high manufacturing costs and easy warehouse conditions. The present manufacturing plan should be to reduce the output of Clear flooring and increase the output of No. 1 and Factory.

This is not a Semiannual Report in conventional form. It is rather a report and explanation of methods, and your committee has taken the liberty of offering it with the hope that it may suggest ways of analyzing our statistical reports from month to month

so that they may be more valuable to you as a basis for estimating future conditions.

Respectfully submitted.

MORRIS E. THOMAS, *Chairman*,
E. HARVEY WILCE,
B. P. WHEDON,

Of Market Conditions Committee.

VIII

Association Meetings

Article IX of the Articles of Association under which the defendants were operating when the petition was filed provides that an annual meeting for the election of officers and trustees and the transaction of other business shall be held on the third Wednesday of January of each year; that regular meetings for the transaction of business shall be held on the third Wednesday of April, July, and October of each year; and that special meetings may be called by the President or a majority of the Board of Trustees on not less than five days' notice. (Vol. III, p. 67.) Each of the Articles of Association under which the defendants operated from 1916 to 1922 contained a similar provision (Vol. III, p. 17, p. 28, and p. 40), but the Articles in effect from January 1, 1913, to December 31, 1915, provided that there should be five regular meetings in addition to the annual meeting (Vol. III, p. 4).

Mr. Keehn testified that he never kept a minute book, but that he made rough notes and wrote them up and mimeographed them and sent the reports to the members as memoranda of the proceedings of meetings. He also testified that he did not have any of the minutes of the meetings during the period when the Articles of Association dated January 1, 1913, or any of the succeeding articles were in effect, other than those he had given to the Department of Justice. (Vol. I, p. 79.) All those minutes or memoranda, and all other minutes, reports of the Market Conditions Committee, and reports and circular letters to members from the secretary, which the Government secured under subpœna duces tecum to each member of the association, were introduced in evidence and appear in various portions of the record. With reference to the Market Conditions Committee, Mr. Keehn stated:

> These associations at one time had a committee called "Market Conditions Committee," with, I think, about 7 or 8 or 9 members. The functions or rather the duties of that committee were in a general way to find out the state of the market, the trade conditions, and to make an analysis of conditions generally and report to the association as to their findings. They sometimes made their reports to the association in the meetings, sometimes by mail to the association. I sent out the reports of that committee to the members of the association, and when the reports were made verbally at association meetings I

might reduce them to writing or they might be referred to in the minutes of the meetings. Anyway, I circulated them among the members of the association.

I couldn't say positively from what sources this committee got its information. I suppose from all sources. The committee ascertained from past transactions what the prices were at which maple flooring was being sold. (Vol. I, p. 95.)

The last report of the Market Conditions Committee which was introduced in evidence is dated October 28, 1921, and according to Mr. Keehn that committee was not succeeded by another committee, but a new committee was created called the "Cost Surveys Committee," and it has been operating since in accordance with the articles of association of January 1, 1922. (Vol. I, p. 96.)

With reference to the number of meetings held, Mr. Keehn testified:

Q. Now Mr. Keehn, going on to another matter, you held meetings?

A. Yes.

Q. How often were those meetings held?

A. *During the past year I think they were held about monthly, there may have been months they were not held. In former years they were held quarterly and semiannually and annually.*

Q. When did you begin holding those meetings monthly?

A. I would say from memory some time late in 1921 or during the year 1922.

Q. It is a circuitous track. *Anyway, those meetings began to be held monthly after the decision in the Hardwood Lumber Company case.*

A. *Not in every case monthly, but I would say in a general way monthly.*

Q. Before that they had been held quarterly?

A. There were sometimes special metings, and semi-annual meetings and annual meetings.

The Court: Haven't you the records here that show the proceedings of these meetings?

A. We have many of them, but not any of the old ones.

Q. Did you keep minutes of all the meetings?

A. *We kept minutes of all meetings but didn't keep all minutes of all meetings.*

Q. What did you do with the minutes that you haven't got?

A. That we have got or haven't got?

Q. Haven't got?

A. They go back for a long period of time, and we don't keep all those things.

Q. Have you got all minutes for the last two years?

A. I think probably we have. (Vol. I, pp. 132–133.)

The first meeting in 1922 was held January 12th. Other meetings were held during that year on February 25th, March 9th, March 29th, April 20th, May 17th, June 21st, July 19th, August 16th, October 24th, November 15th, and December 19th.

We held meetings subsequent to that and are holding them now. (Vol. I, p. 134.)

And with reference to the proceedings and discussions at meetings of the association, Mr. Keehn testified:

We had no stenographer present at the meetings and didn't undertake to take down just what was said and done.

Q. You just made a memorandum of some things?

A. Made a memorandum of all things that were talked about in these meetings and wrote them up afterwards.

Q. Do you mean to swear that your minutes of those meetings show everything that was talked about?

A By the Association as an Association meeting, with the exception of the details of the defense of this suit. That was not written out.

Q. Well, I believe you swore the other day that you didn't have, or didn't record the action of the meeting with reference to a discontinuing of that allotment?

A. No; we didn't record that. That was in 1920.

Q. In those meetings what did you discuss?

A. *Well, discussed trade conditions generally, as reflected by statistical information; they discussed the market prices of rough maple flooring or lumber; they discussed manufacturing and market conditions;* they sometimes discussed labor conditions; they would devote a large amount of time to discussing the adver-

tising campaign which the Association has had under way during the last year and a half or two years; spent considerable time on Grade Committee work, also on the petition presented to President Harding when he was alive about doing something on the duty on Canadian flooring; all those things were fully outlined in the minutes of the meeting.

Q. Did you ever discuss the price of maple flooring?

A. We do not discuss the price of maple flooring at the present time.

Q. Never mention it?

A. We do not discuss the future prices to be charged. There is no reason to discuss past prices because they are contained in the weekly sales report which the members have before they come to the meetings.

Q. You never mention the prices of flooring at all?

A. Not as an association discussion.

Q. What about the individuals that stand around?

A. I don't know what they talk about. They may talk about a hundred different things. I am speaking about the association discussions—what the association discusses.

Q. That is when they assemble around there and do not get up publicly to make speeches to each other?

A. They do not talk about the price of flooring they are going to charge.

They met every month and discussed the particular matters outlined in our minutes of the meetings. They were written up in the

> minutes of the meetings. They usually meet at the Congress Hotel. Sometimes about 11 o'clock, and staying in session until about 12.30 or 1 o'clock, then have lunch and get together again about half past 1 or 2 o'clock, and many of them go to the ball game, and that is the end of the meeting. It usually breaks up about three o'clock. (Vol. I, pp. 134–135.)

On cross-examination Mr. Keehn testified further with reference to the same matter:

> We have never discussed the prices to be charged or asked for maple flooring. We of course have the weekly reports of sales and monthly report, and which are past transactions, and sometimes as those reports were distributed at the meeting they looked them over. (Vol. I, p. 174.)

Mr. William L. Saunders stated on direct examination that at the association meetings in Chicago he met his maple-flooring friends with less trouble than would otherwise have been the case, that he was frequently able to dispose of rough maple lumber at the meetings to manufacturers who do not own their own stumpage; and that at the meetings they also discussed wages or manufacturing troubles, also car service, traffic difficulties, and the merits of the different flooring machines, etc. He also stated that standardization of flooring had been perfected only step by step during the past fifteen years and is one of the features of association work, and that at the meetings which he had attended there had never

been any discussions with respect to the *future* prices of flooring.

On recross-examination Mr. Saunders testified as follows:

> Q. Since he went into these meeting matters, I will ask a question or two. You tried to prove the things you did not discuss when you get together. Do you ever say anything about the market for lumber?
>
> A. Of our rough lumber?
>
> Q. No; Maple Flooring; when you meet these gentlemen who are concerned in manufacturing Maple flooring, do you ever speak about market conditions?
>
> A. As to the question of supply and demand—things of these kind, do you mean?
>
> Q. Yes. Do you talk about that?
>
> A. Individually, not collectively, not as an Association.
>
> Q. You mean as you are standing about together, or lunching together, you talk that all over?
>
> A. Yes, sir.
>
> Q. Do you talk about the prices that you have been getting for your lumber?
>
> Mr. DARBY. Do you mean flooring or lumber?
>
> Mr. FOWLER. When I say lumber I mean flooring.
>
> A. Personally, I have no knowledge of prices ever being talked.
>
> Q. You talk about everything else but prices?
>
> A. That is the least of our troubles.

Q. If you don't get a good price, you will soon go to the wall.

A. Yes, sir.

Q. That is what you are specially interested in?

A. Yes, sir. (Vol. I, p. 206.)

Q. So you mean to say that you gentlemen will talk about everything else connected with the Maple flooring industry but you won't hint prices?

A. I think that subject is the least discussed of any.

Q. Then it is discussed, is it? You say it is the least discussed?

A. Oh, it would be impossible not to mention it sometimes in your conversation. I might confess that my price was so-and-so, and the other fellow might say his was so-and-so.

Q. Since you have been reporting your prices from week to week, every single sale to the Association, why are you so awfully particular not to talk about it between each other?

A. The individual member does not know what my prices are as I report them to the Association.

Q. He did up to July last, didn't he?

A. Yes.

Q. Before last July—if your mouth hast been shut so tight since—before last July when you were reporting your prices to the Secretary and he was sending it right out to every member of the Association, why were you so awfully particular not to talk about it?

A. I took the chance of his remembering as to what my quotations were previously and it wasn't necessary for me to mention it.

Q. Would you ever talk about what the prices would likely be in the future, whether prices were going up or down, market conditions were favorable or unfavorable, ever talk about that?

A. I might have expressed my opinion about that.

Q. Didn't you time and again talk that one thing?

A. You mean now as an individual talking to an individual?

Q. Individuals talking around there, either on the floor of the Association or at your luncheons, or anywhere?

A. Or in the lobby of the hotel?

Q. Lobby of the hotel or anywhere?

A. We might discuss those things.

Q. Well, didn't you, as a matter of fact?

A. I think, as a matter of fact, we would to certain extent. (Vol. I, p. 207.)

Mr. Frank M. Hodges stated on his direct examination that there could not have been more than two or three meetings after he joined the association in August, 1921, and he did not remember whether he attended all of them, and that he attended perhaps two-thirds of the meetings during 1922. (Vol. I, pp. 295–296.) The following interrogation then took place:

The COURT. Now, during 1922, at these meetings which you attended, was there any discussion of market conditions, trend of the market, prices realized?

A. I don't recall any such discussions in the meetings. We had reports of costs committees, of course, on rough lumber and manufacturing costs and things of that sort.

The COURT. You certainly discussed those, did you not?

A. Yes, sir.

The COURT. Can you tell me why? Was not the natural discussion of market conditions, the market trend, the outlook?

A. Yes.

The COURT. Will you tell me why there wasn't any discussion of it?

A. Well, I think that after the decision of the Supreme Court about those things that our attorneys advised us that those things were not to be discussed; I don't recall.

Q. But you did discuss the past transactions, did you not?

A. Oh, yes.

Q. And the cost of rough lumber and manufacturing costs and the advertising campaign was discussed?

A. Yes, sir.

Q. And traffic questions would come up, but those of past transactions, I understand, you discussed.

A. What do you mean?

Q. These reports which would show what—the monthly reports of the secretary.

A. Oh, yes.

Q. But there was no understanding or agreement with respect to future prices.

A. No, sir.

The COURT. What benefit did you derive from discussing past transactions?

A. Well, we were enabled to find out how much stock of certain grades had been shipped and what had been obtained for it, that was valuable information.

The COURT. What was the benefit of that?

A. It shows what stock was being moved at the time.

The COURT. Well, it enabled you to forecast what was going to happen in the future?

A. To a certain extent.

The COURT. And that was the only benefit?

A. To a certain extent; yes, sir. (Vol. I, pp. 296-297.)

On cross-examination Mr. Hodges testified as follows:

Q. How far is Tupper Lake from Chicago?

A. Oh, it is probably 900 miles, something like that.

Q. How long would you be in session there at Chicago?

A. One day, usually.

Q. When you had those meetings you had these weekly sales reports before you, didn't you?

A. Yes, sir.

Q. They were distributed around among you, weren't they?

A. Yes, sir.

Q. So that you would have them right before your eyes while you were going on with your discussions?

A. Sometimes they were.

Q. Anyway, after you got there, he distributed them among you?

A. Possibly the last week's statistics, if they had not been mailed he would distribute them at the meeting.

Q. Distribute them monthly. These stock reports and shipments and things of that kind, you had them before you, too, didn't you?

A. Yes, sir.

Q. So you had the whole situation there right before your eyes, every member during those discussions, did you?

A. We did not discuss them at the meetings.

Q. What did you have them before your eyes for? What were they distributed among you for, and why did you have them in the meeting if you did not discuss them?

A. Well, we could look them over; they were distributed to us there rather than to be mailed to us at our home.

Q. Well, what did you talk about, then, that was in those reports, if you didn't talk about prices?

A. About stock conditions, manufacturing costs, things of that sort.

Q. Now, you mean to say, do you, that when it came to a question of price on past transactions that your mouths were simply shut; is that right?

A. I wouldn't say that entirely. (Vol. I, pp. 297–299.)

As in the case of the discussion as to the value of the association statistics, Mr. Ralston was one of the

frankest witnesses examined with reference to the matters discussed at the association meetings.

On cross-examination he stated that he was a member of the Market Conditions Committee for about a year or a year and a half; that that committee simply gathered information as to the costs of manufacture, test runs, the average of the test runs and general information on the markets and on conditions for the benefit of the members of the association; that there was no report made of any kind to amount to anything but generally the committee just talked in the general meeting of what they had found, and that the report was discussed in the open meeting. (Vol. I, p. 330.) He then testified as follows:

> Q. As a matter of fact, that is one of the principal things that was discussed in those meetings, was it not—the general market conditions?
>
> A. *The general market conditions were always discussed; yes.*
>
> Q. *And the range of prices?*
>
> A. *Sometimes.*
>
> Q. Wasn't that one of the things that was generally discussed—range of prices?
>
> A. Not always; no.
>
> Q. Didn't you consider where the prices were, going down or going up or had been going down or going up?
>
> A. There was probably some talk of that, more or less, yes.
>
> Q. That was the interesting thing, wasn't it, whether prices were going down or up?

A. Absolutely it is to any manufacturer, it might be.

Q. When you were talking about general market conditions, it was with reference to whether it would justify prices going up or whether it would necessitate their going down?

A. Not necessarily, it was merely the talk from that Committee was merely on general conditions and on the general state of the market.

Q. Wasn't the ultimate thing you had in mind whether or not the price should be advanced or whether you would have to lower the price?

A. That may be true, I couldn't say what was in their minds.

Q. Really, wasn't that true that that is what you were driving at all the time?

A. *There is no question at all if I went to one of those meetings, I went there to get information if I could as to market conditions and the reason I wanted that information was to know what I would do with my prices, yes.*

Q. *That was the ultimate object you had in mind all the time?*

A. *Absolutely.*

Q. *That is what you wanted all of this information for?*

A. *Why, it would be useless to us for any other purposes.*

Q. *And that is the reason all of you exchanged all this information about yourselves, was it?*

A. *Yes, it was spoken of that way.* (Vol. I, pp. 330–331.)

On redirect examination Mr. Ralston stated that it was a year and a half or two years before that he had been on the Market Conditions Committee and that he did not know of any Market Conditions Committee maintained by the present association. He never served on the Cost Surveys Committee of the present association, and ceased attending the association meetings about May, 1923. (Vol. I, pp. 331–332.) The following interrogation then took place:

> Q. I wish you would state generally what was discussed or what had been discussed at the Association meetings, say, from March 1922, until you left.
>
> A. The discussion was the cost of production, market conditions to some extent, advertising—the Association put on a very elaborate advertising campaign a year or so ago—and general conditions of the lumber industry and the flooring industry. I think that was practically the——
>
> Q. About how long did those sessions last; how long did you use to stay at the Association meetings?
>
> A. Sometimes only in the morning. Occasionally I stayed for lunch; sometimes I was there a while in the afternoon. Sometimes I got in trouble; was called down for leaving; I was accused of going out to get business and let the Association run itself.
>
> Q. State whether or not at the Association meetings since its organization in 1922 they

discussed at those meetings the future prices of maple, beech, or birch flooring.

A. No; not at all. (Vol. I, p. 332.)

On recross-examination Mr. Ralston testified as follows:

Q. *You discussed past prices?*

A. *Past prices, yes; and general market conditions.*

Q. Did you stop right at the minute you were talking or did you stop an hour or two beforehand?

A. I really couldn't say where the stop was. The talk as a rule was all general.

Q. Just discussed the prices until you got up to the present and then you quit; is that it?

A. I didn't say that; I just simply said I really couldn't say. (Vol. I, pp. 332–333.)

An interesting commentary on the value of attending the Association meetings is contained in a letter dated January 31, 1923, from the North Branch Flooring Company to the Flanner Steger Land & Lumber Company and in the answer of the latter company dated February 5, 1923. Part of the first letter reads as follows:

> The writer was very glad to see Mr. Flanner at the meeting last week and wishes to take this opportunity to encourage your regular representation at these meetings. *We can say from actual experience that the personal contact and association with the other members has become very valuable to us and we have been able to capitalize this to a remarkable degree.* (Vol. IV, p. 479.)

And the answer stated:

> We are quite in accord with what you have to say regarding the value of attending the Flooring Association meetings. It is the expectation of Mr. Frank Flanner and myself that some one from this company will be at these meetings. (Vol. IV, p. 480.)

The appellant's brief states that "inasmuch as the expenses of members to and from the monthly meetings were paid by the association, it is not surprising that a majority of the members usually attended these meetings" (p. 232), but although that fact may explain why the member from Tupper Lake is able to make the 900-mile trip to Chicago every month, it does not explain why the member in Chicago is willing to contribute, through the association expense fund, a portion of the expenses of that trip. The latter fact certainly constitutes unparalleled generosity on the part of the member in Chicago, if, as intimated in the appellant's brief, the primary object in attending the association meetings is to secure the instruction or diversion offered by a great city or to make sales to customers in Chicago.

Great emphasis is placed by counsel for the appellants on the alleged reformation in the practices of the association in accordance with an opinion given by Mr. Newman after the decision by the Supreme Court in the Hardwood case. As stated heretofore, however, no change was made in the reporting system of the association on account of that decision, and the only material modification

made in the form of the association's activities appears to have consisted of the discontinuance of the Market Conditions Committee and of the monthly reports made by that committee analyzing and commenting on the association statistics, in accordance with the advice that the association "must see to it that no one classifies, analyzes, interprets, comments upon or makes any recommendations concerning the same, or makes any prophesies as to the future prices, output, or other matters." (Vol. III, p. 152.)

During the period from 1913 through 1921 the members of the association regularly received written analyses of conditions by the Market Conditions Committee along with their statistical reports, and it was not necessary for them to hold more than four or five meetings a year to transact the business of the Association. As testified by Mr. Keehn, however, the practice of holding monthly meetings was started *after the decision by the Supreme Court in the Hardwood case*, and meetings have been held nearly every month since then. The defendants who testified, and counsel for appellants in their brief, emphasize the necessity for the frequent meetings to discuss questions relating to grades and grading rules, to standardization, to manufacturing difficulties, to advertising, to traffic questions, to the tariff on flooring, to freight rates, and to labor troubles, but such questions must have arisen as frequently if not more frequently prior to 1922 than after that date, as no changes in the association grades or grading rules or in the standard

sizes have been made since the present articles of association went into effect.

The following table shows what subjects were actually most regularly discussed at the association meetings during 1922 after the reorganization of the association was completed and the new Articles of Association were adopted. The first twelve subjects are those suggested by the defendants as those requiring frequent discussion, and the last seven subjects are those which the government contends suggest the correct answer to the question why the practice of holding monthly meetings was instituted after the decision by the Supreme Court in the Hardwood Case and the consequent discontinuance of the written reports analyzing and interpreting the statistics.

1. Standardization				July 19

[1] Not mentioned in memorandum of meeting, but given in call for meeting as one of the subjects for discussion.

[2] Representatives of Department of Justice present at meeting.

NOTE.—The minutes of the Association meetings from which the data showing the subjects discussed was taken appear in the record as follows: April 20, 1920, Vol. III, p. 164; May 17, 1922, Vol. III, p. 171; June 21, 1922, Vol. III, p. 173; July 19, 1922, Vol. III, p. 176; August 16, 1922, Vol. III, p. 181; October 24, 1922, Vol. III, p. 185; November 15, 1922, Vol. III, p. 191; and December 19, 1922, Vol. III, p. 197.

19221—24†——10

That flooring data, stock conditions, and average costs computed in accordance with Article XIV of the Articles of Association were subjects of primary importance for discussion at the Association meetings held in 1922 is further shown by a consideration of the letters sent out by Mr. Keehn to remind the members of each meeting.[1]

The letter dated May 10, 1922, with reference to the meeting to be held May 17, 1922, reads in part as follows:

> Among the subjects to be discussed at the meeting are the following:
>
> * * * * *
>
> 3. The Committee on Cost Surveys will meet on the afternoon of the 16th and will make a comprehensive analysis of the Average Cost of Manufacturing and Marketing Maple Flooring as ascertained according to Article XIV of the Articles of Association, and will make a report to the general meeting.
>
> If you have recently purchased any rough Maple Lumber on the open market or if you have any information regarding any purchases or sales of same, will you please send the information on the 15th to the Secretary, giving the prices F. O. B. sawmill (omitting the location of the sawmill), and the cost of freight from the sawmill to your flooring plant? This information will be very useful to the committee in its work and it will be

[1] Letters to members giving the dates of meetings and the subjects for discussion were sent out under the following dates and are printed in the record as indicated: Vol. III, May 10, 1922, p. 170; June 15, p. 172; July 13, p. 175; Aug. 16, p. 181; Sept. 21, p. 184; Oct. 24, p. 185; Nov. 10, p. 190; Dec. 14, p. 196.

held strictly confidential and no information will be given revealing the identity of the buyer or seller, or the source of the information, if you so desire.

There has been a good volume of New Orders Booked since the last meeting, and it will be very interesting to know how business has been running during the first half of May. It looks as if the 13/16" x 2¼" face No. 1 Maple flooring will be oversold to a greater extent than on April 18th, the date of our last compilation.

Please remember to bring with you to the meeting the flooring data as per blank form below, so the data can be summarized and the members fully informed as to actual stock conditions, etc., on May 15th.

Yours very truly,

GEORGE W. KEEHN,
Secretary.

Flooring Data May 1–15, Incl.

Unfilled Orders	"	"	"	"
Unsold	"	"	"	"
Oversold	"	"	"	"

(Vol. III, p. 170).

Each notification of a meeting to be held requested the members to send or bring flooring data as per the blank form copied above and the letters dated July

13, 1922, and Aug. 10, 1922, emphasized the importance of this information as follows:

> It is important to know how the flooring business is running so far this month and we wish to suggest that if the members will supply the data as outlined on the blank form below covering the first half of July and mail the data to us at the close of business July 15th, or on Monday the 17th at the latest, that we will compile same and have it ready as soon as the meeting is called to order. This will save time and give you a better opportunity to consider the relations of supply and demand as reflected by the data than if the matter is delayed by our not getting these reports until the members arrive in Chicago and then not getting them compiled until late in the afternoon. (Vol. III, July 13, p. 175.)
>
> Please be sure and bring with you to the meeting the flooring data as per blank form below *so that you will have as complete information as possible regarding statistical conditions on the day of the meeting.* (Vol. III, Aug. 16, p. 181.)

That the flooring data requested in each notification of a meeting is especially important in enabling the members to forecast future conditions, and that the discussion of the statistical and trade conditions at least was not confined to the past, is indicated by the letter dated February 19, 1923, which Mr. Keehn sent to the members and which reads as follows (Vol. IV, p. 470):

FEBRUARY BUSINESS

To members:

GENTLEMEN: We have received flooring data from 14 members of the Association covering the first 13 days of February, from which it is estimated that if the business during the remainder of February averages about the same as the first 13 days and if the trade experiences of the other 8 members are about the same, that the February business will turn out about as follows:

Shipments about 26% less than in January.

Production about 21% less than in January.

New Orders about 41% less than in January.

The stock conditions of 13/16 x 2¼" face Maple flooring on February 13th of the same 14 members indicate as follows:

On Feb. 13—	Stocks on hand	Unfilled orders	Over-sold	% sold 14 members	% sold Feb. 1, all members
Clear	2,158 M	8,502 M	6,344 M	394%	411%
No. 1	1,424	6,812	5,388	478	407
Fety	1,099	3,118	2,019	284	389
	4,681	18,432	13,751	394	405

Yours very truly,

GEORGE W. KEEHN,

Secretary.

A note as to a discussion of the subject "trade conditions and the relations of supply and demand as reflected by our (the association's) statistical reports" is found in only two of the memoranda of meetings analyzed in the above table (p. 145). It is, however,

reasonable to assume from the statement in the letter dated December 14, 1922, to the effect that the November reports would be ready for the meeting so the members could know how the November business turned out, that those reports were discussed at the December meeting, to assume from the paragraph quoted above from the letter dated July 13, 1922 (p. 148), that the relations of supply and demand were discussed at the July meeting, and to assume from the following paragraphs in the letter dated October 24, 1922, not only that the subject of trade conditions and the relations of supply and demand was discussed at the October meeting but also that it has been the principal subject for discussion at every meeting:

> *It has now been two months since there has been a "gathering of the clan" and it is hoped that every member of the Association will be represented at the meeting so that trade conditions and the relations of supply and demand for flooring can be discussed and considered.*
>
> We expect to have our statistical reports for the month of September made out and in the mail for you on the 19th or 20th, so that you will have an opportunity to look them over in advance of the meeting, and see how the September business turned out. (Vol. III, p. 185.)

None of the memoranda of association meetings held since January 1, 1922, indicates that any discussion was held with reference to prices, past, present, or future, but the record contains letters to members dated June 15, 1922, and July 13, 1922, in

which Mr. Keehn specially requested the members to send in their weekly sales reports so that he could make up the association report and have it ready for the general meeting. (Vol. IV, pp. 461 and 462.) The remark appended to the request of August 15, "hoping you will be able to do this so that you will have information up to date regarding the market," certainly indicates that the sales reports were intended to be used as the basis for a discussion at the meeting of past and up to the minute prices, and substantiates Mr. Ralston's testimony that past prices and general market conditions were discussed at the association meetings even after the 1922 reorganization.

The evidence considered heretofore with reference to the procedure and discussion at the association meetings established that as in the case of the changes made in the sales and statistical reports shortly before the hearing in the court below the change made in the activities of the association after the decision by the Supreme Court in the Hardwood Case related entirely to the form of the activities and not at all to their substance and effect. The Market Conditions Committee was discharged, and the association resolved itself into a Committee of the Whole for the monthly discussion and analysis of the same matters which had formerly been discussed and analyzed in the monthly reports of the Market Conditions Committee. In fact, the practice of having the Market Conditions Committee analyze, interpret, and comment on the statistics was discontinued even before that committee

was discontinued, *because the members recognized the superior advantages of their present system of discussions at association meetings.* This is shown by the following paragraph from the minutes of the general meeting held August 19, 1921:

> *Market Conditions Committee.*—Mr. Thomas, Chairman of the Market Conditions Committee, stated that his Committee had nothing special to report as a Committee, no meeting having been held prior to the convening of the general meeting, as the members of the Committee felt that trade conditions and our July statistics could be discussed to just as good, if not better, advantage by the Association as a whole as to hold a separate meeting of the Committee. (Vol. III, p. 137.)

IX

Results of Combination

The brief for the appellants states (p. 161) that the Government abandoned its contention that there had ever been uniformity of prices. *On the contrary, however, the Government contended during the argument in the Court below, and it still contends, that the activities carried on by the defendants through the defendant association, which have been described heretofore, have caused a much greater uniformity of prices than could possibly have obtained under conditions of free and unrestricted competition.*

Of course, no contention has ever been made that there has been an absolute uniformity in the prices obtained by the defendants, as, considering the nature

of the commodity, it would undoubtedly be impossible to accomplish such a result. Maple flooring is not an article like cement or linseed oil, with reference to which it is undisputed that one barrel of cement is just like any other barrel of cement, and that one gallon of linseed oil is just like any other gallon of linseed oil. Such a product as Maple flooring, however, reflects in its finished state not only differences in the quality of the raw material used, but also differences in the quality of the workmanship in machining and finishing. There are consequently bound to be some differences in the product put out by the different members of the association, and such differences inevitably cause some lack of uniformity in their prices. Some of the witnesses examined by the defendants stated that the quality of the flooring produced by the Cadillac mills is in their opinion superior to that of the other members, and that they are always willing to pay those mills about a dollar per M more than they are willing to pay the other mills, and other witnesses testified that in their opinion the flooring produced by Horner is inferior and is therefore unable to command as high a price as other mills obtain. The record also shows that some members of the association have special trade-marked brands of flooring which they advertise extensively, and for which they have a special trade from which they are able to secure prices somewhat higher than the general level. Those factors must, of course, be taken into consideration when determining whether a *substantial* uniformity of

prices has been established and maintained. (Vol. I, pp. 261, 431; Vol. II, pp. 492, 562–563, 564.)

The Government also contended in the court below, and now contends, that the operation of the plan under which the defendants have conducted their business for many years, and especially the minimum price or average cost plan, the reporting system, and the monthly meetings, all of which have been described heretofore, necessarily and inevitably have caused increases in prices to be made more rapidly and decreases in prices to be made less rapidly than would have been the case without such operation under the plan.

To prove its contentions with reference to a uniformity of prices and to the observance of the so-called average costs as minimum recommended prices, the Government introduced in evidence a number of tabulations based on the weekly sales reports. These constitute Exhibit 79, and most of them are printed in the record. (Vol. IV, pp. 583–796.) The evidence of Horace A. Lewis, a special agent of the Bureau of Investigation of the United States Department of Justice, who made the tabulations, and the discussion between court and counsel with reference to them, are found on pp. 846–859, Vol. II, of the printed record. Briefly stated, the explanation of these tabulations is as follows:

The item 13/16″ x 2¼″ Maple Flooring, standard lengths, in the three grades clear, number one, and factory, was selected for the price comparison because

it is the most representative. The 13/16" x 2¼" maple flooring constitutes approximately 70% of the entire amount of flooring produced by the members of the association, and the average percentages of the three grades produced are: Clear, 50%; No. 1, 35%; and Factory, 15%. The item 13/16" x 2¼" Clear Maple Flooring therefore constitutes approximately 35% of the total amount of flooring produced by the members. (Vol. IV, p. 842, Vol. III, side pp. 1622 and 2052.)

The tabulations based on the sales reports which were in the possession of the Government prior to the hearing in the court below were figured for the three grades, but those based on the reports which came into the possession of the Government during the course of the hearing were only figured for the clear grade because of the lack of time. Only the tabulations for the item 13/16" x 2¼" Clear Maple Flooring were therefore considered, and only those based on the sales reports for the weeks ending November 19, 1921, to June 30, 1923, inclusive, are printed in the record.

The procedure followed in making the tabulations was to take each sales report and to take from it and to set down on what Mr. Lewis called the tabulation sheet, all the data given with reference to each sale of the selected item. These sheets, therefore, have the same general appearance as the sales reports, and show in successive columns from right to left (1) the date of the order, (2) the number of the mill

making the sale, (3) the quantity, (4) the delivered price per M, and (5) the average freight rate. These items of information are merely transcribed from the sales reports, except that during part of the period the sales reports give the index letters or freight rate symbols, whereas the average or Cadillac freight rate is shown on all the tabulation sheets. Mr. Lewis testified, nowever, that in every case he decoded the freight symbols by using the freight-rate book. The next column is entitled "Actual freight allowed" and sometimes "Freight charged." It might more properly be termed "Actual Cadillac freight" or "Actual average freight," as it shows the freight per M feet calculated on the basis of the average freight rate shown on tne sales report and of the association standard weight for the item of flooring under consideration of 2,000 pounds per M feet. It will be referred to hereinafter as the Cadillac freight. The practice adopted for the association rate books is, however, followed and the nearest multiple of 25 is actually used for the "freight allowed." Each calculation was checked with the freight table showing the cost of freight per 1,000 ft., which is included in the July 19, 1923, Rate Book and Index of Towns. The data given in one other column on the tabulation sheets, "commissions," is transcribed directly from the sales reports.

A uniform practice was unfortunately not followed in presenting the remaining data on the tabulation sheets. The sheets which were prepared first show

in the last column on the right what is called "Net Factory Price," which is the delivered price, less the Cadillac freight, less the commission, if any. Other tabulation sheets show what is called sometimes "Net Price Cadillac" and sometimes "Price F. O. B. Cars at Mill." The columns so entitled show the delivered price less the Cadillac freight. This might more properly be called the "Cadillac Base Price," and it will be so referred to hereinafter.

It is obvious that it is the Cadillac Base Price which must be considered when determining whether the so-called average costs have been maintained as minimum prices. As shown heretofore, the association rate books and delivered cost charts give the members (1) the so-called average cost, (2) the Cadillac freight rate, and (3) the delivered cost, which is the average cost plus the Cadillac freight. To determine whether the so-called "average costs" have been maintained as minimum prices, either of two methods could have been adopted for the purpose of comparing the prices actually obtained (as shown on the sales reports) with the so-called average cost; either the average cost *plus* the Cadillac freight could have been compared with the delivered price reported (as was done on the sales reports during the operation of the January 6, 1921, Minimum Price Basis, as described heretofore on p. 35), or the delivered price reported *less* the Cadillac freight could have been compared with the average cost. The Government chose the latter method, perhaps

unfortunately, as the use of the former would not have given the appellants an opportunity to claim, as is done on pages 336–348 of their brief, *that the commission allowed, if any, should also have been deducted in order to arrive at the Cadillac base price.* It is, however, frankly stated in the Appellants' Brief that that procedure, in accordance with which the elaborate calculations and charts appearing in the Brief and Appendices to the brief were prepared, *is based on the theory that what the seller received should be compared with the so-called "Average Cost."* The only trouble with that theory is that it has nothing whatsoever to do with any contention made by the Government or with any practice of the defendant association.

The actual comparison between the average cost as determined from time to time and reported to the members by the association, and the prices at which the members sold 13/16" x 2¼" clear maple flooring as shown by the weekly sales reports but reduced to a Cadillac base in the manner heretofore described, is made on what Mr. Lewis called the recaption sheets.

In order to illustrate clearly the manner of making this comparison, and also the different forms of tabulation sheets which were prepared, both the tabulation sheets and the recaption sheets of sales for the weeks ending, respectively, January 6, 1923, and June 30, 1923, are set forth in full below:

It is apparent that the Cadillac base prices compared with the average cost of $95.00 on the first reception sheet above are not what are called the Net Factory Prices on the first tabulation sheet above, but are those prices plus the commission which had been deducted previously. As explained above (p. 157) this is done in order to have the actual delivered sales prices reduced to the Cadillac basis, but not to an actual mill realization basis. The brief for the appellants, however, contends that the average costs of the present association should be compared with the net factory prices and that they must be ascertained by deducting from the delivered prices, both the average freight and the commissions. The argument on this point shows a total inability or unwillingness to meet the Government's contention, which briefly stated again is that the association has prepared and distributed freight rate books and average cost charts which show not only the average costs or f. o. b. Cadillac prices, but also the delivered costs or prices at every destination in the country—the latter being equal in each instance to the average cost plus the average freight or cost of freight or Cadillac freight, as given by the freight rate book; and that the only proper method of comparing the prices actually obtained by the defendants with the average costs is to consider all the elements which are considered in the average cost charts and freight rate books, but no others.

This theory is, of course, inconsistent with any theory of equal *realizations* from sales by all the

members of the association, and the Government has never contended that anything of the kind has existed in the maple flooring industry. However, no contention can possibly be made that the delivered cost or price at any destination as given by the rate books and tables of delivered values, consists of the average cost, plus the average freight, plus the commission, as no reference to commissions is made in the present articles of association, or in the rate books or tables of values distributed during their operation. The theory requiring that the commissions be taken into consideration when comparing the actual prices reported with the average costs, must, however, work both ways, and if it is not correct to add the commission when using one method of comparison it can not be correct to deduct it when using the other method.

In order to demonstrate the Government's contention that the commissions paid, if any, can not properly be considered when comparing the prices obtained by the members with the so-called average costs, the two tabulation sheets heretofore set forth (pp. 159, 160) have been refigured as per the following tables so as to compare *the delivered prices reported with the delivered costs shown by the delivered cost charts.*

Week ending January 6, 1923—average cost or f. o. b. Cadillac price for ¹³⁄₁₆″ x 2¼″ clear maple flooring, $95.00, as per determination of average cost, October 25, 1922.

Week ending June 30, 1923—average cost or f. o. b. Cadillac price for $\frac{13}{16}$*" x 2¼" clear maple flooring $105.00, as per determination of average cost, October 25, 1922*—Continued

SUMMARY

	Number of Sales	Feet	%
Delivered Sales *less* than Average Cost	5	63,000	18.9
Delivered Sales *at* Average Cost	14	210,000	62.9
Delivered Sales over Average Cost	9	61,000	18.2
Total	28	334,000	100.0

The results of the above calculations are of course exactly the same as the results of the comparisons shown on the reception sheets set forth on pages 160, 161, but on account of the variations in delivered prices due to freight differentials, the method of comparison last used does not give the information as to the actual spreads in prices that is given by reducing all the actual prices reported to a common basis.

All the Freight Rate Books, Tables of Values, Tables of Delivered Values, Average Cost Charts, Delivered Cost Charts, and Tables of Concessions and Additions secured by the Government were introduced in evidence, and all those relating to the period from January 1, 1921, to June 30, 1923, were used as the basis for the comparisons between the actual prices reported and the average costs. The following table gives the several average costs established during the period from November 12, 1921, to June 30, 1923, and the references to the tables or charts printed in the record on which they appear:

Average Cost F.O.B. Cadillac, ¹³⁄₁₆″ x 2¼″ Clear Maple Flooring	Date Established	Title of Reports in Record	Reference
$90.00	Nov. 17, 1921	Letter to Members, November 17, 1921.	Vol. III, p. 143.
$90.00	May 31, 1922	Survey of Costs, May 31, 1922	Vol. III, pp. 279–281.
		Rate Book and Average Cost Charts, etc., May 31, 1922.	Vol. III, side pp. 737–905.
$95.00	Oct. 25, 1922	Survey of Costs, October 25, 1922.	Vol. III, pp. 284–286.
$100.00	Feb. 15, 1923	Survey of Costs, February 15, 1923.	Vol. III, pp. 287–289.
		Tables of Differentials and Average Cost Charts, February 15, 1923.	Vol. III, side pp. 910–929.
$100.00	March 10, 1923	Survey of Costs, March 10, 1923.	Vol. IV, pp. 497–499.
$105.00	March 24, 1923	Survey of Costs, March 24, 1923.	Vol. IV, pp. 499–501.

Because of the long intervals that elapsed between the determinations of average costs dated November 17, 1921, and May 31, 1922, and also between those dated May 31, 1922, and October 25, 1922, the comparisons between the actual prices reported and the average costs for the period prior to October 25, 1922, are not nearly as interesting as those for the period after that date, when the present association was functioning smoothly and was making Surveys of Costs at least quarterly as provided by Article XIV of the articles of association. The results of the comparisons shown on all the recaption sheets printed in the record nevertheless are shown below in summarized and tabulated form:

Comparison of sales of 13/16" x 2¼" clear maple flooring as reported by members and reduced to Cadillac Basis with average costs reported to members

(NOTE.—The brief for appellants (pp. 345-346) calls attention to the fact that for the weeks ending September 30, October 7, October 14, and October 21, 1922, the reception sheets compare the Cadillac Base prices with the average cost dated October 25, 1922, or $95.00, instead of with the earlier lower average cost of May 21, 1922, or $90.00. The error obviously was not unfair to the defendants, as it represented some sales as having been made at prices less than the average cost, which the Government contends is a *minimum price*, whereas the correct comparison shows that during those weeks *every sale was made at a price above the minimum price*. The corrected figures have been used in the above tabulation.)

The following tables gives summaries of the above figures for: (1) Each month of the period from November 19, 1921, to June 30, 1923; (2) The period from November 19, 1921, to March 25, 1922, or until the reorganization of the Association was consummated by the adoption of the present articles of association; (3) The period from April 1, 1922, to June 30, 1923, or the entire period of the operation of the Association under its present articles of association; (4) The period from October 28, 1922, to June 30, 1923, when the Association was operating smoothly and was preparing and sending out Surveys of Costs at least quarterly as provided for in the present articles of association, and (5) The entire period from November 19, 1921, to June 30, 1923.

The results shown clearly demonstrate that there has been a remarkable uniformity in the delivered prices charged by the defendants, and an even more remarkable observance of the so-called average costs as *minimum prices*, especially during the operation of the association under its present articles of association.

Nov. 1s, 1921, to June 30, 1923	1,725	27,984,166	50.8	1,317	16,917,831	30.8	599	10,144,872	18.4

An analysis of the reception sheets comparing the so-called average costs with the actual sales prices reduced to the Cadillac basis for the periods before and after changes were made in the average costs clearly demonstrates the soundness of the Government's contentions that the so-called average costs are in fact recommended prices and that they exert a strong influence on the members' actual selling prices.

The October 25, 1922, average cost of $95.00 for ⅞″ x 2¼″ Clear Maple flooring was well established as the Cadillac base price even before the survey of costs of that date was prepared, so very apparently in that instance the prevailing market price for the item was accepted and was sent out as its average cost.

The sheet for the week ending January 6, 1923, shows that only three sales were made at Cadillac Base prices under the $95.00 average cost; that the prices on two of these sales were only $1.00 per M under the average cost and the price on the other was only 25¢ per M under the average cost, and that the total amount of these sales was only 19,000 ft., or 4.3% of the total volume sold during the week. The same sheet shows that *23 sales, totaling 220,700 ft., or 50.8% of the entire amount, were made at the Cadillac Base price exactly equal to the average cost,* and that twelve sales aggregating 195,302, or 44.9% of the total amount, were made at Cadillac Base prices above the average cost. Of these sales two were made at each Cadillac Base price, respectively,

50¢, 75¢, and $1.00 per M more than the average cost. (Vol. IV, p. 734.)

No material changes in the comparative results appear on the recaption sheets for the weeks ending, respectively, January 13, January 20, and January 27, 1923, except that the number and volume of sales made at the Cadillac Base price exactly equal to the average cost were much larger. The figures for those weeks are as follows:

Sales at Cadillac base price exactly equal to average cost for item of $95.00

	Sales	Ft.	% of total
January 13	46	1,262,800	91.4
January 20	95	1,739,050	86.8
January 27	91	1,287,000	85.2
February 3	63	1,302,957	80.0

For the same weeks, the volume of sales made at Cadillac Base prices below the average cost was respectively 55,000 ft. or 3.9%; 194,000 ft. or 9.6%; 31,000 ft. or 2%, and 128,000 ft. or 7.4%, and during the first three of those weeks the Cadillac Base price for 71% of the total volume of the sales below and above the average cost did not vary from the average cost by more that $1.00 per M. (Vol. IV, pp. 736, 739, 743, 747.)

The Cadillac Base price of $100.00 per M first appears on the sheet for the week ending January 20, 1923, as the price on one small sale. It is the highest price appearing on that sheet. One small sale at the same price appears on the sheet for the week ending January 27, but on the sheet for the week ending February 3, there are 12 sales for a total of 125,000 ft.

at the $100.00 per M Cadillac Base price. This represents 60% of the total volume sold at Cadillac Base prices above the established average cost of $95.00.

The sheet for the week ending February 10 (Vol. IV, p. 751) shows 3 sales totaling 29,000 ft. or 2.8% of the entire amount, made at Cadillac Base prices under the average cost, 14 sales totaling 409,000 ft. or 39.2% of the entire amount made at Cadillac Base prices exactly equal to the average cost, and 30 sales totaling 603,350 ft. or 58% of the entire amount, made at Cadillac Base prices above the average cost. Eighteen sales aggregating 513,100 ft., or 85% of the volume sold for more than the average cost, were made at the $100.00 per M Cadillac Base price. *Apparently $100.00 per M was accepted as the prevailing Cadillac Base price for 13/16" x 2¼" Clear Maple flooring, and the Survey of Costs dated February 15, 1923, established exactly that figure as its average cost.*

The sheet for the week ending February 17, of course, does not reflect to any considerable extent any results from the distribution to the members of the increased average cost. The comparison for that week is therefore still made with the $95.00 average cost. The sheet shows 1 sale, aggregating 26,850 ft., or 2.8% of the total, at a Cadillac Base price below the average cost; 16 sales, aggregating 269,500 ft., or 29.2% of the total, at the Cadillac Base price exactly equal to the average cost; and 34 sales, aggregating 626,300 ft., or 68% of the total, at Cadillac Base prices above the average cost. Twenty-one sales, for a total of 357,100 ft., or 38.7% of the

total, were made at the $100.00 per M Cadillac Base price. (Vol. IV. p. 754.)

The sheets for the weeks ending February 24 and March 3 show clearly the results accomplished by sending out the Association report dated February 15, which established the increased average cost. For the week ending February 17 twenty-two sales, aggregating 436,850 ft., or 47.4% of the total, were sold at Cadillac Base prices less than $100.00, but for the week ending February 24 only 8 sales, aggregating 167,000 ft., or 14.3% of the total, were sold at Cadillac Base prices below the new average cost of $100.00 per M; and for the week ending March 3 only 5 sales, aggregating 52,000, or only 7.2% of the total, were sold at prices below the average cost. Respectively, five and three of the lower sales appearing on the two sheets were made at Cadillac Base prices equal to the old $95.00 average cost. For the same weeks there were, respectively, 36 sales, aggregating 696,000 ft., or 59.8% of the total, and 31 sales, aggregating 552,000 ft., or 76.4% of the total, made at the Cadillac Base price exactly equal to the $100.00 average cost. (Vol. IV. pp. 757, 760.)

The sheets for the weeks ending respectively March 10 and March 17 do not show any material changes in the comparisons. They show respectively three sales aggregating 67,000 ft., or 9.3% of the total amount, and four sales aggregating 71,000 or 11.9% of the total amount, at Cadillac Base prices less than the average cost; 22 sales aggregating 385,600 ft. or 53.3% of the total amount and 21 sales aggregating 322,000 ft. or 54% of the total

amount at the Cadillac Base price exactly equal to the average cost; and 18 sales aggregating 271,839 ft. or 37.4% of the total amount and 13 sales aggregating 204,000 ft. or 34.1% of the total amount at Cadillac Base prices above the average cost. (Vol. IV, pp. 763, 765.)

The Cadillac Base price of $105.00 appears on the sheet for the week ending February 24. The sheets for that and the following weeks show:

Sales at Cadillac Base price of $105.00

	Sales	Feet	Per cent of total amount sold
February 24	2	8,000	0.7
March 3	7	58,370	8.0
March 10	10	197,000	27.3
March 17	6	119,000	19.9

A Survey of Costs dated March 10, 1923, was prepared and distributed to the members, but it did not make any change in the average cost for 13/16 x 2¼" Clear Maple Flooring. Another Survey of Costs dated March 24 was prepared and distributed, and it adopted the Cadillac Base price of $105.00 as the new increased average cost.

The sheet for the week ending March 24 shows 5 sales aggregating 74,000 ft., or 7.9% of the total amount, made at Cadillac Base prices less than the average cost, the $100.00 average cost of February 15, of course, being still used as the basis of comparison, 26 sales aggregating 398,000 ft. or 42.4% of the total amount made at the Cadillac Base price exactly equal to the average cost, and 24 sales aggregating 466,300 ft., or 49.7% of the total amount made at Cadillac Base prices higher than the average

cost. Fifteen of these sales aggregating 242,300 ft., or 25.8%, of the total amount were made at the Cadillac Base price of $105.00 per M.

The full effect of the Survey of Costs dated March 24, 1923 (Saturday) could not of course be reflected in the sales for the week ending the next Saturday, March 31, but the sheet for that week nevertheless makes the comparison with the new average cost of $105.00. On that basis it shows 16 sales aggregating 297,400 ft. or 56.9% of the entire amount made at Cadillac Base prices less than the average cost; seven sales aggregating 104,000 ft. or 19.9% of the entire amount made at the Cadillac Base price exactly equal to the average cost, and 5 sales aggregating 121,200 ft. or 23.2% of the entire amount made at Cadillac Base prices above the average cost. Nine sales aggregating 151,500 or 28.9% of the entire amount were sold at the Cadillac Base price exactly equal to the old average cost of $100.00, and if that had been used as the basis of comparison, only 3 sales representing .5% of the entire amount would have been sold at lower Cadillac Base prices.

The sheets for the weeks ending April 7 and April 14 reflect the full effect of the action establishing the increased average cost of $105.00 per M. They show:

Sales at Cadillac base price exactly equal to new average cost of $105.00

	Sales	Feet	Per cent of total amount sold
April 7	15	362,000	64.9
April 14	26	396,700	71.1

The same sheets show respectively 12 sales aggregating 106,800 ft. or 19.1% of the total amount and 4 sales aggregating 32,500 ft. or 5.9% of the total amount at Cadillac base prices below the average cost, but of these sales, respectively 5 sales aggregating 41,000 ft., or 38.4% (of amount sold below average cost) and 3 sales aggregating 28,000 ft., or 86.1%, were made at the Cadillac Base price exactly equal to the old average cost.

X

Economic defense

The defendants introduced in evidence in the court below the depositions of Edward Gordon, Grant Keehn, Professor Hettinger, and Professor Vanderblue, statisticians and economists either now or formerly connected with the Harvard School of Business Administration. Mr. Gordon and Mr. Keehn explained a number of comparative charts and tables which were introduced as exhibits to their depositions, and on the basis of which they testified that, as stated by Mr. Keehn—

> the study which Mr. Gordon and I made developed data and material such as to clearly indicate that the members of the Association did not have the ability to continuously control the prices of maple flooring, or, even if it be assumed that they had such abliity, comparisons with other prices, with prices of competing floorings, with the costs of maple flooring, and with the conditions of supply and demand of that product, do not offer any evidence of fixation or unreasonableness. (Vol. II, p. 714.)

Professors Hettinger and Vanderblue testified that they had reviewed the work of Mr. Gordon and Mr. Keehn and concurred in their conclusions.

The charts and tables introduced in connection with the defendants "economic defense" covered the period from 1913 through the first half of 1923, and the conclusion that they do not offer any evidence of the fixation or control of the prices of maple flooring of course pertains to the same period. According to these statisticians and economists, therefore, they have conclusively demonstrated that the agreements, called the Allotment Articles and the Minimum Price Plans and the Minimum Price Basis of the Maple Flooring Manufacturers Association, and the operation of the association and its members under and in accordance with those agreements; the practice of having a committee of experts, called the Market Conditions Committee, analyze statistics and conditions and advise the association members as to the prices they could and should obtain and as to the policies they should follow with reference to sales and production; and the practice of holding association meetings at which a "concensus of opinion" was frequently reached as to the prices that should be obtained, *did not constitute fixation or control of the prices of maple flooring.* If the price comparisons made by this economic defense have any value or probative force for the purpose for which they were used, they certainly indicate that there has been price fixation or control of the com-

modities used as the basis of comparison rather than that there has been no fixation or control of the prices of maple flooring.

John Knox Arnold, a special agent of the Federal Trade Commission who has been engaged for twelve years in the investigations of industries, usually under Congressional resolutions, testified as a witness for the Government. After analyzing the exhibits to the Gordon and Keehn depositions, Mr. Arnold stated a number of reasons why the conclusions reached by Mr. Keehn and Mr. Gordon can not possibly be proved by the charts and tables introduced by them for that purpose. Some of these reasons as given by Mr. Arnold are as follows:

> The COURT. Let me ask you this question: From your experience in research work is it not true that unless there is an absolute monopoly and thus an absolute control, will not the general trend of prices of any commodity be in accordance with the law of supply and demand—now I mean by that the trend?
>
> A. The trend will be; yes, sir. (Vol. II, p. 821.)
>
> *It must be kept constantly in mind that such charts merely show the direction and rate of the change and not the extent or magnitude of the change.*
>
> An attempt has been made by means of various charts, indicated as exhibits in the testimony of Messrs. Gordon and Keehn, to show that other causes than concerted action or control have been responsible for the extent or magnitude of changes that have occurred

in the prices, production, and stocks of maple flooring. To do this, it would of course be necessary to account for one hundred per cent of all changes in prices, production, and stocks as being due to other causes, so as to leave nothing for the control cause to effect; but this has not been done, no such exact quantitative effect is shown by any of the charts; only trends and especially cyclical trends are shown, which is attempted to disprove control by ignoring it; by the same method it could be shown that costs of production have no effect upon prices of maple flooring. Merely omit costs and state that the other factors show the same trend of movement as the prices show, which would probably be true, and it would be proven that cost don't affect prices. (Vol. II, p. 823.)

In connection with what you have just stated, your Honor, I might add this, that in describing these charts and these trends, and so forth, I have not been criticising their use in connection with this so-called cyclical trend, which merely is a guess and something that is necessary, however, in the business, because it is a little better guess than a guess based on nothing. It has not been perfected up to this time, however, to any considerable extent. *What I am basing my remarks on is solely whether these charts and the comment on them prove that there was not control. I do not argue on the other side that the charts prove there was control, because you can not prove that by charts: you can't prove it either way.* (Vol. II, p. 824.)

XI

Discussion of the Law

1. *It is not necessary to prove a direct agreement to fix or control the prices of the commodity in question. It is sufficient to prove the adoption of a plan or scheme, which in its operation necessarily affects the prices; and to warrant an injunction it must, of course, be also shown that the plan or scheme is in operation.*

In *American Column & Lumber Company* v. *United States*, 257 U. S. 377, 399, the Court said:

> *Obviously the organization of the defendants constitutes a combination* and confessedly they are engaged in a large way in the transportation and sale of lumber in interstate commerce so that there remains for decision only the question whether the system of doing business adopted resulted in that direct and undue restraint of interstate commerce which is condemned by this antitrust statute.

See also *United States* v. *American Linseed Oil Co.*, 262 U. S. 371.

2. *The question of fact is: Does the operation of the scheme materially affect the prices or production of the commodity moving in interstate commerce?*

In fact, the real matter of inquiry is the effect of its operation upon *prices;* but curtailment of production is important because prices are thereby increased. Strictly speaking production is a local matter; and it is only when its reduction is coupled with an intent to increase the price, or the effect of its reduction is necessarily to increase the price, that its willful curtailment is unlawful.

With reference to prices, the Chief Justice, speaking for the Court, in *Board of Trade* v. *Olsen*, 262 U. S. 1, 39, 40, said:

> If a corner and the enhancement of prices produced by buying futures directly burden interstate commerce in the article whose price is enhanced, it would seem to follow that manipulations of futures which unduly depress prices of grain in interstate commerce and directly influence consignment in that commerce are equally direct. *The question of price dominates trade between the States.* Sales of an article which affect the country-wide price of the article directly affect the country-wide commerce in it.

3. *As heretofore shown, the operation of the association brought about uniformity of price in about 50% of the sales of the most important kind of flooring made between October, 1921, and June, 1923, and prices equal to or in excess of the so-called cost price in at least 82% of the sales during that period. But it is wholly unnecessary to prove that the operation of the scheme or plan does, or will, produce uniformity of prices.*

The question is, are prices made higher or lower than they would be if controlled entirely by the natural law of supply and demand? In the Hardwood case great reliance was had by the members of the association upon the fact that there was never a condition approaching uniformity. In fact the spread between the highest and lowest prices became greater. For illustration, the spread in prices of f. a. s. sap gum in January, 1919, was $7.00, while in

January, 1920, it had increased to $22.50. During the same period the spread in f. a. s. plain white oak increased from $6.00 to $81.25; and in No. 1 common poplar from $5.00 to $53.25. It was urged that this conclusively showed that there was no agreement to fix prices. But the Court held that, while it was perfectly apparent that there was no understanding *to fix* prices, yet the scheme when operated induced every one to get the *highest* prices he could, and gave him the exact information which enabled him to extort the highest prices.

In the Linseed Oil case (*United States* v. *American Linseed Oil Co.*, 262 U. S. 371) sometimes the prices would remain practically uniform for months, and then movements would begin which resulted in the most variable prices extending over weeks and sometimes months. But it was manifest that the actions of the several members were much more greatly affected by that of other members than they would have been if competition had been unrestrained.

The extent of the uniformity produced by a scheme of this kind depends upon the conditions of the market and very greatly upon the nature of the commodity. Take a stable commodity like flour, where the profit is but a small amount per hundred pounds, the variation in prices is necessarily small regardless of whether the millers have an association or not. With lumber it is different. In an active market the profit upon a thousand feet may be several dollars; and while one man may be satisfied with a profit of $3.00 per thousand, another will

want to exact $5.00, or if possible $10.00 per thousand. When the market is inactive the prices are nearer uniform, but through concert of action arising from the knowledge each one has of the business of all of his competitors, the prices are held at an unnaturally high level. Under both conditions the effort of the association members is to get all they possibly can and to aid each other in getting it. And when they all by tacit understanding have in mind a minimum price it will result in more or less uniformity at or about that price, with now and then a sale below, and more often a sale above that price. But there will generally be enough variation to enable them "to point with pride and confidence" to the lack of uniformity, and especially to the spread in prices. The spread, however, means but little, as a small sale for peculiar reasons may be made at a very high price, while a very large sale may be made at a specially low price, thus making a very considerable spread between them.

4. *A matter of special inquiry is, does the association scheme or plan bring about an abnormal and unusual relationship as to their business matters between those who are naturally competitors?*

In *United States* v. *American Linseed Oil Company*, 262 U. S. 371, 388, the Court said:

> In *American Column & Lumber Company* v. *United States*, 257 U. S. 377, we considered a combination of manufacturers got up to effectuate *this new conception of confidence and competition* and held it within the inhibi-

tion of the Sherman Act *because of inevitable tendency to destroy real competition, as long understood, and thereby restrain trade.* Our conclusion there can not be reconciled with the somewhat earlier opinion and judgment of the court below. They are in direct conflict.

The Sherman Act was intended to secure equality of opportunity and to protect the public against evils commonly incident to monopolies *and those abnormal contracts and combinations which tend directly to suppress the conflict for advantage called competition—the play of the contending forces ordinarily engendered by an honest desire for gain.* "The statute did not forbid or restrain the power to make normal and useful contracts to further trade by resorting to all normal methods, whether by agreement or otherwise, to accomplish such purpose * * * The words restraint of trade should be given a meaning which would not destroy the individual right to contract and render difficult if not impossible any movement of trade in the channels of interstate commerce—the free movement of which it was the purpose of the statute to protect." *United States* v. *American Tobacco Company,* 221 U. S. 106, 179, 180; *Ramsay* v. *Associated Bill Posters,* 260 U. S. 501; *Federal Trade Commission* v. *Sinclair Refining Company,* 261 U. S. 463.

Certain it is that the defendants are associated in a new form of combination and are resorting to methods which are not normal. If, looking at the entire contract by which they are bound

> together, in the light of what has been done under it the court can see that its necessary tendency is to suppress competition in trade between the States, the combination must be declared unlawful. That such is its tendency, we think, must be affirmed. To decide otherwise would be wholly inconsistent with the conclusion reached in *American Column & Lumber Company* v. *United States*, supra.

And again (p. 390):

> We are not called upon to say just when or how far competitors may reveal to each other the details of their affairs. In the absence of a purpose to monopolize or the compulsion that results from contract or agreement, the individual certainly may exercise great freedom; *but concerted action through combination presents a wholly different problem and is forbidden when the necessary tendency is to destroy the kind of competition to which the public has long looked for protection.* The situation here questioned is wholly unlike an exchange where dealers assemble and buy and sell openly; and the ordinary practice of reporting statistics to collectors stops far short of the practice which defendants adopted. *Their manifest purpose was to defeat the Sherman Act without subjecting themselves to its penalties.*

There the unnatural relationship was brought about by each member making an independent contract with the Armstrong Bureau; while here, as in the Hardwood case, it is consummated through an association composed of the individual defendants. And in the Hardwood case (257 U. S. 377, 410) the court in

commenting on the actions of the defendants in compiling reports of their business operations for circulation among their competitors said:

> This is not the conduct of competitors, but is so clearly that of men united in an agreement, express or implied, to act together and pursue a common purpose under a common guide that if it did not stand confessed a combination to restrict production and increase prices in interstate commerce, and as therefore a direct restraint upon that commerce, as we have seen that it is, that conclusion must inevitably have been inferred from the facts which were proved.

5. *If it be not shown that the necessary effect of the scheme or plan is to restrain interstate commerce, yet its operation should be enjoined, if it be shown that it can be so used, and that it is the intent of the parties to so use it.*

If the necessary result of an agreement or the operation of a scheme be to restrain interstate commerce, it can make no difference whether the restraint was intended or not. In *United States* v. *Patten*, 226 U. S. 525, 543, the court said:

> And that there is no allegation of a specific intent to restrain such trade or commerce does not make against this conclusion, for, as is shown by prior decisions of this court, the conspirators must be held to have intended the necessary and direct consequences of their acts and can not be heard to say the contrary. In other words, by purposely engaging in a conspiracy which necessarily and directly

> produces the result which the statute is designed to prevent, they are, in legal contemplation, chargeable with intending that result. *Addyston Pipe & Steel Co.* v. *United States*, 175 U. S. 211, 243; *United States* v. *Reading Co.*, 226 U. S. 324, 370.

And to the same effect in *Eastern States Retail Lumber Dealers' Association* v. *United States*, 234 U. S. 600, 612, the Court said:

> But it is said that in order to show a combination or conspiracy within the Sherman Act some agreement must be shown under which the concerted action is taken. It is elementary, however, that conspiracies are seldom capable of proof by direct testimony and may be inferred from the things actually done, and when in this case by concerted action the names of wholesalers who were reported as having made sales to consumers were periodically reported to the other members of the associations, the conspiracy to accomplish that which was the natural consequence of such action may be readily inferred.

When the intent becomes important appears from the following authorities:

In *United States* v. *Terminal Railroad Association*, 224 U. S. 383, 394–5, the Court said:

> Whether it is a facility in aid of interstate commerce or an unreasonable restraint forbidden by the act of Congress, as construed and applied by this court in the case of *The Standard Oil Company* v. *The United States*,

> 221 U. S. 1, and *The United States* v. *American Tobacco Company*, 221 U. S. 106, will depend upon the intent to be inferred from the extent of the control thereby secured over instrumentalities which such commerce is under compulsion to use, the method by which such control has been brought about and the manner in which that control has been exerted.

And on the same subject the Court said in *United States* v. *Reading Company*, 226 U. S. 324, 370:

> Whether a particular act, contract or agreement was a reasonable and normal method in furtherance of trade and commerce may, in doubtful cases, turn upon the intent to be inferred from the extent of the control thereby secured over the commerce affected, as well as by the method which was used. Of course, if the necessary result is materially to restrain trade between the States, the intent with which the thing was done is of no consequence. But when there is only a probability, the intent to produce the consequences may become important.

In other words an instrument which within itself is harmless may be used for an illegal purpose. And while it will be allowed to remain in the possession of one who intends to use it for an innocent purpose, it will be taken away from him who intends to use it to accomplish an unlawful purpose.

With reference to the defendant association the Government insists first, that the inevitable effect of its operation is to affect the prices of maple flooring which is an article that moves in interstate commerce;

and second, that if the association could be so conducted that its operation would not have such an effect, yet the past history of the conduct of the members of the association, and the character of its present activities are such that no other conclusion can possibly be reached than that defendants maintain the organization for the purpose of controlling prices of maple flooring. In other words that they intend to bring to bear through this agency influences which will not permit prices to be regulated solely by the law of supply and demand.

6. *It is no defense that the defendants did not intend to violate the law, and that they filed copies of their plan with the Department of Justice and the Federal Trade Commission.*

In this case all evidence of this character is absolutely immaterial. The sole question here is whether this scheme actually restrains, or is intended to bring about a condition which in fact is a restraint upon interstate commerce.

As above quoted from *United States* v. *Patten*—

> by purposely engaging in a conspiracy which necessarily and directly produces the result which the statute is designed to prevent, they are, in legal contemplation, chargeable with intending that result.

And even if the illegality of the scheme or combination depends upon the intent, the inquiry is not whether they intended to violate the law, but whether they intended to bring about the condition or do the thing which in fact restrains commerce.

7. *It is no defense that some benefits may have resulted from the operation of the scheme or combination.*

In *Standard Sanitary Mfg. Co.* v. *United States*, 226 U. S. 20, it was earnestly urged upon the Court that great benefits had resulted to the public from the combination of the manufacturers of bathtubs, in that the poorer articles were kept off the market, and a purchaser received what he supposed he was buying; but the Court (p. 49) said:

> Nor can they (the prohibitions of the statute) be evaded by good motives. The law is its own measure of right and wrong, of what it permits or forbids, and the judgment of the courts can not be set up against it in a supposed accommodation of its policy with the good intention of parties, and it may be of some good results. *United States* v. *Trans Missouri Freight Assn.*, 166 U. S. 290; *Armour Packing Co.* v. *United States*, 209 U. S. 56, 62.

8. *It is no defense that the prices of maple flooring were and are reasonable, if such be the fact.*

Such a contention was insisted upon in *United States* v. *Addyston Pipe & Steel Co.*, 85 Fed. 271, but the court (p. 293) said:

> It has been earnestly pressed upon us that the prices at which the cast-iron pipe was sold in pay territory were reasonable. A great many affidavits of purchasers of pipe in pay territory, all drawn by the same hand or from the same model, are produced, in which the affiants say that, in their opinion, the prices at which pipe has been sold by defendants

have been reasonable. We do not think the issue an important one because, as already stated, we do not think that at common law there is any question of reasonableness open to the courts with reference to such a contract. Its tendency was certainly to give defendants the power to charge unreasonable prices had they chosen to do so.

9. *The contention that the association created only a reasonable restraint upon interstate commerce is devoid of merit.*

This contention arises out of a misapprehension of the meaning of "the rule of reason" stated by the Chief Justice in the Standard Oil case.

Realizing that his language had been misinterpreted he clarified its meaning in the opinion handed down a few weeks later in *United States* v. *American Tobacco Co.*, 221 U. S. 106, in the following language:

> It was therefore pointed out that the statute did not forbid or restrain the power to make normal and usual contracts to further trade by resorting to all normal methods, whether by agreement or otherwise, to accomplish such purpose. In other words, it was held *not that acts which the statute prohibited could be removed from the control of its prohibitions by a finding that they were reasonable* but that the duty to interpret which inevitably arose from the general character of the term restraint of trade required that the words restraint of trade should be given a meaning which would not destroy the individual right to contract and render difficult if not impossible any move-

> ment of trade in the channels of interstate commerce—the free movement of which it was the purpose of the statute to protect (p. 179).

There can be no doubt that the court entertained the same views which were expressed by the Circuit Court of Appeals for the Sixth Circuit in the Addyston Pipe & Steel Co. case. After reviewing in detail all the authorities relied upon by the defendants, wherein it had been held that the contracts in question were reasonable and not in restraint of trade, that court said:

> For the reasons given, then, covenants in partial restraint of trade are generally upheld as valid when they are agreements (1) by the seller of property or business not to compete with the buyer in such a way as to derogate from the value of the property or business sold; (2) by a retiring partner not to compete with the firm; (3) by a partner pending the partnership not to do anything to interfere, by competition or otherwise, with the business of the firm; (4) by the buyer of property not to use the same in competition with the business retained by the seller; and (5) by an assistant, servant, or agent not to compete with his master or employer after the expiration of his time of service. Before such agreements are upheld, however, the court must find that the restraints attempted thereby are reasonably necessary (1, 2, and 3) to the enjoyment by the buyer of the property, good will, or interest in the partnership bought, or (4) to the legitimate ends of

the existing partnership; or (5) to the prevention of possible injury to the business of the seller from use by the buyer of the thing sold; or (6) to protection from the danger of loss to the employer's business caused by the unjust use on the part of the employee of the confidential knowledge acquired in such business. (Citing authorities.)

It would be stating it too strongly to say that these five classes of covenants in restraint of trade include all of those upheld as valid at the common law; *but it would certainly seem to follow from the tests laid down for determining the validity of such an agreement that no conventional restraint of trade can be enforced unless the covenant embodying it is merely ancillary to the main purpose of a lawful contract, and necessary to protect the covenantee in the enjoyment of the legitimate fruits of the contract, or to protect him from the dangers of an unjust use of those fruits by the other party.* (85 Fed. 281, 282.)

In other words whether a restraint is reasonable or not depends upon the character of the agreement or agency that brings it about, and not upon the extent of the restraint. Is the agency an unusual and abnormal one? If so the restraint is unreasonable and unlawful. That this is especially so with reference to restraints arising from these open-price associations is conclusively shown by the language of the court above quoted from the opinion in the Linseed Oil case.

10. *The relief to which the Government is entitled.*

Defendants appear to insist that the association has the right to do certain things, as for instance to standardize maple flooring and maintain inspectors; and therefore that the court should specify what particular things the association can do, and so limit the injunction as to exclude such activities from its provisions. *But to comply with such contention would be for the court to undertake to construct an association for the defendants which according to the court's view would be a legitimate one.* This the court will not do, because it never can be determined in advance what the effect of a particular organization will be; and the court might authorize the formation of an association to exercise certain functions which in actual operation would result in the most serious restraint of interstate commerce. Certainly parties who have openly violated the law by creating and engaging in an unlawful combination can not invoke the agency of the court to create for them a different combination which the court might consider legitimate.

The situation here presented is quite different from the conditions existing when the acquisition of various properties by a corporation, or the merger of a number of corporations into one, have been held to constitute a monopoly or an unlawful combination in violation of the Anti-Trust Act. There the rights of property are involved, and the court will not destroy the property, but direct that it be restored to the original owners, or be so divided that

a further violation of the statute will not exist. But here no property rights are involved. There exists nothing but an agreement or combination which the defendants have entered into and in which they are engaging; and the status quo is restored and the restraints upon commerce are stopped by a simple decree declaring the agreement and combination unlawful, and inhibiting the defendants from further engaging therein, or in any combination of like character.

An unlawful conspiracy may be composed of elements each of which when considered alone is lawful. As said in *Swift* v. *United States*, 196 U. S. 375, 396:

> The scheme *as a whole* seems to us to be within reach of the law. The constituent elements, as we have stated them, are enough to give to the scheme a body and, for all that we can say, to accomplish it. Moreover, whatever we may think of them separately, when we take them up as distinct charges they are alleged sufficiently as elements of the scheme. *It is suggested that the several acts charged are lawful and that intent can make no difference. But they are bound together as the parts of a single plan. The plan may make the parts unlawful.*

Defendants' contention leads to the absurd result that where each element of a conspiracy is when standing alone lawful no injunctive decree can be entered, although the conspiracy composed of these several elements may be unlawful and accomplish the most harmful results.

This question was conclusively settled in *American Column & Lumber Co.* v. *United States, supra.* There the court entered a *sweeping decree declaring the association an unlawful combination and inhibiting the defendants from engaging in any of the activities provided for by its organization.* On the hearing defendants' counsel earnestly insisted that the decree was too sweeping and that the court should specify certain things which the association could legitimately do. *The court disregarded this insistence and affirmed the decree of the court below in toto. A petition for a rehearing was filed, in which it was again urged upon the court that a limitation should be placed upon the decree and that the defendants should not be enjoined from separately doing a number of the things prescribed by the association, but the petition was dismissed by the court.*

In fact the question had been settled in the case of *Swift* v. *United States*, 196 U. S. 375, 401–2. A broad decree inhibiting the defendants from engaging in any of the things alleged in the bill had been entered by the court below, and it was insisted that the decree should be modified in certain particulars. The only modification directed by the court was that in one or two particulars it should be made more specific. But the court especially considered the allegations in the bill (the case had been disposed of on demurrer) wherein it was alleged that defendants had engaged in and would continue arrangements with the railroads whereby the defendants received, by means of rebates and other devices, rates less than the lawful rates for transportation,

and were exclusively to enjoy and share this unlawful advantage to the exclusion of competition and the public (p. 392). The court stated that the acts here charged, apart from the combination and the intent, might perhaps not necessarily be unlawful except for the adjective which proclaimed them so, and the court assumed for the purpose of the decision that they were not unlawful, and that the defendants severally might lawfully obtain less than the regular rates for transportation if the circumstances were not substantially similar to those for which the regular rates were fixed; but the Court said:

> Whether this particular combination can be enjoined, as it is, apart from its connection with the other elements, if entered into with the intent to monopolize, as alleged, is a more delicate question. The question is how it would stand if the tenth section were the whole bill. Not every act that may be done with intent to produce an unlawful result is unlawful, or constitutes an attempt. It is a question of proximity and degree. The distinction between mere preparation and attempt is well known in the criminal law. *Commonwealth* v. *Peaslee*, 177 Massachusetts, 267, 272. The same distinction is recognized in cases like the present. *United States* v. *E. C. Knight Co.*, 156 U. S. 1, 13; *Kidd* v. *Pearson*, 128 U. S. 1, 23, 24. We are of opinion, however, that such a combination is within the meaning of the statute. It is obvious that no more powerful instrument of monopoly could be used than an advantage in the cost of transportation.

> And even if the advantage is one which the act of 1887 permits, which is denied, perhaps inadequately, by the adjective "unlawful," still a combination to use it for the purpose prohibited by the act of 1890 justifies the adjective and takes the permission away (196 U. S. 401, 402).

For the foregoing reasons the decree of the court below should be in all things affirmed.

JAMES M. BECK,
Solicitor General.

J. A. FOWLER,
C. STANLEY THOMPSON,
Special Assistants to the Attorney General.

In the Supreme Court of the United States

OCTOBER TERM, 1924

MAPLE FLOORING MANUFACTURERS ASSOCIATION et al.
v.
UNITED STATES OF AMERICA
No. 342

REPLY BRIEF ON BEHALF OF THE UNITED STATES

Because of the circumstances existing when the brief heretofore filed on behalf of the Government was prepared, and the short period of time before argument counsel for the Government had in their hands the brief filed for appellants, it was impossible to prepare a brief containing a reply to many questions elaborately discussed in appellants' brief. Consequently this brief has been prepared, which counsel believes presents the Government's case more fully and satisfactorily than the former one; and it is asked that it be substituted for the brief filed previous to the former arguments.

STATEMENT OF CASE

(Italics in quotations are ours, if not otherwise stated)

This is an action brought by the United States against the Maple Flooring Manufacturers Associ-

ation and its several members to enjoin an alleged violation of the Sherman Antitrust Act. The original bill was filed on March 5, 1923; and it alleges in substance that the defendants, who manufacture a very large per cent of the maple, beech, and birch flooring marketed in the United States, fix minimum prices upon such commodity, and control its production and prices in the market by the observance of provisions contained in the plan of the association, which provide for the computation and distribution among the membership of alleged average costs, being in fact agreed minimum prices, for the adoption and distribution of freight rate books, for an open price reporting plan, and for meetings of the members of the association. (Vol. I, pp. 1–12.) For the reasons fully set forth in its opinion, a decree was entered by the District Court in favor of the Government (Vol. I, pp. 52–60), wherein it was adjudged that the articles of association and activities thereunder were violative of the Antitrust Act; and it was ordered that the association be dissolved, and that the defendants and their agents be enjoined from further engaging in the practices specifically described in the bill and also in the decree. (Vol. I, pp. 60–61.) Defendants assigned errors, and prosecuted an appeal to this court.

BRIEF AND ARGUMENT

No attempt will be made to answer in detail all the questions discussed in the brief filed on behalf

of appellants. It is believed that some of those questions are not at all determinative of the case, and this brief would thereby be extended without justification to an unreasonable length. However, the case is of such importance that the material evidence bearing upon the questions regarded as vital will be both cited and freely quoted from, as the court can thereby perceive its pertinency much more readily than if required to pick it out guided by mere citations from the mass of matter in the record, much of which is not regarded of sufficient value to justify its perusal.

I

The nature and extent of the industry involved, and its control by appellants

As is customary in this character of case, an effort is made to show that the industry involved is not important in comparison with others; that it is hedged about with competition which threatens its destruction, and can be saved only by drastic and concerted action by those engaged therein; and, especially, that it is not controlled by the organization attacked.

How old the maple, beech, and birch flooring industry is does not appear from the evidence in the record. It is probably true that fifty years ago there was no such industry; but the same is true as to the manufacture of electrical appliances of all kinds, of aluminum ware, of automobiles, of many of the most important steel and iron implements,

of cement, and of numerous other industries, which together produce by far the greater bulk of the enormous commerce which now flows from State to State and into foreign countries; and every one of those industries has its competitors who are endeavoring to limit its field to as narrow boundaries as possible.

Twenty years ago there was a sufficient number engaged in the industry to form an association and choose Mr. Keehn as its secretary; and he has been acting continuously in the same capacity with like organizations down to the present time. Nor is it one of the small and insignificant industries. The table on side page 3556, page 518, Volume IV, shows the production of maple, beech, and birch flooring in the United States for the five years ending with 1922; and the production for the last year was 210,819,000 feet; and if sold for an average of $50 per M, which is much too low as will appear from prices hereinafter set forth, the manufacturers received $10,500,000 for their product. True this is not large when compared with the entire lumber industry; but Mr. Smith, who was from March, 1920, to some time in 1922, Assistant Secretary and Statistician of the National Lumber Manufacturers Association, names eleven associations, composed of manufacturers of rough lumber located at different parts of the United States, which then composed such National Association (Vol. I, pp. 183–184); and there must be several

other associations connected with the different branches of the lumber industry, as the defendant association is not included in the number mentioned by Mr. Smith. Apparently, therefore, each branch of the lumber industry and each of many groups of producers of rough lumber has its separate organization; and among them the appellant association is not at all insignificant.

Effort is also made to show the impossibility of defendants exercising a dominating influence over the industry by showing the enormous amount of maple timber standing in the forests, how widely it is scattered, and the great number engaged in producing maple lumber, and how easily they can convert their plants into flooring mills. In fact, the picture drawn gives an impression that is entirely false. The fact is that it is an industry which nature has practically confined to Michigan and Wisconsin; and it is dominated by appellants acting through their association.

Mr. Brush, who is Scientific Assistant of the Forest Service, testifies that in 1920 he made a special study of the wood-using industries in the State of Michigan, and that the total amount of maple lumber used by the factories in Michigan in that year was 286,363,000 board feet, of which 178,477,000 feet were used in planing-mill products; and he states that as a conservative estimate 90 or 95% of such products was flooring (Vol. I, pp. 178–180). He also says that there are two commercial kinds of maple, one hard and the other

soft; that the hard maple will stand a great deal of wear, while the soft is not so durable under conditions necessitating considerable wear; that hard maple is very largely used in the manufacture of maple flooring, soft maple not producing a flooring nearly so satisfactory; that soft maple flooring would not be able to compete successfully with flooring made of hard maple; that hard and soft maple grow together more or less, but that, as a general rule, the two together do not grow in commercial stands in large quantities; *that the "Lake States contain the principal hard maple stands in this country, namely Michigan, and to a less extent probably Wisconsin";* that he can hardly answer the question which kind of maple predominates in the other maple-producing centers, but he knows that the soft maple is very important in New England, probably more important than the hard maple. (Vol. I, pp. 179-180.)

Mr. Franklin H. Smith, who when his deposition was taken, was in charge of the Lumber Commodity Division of the United States Tariff Commission, and who had previously been Assistant Secretary and Statistician for the National Lumber Manufacturers Association, and had also been with the Forest Service from March, 1908, until March, 1920, testified that the bulk of maple lumber is produced in the Lake States region, particularly Michigan and Wisconsin; that maple is also found in the Northeastern States—Maine, New Hampshire, Vermont, New York and Pennsylvania—and also

grows in West Virginia; that there is hard and soft maple, and that the two varieties are found together only to a slight extent; *that hard maple is found largely in Michigan and Wisconsin;* that from his work in the Forest Service he became familiar with the figures of production of lumber in various sections of the country, and that he would say *in Michigan and Wisconsin 95 to 98% of the maple cut was hard maple; and in the Northeastern States 75% of the maple cut was soft; that in West Virginia and adjoining States, so far as applicable to the Appalachian region, possibly 60% was hard and 40% soft; that maple was produced in minor or limited quantities in the Mississippi Valley and in fact in all of the hardwood producing States, of which in his judgment 75% was soft and 25% hard; that he would say that a large percentage of the maple produced in Michigan and Wisconsin is converted into flooring; that probably 90% of the maple utilized by planing mills was for the production of flooring, and that he thinks he has kept in close enough touch with the conditions to state that the percentages mentioned still hold good.* (Vol. I, pp. 186–188.) And with reference to the relative value of hard and soft maple flooring, and where the industry is concentrated, he testifies:

> Q. Which of the two species of maple that you have mentioned is suited to manufacture maple flooring?
>
> A. Hard maple, because of its hardness of texture and wear resisting qualities.

Q. Is soft maple used, too, for the manufacture of maple flooring at all?

A. If it is so used, it would be used only in isolated cases.

Q. Where is the maple flooring industry in this country centered?

A. In Michigan. (Vol. I, p. 188.)

With but three exceptions the plants of the defendant corporations are located in the States of Michigan and Wisconsin. Some time before the hearing the defendants took the deposition of Edward B. Gordon, who is on the Research Staff of the Bureau of Business Research of Harvard University; and Mr. Gordon testified that from Hendricks' Commercial Register, the only source of information he could find upon the subject, he took a list of those engaged in the manufacture of maple, beech, and birch flooring whose names did not appear in a list prepared by Mr. Keehn, the secretary of the association; and the two lists, one prepared by Mr. Keehn and the other by Mr. Gordon, which together purport to show the nonmembers of the association engaged in the business, were filed as Exhibits 1 and 2 to Mr. Gordon's deposition. (Vol. II, pp. 626–7.) To secure accurate data as to the production of such flooring in Michigan and Wisconsin the Government subpœnaed representatives of the several manufacturers appearing upon these lists whose factories are located in those states. And there appears in the record, either by way of evidence given by such representatives or by stipu-

lation, the quantity of flooring produced for the years 1918–1922, inclusive, by such manufacturers. See Vol. I, pp. 83–88, 91–94, 96–98, 119–120, 137, and 140–142. From the data thus obtained and that contained in the barometers issued by the association, which show the amount of flooring produced by the members of the association, and information obtained from other manufacturers appearing in the lists filed by Mr. Gordon in response to questionnaires sent out by the Department of Justice, Mr. Hughes, an agent for the Government, computed the amount produced by members of the association and by nonmembers respectively, and the percentage produced by the members, and filed as Government Exhibit 68 a statement showing the result of his calculation. (Vol. II, pp. 798–802.) His calculations appear in Vol. IV, p. 518, side pp. 3553–3708, a number of side pages not being printed. Without going into details, it appears from these estimates that the percentage of production of maple, beech, and birch flooring in the United States by members of the association for the years mentioned is as follows: 1918, 78.1%; 1919, 78.9%; 1920, 75.2%; 1921, 71.0%; and 1922, 70.0%. Average for the five years 74.2%. (Side p. 3556.)

In Michigan the production of members was: 1918, 96%; 1919, 94%; 1920, 92%; 1921, 92%; and 1922, 92%. Average, 93%. (Side p. 3553.)

In Wisconsin the percentages produced by the members were: 1918, 47%; 1919, 70%; 1920, 42%;

1921, 31%; and 1922, 49%. Average 50.8%. (Side p. 3554.)

The production in Michigan is so much greater than that in Wisconsin that the percentages of production by the members in the two states were: 1918, 91.6%; 1919, 89.3%; 1920, 85.6%; 1921, 82.7%; and 1922, 82.8%. Average, 85.8%. (Side p. 3555.)

Mr. Hughes' estimates show the quantities produced in each of the several states. The defendants filed as Exhibit CC a list which also shows the production by nonmembers by states. (Vol. IV, pp. 831–833.) A comparison of the estimates will show no great difference, the defendants' tables more generally showing less production by nonmembers than the estimates made by Mr. Hughes.

In the petition filed by the association in 1915 with the Federal Trade Commission it was said that the members of the association "represent about seventy per cent of the industry." (Vol. III, p. 76.)

A petition to the President of the United States with reference to the Canadian duty on flooring, which was incorporated in the Minutes of the Meeting held March 22, 1923, stated that the members of the Association produce about seventy per cent of all Maple, Beech, and Birch flooring manufactured in the United States (Vol. IV, p. 507); and in the answer to a questionnaire sent out by the Department of Commerce, which was incorporated in the Minutes of the General Meeting held April

20, 1922, it was stated that *the members of the Association represent about 70% of the productive capacity of the industry.* (Vol. III, p. 166.)

These figures are conclusive evidence that the industry is wholly dominated by the association.

In the case of *American Column & Lumber Co.* v. *United States,* 257 U. S. 357, known as the Hardwood case, the association members produced only about one-third of the entire product for the United States. And they had competitors scattered all over the country, while for the reason above shown appellants can never have serious competition from other sections.

II

Former articles of association under which manufacturers of maple and beech flooring operated before the adoption of the present articles

The manufacturers of maple, beech, and birch flooring have operated under a number of articles of association; but the membership of each organization has been composed largely of the same manufacturers; and a large majority of the defendants have been continually members.

A short review of previous articles of association and of the activities thereunder will be helpful in determining the purposes of the present association and the results accomplished by it.

So far as the record shows the first association was organized in 1905, with headquarters in Chicago. The members of that and subsequent as-

sociations manufactured maple, beech, and birch flooring, and some of them also manufactured oak flooring. The association of 1905 continued until 1907 or 1908, when it was succeeded by another association, the articles of which expired about 1909. That association was succeeded by another which lasted until either 1911 or the fall of 1912, when a successor was organized. The articles of that association bear date as of January 1, 1913, and are filed as Government Exhibit 1, being the first articles of association introduced. (Keehn, Vol. I, p. 72.)

There are twenty-two manufacturing companies who are made defendants, and they constitute the membership of the present association. Of these twenty-two members *sixteen were members of the association which began to function January 1, 1913.* There were thirty members of that association. (Keehn, Vol. I, p. 73.) Among other objects mentioned in those articles were " to exchange information; to collect and disseminate statistics concerning the flooring industry." The officers and their duties, and the meetings specified, were substantially the same as those provided for in the present articles of association, which will be hereafter fully described.

Allotment plan

A special fund was provided for by those articles, which was deposited as a guaranty that the member would carry out all of its obligations; and if it failed

to do so its share of the special fund was forfeited. (Vol. III, p. 5.) There was also created a general fund; and for the purpose of securing moneys for that fund an assessment of $3 per M feet was levied each month on "*all shipments during that month in excess of the allotted percentage set opposite the signature of each member*"; *and it was provided that from such fund each member who had shipped during the month less than its allotted percentage should be paid $3 per M feet on the quantity under-shipped down to 75% of its allotment; and if a member shipped less than 75% of its allotment during any one month, it should receive $3 per M on the deficit down to 75% of its allotment,* and that the balance should be held until the end of the year; and if at the end of the year it had shipped 75% of its allotment for the year it would be paid the balance, but if it had failed to ship as much as 75% of the allotment the amount retained would belong to the Association. (Vol. III, p. 6.)

It was provided that each assessment for that fund should be paid within five days after the assessment had been made and notice given; and if any member failed to pay his assessment within thirty days the trustee should draw upon the member's share of the Special Fund; and if the amount was not restored to the Special Fund by the member within ten days after notice he should cease to be a member of the Association, and should forfeit all interest in both the special and general fund.

(Vol. III, p. 6.) It was further provided *that daily reports should be made by each member of the association to the secretary at the close of business of all deliveries and shipments of all kinds of maple, beech, and birch flooring for use within the United States, except that purchased from other members; and it was specified what such reports should include.* (Vol. III, p. 7.)

As there was then no provision for the distribution of such information, the object of the requirement no doubt was to enable the secretary to make estimates of assessments and payments under the allotment provision.

These articles of association were continued with a few modifications for three additional years until January 1, 1919. (Keehn, Vol. I, pp. 74–75.) The articles in effect during that period are filed as Government Exhibit 2 (Vol. III, pp. 14–21). *Of the twenty-two members of the present association seventeen were members during the existence of those articles of association,* the membership then being twenty-eight. (Keehn, Vol. I, p. 75.) Those articles were succeeded by another set, which went into effect on January 1, 1919, and continued for six months, or until July 1, 1919. Those articles are filed as Government Exhibit 3. (Vol. III, pp. 25–32.) They contain precisely the same provisions as to allotment and statistical reports as those contained in the preceding articles (Vol. III, pp. 30–31), but a different method was provided for raising the special fund (Vol. III, p. 29). *Twenty-one*

members of the present association were members of that association, which consisted of twenty-nine members. (Keehn, Vol. I, p. 76.) Other articles of association were adopted and went into effect July 1, 1919, to be effective until July 1, 1922 (Vol. III, pp. 37–44). But Mr. Keehn testifies that the allotment feature was discontinued on March 31, 1920, and that there has been no general fund or allotment payments since that date. But, strange to say, there was no minute made by the association or by the board of trustees showing such fact.

On being questioned by the court, the witness claimed that they took this action on advice of counsel, but admitted that he thought there was nothing in the minutes to show such fact. (Vol. I, pp. 76–78.) Instead of the articles adopted July 1, 1919, being continued to July 1, 1922, as was contemplated, the articles now in effect were adopted in March, 1922, but were dated back as effective January 1, 1922. In the meantime, however, a draft of articles was made, and was signed by a large number of the manufacturers, which purported to extend over the period from October 1, 1921, to July 1, 1922 (Gov. Ex. 5, Vol. III, pp. 49–56); but Keehn says that they did not go into effect because not signed by three or four of the manufacturers (Vol. I, pp. 78–90). Although Keehn says that the allotment feature was discontinued March 31, 1920, *yet it will be noted that in this tentative draft that feature was retained;* but instead of three dollars per thousand on excess

shipments, and payment of the same amount on undershipments, the amount to be collected and paid was four dollars per thousand. (Vol. III, pp. 54–55.) If all but three or four of the members were willing to sign articles containing such an agreement to extend from October 1, 1921, to July 1, 1922, it can hardly be believed that the allotment feature ceased on March 1, 1920, especially in view of the fact that no record of any such action was made.

The fact appears to be that for some reason not disclosed by the record, the operation of the allotment articles was *suspended* for a period of 18 months from March 31, 1920, until October 1, 1921, so far as the collection and distribution of the General Fund was concerned. This is established by a number of letters in the record. In a letter from William Horner to Mr. Keehn dated Nov. 22, 1920, eight months after it is claimed the allotment feature was abandoned, the writer said:

> We note by your report of the General Meeting that you do not mention the resolution regarding the allotment plan at all. Please advise us by early mail, if you intend to put the allotment plan into force immediately or if this is to be held in abeyance for the present. (Vol. IV, p 560.)

Mr. Keehn's answer dated November 29, 1920, said:

> The question of resuming the allotment payments, *which have been held in abeyance*

> since March 31st, will be taken up by correspondence with the Trustees and the entire membership in time so that some definite action can be taken at the next general meeting to be held on December 22d. (Vol. IV, p. 560.)

But another letter from Mr. Keehn to William Horner dated December 31, 1920, shows that the meeting on the 22d was a "mixed-up mess", and that nothing was accomplished. (Vol. IV, pp. 560–561.) Apparently nothing more was done about the matter until the proposed Articles of Association dated October 1, 1921, were under consideration, when under date of September 16, 1921, Mr. Keehn sent to each member a copy of the proposed revised articles, stated the changes incorporated in them, and in explanation of the allotment articles said:

> It would seem that the allotments as agreed upon in our present Articles of Association, which allotments were to be in force from July 1, 1919, to July 1, 1922, should govern from October 1, 1921, to July 1, 1922, because each member has already agreed to his allotment to run to July 1, 1922, and if we begin changing allotments, there will be no end to it. *Inasmuch as the allotments were suspended from April 1, 1920, to October 1, 1921, a period of 18 months or one-half of the three-year period originally agreed upon,* there should be no particular hardship on any member to reinstate his allot-

> ment from October 1, 1921, to July 1, 1922, being the nine months remaining of the three years originally agreed upon. (Vol. III, p. 61.)

The proposed Articles of Association of October 1, 1921, apparently did not actually go into effect because of the refusal of the Nichols & Cox Lumber Company and of the Holt Hardwood Company to join with the other members who had expressed themselves in favor of reinstating the allotment feature, unless their allotted ratios in M feet were readjusted to be in harmony with the volume of their production and shipments during a more recent period than the one used in basing their allotted percentages. (Vol. III p. 63.) In one respect, however, the allotment feature of the July 1, 1919, Articles of Association was actively in force and *enforced* until the present Articles of Association were adopted. Article XVI of these articles provided that:

> An Expense Fund to provide for the current running expenses of the Association shall be established and maintained by the payment, as often as required by the Board of Trustees, of assessments levied upon the members of the Association of Twenty-Five ($25.00) Dollars per each one (1%) per cent. allotted to each member under these Articles of Association (Vol. III, p. 43.)

The Special Fund or Guarantee Fund established by Article XIII of the 1919 Articles was also

based on the allotted established percentages, and no change was made in the Special Fund or in the method of providing for the current running expenses of the Association, except in the case of one new member, until the 1922 Articles were adopted. (Vol. IV, pp. 481–482.)

Therefore, if in fact the collection and paying out of the allotment fund ceased on March 1, 1920, defendants deserve no credit so far as this proceeding is concerned, as it was not done that their conduct might conform to the law; *but it was a mere temporary suspension arising out of the general conditions of the lumber business.*

The provisions relating to determining average cost appeared for the first time in the proposed Articles of October 1, 1921, in practically the same form as in the Articles under which the Association is now operating. It was declared that the principles stated were recognized *and adopted* as the only scientific method of conducting the business of manufacturing and marketing Maple, Beech, and Birch flooring. (Vol. III, pp. 53–54.) This feature will be fully considered hereafter.

There was an effort on the part of the witness Keehn, who is secretary of the defendant association, to make it appear that an entirely different association operated under each one of the plans above described; but he was forced to admit that he was the secretary of all the associations; that each one functioned until the articles of its successor

were adopted; and he did not deny that the office was continued at the same place; and, as above shown, nearly all the members of the present association were members of each one of its predecessors. (Keehn, Vol. I, pp. 73–76.) The continuity of these associations is also undisputably shown in Keehn's cross-examination. (Vol. I, p. 143.)

III

Minimum Price Plan and Minimum Price Basis

The Minimum Price Plan

In addition to the articles of association above described, on August 27, 1915 (Gov. Ex. 10, Vol. III, pp. 76–78), a petition dated July 14, 1915, was filed with the Federal Trade Commission, and on June 27, 1916, an agreement between the petitioners designated as a "Minimum Price Plan," to which a copy of the petition was attached, was also filed with the Commission. (Vol. III, pp. 78–81 and Vol. IV, p. 798.) The signatures of twenty-eight manufacturers were attached to the petition, and the signatures of twenty-three were attached to the plan. *Fourteen of the defendants signed both the petition and the plan.* The plan provided for an amendment to the articles of association, to be operative from July 1, 1916, to November 1, 1917; and Article I of the proposed amendment provided that:

> Pursuant to the petition dated July 14, 1915, which the Maple Flooring Manufacturers' Association submitted to the Federal

Trade Commission at Washington, D. C., on or about the 27th day of August, 1915 (a copy of which petition follows this supplemental agreement), the members of the Maple Flooring Manufacturers' Association *hereby agree to establish minimum prices for the sale of Maple, Beech, and Birch Flooring, and agree not to sell any Maple, Beech, or Birch Flooring during the period beginning July 1, 1916, and ending November 1, 1917, below such minimum prices.* (Vol. III, p. 78.)

Article II provided that in order that the minimum prices might be fair and reasonable, the actual average cost of flooring should be determined by the following elements, to wit:

(*a*) The actual market value of the raw material;

(*b*) The average cost and expense of manufacturing and selling flooring;

(*c*) Interest on the capital actually invested in the flooring business at the rate of five (5) per centum per annum;

(*d*) Annual depreciation of Plant; and

(*e*) The usual overhead charges incurred in carrying on the flooring business. (Vol. III, pp. 78–79.)

Article III provided *that minimum prices should from time to time be established under the agreement, but that they should not exceed an amount which would give the member an average net profit, over the average actual cost to be determined, in excess of ten per cent.*

By Article IV a scale of minimum prices to be observed until altered was established.

By Article V the members were prohibited from selling during the period mentioned flooring at less than the minimum prices established, or to be established, and it was provided that if any member should sell for less than the minimum price, it should pay to the association a sum equal to 10% of the amount received for the flooring so sold.

By Article VI each member was required upon the request of the secretary to furnish a report showing its sales and to whom, and the prices at which made; and the secretary was given the right to examine the records of the members.

Article VII provided that if a member had on hand flooring which it was unable to market at the minimum price, or to any other member of the association without regard to such price, it should offer the flooring to the members through the secretary; and in case it was bought by a member, it should not be resold by the purchaser at a price less than the minimum; but if not bought by some member within thirty days, then the owner might sell the flooring in open market at any price, not less than the price at which he offered it to the members of the association; and that if a member should violate such provision he should pay the association a sum equal to 10% of the amount received for the flooring.

Article VIII provided that if a member did not pay the 10%, the secretary should cause the same to

be paid from any funds standing to the credit of such member. The agreement was made with the understanding that it should be signed by all the members, and that it should be filed with the Federal Trade Commission. (Vol. III, pp. 78–81.) The petition was attached to copies of different plans, and appears in the record [1] Vol. III, pp. 76–78; [2] pp. 82–84; [3] pp. 89–91; and [4] pp. 95–97.

As stated in the following paragraph from the report of the Market Conditions Committee (the functions of which committee are explained hereafter on p. 139) dated June 22, 1916, the Minimum Price Plan Agreement was finally signed by all the members, and became effective from July 1, 1916, until November 1, 1917:

> The Special Committee is indeed happy to report that Mr. I. N. Bushong, of the Northwestern Cooperage & Lumber Company, attended the meeting and signed the Minimum Price Plan Agreement in behalf of his company. *The Minimum Price Plan Agreement is, therefore, consummated, and will take effect July 1st, 1916, as telegraphed yesterday.* The duration of the agreement is from July 1, 1916, to November 1, 1917. As the time between now and July 1st is quite short, and as members may have quotations out which they may not hear from before July 1st, it is understood that any bona fide outstanding quotations may be protected up to July 10th. (Vol. IV, p. 430.)

Even at the time they first adopted and operated under the Minimum Price Plan, some of the defendants were rather uncertain as to its legality; or perhaps quite certain as to its illegality. Under date of September 1, 1916, the East Jordan Lumber Company advised Mr. Keehn that in the opinion of their attorneys the plan was in direct violation of the Federal Statutes and also of the Michigan Statutes (Vol. IV, pp. 545–546); but this difficulty was ingeniously answered by Mr. Keehn in his reply dated September 7, 1916, part of which reads as follows:

> Replying to your letter of the 1st, the submission of the Minimum Price Plan to the Federal Trade Commission takes care of all legal questions pending the reply of the Commission, and if the Commission decides that the Plan is not legal, they will, no doubt, tell us to discontinue its operation.
>
> When the Plan was under consideration, the Association requested its attorney, Mr. Newman, to handle the legal details, and it was understood that the members of the Association would leave it to him instead of each member consulting his own attorney. If all the members submitted all Association questions to their attorneys we would have such a diversity of opinion that nothing could be accomplished, and for that reason it has been an advantage to the Association to have an able attorney like Mr. Newman to advise us.

> Inasmuch *as the Minimum Price Plan is an amendment to the Articles of Association, and is consequently now a part of that contract,* all I can do, it seems to me, is to send a copy of your letter to the Board of Trustees. (Vol. IV, p. 546.)

Mr. Keehn's letter of September 7, 1916, also shows that the problem had been presented by the Wisconsin members of making the affidavit required by the laws of that State in answer to the question " whether such corporation has entered into any combination, conspiracy, trust, pool, agreement, or contract," etc.; and although Mr. Keehn first stated in a letter dated January 17, 1917, that the affidavit could not be signed while a corporation was a party to the Minimum Price Plan, this difficulty was also solved; and under date of February 7, 1917, Mr. Keehn advised the Foster-Latimer Lumber Company that inasmuch as the Association had never received the approval of the Federal Trade Commission to the Minimum Price Plan, and as the matter was still pending, the Plan had never been consummated and had never been in effect. The Foster-Latimer Company nevertheless made its report to the State with the notation: " We are members of Maple Flooring Manufacturers Association and all matters pertaining to that organization are submitted to Federal Trade Commission." (Vol. IV, pp. 546–548.)

The original Minimum Price Plan was extended from November 1, 1917, to January 1, 1919, to run

concurrent with the duration of the allotment articles, by a resolution adopted at the meeting held July 20, 1917, in accordance with a recommendation of the Market Conditions Committee. (Vol. IV, pp. 436–437.)

In a letter to members dated October 14, 1918, Mr. Keehn stated that the allotment contract and Minimum Price Plan would both expire by limitation on December 31; and he made the following suggestions as to the renewal of the Plan:

> 6. The M. P. P. to be rewritten to include all modifications adopted to date and its duration to run concurrent with the Allotment Articles.
>
> *It would be my thought not to incorporate the Allotment Articles and the M. P. P. in one document, but to have the M. P. P. supplemental to the Allotment Contract as at present, so in case the Federal Trade Commission should advise the cancellation of the M. P. P. it can be done without disturbing the Allotment Contract or vice versa.* (Vol. IV, p. 444.)

The plan was accordingly revised as of January 1, 1919, to be in effect from January 1 to July 1 of that year; and it was recited that the revised plan was made pursuant to the petition filed with the Federal Trade Commission on July 14, 1915. (Vol. III, p. 84.) This plan contained the same provisions as the former, with the addition that each member might register special representatives;

who were required to be wholesalers or commissioned salesmen, and whose registration should be confidential, and that a concession of one dollar per thousand might be made to such representatives; and further, that a list of wholesalers and commission men should be adopted to whom a like concession might be made as soon as such list had been published to all the members of the association; and that nominations for registration should be made in writing to the secretary by members of the association, and all nominations should be bulletined to the members by the secretary; and if no objections were filed within ten days the registration should automatically become valid. Thus a favored class of dealers was provided for. (Vol. III, pp. 88–89.)

The Minimum Price Plan was continued after July 1, 1919, and was finally vacated by the following resolution adopted at the Annual Meeting held February 12, 1920:

> M. P. P. Vacated.—On motion, the following resolution was adopted by unanimous vote:
>
> "Whereas the Minimum Price Plan was submitted to the Federal Trade Commission for its approval on June 27, 1916, and the Commission has taken no action with respect to the same, neither approving nor disapproving the Plan; and
>
> "Whereas said Plan has never been enforced by the Association;

> "*Therefore be it resolved,* That said Minimum Price Plan and all resolutions relating to the same, be and they are hereby vacated." (Vol. IV, p. 529.)

This action was undoubtedly taken because recomendations or agreements as to *minimum* prices were a futility in February, 1920, as the annual report of the Secretary which was read at the meeting before the resolution quoted above was adopted, *commented at length upon conditions in the industry, and then stated that the time was rapidly approaching, if it had not arrived, when concerted action should be taken by the Association to stabilize the price of flooring, and that maximum prices could be established from time to time.* At the same meeting, however, the Association adopted the resolution instituting the weekly sales reports which is quoted hereinafter (p. 107), and also the following resolution:

> New Table of Values.—On motion, the Secretary was instructed to compile for the information of the members *a Table of Values showing what the selling prices of flooring should be* if based scientifically upon actual average cost and if a profit is included of 10% reckoned upon selling prices F. O. B. the flooring mill.
>
> It was the sense of the meeting that the following fundamental elements constitute the basis of cost in ascertaining what the selling prices of flooring should be:

(*a*) The actual market value of the raw material.

(*b*) The average cost and expense of manufacturing and selling flooring.

(*c*) Interest on the capital actually invested in the flooring business at the rate of five (5) per centum per annum.

(*d*) Annual depreciation of Plant; and

(*e*) The usual overhead charges incurred in carrying on the flooring business. (Vol. IV, pp. 528–529.)

Conditions in the industry during the latter part of 1920 were not as favorable for the manufacturers as they had been in February; and under date of December 16, 1920, Mr. Thomas, the Chairman of the Market Conditions Committee, wrote to Mr. Keehn saying:

> *From present indications I assume that there will be an insistent demand for the resumption of our M. P. P. at the time of our next meeting, December 22. It seems to me desirable to work out an adjustment of the plan so it can be put into effect the first of the year providing the members all agree to it.* (Vol III, p. 97.)

The Minimum Price Basis

Then on January 6, 1921, *a plan, known as the "Minimum Price Basis," was adopted, which was to be effective from that date to July 1, 1922.* This purported also to be based upon the petition filed with the Federal Trade Commission on July 14, 1915; and it was stipulated that "*the members of*

the Maple Flooring Manufacturers' Association hereby establish a Minimum Price Basis for the sale of maple, beech, and birch flooring." (Vol. III, p. 92.) The elements which entered into the computation of cost were the same as in the former stipulation, except the interest allowed was 6% on capital invested instead of 5%, and it was declared the *minimum* price should not give a member an average net profit in excess of 5%, instead of 10% as specified in the former agreement. (Vol. III, pp. 92-93.) *A table of values was agreed upon, subject to change; and it was stipulated how much commission might be allowed each member's special representatives and also the amount allowed those registered as wholesalers and commission men, and what the terms of sale should be.* The only difference between this plan and the "minimum price plans" previously adopted was, that this one did not prescribe a penalty for violation, or specify a method to enforce its observance. It was recited that the plan should be filed with the Federal Trade Commission for its approval, and that *in the event of its disapproval* it should be void. Of course, the Commission expressed no opinion upon the subject, and by its very terms it became effective. This plan was signed by twenty-three manufacturers, *of whom eighteen are defendants in this litigation.* (Vol. III, pp. 92–94.)

Both the M. P. Plan and M. P. Basis were in force

It was first claimed by the witness Keehn that neither the Minimum Price Plan nor the Minimum Price Basis ever went into effect; and when shown the Plan revised as of January 1, 1919, and asked "Did that go into effect on that date?" he replied, "No minimum price ever was enforced or was consummated." (Vol. I, p. 80.) Later, on cross-examination, he made a distinction between the plans being "in force" and "enforced," and testified:

> Q. When you said in your direct examination that it was never enforced will you explain just what you mean by that? What was done by the association then existing under this minimum price plan, government exhibit 11, if anything?
>
> A. Some of the statistical data and lists of surplus stock, etc., were submitted to the association, but no penalties or fines or assessments of any kind were ever made upon or claimed for or ever paid into the general fund or the treasury of the association or were demanded by the association. In other words, the members continued on and so far as my judgment and opinion goes they sold their flooring at whatever prices they pleased. (Vol. I, p. 144.)

His attention was called to a recital in the minutes of a meeting held January 6, 1921, as follows:

> The committee then made its report and the plan as formulated to be known as the

> minimum price basis was read and fully discussed by the meeting, *and on motion was accepted;*

and the witness drew a distinction between "accepted" and "adopted" (Vol. I, p. 148), as he had previously done between its being "in force" and "enforced" (p. 146).

That the Minimum Price Plan was "in force," and at least in a measure "enforced," ever since it was first devised is shown by many of the exhibits introduced by the Government. Exhibit 31 M (Vol. III, side p. 533) is a page dated July 1, 1916, entitled "*Application of Minimum Prices,*" which was combined with the Table of Values of May 15, 1916, and which reads as follows:

> The Delivered Prices in the Table of Values of May 15, 1916, in the Association Rate Book and Index of Towns, *are the basis of the Minimum Prices*—not F. O. B. mill prices.
>
> Minimum Prices of 1$\frac{1}{16}$", 1$\frac{5}{16}$", and 1$\frac{13}{16}$" Maple, Beech, and Birch Flooring are based on the Rate Book Full List Delivered Prices of 1$\frac{13}{16}$" D. & M. Maple.
>
> *Minimum Prices* of 1$\frac{13}{16}$" Jointed Flooring are based on the Rate Book Full List Delivered Prices of 1$\frac{13}{16}$" D. & M. Maple.
>
> Prices of 2½" face D. & M. or Jointed are based on 2¼" face D. & M.
>
> Prices of 3" or wider faces D. & M. or Jointed are based on 3¼" face D. & M.
>
> *A Minimum Price is the bottom price, not an average price.*

Don't stay at the bottom.

When your stock conditions and sales opportunities will not warrant your holding for top prices, insist at least on getting a substantial advance over the Minimum Price.

That some at least of the members did not ignore their agreement to maintain the minimum prices (which were apparently also the actual current selling prices) is shown by a letter from the Bigelow-Cooper Company to Mr. Keehn, *which the latter circularized to all the members under date of September 14, 1916,* and which reads in part as follows:

> We received the following letter from our New England salesman, which we thought would interest you:
>
> "I was very much surprised this morning in trying to secure an order from Blacker & Shepard Co. for a carload of 13/16 x 2¼" No. 1 Maple flooring, *that I was the only one quoting on new basis of prices* * * * I did not get the names of any of the concerns bidding, but it surprised me to think that not one of them was over $41.00, whereas our quotation was $42.50."
>
> The writer does not know of six concerns quoting in Boston Territory who are outside of the Association. It would look as though all your good members are not sticking. *We are continuing, however, to ask the prices.* (Vol. IV, p. 431.)

Actions taken by the Association to establish new minimum prices or new spreads in accordance

with Articles II and IV of the Plan, are shown by the January 26, 1917, Table of M. P. P. Values (Vol. III, p. 245); the minutes of the meeting held July 20, 1917 (Vol. IV, pp. 434–435); the letter to members dated May 23, 1918 (Vol. III, p. 299); the Market Conditions Committee Report dated June, 1919 (Vol. III, p. 246); and the Market Conditions Committee Report dated August 21, 1919 (Vol. III, p. 249). A report entitled "Listings of M. P. P. Surplus Stocks" illustrates the method of operating under Article VII of the Plan. (Vol. III, pp. 256–260.) The June, 1919, Report illustrates in detail the method of determining and establishing minimum prices and is therefore quoted at length:

> *Current Net Values.*—Current Net Values for June reflect the advance adopted in May, but as the advance adopted in June did not take effect until June 19th, with the customary ten days in which to protect outstanding quotations, it was not to be expected that a large volume of new orders would be booked in June at the new June prices. Current Net Values for July, however, will reflect the June 19th M. P. P. Basis.
>
> *Survey of Costs.*—Surveys of Costs for the 2nd quarter of 1919 were received from ten members whose flooring operations are typical of the average of the industry. Their reports indicate an advance in Manufacturing and Marketing Costs of $1.29 over

the previous survey. The gross cost is $22.14 less wood $2.22, leaving the net cost $19.92 compared with $18.63, according to the preceding survey. The market value of rough flooring lumber has also advanced. The Committee felt that it should be conservative and that it would be better to be too low than too high regarding the average current market value of lower Michigan, upper Michigan and Wisconsin 4/4 Maple Flooring stock. Based upon information regarding recent sales, not asking prices, the Committee concluded that $3.00 would represent the advance on the flooring lumber. This would equal $3.66 advance in the cost of 1,000 ft. of flooring (counting 18% waste) in arriving at the selling basis of the product. Using the composite results of the seven test runs, as per our revised statement of May 15, 1919, it works out as follows:

Cost of 1,000 ft. flooring sold	$56.34	
To cover $3.00 advance on flooring lumber, counting 18% waste. Add	3.66	
Add increase in Manufacturing and Marketing Costs from $18.63 to $19.92	1.29	
		$61.29
Add one-ninth to give 10% profit on sales	6.81	
		$68.10
Value of Seven Test Run flooring product per statement of May 15th	$58.98	
Add advance of June 19th	6.00	
	64.98	
Horizontal advance required	3.12	
		68.10

Committee's Recommendations.—In view of cost conditions the Market Conditions Committee recommended a horizontal ad-

vance of $3.00 and the recommendation was immediately telegraphed to all the other members of the Association as follows:

"Because of increased costs Market Conditions Committee recommends horizontal advance of Three ($3.00) Dollars effective today. Please wire approval today."

At this writing we have received affirmative replies from all but one member of the Association, and we are expecting to hear from him during the day.

Some of the replies which we quote below favored a larger advance than $3.00. (Vol. III, pp. 246–247.)

After quoting some of the replies favoring a larger advance the Report continued:

So, if any members of the Association feel that the recommendation of the Committee is too low or is at a lower basis than they wish to take new orders at, they can, of course, pursue the same course *and ask more than this new M. P. P. Basis.*

It should always be remembered that the M. P. P. is a minimum price not a maximum price.

Values of $\frac{3}{8}$*".—The Committee discussed the market value of* $\frac{3}{8}$*" flooring, which is also oversold to a greater extent than ever before in the records of the Association, especially the Clear grade. It was the view of the Committee that a horizontal advance of $5.00 on* $\frac{3}{8}$*" Clear and No. 1 be recommended, and*

> *the Secretary was instructed to have a new Table of Values covering the* $\frac{3}{8}$*" printed and mailed to the members.* Please bear in mind that the $\frac{3}{8}$*"* prices do not carry any concession, but are net, being subject only to commissions to your Registered Special Representatives and to Registered Wholesalers and Commission Men. (Vol. III, p. 248.)

The appellants' brief quotes on pp. 197–204 a number of statements by witnesses in support of the assertion on p. 196 that the evidence "clearly proves that the Minimum Price plans were abandoned and never enforced." None of the statements quoted, however, in any way controverts the evidence heretofore considered, which establishes beyond dispute that the original Minimum Price Plan was continued from time to time from 1916 to January, 1919; that in January, 1919, it was revised and readopted and was in effect until early in 1920 when the high level of prices made its continuance unnecessary; and that the Minimum Price Basis was signed and put into effect in January, 1921, when the general business depression again made the establishment of minimum prices desirable. The greatest effect that could be allowed the evidence quoted is that during the operation of the Plans, some of the parties to them perhaps did not always live up to their signed agreements, and that the prescribed penalties were not collected for such lapses. However, some of the evidence quoted with reference to that question merely indicates

that there was no absolute *uniformity* of prices—which of course was never required under the plans.

Everything prescribed by the Minimum Price Plans and Minimum Price Basis—except possibly enforcing the observance of the former—was, however, regularly done; and it appears from the following statement made by Mr. DeWitt while attempting to establish the nonobservance of his minimum price agreements, that the prices established in accordance with the plans were at least considered to be *the association prices*. He said:

> * * * and our actions show that we never have considered ourselves bound. If you will go through all our files and get the prices that we have obtained for our flooring you will find that it has always varied, sometimes it will be the Association price, sometimes lower and sometimes higher, but we have never surrendered the right to make our own prices on our product. (Vol. I, p. 258.)

At least one member of the association, however, did not violate the Minimum Price agreements, as Mr. Saunders testified on cross examination:

> A. At any time during the life of any of these Associations had our prices been below that price, we might have considered it, but it never being necessary it never came to our attention.
>
> Q. That is your explanation, that you always sold above the minimum price, and hence you did not consider the minimum price?

A. That is correct.

Q. Always sold above it?

A. I think that is correct, I think our history will show it. (Vol. I, p. 203.)

No reports of individual sales were furnished to the members by the association during the life of the Minimum Price Plan, *but while the Minimum Price Basis of January 6, 1921, was in force the regular weekly sales reports were being prepared and distributed.* Exhibits 20, 20A, 21, and 22 (Vol. III, pp. 261–76) are the reports dated January 13, January 20, January 27, and February 3, 1921. Each report gives in successive columns from left to right the date of the sale, the quantity, the dimension, the grade and wood, the delivered price, the new index letters (freight rate symbols), the M. P. B. (the Minimum Price Basis delivered price), the commission, and the identification number of the mill, except that there are not in all cases M. P. B. prices to compare with the actual prices. A tabulation of all the comparisons given, however, shows the following results:

Report dated	Actual prices exactly equal to M. P. B. prices	Actual prices over M. P. B prices	Actual prices under M. P. B. prices
January 13, 1921	14	20	5 (1 explained as per note 1).
January 20, 1921	31	22	8 (3 explained as per note 2).
January 27, 1921	21	11	10 (10 explained as per note 3).
February 3, 1921	49	21	11 (5 explained as per note 4).

(1) Quotation lowered to meet competition.

(2) One sale to association member, two sales on quotation made prior to Jan. 6, 1921.

(3) Nine sales to association members, one sale price reduced because of cancellation after car loaded.

(4) Three sales made to association members, two sales made with 50¢ error in freight rate.

A further analysis of the comparisons made by the January, 1921, sales reports between the actual prices and the minimum prices shows that the companies of the witnesses who testified as to their general disregard of the minimum prices in fact almost invariably maintained them during the only period for which an accurate check can be made.

The Holt Hardwood Company, represented by Mr. DeWitt, made three sales at the minimum prices, seven over, and two under—one of these being explained as having been taken January 5, the day before the agreement went into effect. This company apparently did make one unexplained cut of 50 cents. It is also noteworthy that three months after the Department of Justice was assured that the M. P. B. had been abrogated and would not be proceeded with, a table of values dated May 21, 1921, was sent out by the association; that shortly thereafter the Holt Company, in answer to an inquiry, advised the Wood Lumber Company of Worcester, Massachusetts, that it was revising its prices; that it quoted delivered prices at Worcester which were identical with the new delivered values established by the May 21 table, and that notwithstanding a lengthy correspondence, the Holt Company steadfastly refused to deviate from the new prices, and manifested great confidence that prices would be stabilized on the new basis. (Vol. I, pp. 244–247.)

The comparison also shows that during the period of the formal existence and operation of the

M. P. B. in January, 1921, William Horner, represented by Mr. Ralston, *made nineteen sales at the minimum prices, three over, and two under—the latter being explained as due to an error in the freight rate,* and that the Cummer-Diggins Company, represented by Mr. Saunders, *made six sales at the minimum prices—but none either over or under those prices.*

Why the Minimum Price Basis was substituted for the Minimum Price Plan is perfectly apparent. No penalties are necessary when each competitor is required to reveal his violations of an agreement or tacit understanding to the others. This has been repeatedly demonstrated in the operation of these associations. Therefore, the penalties were eliminated, and each member was required to report his individual sales which were repeated by the secretary to the members; and the explanations of nearly all the sales made under the prescribed minimum prices show the moral restraint imposed upon the members.

Mr. Keehn stated with reference to the Minimum Price Basis:

> The minimum price basis never provided for any penalty of any kind. A man could do just as he pleased about it. It was without force or effect. It was simply a statement of business policy. (Vol. I, p. 82.)
>
> We did not exact any penalties of any kind under the Minimum Price Plan, but in

the Minimum Price Basis no penalties of any kind were even prescribed. *It is simply a statement of business policy and was for handling the sales of maple, beech, and birch flooring.*

The COURT. Will you permit me a question? If I understand you, with the exception of a declaration that penalties would be imposed or might be imposed, the method of obtaining the cost of production and selling was the same under these two plans, that is, the Minimum Price Plan and the Minimum Price Basis, as you call them, and the information furnished members of the Association was the same information, in substance?

A. In substance the same basis was used in arriving at the average cost of producing and marketing flooring with the exception of the interest rate that I mentioned.

The COURT. Then, the difference would be, the substantial difference would be that in the one case, in form at least, you required it, and in the other you advised it?

A. I wouldn't say that we advised it. We gave it to the members to use in such way as they wished to use it. (Vol. I, p. 102.)

It is quite apparent, however, that whatever may have been the situation with reference to the observance of the minimum prices under the Minimum Price Plan, under the Minimum Price Basis, supported by the information conveyed to every member as to every sale below the minimum, the minimum prices were very scrupulously maintained.

In view of the overwhelming evidence that the

Minimum Price Plan and Minimum Price Basis agreements were in fact observed, Mr. Keehn's effort to make it appear to the contrary should cause his testimony upon other material matters to be received with caution.

IV

Abrogation of Minimum Price Basis, and negotiations leading up to adoption of present articles of association

A resolution adopted at a meeting held February 25, 1921, declared the minimum price basis null and void, and stated that neither the association nor its members would operate under it. This action was taken in accordance with assurances given to the Department of Justice by the president of the Association in a letter dated February 11, 1921, (Vol. IV, p. 803) *prompted by the receipt of a letter from the Assistant to the Attorney General stating that the minimum price basis and rate book transmitted to him indicated a flagrant violation of the penal provisions of the Sherman Act.* (Vol. IV, p. 802.) Apparently, however, at least one of the members of the association still considered that the association prices, or costs, or values, were to be maintained, for in a letter dated March 19, 1921, to Mr. Keehn, the Osgood and Blodgett Mfg. Co. referred to cuts appearing in the sales reports, and then stated:

> *If there has been a new list established it would seem to us that we all ought to be ad-*

> *vised, as our quotations at the standard price are being turned down daily.* (Vol. IV, p. 480.)

In a letter to members dated April 21, 1921, Mr. Keehn advised them of a general meeting to be held on the 27th of that month, and stated that conditions in the flooring industry were in a deplorable state and that it was of the utmost importance that every member of the association be represented; and in a letter to the Holt Hardwood Co., dated April 23, 1921, he said:

> We are glad you will be represented at the meeting on the 27th, and note what you say about not furnishing any more reports *until there is something done to make more co-operation.* I hope some new plan can be worked out that will improve conditions. (Vol. IV, p. 563.)

The minutes of the special meeting held April 27, 1921, contain only the following brief reference to the " new plans " under consideration:

> The statistical reports for the month of March, 1921, were submitted to the meeting and briefly discussed, and several plans to remedy the present deplorable conditions in the industry were suggested and considered, but no definite conclusions were arrived at.
>
> It was suggested that the plans proposed be given further thought and that the meeting adjourn subject to the call of the President with the understanding that the Presi-

dent would call such meeting to be held at as early a date as possible. (Vol. III, p. 134.)

But in a letter to Mr. Earle, Mr. Thomas, and Mr. Whedon, dated April 30, 1921, Mr. Keehn said:

> GENTLEMEN: We have prepared a rough draft of new Articles of Association, effective from May 1, 1921, to July 1, 1922, and are sending each of you a copy for such suggestions in the way of revision as you may wish to make.
>
> Several new features have been incorporated as the result of experience, etc., since the old Articles were formulated. You will note that in Article II, "Objects," we have included some of our creed as it appears in our advertising literature, and that we have inserted a clause regarding actually completed and closed business transactions, which, of course, refers to our Weekly Sales Reports; we have also declared our intention regarding Surveys of Cost and what we consider the fundamental elements to be used in arriving at the basis of ascertaining cost to the manufacturer of producing and placing on the market Maple, Beech, and Birch flooring.
>
> It is my thought, when we prepare an Average Cost Chart, that Frame A will represent the average cost F. O. B. cars at flooring plants and subsequent frames will show the cost of delivering to destination, which would mean Frame A plus average

cost of freight, and this average cost of freight, would be based upon the freight rate from Cadillac, Mich., which we consider represents the average freight rate from all the flooring mills to all the destinations. I thought it unnecessary to mention delivered values in the Articles of Association, *as whatever Average Cost Charts are compiled to show the delivered prices* would be simply mathematical and a supplemental detail, which would not in any way be contrary to the principles outlined in Article XIV.

We are waiting to hear from Mr. Thomas before proceeding further with the other plan discussed at the meeting, and in this connection perhaps it would not be out of place for me to say that, in view of the representations made by Dr. Earle as President of the Association, in his last letter to Mr. Nebeker (a copy of which you have), and also in view of the resolution adopted at the general meeting held on February 25, and approved at the meeting held on April 27, we should carefully consider any new plan the adoption of which might raise a doubt in the mind of Mr. Nebeker as to the sincerity of the representations in Dr. Earle's letter, evidence of which sincerity the Department of Justice may call upon us for at any time, and also as to the sincerity of the resolution adopted February 25, and approved April 27.

By the way, I see by the newspapers this morning that the Federal Trade Commission has again attacked the Pittsburgh base used

> by the steel industry and that the Commission is also going into the question of fixing prices by all the steel manufacturers by using the Pittsburgh base. It seems the Commission is divided on the question, three of the members opposing the Pittsburgh base and two of them not opposing it. (Vol. IV, pp. 534–535.)

The record does not contain the minutes of a meeting held May 20, 1921, but in a letter to members dated May 26, 1921, Mr. Keehn stated:

> GENTLEMEN: Only three of the members who attended the general meeting on the 20th and who promised then to make the weekly reports of sales did not make their reports for the week ending May 21st. No doubt they are under the impression that the *new Plan under which these reports are to be made by every member of the Association,* would begin with the week ending May 28th, instead of with the week ending May 21st. (Vol. IV, pp. 451–452.)

The record does not definitely establish the nature of the "new plan" referred to, but Exhibit 43 JJ (Vol. III, side pp. 2394–2399) is a report dated October 6, 1921, entitled "Audit Changes, June 2 to July 8, 1921, In Members' Weekly Sales Reports," so it is apparent that the "new plan" required all the members to report all their sales, and provided for an audit to make certain that was done.

In a letter to Mr. Keehn dated *May 26, 1921, which was circularized to the members* under date

of May 28, 1921, the East Jordan Lumber Company said:

> *We have your favor of the 21st and are exceedingly sorry that the minimum price plan did not go through, as we feel this is the only plan which has ever worked out satisfactorily, and that it would be especially valuable to us at this time.* (Vol. III, p. 313.)

Whatever may have been the fate of the Minimum Price Plan at the May 20, 1921, meeting, the record contains a table dated *May 21, 1921, (three months after the date of the resolution nullifying the Minimum Price Basis) entitled "Concessions and Additions—Table of Values May 21, 1921, 13/16" Maple and Birch D. & M. All Grades and Faces, Full List," gives the concessions and additions for other faces, grades, and woods, and also states the rules with reference to commissions and terms of sale.* (Vol. III, p. 326.) *A letter to members dated June 3, 1921, shows that this concession sheet had been sent out the preceding day with Tables of Values for 13/16" and* $\frac{3}{8}$*" flooring as new fillers for the Rate Books, and also that the list of wholesalers and commission men was being revised and reprinted, and that the names of unclassified dealers would be passed upon by the committee the same as theretofore before being listed.* (Vol. III, pp. 313–314.) Apparently the Trade Relations Committee had charge of that matter, as the call for a meeting to be held July

8, 1921, stated that that committee might have a report to make regarding the list of wholesalers and commission men. (Vol. IV, p. 452.)

In a letter to members dated August 11, 1921, calling a meeting to be held August 19th it was said:

> Our weekly Sales Reports indicate considerable demoralization in the flooring situation and it seems absolutely necessary that every member should be represented at the meeting *so that greater cooperation can be assured and conditions in the industry, which are now much disturbed, can be stabilized.* (Vol. IV, p. 567.)

And the action taken at the meeting on that subject is stated in the following paragraph in the minutes:

> *Revise Articles of Association.*—After a prolonged discussion of the demoralized conditions in the flooring industry, the Secretary was instructed to prepare a draft revising the Articles of Association *with the view of securing greater cooperation in the industry,* and to have the draft of the revision ready to submit to the next general meeting of the Association. (Vol. III, p. 138.)

A letter to members dated September 16, 1921, transmitted to the members the proposed articles of association dated October 1, 1921, the principal features of which have been explained heretofore on pages 15 and 19, and stated:

> GENTLEMEN: In accordance with your instructions at the last general meeting of the

Association, the proposed revision of the Articles of Association has been drafted and in order that you may have an opportunity to study them before the next meeting is held, we are enclosing a copy which, for your greater convenience, is in printed form. The printer is holding the type set up so that further revisions can be made, if desired.

Several changes are suggested in this proposed revision, namely:

Article II, "Objects," have been made more general and include "*the exchange of information concerning the character and nature of actually completed and closed business transactions of its members.*" This refers to the Weekly Sales Reports, etc.

Article XIV, "Determining average cost" is entirely new. (Vol. IV, pp. 568–569.)

* * * * *

It is now expected that a general meeting of the Association will be held on Friday, the 23d, and that a meeting of the Special Committee will be held on Thursday, the 22d, in order to draft some simple memorandum along the lines suggested at the last meeting and submit same to the general meeting on the 23d.

Conditions in the industry as reflected in the Weekly Sales Reports are greatly demoralized, as all of you of course know, and if any progress whatever is to be made in the work of the Association it is absolutely necessary that every member be represented

> at the next meeting, with full power to act, so that definite conclusions can be arrived at then and there. (Vol. IV, p. 570.)

The above letter also appears in the record as Exhibit 6 (Vol. III, p. 61), but as cited under the above quotation the letter is a part of Exhibit 77, and was introduced in evidence in connection with three undated "Rough Drafts," each entitled "Declaration of Our Business Policy." The three forms are substantially the same, so only Form 2, which is as follows, need be quoted:

> Believing that the sale of any commodity below the cost of production is unfair competition and is certain to be ruinous and destructive to any industry and consequently is detrimental in the long run to public welfare, we hereby voluntarily agree, regardless of what other manufacturers of flooring may do, to pay into the Treasury of the Maple Flooring Manufacturers Association, Ten per cent (10%) on any and all sales we may make of Maple, Beech, and Birch flooring, 13/16" and thicker, of standard grades and lengths at values below the average cost of production, plus the average cost of freight to destination, as ascertained from time to time by the Maple Flooring Manufacturers Association's Survey of Costs and Tables of Values Based Upon Average Cost, after allowing for commissions not exceeding $2.00 per M feet to Wholesalers and Commission Men and to our own Special Representatives. And the

> said Ten per cent (10%) shall be reckoned upon the average cost of said flooring delivered at destination as indicated by the Maple Flooring Manufacturers Association's Rate Book. (Vol. IV, p. 568.)

It is thus seen that ever since the adoption of the first articles introduced in evidence up till at least February, 1921, the organizations of which a large majority—of some nearly all—of defendants were members had been engaging in practices palpably unlawful. In February, 1921, they were driven to a declaration of abandonment of these practices by fear of criminal prosecution. As the court judicially knows, at that time, and for some time thereafter, business generally throughout the country was greatly demoralized; and the industry in which defendants were engaged was not excepted from the general conditions. The organization under the articles of association which when adopted were to continue until July 1, 1922, was still functioning; but after the Minimum Price Basis scheme was abrogated the organization was not accomplishing the results desired. As appears from such meager correspondence and other documents as the Government was able to obtain, there was manifestly much consultation among the members, and every ingenuity, by both the members and especially by the secretary, was being exercised to perfect a plan which would accomplish results the same as, or more satisfactory than, those accomplished by the Minimum Price Plan and the Mini-

mum Price Basis scheme. As stated in the correspondence, there was no such *cooperation* among the members as was desired. And the purpose was to devise a plan by which the necessary *cooperation* could be brought about. They were so anxious that this new scheme be adopted and put in operation that they would not wait till July 1, 1922, for the old articles to expire, but adopted the new articles in March, 1922, and dated them back to January 1, 1922. (Keehn, Vol. I, pp. 78-79.)

With this background in mind let careful examination be made of the articles and organization in existence when the bill in this case was filed, and which are still observed except as to one or two trifling modifications made some months after this action was begun.

V

Plan under which the association was operating when bill was filed

These articles of association purport to run from January 1, 1922, to January 1, 1925, and are filed as Government Exhibit 8. (Vol. III, pp. 64-74.) The parts of this plan which are especially material are as follows:

It is declared, among other things, that its object is "to exchange information concerning the character and nature of actually completed and closed business transactions of its members; to collect and disseminate statistics concerning the flooring industry"; but it is declared that the association shall

not, either directly or indirectly, fix, regulate, or control the price, output, purchase, or sale of flooring, or attempt to do so. (Vol. III, p. 64.) The officers are a president, a vice-president, a treasurer, a secretary, and a board of trustees, which board consists of the president, vice-president, and treasurer, and four members elected by the association. (Vol. III, p. 65.) The board of trustees is vested with practically all of the governing powers (p. 66). It is provided that an annual meeting for the election of officers shall be held on the third Wednesday in January of each year, and that regular meetings shall be held on the third Wednesday of April, July, and October, and that special meetings may be called by the president or by a majority of the board of trustees, and that a meeting of the board of trustees may be held at any time called by the president or by a majority of the board (p. 67).

Article XIV, which relates to cost of production, reads as follows:

> SECTION 1. The sound business principle advocated by the Federal Trade Commission that manufacturers should carefully consider the question of cost in manufacturing and selling their product is recognized by the Association as the only scientific method of conducting the business of manufacturing and marketing Maple, Beech, and Birch flooring.
>
> SECTION 2. For the purpose of furnishing to its members information regarding *the average cost* of manufacturing and market-

ing Maple, Beech, and Birch flooring, Surveys of Costs *to ascertain such average cost* shall be made from time to time by the Association, and such Surveys of Costs shall be filed with the Federal Trade Commission at Washington, D. C.

SECTION 3. In the judgment of the Association the following fundamental elements enter into and determine *the average cost* of Maple, Beech, and Birch flooring to the manufacturers when manufactured, sold and delivered F. O. B. cars at the flooring plant:

(*a*) The actual market value of the raw material, as established from time to time by current sales of rough flooring lumber on the open market;

(*b*) *The average cost and expense* of manufacturing, selling, and delivering flooring F. O. B. cars at the flooring plant;

(*c*) Interest on the capital actually invested in the flooring business at the rate of six per cent per annum;

(*d*) Annual depreciation of plant as is usually allowed by the United States Government;

(*e*) The usual overhead charges in carrying on the flooring business; and

(*f*) A reasonable allowance to provide for contingencies and unforeseen hazards incident to manufacturing operations. This allowance is estimated at five per cent of *the average total cost* of Maple, Beech, and Birch flooring when delivered F. O. B. cars at the flooring plant. (Vol. III, p. 69.)

With reference to statistical reports, it is provided in Article XV as follows:

SECTION 1. In order that the relations of supply and demand and the statistical conditions existing from time to time in the Maple flooring industry may be known, the following statistical monthly reports shall be made to the Secretary by each member of the Association on or before the 5th day of each month:

(*a*) Report of Stocks on Hand of Maple, Beech, and Birch Flooring at the end of the previous month.

(*b*) Report of Unfilled Orders on Hand for Maple, Beech, and Birch Flooring at the end of the previous month.

(*c*) Report of the amount in feet of Shipments made during the previous month of all kinds of Maple, Beech, and Birch flooring for use within the United States, except Maple, Beech, and Birch flooring purchased from other members of this Association.

(*d*) Report of Production of Maple, Beech, and Birch Flooring during the previous month.

(*e*) Report of New Orders Booked for Maple, Beech, and Birch Flooring during the previous month.

(*f*) Report of Average Prices Realized F. O. B. flooring plant after deducting freight, for 13/16″ x 2¼″ face Clear, No. 1 and Factory Maple Flooring, standard grades and lengths, sold during the previous month.

SECTION 2. *In addition to the foregoing monthly reports, each member of the Association shall send to the Secretary promptly at the end of each week a report of all sales made during that week of Maple, Beech, and Birch Flooring. These weekly sales reports shall state the quantity, kind and grade of flooring sold, the delivered price sold at, the average freight rate to destination of shipment, and the commissions paid, if any.*

SECTION 3. All the foregoing statistical reports shall be made upon blank forms furnished by the Association and shall relate wholly and entirely to past and completed transactions. Said reports shall be mailed by the members to the Secretary, *who shall report the same to the members.* (Vol. III, p. 70.)

The Association adopted a trade-mark for the use of its members, and the articles set forth a trade-mark agreement whereby the member is permitted to use the trade-mark as long as he retains his membership, but such right shall cease immediately upon his ceasing to be a member. Every member is given a number which appears on the trade-mark for identification. Each member agrees that he will maintain the standard grades which the association may from time to time establish, and that an inspector shall have the right to visit the plant to see that the grades are properly maintained and to protect the association against damage should the member fail to maintain the standard fixed; and a license fee of fifty dollars is paid for the use of the

right to use the trade-mark. (Vol. III, pp. 72-73.) The members are required to pay to the association the following amounts:

1. All new members admitted after May 1, 1922, are required to pay for the benefits which " they will enjoy from the Association trade-mark" the additional sum of $100 for each matcher installed for the manufacturing of flooring, which is a part of the Advertising Fund. (Vol. III, p. 65.)

2. Each member pays a fee of $200 for each matcher, which constitutes a fund called " The Membership Fee Fund." (Vol. III, p. 68.)

3. Each member pays 25c per M feet on all flooring shipped, except flooring purchased from other members, which goes into the " Expense Fund " to provide for the current running expenses of the association. (Vol. III, p. 71.)

4. Each member pays 10c per M feet on all flooring shipped, except flooring purchased from other members, which goes into the "Advertising Fund " (p. 71).

5. An annual fee is paid by each member of $50 as a license for use of trade-mark which also becomes a part of the "Advertising Fund " (p. 73).

The Government insists that the plan thus promulgated was designed to, and in fact does, accomplish more effectually the objects which were accomplished by defendants and their associates under the Minimum Price Plan and Minimum

Price Basis scheme. *In fact, as operated defendants are carrying on nothing less than a Minimum Price Plan effectually enforced by the continual exchange and distribution of information among the members of the association, and by open meetings and private conferences among members in which every phase of the industry is discussed.*

The principal agencies through which the desired results are accomplished are:

> (1) The computation and distribution among the members of a so-called average cost of all dimensions and grades of flooring;
>
> (2) Computing and distributing among the members a booklet showing freight rates on flooring from Cadillac, Michigan, which by agreement is made a basing point for the computation of freight rates, to thousands of points in the United States, and also showing the pretended average cost prices of flooring delivered at such points and advising how such prices may be computed for other points;
>
> (3) Exchanging statistics by which every member reveals to every other member what he is doing, the prices he is receiving for flooring, and the exact condition of his business; and
>
> (4) Meetings where the members congregate and both openly in a body and individually among themselves discuss every phase of the industry, and exchange views as to future policies and prices.

These agencies will be considered in the order mentioned.

VI

Construction and circulation of list or base prices

The excuse for computing and distributing among the members lists showing alleged "cost prices" is that it is of great value to the manufacturer that he be informed as to the cost of production and distribution of the article manufactured. The importance to the manufacturer of knowing *his* cost of production and distribution is fully recognized. How far competitors may cooperate in determining a *method* of cost accounting need not here be discussed, as defendants went far beyond a mere method of accounting. But it may be observed that when competing manufacturers interest themselves in the affairs of each other the natural and legitimate inference is that it is done to reduce the pressure of competition.

If it were conceded that competitors may agree upon a uniform *method* of cost accounting, yet there is a very wide and vital distinction between using a uniform *method or system* of cost accounting and *adopting either formally or tacitly uniform costs.* It is obvious that there must be a wide difference in the actual cost of production and marketing among the members of the association. Singularly enough counsel for appellants in their brief have strongly emphasized these differences. On page 66 of their brief appears the heading "Divers facts which are insuperable barriers to concert of action by defendants with respect to

production, prices, commissions, or terms of sale." And thereunder it is pointed out that there are great differences among the members in the following respects:

(1) The amount of maple, beech, and birch timber owned by them;
(2) The quantity of flooring produced;
(3) Location of plants;
(4) The value and quality of the timber owned or the rough lumber available to the different members;
(5) Some members produce only flooring, while others are engaged in various branches of the lumber business, as well as in other lines of industry;
(6) All the members manufacture maple flooring, twelve manufacture beech flooring, and fifteen birch flooring;
(7) Different matchers, or flooring machines, are used, which vary in capacity;
(8) All members are not engaged in producing the same thicknesses and widths of flooring;
(9) The trade of some is local, while others sell throughout the United States and for exportation; and
(10) Different sales methods are used.

And on page 244 of Appellant's brief it is said:

"The defendant association has more than 20 members, *among whom exist great differences.* Manifestly, the *association* (Italics theirs) could not undertake to furnish its *members* (Italics theirs) with the

> *cost* (Italics theirs) of producing and distributing maple, beech, and birch flooring ";

And on page 245 the brief continues:

> "All the association could do was to undertake to furnish its members with the *average* (Italics theirs) cost of production and distribution of maple, beech, and birch flooring. Of course, this means the average cost of members of the defendant association."

Now it is not only admitted, but the fact is emphasized, that there are great differences in the conditions under which the several defendants are operating; and that *necessarily* there are *wide* divergences in the costs to the members of production and distribution of flooring. While it is not admitted that the association *could* not undertake to furnish each member with the cost of its production and distribution of flooring, yet it is admitted that the association *ought not to do so. Each member should make its own estimate based upon its own peculiar conditions and items of cost.* It is not true either that "All the association could do was to undertake to furnish its members with the average cost of production and distribution of * * * flooring." The association could have given some suggestions to each member as to *how it could properly make its own estimate.* And it was altogether improper and illegal to furnish the members with the *average* cost of production and distribution. *The very foundation of competition is the dif-*

ferences to competitors in the cost and distribution of the article manufactured by them. It is that which enables one competitor to undersell another. When that is eliminated competition practically disappears. Is there any one who will contend that if these defendants had positively agreed to adopt these estimates of *average* cost of production and distribution as their *actual* costs, and to figure prices upon that basis, such an agreement would not violate the Antitrust Act? The only element left for competition would be the amount of profit each would be content to make. If such actual and open agreement would be unlawful, an implied agreement or the accomplishment of the same purpose through an association, is also unlawful.

Since the *average* cost was not the *actual* cost of *any* member why furnish *any* of them with the average cost? How could it be of use to any member in computing *its* costs? The Government insists that the evidence establishes beyond possible controversy that this plan and practice of computing and distributing *average* costs of production and distribution *was adopted and has been continually used, and is still used, as a method of determining the minimum price at which flooring has been and is to be sold; and that the claim that it is done as an aid to the members in estimating their own costs is a mere pretense and sham.* The following is a short history and analysis of this feature of the association's activities.

The members of the Association during the entire time since 1913 have distributed among themselves through the secretary lists designating what are now called " average costs " of the various grades and dimensions of flooring. Mr. Keehn testifies:

> Q. That method has been used for how many years?
>
> A. I think we commenced, originally, in 1913 under what we termed " scientific list." That was based on the old work of the Market Conditions Committee.
>
> Q. You have been using that same method since—the same general principles—and are using them to-day?
>
> A. We are using it to-day. (Vol. I, p. 110.)

And with reference to the computation of costs, he says:

> This same method has been pursued at different times, and we have a number of those calculations going way back to 1913. (Vol. I, p. 109.)

The preparation and distribution of the first so-called " cost list " which is variously referred to in many of the circulars, reports, and minutes in the record as the " Scientific List " or " Scientific Price List " (Vol. III, p. 114, p. 207, p. 228, p. 230), the " Recommended List " (Vol. III, p. 205), the " Logical Basis of Values Table " (Vol. III, p. 211), and the " Delivered Table of Values " or " Table of Values " (Vol. III, p. 213, p. 215, p.

222, p. 238) was authorized at the annual meeting of the association held January 22, 1913 (Vol. III, p. 106 and p. 108). The portion of the memorandum of the meeting covering this matter reads as follows:

> It was the opinion of the members present that considering the present market values of rough lumber and the actual costs of manufacturing and selling flooring, the present values of flooring are entirely too low, and it was suggested that at the next meeting of the Market Conditions Committee, the Committee figure out what the selling values of flooring would be if a logical and scientific method of determining values of flooring were used, that is, if the selling values of flooring were based upon the cost of raw material plus manufacturing and selling costs and plus a reasonable profit. (Vol. III, p. 106.)

The references heretofore given to the first " Scientific List " or " Table of Values " establish that it was printed under date of May 21, 1913. No other such list or table was prepared and distributed to the members until the Minimum Price Plan was adopted in 1916, when a new rate book containing the Index of Towns and Table of Values of May 15, 1916, referred to in the Plan (Vol. III, p. 79) was printed (Vol. III, p. 242). The memoranda of Association meetings and the Reports of the Market Conditions Committee contained in the record for the period from 1913 to May, 1916, are not complete,

but they disclose only *one* instance during that period, in January, 1915, when a change in the delivered values was recommended *on the basis of new data covering manufacturing and selling costs and the current value of the raw material* (Vol. III, pp. 230–231); whereas they disclose *ten* instances where recommendations as to the current price obtainable (in terms of additions to or concessions from the list of May 21, 1913) were made by the Market Conditions Committee solely *on the basis of analyses of the association statistics as to stocks, shipments, and production, new business booked, and current net values.* These instances are shown by the Reports of the Market Conditions Committee dated respectively March 25, 1914 (Vol. III, pp. 204–205), June 25, 1914 (Vol. III, pp. 210–211), August 22, 1914 (Vol. III, pp. 214–215), September 24, 1914 (Vol. III, pp. 216–220 at 219), October 30, 1914 (Vol. III, pp. 220–222), November 20, 1914 (Vol. III, pp. 222–224), December 18, 1914 (Vol. III, pp. 225–226), February 25, 1915 (Vol. III, pp. 231–233), April 15, 1915 (Vol. III, pp. 237–239), and May 26, 1916 (Vol. III, pp. 240–242).

That general market conditions had a more controlling effect than actual costs in determining minimum prices even during the time when the Minimum Price Plan was in effect, is shown by the recommendation of the Market Conditions Committee under date of August 21, 1919, for an advance in the minimum price in accordance with the procedure established by Article IV of the plan. This recommendation reads as follows:

Raw Material Higher.—Since the last meeting of the Committee there has been an advance in the market value of rough flooring lumber, according to reliable information given to the Committee in regard to several recent sales on the open market. *If the advance in the rough lumber and the steady increases in Manufacturing and Marketing costs were fully met, an advance of $10.50 in the M. P. P. Basis would be required, but in view of all conditions, the Committee recommends horizontal advances of $6.00 on Clear, $6.00 on No. 1, and $5.00 on Factory $\frac{13}{16}$" and thicker Maple, Beech, and Birch flooring, effective immediately* with the understanding that old quotations now outstanding may be protected, if desired, up to August 30th, inclusive.

* * * * *

Please advise the Secretary immediately upon receipt of this report whether or not you concur in the recommendation of the Committee, and if the recommendations are adopted, new Concession sheets will be printed and mailed you at once. (Vol. III, pp. 250–251.)

Analysis of elements and computation of so-called cost prices

There are three general elements that enter into the computation of these so-called cost prices:

1. Manufacturing costs;
2. The cost price per thousand feet of rough lumber out of which the flooring is made; and

3. The percentage of waste in converting the rough lumber into flooring.

As to how manufacturing costs are estimated, the secretary, Keehn, says:

> The information from which we figured out the cost of production came from the members of the association. We had no information from nonmembers regarding their cost of production. Referring to Gov. Ex. 23 (a sheet entitled " Survey of Costs, 3rd Quarter, 1922 ") we use the same form but employ different calculations. We are still sending out the questionnaire above referred to and by means of them ascertain the average of actual costs. (Vol. I, pp. 104–105.)

The questionnaire now sent out was read into the record by this witness and appears on page 108, Vol. I. The secretary takes the replies from the several members and makes an average of them all. A questionnaire relating to production and marketing costs of the flooring produced during January, February, and March, 1922, with *an average* of the figures given in the answers as to each item, is filed as Gov. Ex. 25 (Vol. III, p. 279), which is as follows:

	Per 1 M Ft. of Flooring Produced
1. Labor taking lumber off of dock, car, pile, or wagon and placing in dry kiln, including expenses of night fireman	$1.16
2. Cost of manufacturing into flooring and putting flooring in warehouse, including twine, oil, belting, and other factory supplies, and factory repairs and including manufacturing administrative expenses	8.34
3. Warehouse expense and loading into cars or on wagons	.90
4. Insurance and taxes. (Divide ¼ of annual amount by quantity of flooring produced during January, February, and March)	1.07

	Per 1 M Ft. of Flooring Produced
5. Interest of 6% on value of plant and on value of average stock carried of rough flooring lumber and of finished flooring. (Divide ¼ of annual amount by quantity of flooring produced during January, February, and March)	$1.92
6. Selling expenses, including commissions and advertising, and office expenses including selling administrative expenses	3.75
7. Cash discount	.80
8. Annual depreciation on flooring plant as is usually allowed by the United States Government. (Divide ¼ of annual amount by quantity of flooring produced during January, February, and March)	1.37
9. Total per M feet	19.31
10. Less net profit from wood and other by-products of flooring lumber, per 1 M feet of flooring produced during January, February, and March	1.32
11. Actual Manufacturing and Marketing Costs per 1 M feet of flooring produced during January, February, and March	17.99

MAY 31, 1922.

The questionnaire read into the record (Vol. I, p. 108), which appears to have been in use in 1923 some time after this action was begun, contains two queries not included in this one, to wit, "Quantity of flooring produced by us during July, August, and September" and "Our percentage of waste in manufacturing flooring during July, August, and September," but the information thus asked for was obtained in other ways.

With reference to the second element, cost of rough lumber, Mr. Keehn says:

> When an estimate of cost was made we also had the market value of the rough lumber as established by sales in the open market. We might have such information from the lumber trade papers or from sales made by sawmill operators of flooring lumber on

> the market or from members of the Association who had purchased the rough lumber on the open market. We used all sources of information. This information was sent in by members of the Association, sometimes to me, sometimes to the Market Conditions Committee, all for the use of the Market Conditions Committee. Sometimes during the past year we would get this information at meetings of the Association by asking each one what he was paying for rough maple lumber on the open market, actual sales. The Committee on Cost Surveys ordinarily came to the conclusion as to what information was to go out in my reports to the members. The cost of rough maple lumber was taken by using several purchases—five, six, eight, or ten—and we might take the average the same as the Government does in compiling its data regarding the value of rough maple lumber on the open market. (Vol. I, p. 104.)

From the beginning there has been a Committee which had special duties to perform in regard to constructing these price lists of flooring. Formerly it was called the "Market Conditions Committee," but now is known as the "Cost Surveys Committee." With reference to the functions of this Committee, Mr. Keehn says:

> The Cost Surveys Committee does not perform exactly the same function as the Market Conditions Committee did. The Committee on Cost Surveys simply goes into the

> cost of the raw material, the cost of marketing and manufacturing, and takes no notice of any kind of the selling price of flooring. (Vol. I, p. 105.)

However, it is apparent from Mr. Keehn's testimony (Vol I, pp. 104–110) that the information was all gathered and the computations made by himself, and that but little work was actually done by the Committee. In fact, Mr. Dewey, Chairman of the Cost Surveys Committee, testifies to that effect. (Vol. I, pp. 396–399.)

The information as to the third element, the amount of waste resulting from converting rough lumber into flooring, is obtained by one or more members making what is known as "Test Runs." Sometimes the same member makes several runs; and at other times the runs are made by different members; and the estimates are based upon the average waste resulting from the several runs. The manufacturer making the run keeps a record of the quantity of each grade of rough lumber used and also of the quantity of each grade and dimension of flooring produced, and, of course, the difference is the amount of waste.

The final result is obtained by putting together the three elements mentioned, and determining therefrom the alleged cost price of each grade and dimension. A careful study of the tables will show that this work, *especially that of distributing the cost price between the various dimensions*, is done

by a genius. With reference to how often the estimates are made, Mr. Keehn says:

> We make those estimates from time to time according to when the market changes on rough lumber or according to when the manufacturing and marketing costs are changed. There is no definite period. We make them at very irregular intervals. I would say without looking it up we made perhaps three or four during 1922. (Vol. I, p. 110.)

This witness undertook to explain how the estimates are made (Vol. I, pp. 105–106), but, presumably through error of the stenographer in taking the figures, but few of the results stated can be obtained from the quantities given, and the estimates can be more readily understood from a study of the tables themselves. Exhibits 25–A, 26, 27, and 28–N (Vol. III, pp. 280, 284, 287, and 315) are four estimates, all based on "the three test runs of 1921, made by North Branch Flooring Company, Chicago, in January, 1921, and between May 1 and September 10, 1921." For the element of manufacturing and marketing costs the first of these estimates (Exhibit 28–N, p. 315) was based on an estimate of average of such costs for the first half 1921; the second estimate (Exhibit 25–A, p. 280) was based on such costs for the first quarter 1922; the third estimate (Exhibit 26, p. 284) was based on such costs for the third quarter 1922; and the fourth estimate (Exhibit 27, p. 288) was based on such costs for the last quarter 1922.

29379—25. (Face p. 73.)

For illustration Government's Exhibit 28–N (Vol. III, p. 315) is set forth on the sheet inserted opposite. The first part of the table, which shows the quantity and grades of the rough lumber used, is, of course, the same in all of the four estimates based on these same test runs.

Mr. Keehn claims that by resolution of July 19, 1923, *four and half months after this action was begun,* it was directed that the element of 5% for contingencies which appears in the second part of the table, be eliminated from the calculations. (Vol. I, p. 152.)

The first division of this table is easily understood, as is also the second, assuming that the cost prices of rough lumber and cost of manufacturing are correct. *But on what principle were the prices divided between the different grades and dimensions of flooring, so as to make up approximately the average cost shown by the second part of the table?* There is nothing to show that the waste of manufacture of one grade of rough lumber is greater than that of another, and the cost of manufacturing the different grades of flooring was the same, or practically so. Therefore the only element upon which to base a difference in the *cost* prices of different grades and dimensions of flooring was the difference in the prices of the grades of rough lumber; and it does appear that the *average* of the grades of the finished product in the foregoing estimate were in the neighborhood of the

same proportion to the prices of the grades of rough lumber; that is, the average price of the different dimensions of "clear" flooring was a little more than twice as much as the price of "No. 1 Common" rough lumber, and the same was true, but with a greater difference, as to No. 1 grade of flooring and No. 2 Common lumber, while the average price of factory was somewhat less than twice the price of No. 3 Common A rough lumber. However, since attention is called to this matter in appellants' reply brief (pp. 32 and 33) it is observed that in the later estimates even that general relationship greatly varied. But in estimating *costs* why should 1⅛" x 1½" Clear be fixed at $85 while the same thickness, face 2" was fixed at $83, that facing 2¼" at $90, that facing 3¼" at $80, and all faces of ⅜" Clear at only $60? Here was a spread of $25 between the several dimensions *of the same grade.* In "costs" of dimensions of No. 1 there was a spread of $15, all faces of ⅜" being estimated at $45, while 2¼" and 3¼" faces of 1⅛" flooring was estimated at $60. And why should 1⅛" x 3¼" Factory be estimated *to cost* $27 while ⅜" all faces is computed at $10? *Necessarily these were not COST figures at all, but were the prices fixed by the Committee or Secretary Keehn, which the members were advised they should charge for different grades and dimensions of lumber.*

This is further manifested from a comparison of the advances made in the prices of the several grades and dimensions in the four estimates above

mentioned. The other three estimates appear in Vol. III, pp. 280–289. For convenience of comparison a table showing such advances, and also the prices of rough lumber upon which the several estimates were based, and the average prices of manufacture, is here given.

First part

[Showing prices of different grades and dimensions of flooring in the four estimates based upon the three runs made by North Branch Flooring Company in 1921]

	First Est.	Second Est.	Increase	Third Est.	Increase	Fourth Est.	Increase
Clear:							
¹³⁄₁₆ x 1½"	$85	$85	$0	$90	$5	$90	$0
x 2"	83	87	4	90	3	95	5
x 2¼"	90	90	0	95	5	100	5
x 3¼"	80	85	5	80	−5	85	5
⅝ All Faces	60	60	0	65	5	65	0
No. 1:							
¹³⁄₁₆ x 1½"	53	68	15	78	10	78	0
x 2"	53	72	19	80	8	85	5
x 2¼"	60	75	15	85	10	90	5
x 3¼"	60	75	15	75	0	80	5
⅝ All Faces	45	45	0	45	0	45	0
Factory:							
¹³⁄₁₆ x 1½"	15	20	5	25	5	30	5
x 2"	23	28	5	35	7	40	5
x 2¼"	25	30	5	40	10	45	5
x 3¼"	27	35	8	45	10	50	5
⅝ All Faces	10	10	0	15	5	20	5

(NOTE.—Between the dates of the first and second estimates, a table of values dated November 17, 1921, was distributed. This increased the prices on 2" face Clear, No. 1 all faces, and 3¼" face Factory, on the basis of a discussion of trade conditions and costs at an association meeting. [Vol. IV, pp. 142–143.] These increases were not based on a survey of costs and are therefore not considered in the above comparison.)

Second part

[Showing estimated average manufacturing and selling cost of flooring and the prices of the three grades of rough lumber entering into said estimates]

	First Est.	Second Est.	Increase	Third Est.	Increase	Fourth Est.	Increase
Average manufacturing and selling cost of flooring per M	$61.94	$73.53	$11.59	$80.33	$6.80	$84.00	$3.67
Price No. 1 Com	39.50	51.00	11.50	56.00	5.00	61.00	5.00
Price No. 2 Com	24.50	36.00	11.50	41.00	5.00	41.00	0.00
Price No. 3 Com. A	11.50	22.00	10.50	26.00	4.00	30.00	4.00

It might be claimed that the prices of the several grades of flooring should be increased or diminished according to the advance or fall of the prices of the corresponding grades of rough lumber. In other words, there are three grades of rough lumber used in the manufacture of the three grades of flooring, to wit, No. 1 Common, No. 2 Common, and No. 3 Common A, and no doubt No. 1 Common will produce a greater per cent of clear flooring than either of the other two grades, and No. 2 Common will produce a larger per cent of the higher grades than No. 3 Common A.

The witness Greene testifies in effect that such is the fact. (Vol. I, p. 386.) Therefore there may be reason in increasing or diminishing the prices of clear flooring in proportion to the advance or fall of the price of No. 1 lumber, and the same is true as to No. 1 flooring and No. 2 Common lumber, and factory flooring and No. 3 Common A lumber. But in estimating costs, what justification is there for making *a difference in the advance of the different dimensions of the same grade? A study of the foregoing table will show that the increase of prices on lumber has no relationship whatever to the advance of the prices of the grades of flooring.* In the second estimate there was an average increase of $11.59 in the cost of flooring over the first estimate, and the increase in the average prices of the *grades* of rough lumber were:

No. 1 Common	$11.50
No. 2 Common	11.50
No. 3 Common A	10.50

But prices of three dimensions of clear flooring were not increased at all, while 1⅛" x 2" was increased $4, and 1⅛" x 3¼" was increased $5. Moreover, there was no increase in No. 1, ⅜" All Faces, but the prices of the several faces of 1⅛" were increased: 1½", $15; 2", $19; 2¼", $15; and 3¼", $15; and the prices of factory were increased 3 faces of 1⅛", $5; and 3¼", $8; and there was no increase in ⅜" All Faces.

The increase in the third over the second estimate of the average cost of flooring was $6.80, the prices of rough lumber having increased $5 each for No. 1 and No. 2 Common, and $4 for No. 3 Common A. In distributing this increase among the grades and dimensions, *three of the dimensions of the Clear grade, including 3/8 all faces, were advanced $5 each, one, 2" face, was advanced $3, and one, 3¼",* **was reduced $5.** And in No. 1 Flooring, two dimensions were advanced $10 each, one dimension $8, and the other two remained the same. And the prices of two dimensions of factory were advanced $10 each, two $5 each, and the other dimension $7.

The estimated average increase of cost of flooring in the fourth estimate was $3.67, there having been an increase of $5 for No. 1 Common rough lumber, no increase for No. 2 Common, and $4 for No. 3 Common A. But in distributing this among the several dimensions of *flooring,* three dimensions of Clear were advanced $5 each, and two remained

the same, three dimensions of No. 1 were advanced $5, and two remained the same, while all dimensions of factory were advanced $5.

It is perfectly apparent, therefore, that the distribution of the increase or decrease of the so-called cost of production between the different grades and dimensions has no relationship whatever **to the advance or decrease in cost;** *but is based entirely upon other influences, which unquestionably are the prevailing and prospective conditions of the market.* **In other words, the secretary of the association, aided to some extent by the Committee, surveys the entire situation and makes up a price list which, so far as the relative price of grades** *and dimensions is concerned, is wholly arbitrary and not controlled in the least by any of the elements that appear in the cost of production.*

In fact Keehn incidentally admits as much. The court pointed out a differential of $10 between "beech, 13/16th dressed" and "matched, all faces" and asked if that was substantially a continuing differential, and Keehn replied:

> Not at all times. *It depends upon the supply and demand of these different floorings, to what a man's stock conditions are,* and the cost of it, too. (Vol. I, pp. 153–154.)

These pretended "cost-price" lists that are now distributed among the members *are computed in the same way and are the same lists that were, while*

the Minimum Price Plan and the Minimum Price Basis scheme were in open operation, distributed as "tables of values" with the written stipulation that they would be observed as the minimum prices at which the flooring was to be sold.

That the manipulation of the spreads between the different sizes and grades of flooring and between the different woods is not based on actual cost, but is purely arbitrary and designed to reflect current market conditions, is clearly established by the following quotations from letters sent out to the members by the Secretary, from Reports of the Market Conditions Committee, and from minutes of meetings during the period from 1913 to 1922.

M. C. C. Report, March 25, 1914

> The better movement in Factory should be noted because it indicates that better prices should now be obtainable for this grade, especially in view of the fact that 70% of the 2¼" Factory was sold on March 1st as against only 39% on January 1st. (Vol. III, p. 204.)

Letter, Keehn to John Schroeder Lumber Co., Jan. 30, 1915

> I would like to urge upon you to carefully read and study the annual reports reviewing the work of the Association during the year, and especially the report of the Market Conditions Committee for December, which covers the data collected regarding manufacturing and selling costs, and to which is

attached a table illustrating our so-called Scientific List brought up to date. This table is figured on the basis of the present market value of the raw material, manufacturing and selling costs, *and present selling values for flooring* as applied to the six test runs which were used in the construction of the original Scientific List in 1913. (Vol. III, p. 234.)

M. C. C. Report, May 18, 1917

In exchanging trade experiences, members of the Committee report the demand strong for Factory and No. 1, particularly for Factory, and it is their opinion that this demand will continue strong and grow stronger on account of the class of buildings now in course of construction and which are likely to be built during the summer and fall. *It is the view of the Committee that on account of the oversold condition of Factory and the heavy prospective demand for it that much higher prices than present values can be readily obtained. As the No. 1 grade moved up 62 points during April and as the demand for it seems likely to increase, it should also command higher levels of value.*

* * * * *

The opinion was expressed that the present Spreads between Clear and No. 1 and between No 1 and Factory are larger than are justified by market conditions, and we would be glad to have your views on this subject. The Secretary will send you blank forms requesting an expression from you in the

form of a vote for our guidance, so we can consider the question at our next meeting and make some recommendation to the Association. (Vol. III, pp. 243–244.)

Memo. of Meeting, Nov. 17, 1921

Stronger Market.—Trade conditions and our statistical reports for the month of October were discussed. Clear and No. 1 Maple Flooring 13/16" x 2¼" face are both in a very strong position, as indicated by their oversold condition, the Clear being sold 232% and the No. 1 sold 208%. The improvement in the demand for No. 1 is particularly noticeable, as it was sold only 45% on August 1st compared with 208% sold on Nov. 1st.

In view of recent advances in the market value of rough Maple Flooring lumber and taking into account Manufacturing and Marketing Costs and the relations of supply and demand as indicated by the heavily oversold condition of Clear and No. 1, IT WAS THE CONCENSUS OF OPINION AS FOLLOWS:

1. That present market values of Maple Flooring 13/16" are represented by Frame "A" Basis, Table of Values dated 5–21–21, at Full List for Clear and No. 1 and a concession of $5.00 on Factory.

2. That the spread of $7.00 between 2" and 2¼" in Clear and No. 1 is excessive and that a spread of $3.00 would be more representative of the difference in the intrinsic value of the two faces.

3. That the spread between Clear 3¼" and 2¼" be reduced from $10.00 to $5.00, and the spread between Factory 3¼" and 2¼" be changed from $2.00 to $5.00.

4. That the market values of Birch are equal to Maple, and that Beech Clear and No. 1 are $10.00 less than Maple and Birch, and that Beech Factory is equal in value to Maple and Birch Factory.

5. That the Table of Values dated May 21, 1921, covering ⅜" represents the present market value of ⅜". (Vol. III, p. 141.)

The action taken at the November 17, 1921, meeting was recommended by the Market Conditions Committee in a report dated October 28, 1921 (Vol. III, pp. 253–255), and is shown by circular letters from Mr. Keehn to the members dated November 17, 1921, and December 1, 1921, to have been used as the basis of a new " Table of Values " printed under the same date (Vol. III, pp. 142–143 and p. 318).

It is worthy of note that this was done nearly nine months after the warning was given by the Assistant to the Attorney General and the Association had by resolution pretended to revoke the Minimum Price Basis agreement, and had written the Department of Justice-their intention not to observe it. But in practice they continued to do, and are still doing, the same things they did before.

The Government filed a number of other estimates based upon varying numbers of runs made by members, which are:

Exhibit No. 28, Vol. III, p. 291.
Exhibit No. 28A, Vol. III, p. 294.
Exhibit No. 28B, Vol. III, p. 296.
Exhibit No. 28D, Vol. III, p. 300.
Exhibit No. 28E, Vol. III, p. 302.
Exhibit No. 28F, Vol. III, p. 304.
Exhibit No. 28G, Vol. III, p. 307.
Exhibit No. 28H, Vol. III, p. 310.

The first of these was dated January 29, 1915 (p. 293), and the last March 1, 1920 (p. 312). In each of them there was added 10% profit on selling prices f. o. b. mill, and to some a note was added, as, for illustration, to Exhibit 28G (Vol. III, p. 309):

> To Realize a Profit of " Cost Plus " 10% (the method frequently used by the Government during the war in making its purchase contracts) instead of a 10% Profit on Sales, the profit would be $5.63 instead of $6.26, a difference of 63 cents; in that case the flooring manufactured in these Seven Test Runs, which have been consolidated and considered one run, should sell for $61.97, instead of $58.98, or $2.99 more than selling basis of May 13, 1919.

In the estimates made during 1922 this 10% profit is omitted, and the witness Keehn says that the estimate as now made contains no element of profit. (Vol. I, p. 107.) But it will be observed that in the fifth question in the questionnaire (p. 68), from which the average manufacturing and marketing costs are estimated, there is included 6% on the value of the plant and the average stock carried

of rough lumber and of finished flooring; and, until after this action was begun, in each of the estimates 5% was added for contingencies. *But what difference can it make whether any per cent is allowed on the average estimated cost or not, when the prices upon the several grades and dimensions are manipulated at will? The advance may be far beyond 10% on those dimensions for which there is a demand and which are being sold in large quantities, and be reduced to nothing on the dimensions for which there is no demand at all.*

There is another feature which shows that this estimated cost has really but very little to do with the actual cost of flooring that is manufactured and sold upon the market. In the test runs a record is kept of the relative amounts of the different grades of rough lumber that are used, and the estimates are all based upon the *average* price of all the lumber used. *But manifestly in the operation of their mills, the relative quantity of these grades is not observed at all; and, therefore, the cost of the lumber actually used by the several manufacturers does not correspond at all with the costs upon which the estimates are based.* For instance, suppose there is a greater demand in the market for No. 1 flooring than for Clear, then the rough lumber used will be more of No. 2 Common and less of No. 1 Common; or if there is a greater demand for Factory and less for Clear and No. 1, then a very large percentage of the rough lumber used will be

No. 3 Common A; and *the estimates all show that the price of such lumber is less than half of the price of No. 1 Common.* Undoubtedly after the second estimate above cited had been sent out, there was a large increase in the quantity of No. 1 flooring produced, and but little, if any, in clear, as the great increase in the prices of No. 1, as compared with the increase in prices of clear, no doubt resulted from the increased demand for No. 1. Therefore, there was a much greater relative quantity of No. 2 rough common lumber used, and a corresponding decrease in the cost of production. And the same may be said as to No. 3 Common A rough lumber after the third price list was sent out, in which there was advised a large relative increase in the price of factory flooring.

It is apparent, therefore, that these test runs could be easily manipulated so as to show a false and excessive average cost of production by using a large amount of high-priced rough lumber. The evidence indicates that such manipulation was resorted to. W. L. Saunders testified that "Firsts and seconds, selects, and the better end of No. 1 Common rough maple lumber, are not generally used in the manufacture of maple flooring by manufacturers who produce their own lumber, because it is not profitable to do so," Vol. I, p. 197, the reason being that it can be sold on the market at prices as good as, or better than, those obtained for the best flooring. It is clearly inferable from

the evidence that there is a much larger quantity of No. 2 Common and No. 3 Common A used in manufacturing flooring than there is of No. 1 Common rough lumber, yet in the test runs upon which the four estimates heretofore referred to were based, 51.5% of all the rough lumber used was No. 1 Common, the price of which was $39.50, while the prices of the lower grades were $24.50 and $11.50, respectively. And in the test runs upon which the estimates shown in Government's Exhibit No. 63–G (Appellants' brief, p. 274) were based, 53% of the entire amount of rough lumber used was No. 1 Common, the price of which was then $64; while the prices of the lower grades were $44, $32, and $24, respectively.

When consideration is given to the manner in which these "tables of values," now improperly called "average costs," have been used by defendants and other manufacturers of flooring, to the elements that enter into their computation, to the manipulation of costs to suit market conditions, to their repeated distribution among the entire membership, and to the other evidence in the record, which will be hereafter considered, no other inference can reasonably be drawn than that it is intended, and at least tacitly understood, that the costs designated in these lists are the minimum prices at which the flooring is to be sold. This inference is made doubly strong by the methods devised to accomplish such a result; and to these methods consideration will now be given.

VII

Book showing estimated freight rates and values of flooring at points of delivery

The association computes freight rates to thousands of points of delivery, and distributes among the members books which not only show such rates *but also contain the prices of lumber delivered at such designated points.* In describing the book which was prepared in 1916 the witness Keehn said:

> The index letter following the name of each town indicates the rate of freight from Cadillac, Michigan, to the various points. We do not consider that Cadillac is taken exactly as the base. The rate of freight from Cadillac to about thirty or forty or fifty representative markets in the United States happens to be about the same as the average rate of freight from the seventeen producing points in Michigan and Wisconsin. In this particular book it is true that all the freight rates are estimated from Cadillac because we simply took the rate of freight from Cadillac in having it compiled. It shows the rate of freight from Cadillac to five or six thousand points or seven or eight thousand points, scattered all over the United States. (Vol. I, p. 112.)

From the whole of Mr. Keehn's testimony (pp. 112–117) it appears that the following is the method used in computing rates. Nearly all of the factories belonging to the members of the as-

sociation are situated in Michigan and Wisconsin. Three mills are located at or near Cadillac, Michigan; and the rates from that point are about the average of the rates from all of the factories to the numerous points in the United States. Therefore Cadillac is fixed as the arbitrary point from which the freight rates are computed. But the rate charged is not always the actual rate from Cadillac to the point of delivery, as Mr. Keehn testified that the rates take a certain grouping, so that the index letters representing 45, for instance, might also represent 44½ or 45½. (Vol. I, p. 114.)

That Cadillac has been adopted and used as a common freight basing point is shown by a number of exhibits in the record. In a letter to members dated December 7, 1917, with reference to establishing a uniform custom among the members of the association in respect to the war tax on freight charges, Mr. Keehn said:

> *As our delivered prices are based upon Cadillac, it would not work out to mention the rate of freight in cents per 100 pounds, because the local rate of freight from points other than Cadillac, to the point of delivery would not be according to our basis used in arriving at delivered prices.* (Vol. IV, p. 433.)

And in a letter dated August 23, 1921 (six months after the association had pretended to abandon the Minimum Price Basis agreement), to the Oval

Wood Dish Corporation, which had just joined the Association, Mr. Keehn stated:

> We are inclosing the following:
>
> "1. Minutes of Meeting of August 19, 1921.
>
> "2. Copy of letter to members dated August 20th, regarding the consensus of opinion as to the current market value of flooring.
>
> "3. *Rate Book containing Tables of Values Based upon Average Cost and index to towns showing the delivered values based upon the rate of freight from Cadillac, Mich.* Cadillac is our basing point, as it is practically the geographical center of the production and distribution of flooring and the rates of freight in a general way from Cadillac would be about the average rate of freight from all the Association flooring mills." (Vol. IV, p. 481.)

For some reason, which Mr. Keehn does not explain (Vol. I, pp. 113–114), the rates in the book are given in letters instead of figures, A representing 1, B, 2, etc., down to J, which represents 0.

After the rates from Cadillac to the numerous points are thus ascertained, they and the prices of lumber, determined by the method heretofore detailed, are added together, *and the delivered price of lumber at each of the thousands of points mentioned in the rate book is thus obtained and is shown in the book.*

The system is fully illustrated by reference to Gov. Ex. 35, Vol. III, p. 328, side pages 737–905.

This exhibit is the freight-rate book which bears date of May 31, 1922, and which was compiled and distributed about that date. Only enough of this exhibit is printed to fully illustrate the character of the book. The first page, after giving the title, contains a key showing to what figures the letters correspond, and it is then explained:

> To ascertain delivered costs at an unlisted point allow 25 cents for each one cent difference in the rate of freight between the nearest listed point and the unlisted point from the point of shipment. (Vol. III, side p. 738.)

Then follows the freight rates, designated in letters, to numerous points in each State, which are computed in the manner above described. For instance, in Illinois the freight rate to Abingdon is BG, or 27 cents; to Annapolis, Maryland, DD, or 44 cents; to Middletown, New York, it is DA, or 41 cents, and to all points in Massachusetts it is DC, or 43 cents. There is then given (side pages 881–882) an Average Cost Chart, which shows the average cost of the three grades and four dimensions of flooring ascertained by the method heretofore described. This chart contains costs of only Maple lumber ¹¹⁄₁₆″ in thickness, but there also appears on side pages 878–879 a Table of Differentials, which shows the difference between the flooring described in the Average Cost Chart and—

(1) Average cost of Beech, 13/16, All Faces.

(2) Average cost of Birch, 13/16, All Faces.

(3) Average cost of Wide Faces.

(4) Average cost of Thick Flooring.

(5) Average cost of Jointed Flooring.

(6) Average cost of Special Grades.

(7) Average cost of Extra Shorts.

Then follows what is designated as a " Delivered Cost Chart," which contains the delivered costs as above described of $\frac{13}{16}$" flooring of the several faces computed upon every rate given in the freight rate chart. For illustration, take the first item appearing on side page 883, where the freight rate is AE, or 15 cents, the delivered prices for the various dimensions of Clear flooring are $88, $90, $93, and $88.50. The delivered prices of No. 1 are: $71, $75, $78, and $78.50, respectively. The delivered prices of Factory are $23, $31, $33, and $38.50, respectively; and generally with each advance in freight of one cent, there is 25 cents added to the price, although this does not always hold good. If the manufacturer is shipping other varieties of flooring than maple or other dimensions of maple, he has to make his own computation from the table of differentials described. *Thus there is in the possession of each member the exact price which it is intended that he shall charge at the point of delivery for every shipment made by him.* And not con-

tent with this, the book specifies (Vol. III side p. 880) what the terms of sale are to be as follows:

> Sixty days net or 2% discount for cash in 15 days, or 1% discount for cash in 30 days from date of invoice after deducting freight.
>
> If the car has not arrived, the discount may be deducted on 90% of the invoice less estimated freight, for cash within proper discount period, the balance with original paid freight bill to be remitted net within 5 days after arrival of car. No cash discount will be allowed after 30 days from date of shipment.

Of course, it would be expensive to have printed and distributed books containing so much matter every time there is a change in the price. With reference to what is done when a change in price is made, Keehn testifies:

> Q. Now, when another estimate of costs has been made before the issuance of another freight-rate book, what did you do?
>
> A. Well, we might have put in a sheet or might have issued a new table of values.
>
> Q. Well, you would do one or the other?
>
> A. One or the other, ordinarily.
>
> Q. That is, you would send to each member a sheet showing this new estimate?
>
> A. New estimate; yes, sir.
>
> Q. So he could use that in connection with his freight-rate book?
>
> A. He could make such use of it as he desired. Simply sent to him for his information. (Vol. I, p. 114.)

The book of 1922 was made up of loose leaves; and direction was printed in the book showing how the old leaves could be removed and new ones inserted. (Vol. III, side p. 738.)

When this book was issued in 1922, Mr. Keehn, the secretary, sent out to the membership, under date of June 24, 1922, the following letter:

> GENTLEMEN: 1. For the information of the members of the Association, the Committee on Cost Surveys has made a careful analysis and survey of the Average Cost of Manufacturing and Marketing Maple, Beech, and Birch Flooring.
>
> 2. The Survey was made in accordance with Article XIV, "Determining Average Cost," of the Articles of Association, and the results of the Survey are given in the inclosed schedules, which, for brevity, are called "Average Cost Chart" and "Differentials."
>
> 3. For the further information of the members, so-called "Delivered Cost Charts" have been compiled. These Charts include the Average Cost of Freight to destination of shipment; *in other words, the Average Cost of Freight is added to the Average Cost of the flooring F. O. B. cars at flooring mills to illustrate what the Delivered Cost would be at destination.*
>
> 4. Copies of the foregoing under date of May 31, 1922, are inclosed herewith.
>
> 5. We are also inclosing statement "Survey of Costs" for first quarter of 1922 and

an analysis of the "Three Test Runs of 1921," which are also dated as of May 31, 1922.

6. Under the new Articles of Association the new Rate Book will be made up as follows, and will contain only the following matter when completed:

(*a*) Title Page. As per enclosed copy.

(*b*) Key to Freight Rates and Index Letters. As per enclosed copy.

(*c*) Average Freight Rates and Index of Towns. Being the equivalent approximately of the freight rates from Cadillac, Michigan.

Remarks: The freight rates are all being revised to give effect to the reduction ordered by the Interstate Commerce Commission to take effect July 1st.

(*d*) *Average Cost Chart. Showing approximate relative Average Cost of the different grades and faces of 13/16" Maple Flooring F. O. B. cars at flooring mills.*

(*e*) *Differentials from Average Cost of 13/16" Maple Flooring.*

(*f*) *Delivered Cost Charts 13/16" Maple Flooring.*

(*g*) *Average Cost Chart 3/8" Maple, Beech, and Birch Flooring.*

(*h*) *Delivered Cost Chart 3/8" Maple, Beech, and Birch Flooring.* (Vol. III, pp. 318–319.)

Apparently the last book issued before the filing of the bill on March 5, 1923, was dated February 15, 1923, and a copy was filed as Gov. Ex. 37, Vol.

III, p. 330, side p. 910, et seq., but only enough pages are printed to illustrate its character. This book contains a table of differentials similar to those above described, and also the same directions as to terms of sale. *About 7,600 different points are designated therein* (Keehn, Vol. I, p. 118). For convenience of inspection the first three sheets of this exhibit are here reproduced as follows:

Differentials

[From Average Cost Charts of Maple 13/16" D. & M.]

FEBRUARY 15, 1923

Average Cost of Beech 13/16" D. & M., all Faces:

Clear—$10.00 less than Maple.
No. 1—$5.00 less than Maple.
Factory—Same as Maple.

Average Cost of Birch 13/16" D. & M., all Faces:

Clear—$10.00 less than Maple.
No. 1—$5.00 less than Maple.
Factory—Same as Maple.

Average Cost of Wide Faces, D. & M.:

2½" face same as 2¼" face; 3", 3½", and 4" faces same as 3¼" face, of same wood, grade, and thickness.

Average Cost of Thick Flooring, D. & M.:

1 1/16"—$5.00 more than 13/16" D. & M.
1 5/16"—$7.00 more than 13/16" D & M.
1 1/8"—$10.00 more than 13/16" D. & M., of same wood, grade, and thickness.

Average Cost of Jointed Flooring:

13/16"—$5.00 more than 13/16" D. & M.

$1\frac{1}{16}$''—$10.00 more than $1\frac{3}{8}$'' D. & M.
$1\frac{5}{16}$''—$12.00 more than $1\frac{3}{8}$'' D. & M.
$1\frac{1}{8}$''—$15.00 more than $1\frac{3}{8}$'' D. & M., of same wood, grade, and thickness.

Average Cost of Special Grades:

White Clear Maple, $1\frac{3}{8}$'', $20.00 more than Clear Maple, $1\frac{3}{8}$'', same face.
Red Clear Beech, $1\frac{3}{8}$'', $20.00 more than Clear Beech, $1\frac{3}{8}$'', same face.
Red Clear Birch, $1\frac{3}{8}$'', $20.00 more than Clear Birch, $1\frac{3}{8}$'', same face.

* * * * *

White Clear Maple, $\frac{3}{8}$'', $15.00 more than clear Maple, $\frac{3}{8}$'', same face.
Red Clear Beech, $\frac{3}{8}$'', $15.00 more than Clear Beech, $\frac{3}{8}$'', same face.
Red Clear Birch, $\frac{3}{8}$'', $15.00 more than Clear Birch, $\frac{3}{8}$'', same face.

Average Cost of Extra Shorts:

Clear Maple, Beech or Birch, $1\frac{3}{8}$'' x 2'' or 2¼'' Face, under 22'', $35.00 less than standard lengths of Clear, same wood and face.
Clear Maple, Beech or Birch, $1\frac{3}{8}$'' x 1½'' Face, under 22'', $40.00 less than standard lengths of Clear, same wood and face.
No. 1 Maple, Beech or Birch, $1\frac{3}{8}$'' x 2'' or 2¼'' Face, under 16'', $40.00 less standard lengths of No. 1, same wood and face.
No. 1 Maple, Beech or Birch, $1\frac{3}{8}$'' x 1½'' Face, under 16'', $40.00 less than standard lengths of No. 1, same wood and face.

TERMS OF SALE

Sixty days net or 2% discount for cash in 15 days, or 1% discount for cash in 30 days from date of invoice after deducting freight.

If the car has not arrived, the discount may be deducted on 90% of the invoice less estimated freight, for cash within proper discount period, the balance with original paid freight bill to be remitted net within 5 days after arrival of car. No cash discount will be allowed after 30 days from date of shipment. (NOTE: Attention is called to the foregoing language. It is that of authority and not a mere suggestion.)

AVERAGE COST CHART

Average Cost of 13/16" Maple Flooring F. O. B. cars at Flooring Mill

Maple D. & M.	13/16" x 1½" Face	13/16" x 2" Face	13/16" x 2¼" Face	13/16" x 3¼" Face
F. O. B. Mill:				
Clear	$90.00	$95.00	$100.00	$85.00
No. 1	78.00	85.00	90.00	80.00
Factory	30.00	40.00	45.00	50.00

DELIVERED COST CHART

Includes Average Cost of Freight to Destination—Freight Rate, 15 cents to 26 cents

Freight Rates	1	2	3	4	5	6	7	8	9	0
Index Letters	A	B	C	D	E	F	G	H	I	J

Then followed a list showing the delivered price or " cost " of certain kinds and grades of flooring at the 7,600 points in the United States.

It was this book that was in use when the bill in this case was filed. But Mr. Keehn claims that there has been a modification of the information thus sent out since the bill was filed and before the trial. He says the book now in use does not show the *delivered* cost; that is, the items of freight and the cost of the manufacture and distribution *are*

not actually added together. But both items are contained in the book, and all the shipper has to do is to make the addition. As said by the court, "In other words, instead of having a four, he (the manufacturer) has two and two." (Vol. I, p. 118.)

Keehn also claims that the rate book or tables do not now include the differentials and terms of sale. (Vol. I, p. 153.) But he admits that the terms of sale prescribed have generally prevailed in the lumber industry (Vol. I, p. 155), and the differentials as to 70% or 80% of the business are shown in the reports sent to the members (Vol. I, p. 177). And the estimates of so-called costs of production and distribution heretofore fully described are still made and distributed; and they show the prices of all maple flooring, which represents 90% of the business. (Keehn, Vol. I, p. 131.)

Special attention is called to the fact that in the books issued in 1922 and 1923 the tables of delivered prices are designated as "Delivered *Cost* Chart." Prior to that time these tables had been designated "Table of *Values.*" See Table issued January 6, 1921 (Ex. 34, Vol. III, p. 322, side p. 554, et seq.). In this book, after the "Concessions and Additions—Table of Values January 6, 1921," appears the statement "*Established* for First Quarter, 1921." (Side p. 694.) These words were used advisedly, and refer to the values, terms, etc., "*established*" under the minimum-price plan and the minimum-price basis. It was under those plans

that the delivered prices were *fixed;* and they were therefore designated as " values " and not " costs." Apparently in these charts, the delivered prices were not designated as *" values "* before 1916, the date when the minimum price plan originated. On p. 320, side pp. 419 and 420, appears a number of pages of a book dated May 21, 1913, which is improperly designated as " Gov. Exhibit 26," but which is probably a part of Gov. Exhibit 30 f. They show delivered prices, but are not designated " Tables of Values," as appears in the table issued May 15, 1916. (Side pp. 513, 514–521.)

But whether called " Table of Values " or " Delivered Costs Chart " they contained the same information, and were distributed for the same purpose, i. e.: to enable the members to observe a minimum selling price; and they accomplished the same result.

A method of determining the freight rate which the members have included in the price of flooring has been in existence ever since the first association was organized in 1905. Mr. Keehn says, " I was connected with the association on April 1, 1905. I am very familiar with this paper ' Prices on Maple Flooring, effective April 1, 1905.' * * * It is what it purports to be. * * * Tables of prices on maple flooring by geographical zones." (Vol. I, p. 111.) The document spoken of is filed as Gov. Ex. 29. (Vol. III, p. 320, side p. 408, but improperly numbered

498.) That was a simple document as compared with subsequent tables; but it showed the prices which were expected to be charged for lumber delivered at various points in the United States. Some specific points were mentioned, but generally a specified delivered price applied to all, or the greater portion of a state. It appears, however, that by 1911, a table of the nature of those used in recent years and now in use had been developed. (See Gov. Ex. 30E, Vol. III, p. 320, side p. 417.) And in 1913 the system had about reached perfection. (Gov. Ex. 30f [not 26] Vol. III, p. 320, side pp. 418, 419.)

That those producing and selling an article may observe uniform prices or a minimum price, and thus avoid competition, it is essential that some method be devised whereby they can easily ascertain what the delivered prices of the article are at the various points to which the commodity is shipped.

Different methods have been invented, but this court has so far had presented to it no method so complete in all of its details as the one adopted by this association. *Here in most instances no computation was left to be made by the manufacturer; and all he had to do was to turn to his book and find the point to which the shipment was destined, and he had the price before him.*

That the association rate books have in fact been used by members as price lists is shown by the depo-

sition of Ralph A. Brown, who has been engaged since 1910 in selling flooring in New York City as a mill representative and wholesaler. Mr. Brown was manager of the New York office of the Strable Lumber and Salt Company from 1910 to 1917; and from 1917 until he became connected with the John A. Daly Lumber Company, a wholesaler, he continued to represent the Strable Company, but on a commission instead of a salary basis. The Daly Company handles principally the stock of the Strable Company and of the Holt Hardwood Company. (Vol. II, pp. 569–570.) Mr. Brown testified:

> Q. During the time that you have known of the existence of the Maple Flooring Manufacturers Association, have you known of the activities that association has carried on?
>
> A. No, I have not been very familiar with their activities, except that they issue a price book and rate book, which practically everybody uses, to determine delivered prices in various parts of the country.
>
> Mr. JOHNSTON. You are referring to the freight rate book?
>
> The WITNESS. Yes, sir.
>
> Q. It is what is called a table of values?
>
> A. Yes, sir; a table of values.
>
> Q. Is that list furnished to you?
>
> A. Yes, sir.
>
> Q. By the companies which you represent?
>
> A. Yes, sir.
>
> Q. Do you know whether or not that list is furnished to representatives of other com-

panies with whom you are in competition here?

A. I do not know definitely, but I presume it is.

Q. When you have spoken of prices being cut or your cutting prices in order to obtain business, you mean cutting the prices in the rate book or that table of values?

A. Well, it might not be necessarily cutting the prices in the table of values, because that is gotten out and used as a basis—so much over or long base; and if the market prices were over list we might cut down the prices, but they would still possibly be above the list in that book. You can see what I mean; that is, sometimes these lists would go along for months and, to save printing, they would just say "add" or "deduct" so much from list. That simplified sending out a lot of price lists every little while. (Vol. II, p. 575.)

This last paragraph above of Mr. Brown's testimony undoubtedly refers to the Tables of Concessions and Additions which the Association sent out from time to time prior to 1922.

If it was not intended by the members that the prices of lumber should be controlled or in some way affected by this organization, why was each member furnished with a list of fixed or designated prices at innumerable points in the United States? What did prices at those points have to do with the cost of production? To say that these elaborate calculations and their distribution among the

members were not intended to have, and did not have, any effect upon the prices charged by the members is to disregard absolutely the well known relationship between human motive and the actions that result therefrom.

VIII

Exchange of Statistics

The most effectual device yet invented to keep competitors in line as to prices is the exchange of statistics which show the prices each has been charging in sales actually made.

In the Articles of Association in existence from January 1, 1913, to January 1, 1919, the article relating to statistics provided that reports should be made by each member to the secretary at the close of business each day of all deliveries and shipment of all kinds of maple, beech, and birch flooring within the United States, except flooring purchased from members of the association; and the secretary was given authority to examine the books and papers of the members to verify statements; and it was also required that a sworn statement showing total deliveries and shipments for each month should be rendered on or before the fifth of the following month (Vol. III, p. 7); *but there was no provision made for the distribution of statistics by the secretary among the members of the association.* The articles which were in existence for the first three months in 1919 had a simi-

lar provision (Vol. III. pp. 20–21). The articles relating to statistical reports in the Articles of Association which went into effect January 1, 1922, and continued until January 1, 1925 (Vol. III, p. 64), have heretofore been copied in full (p. 56); and, briefly stated, they provide that each member shall report monthly on or before the fifth day of each month (a) stocks on hand of the three varieties of flooring; (b) unfilled orders; (c) amount in feet of shipments made during the preceding month within the United States except purchases made from other members; (d) production for previous month; (e) new orders booked during month; and (f) average prices f. o. b. flooring plant for 13/16" x 2¼" Clear, No. 1 and Factory; and that each member shall report promptly *at the end of each week* all sales made during the week of the three varieties of flooring, the reports stating quantity, kind, and grade of flooring sold, the delivered price at which sold, the average freight rate to destination, and the commission paid, if any; and that all the statistical reports shall relate solely and entirely to past and completed transactions and shall be mailed " by the members to the Secretary, *who shall report the same to the members.*" (Vol. III, p. 70.)

Monthly statistical reports of stocks on hand, of unfilled orders, of shipments, of production, and of average prices realized have apparently been made by the association to its members at least since January, 1912. (Government Exhibit No. 40, Vol.

III, side pages 956–960.) The earliest such report printed in the record is dated January 18, 1913. (Gov. Ex. 40A, Vol. III, side pages 1003–1009.) This report gives practically the same bare statistical information as does the report dated April 17, 1923, which is fully described below (p. 114); but it does not give the information in as great detail as does the later report; nor does it contain any of the elaborate comparisons in percentages and by the graphic representation, called a barometer, which the later report makes between the current statistics and those for earlier months and years.

With the exception of a few months during 1914 and during 1916, when an exchange of quotations was operated through the association (Vol. III, pp. 209 and 227, and Vol. IV, p. 430), no detailed reports of actual prices were furnished the members by the association until the weekly sales reports were started in 1920. During this period the only reports of actual prices were the monthly reports of average prices f. o. b. cars at the factory of $\frac{13}{16}$'' x 2¼'' face maple flooring. Specimens of these reports, then called Current Net Values, dated January 18, 1913, October 28, 1913, and September 19, 1916, are printed in the record. (Vol. III, side pages 1004, 2130, and 1322.) The earliest of these reports merely gives the average price realized for five groups of mills and the general average; but the later reports are in the same form as the report of Average Prices Realized, dated April 17, 1923, which is described below (p. 115).

Mr. Keehn says that he doesn't recall exactly when the weekly reports of sales were started, but that it may have been some time in 1920. (Vol. I, pp. 176–7.) The minutes of the annual meeting held February 12, 1920, establish definitely, however, that the collection and distribution of weekly reports of sales were authorized at that meeting. The pertinent portion of those minutes reads as follows:

> *Weekly Sales Reports.*—In view of the extraordinary business conditions now existing, it was the sense of the meeting that weekly reports of sales should be made in order that the members of the Association may have as much information as possible regarding current market conditions.
>
> On motion the following resolution was adopted by unanimous vote:
>
> "*Resolved,* 1. That the members make reports to the Secretary on Saturday of each week, giving a complete record of all sales made during that week of one carload or more of Maple, Beech, or Birch Flooring, the reports to give date of sale, quantity sold (if one carload or more), the thickness, face, grade and wood, the delivered prices sold at, and the Rate Book index letters to indicate destination, but the names of towns to be omitted.
>
> "2. The information contained in the reports to be tabulated by the Secretary and exchanged by him among the members only who make the reports." (Vol. IV, p. 528.)

The earliest weekly sales report secured under subpœna and introduced as evidence is dated March 2, 1920, but it indicates that similar reports had been issued for at least several weeks preceding that date. (Vol. III, pp. 356–359.)

Because of the decision in the United States District Court at Memphis in the Hardwood Case, on advice of counsel the entire reporting system was suspended from April 1, 1920, to August, 1920. (Vol. I, pp. 146–7.) The weekly sales reports were also omitted for a few weeks in December, 1921, and January, 1922, because of the decision of the Supreme Court in the same case. (Vol. III, p. 152.) The Government filed as exhibits statistical reports which cover practically the entire period from 1913 to 1923, and weekly sales reports which cover practically every week of the period from January, 1921, to October, 1923, but has had printed only a sufficient number to fully illustrate the entire reporting system from its inauguration down to the present time. As we are now especially concerned with the manner of reporting at the time the original bill was filed, we call special attention only to such reports as illustrate the system then in use, and also to one or two reports made since the filing of the bill which indicate the slight change which Mr. Keehn claims has been made in the system since that time.

Government Exhibits 44 to 48, inclusive (Vol. III, p. 404, side pp. 2852–2858), are forms for in-

dividual reports to be made by members to the secretary of the association. The first form (Exhibit 44) is for a report showing (1) date, (2) quantity, (3) thickness and face, (4) grade, (5) wood, (6) delivered price at which sold, (7) average freight rate to destination, and (8) rate of commission paid, if any, as to each shipment, and at the bottom the member is asked to report every Saturday, and if no sale has been made during the week, to send the blank in with such notation. (Vol. III, side p. 2852.) Government Exhibit 45 is a form for reporting the average prices realized f. o. b. plant $\frac{13}{16}$'' x 2¼'' face Clear, No. 1 and Factory maple flooring, and it shows the number of feet, the delivered price, the quantity, and freight to destination of each grade (side p. 2853). Exhibit 46 is a form showing (1) maple flooring on hand of each dimension and grade and (2) the unfilled orders on hand of each dimension and grade (side p. 2854.) Exhibit 46A gives similar information with reference to beech flooring, and Exhibit 46B the same with reference to birch flooring (side pp. 2855 and 2856). Exhibit 47 is the form of a report showing the amount of production of each grade and new orders booked for each variety of flooring, and Exhibit 48 is a summary of shipments showing quantity of each variety shipped (side pp. 2857 and 2858). Exhibit 44 is a weekly report, while the remainder are reports made at the end of each month.

From the information obtained by these reports the secretary compiles the information which he sends out to the various members.

Government Exhibit 43-FFF (Vol. III, pp. 377-384) is the report of all sales made by every member during the week ending April 1, 1922. As heretofore shown, this was sent out to each member about the middle of the following week. It is dated April 6, 1922. This report shows the date of each sale, the exact quantity of each dimension and grade, the delivered price, the Cadillac freight rate, the commission allowed, if any, and the member by which the sale was made, the member being indicated by its identification number. Government Exhibit 43-ZZZZZ (Vol. III, p. 390) is the report for the week ending July 14, 1923. *It was made nearly four and a half months after the bill was filed, and is in precisely the same form as the one made for the week ending April 1, 1922.* But Mr. Keehn says that at the meeting held July 19, 1923, the form of this weekly report was so changed that it no longer identifies the particular mill reporting each sale. Government Exhibit 43-AAAAAA (Vol. III, pp. 398-402), the report distributed among the members for the week ending July 21, 1923, which is the first report made after the alleged change, contains exactly the same information as the previous reports except that the number of the member reporting each sale is omitted, but in this report the groups of mills are designated so as to show that

the first ten sales were made by members of eastern lower Michigan mills, that the next eight sales were made by the western lower Michigan mills, and the remaining seven were made by the Upper Michigan and Wisconsin mills.

It appears from defendants' exhibit G I (Vol. IV, side pp. 5340–5342), a weekly sales report dated November 9, 1923, that other changes in the form of the report were made between July 27, 1923, and that date, as the later report has a different grouping system, which is described below (p. 113), and also the July, 1923, reports have the following additional information appended, which does not appear in the report dated April 6, 1922:

Averages of Sales Week Ended November 3, 1923

	Clear	No. 1	Factory
¹³⁄₁₆ x 2¼" face Clear, No. 1 and Factory Maple Flooring, Standard Grades and Lengths:			
Averages of Delivered Prices	$98.62	$87.57	$52.58
Averages of Average Freight Rates	.29	.26	.32
Average Cost of Freight	5.80	5.20	6.40
Averages of Prices Realized F. O. B. Flooring Mill Basis	92.82	82.37	46.18

Total Sales of ¹³⁄₁₆ x 2¼" Face Maple Flooring

Clear	620 M feet.
No. 1	416 " "
Factory	260 " "
Total	1,296 " "

(Vol. IV, side page 5342.)

In fact the reports had formerly separated the sales according to the geographical groups of members. The sales reports dated March 2, March 16,

and April 20, 1920 (Vol. III, pp. 356-367), separated the sales made according to the groups of the members, but did not show the individual member making each sale. The reports dated January 13, January 20, January 27, 1921, February 3, 1921 (Vol. III, pp. 261–276), and October 6, 1921 (Vol. III, side pp. 2394–2396), gave the identification number of the member making each sale and also separated the members according to groups, although in the last-mentioned report the separation into groups was only indicated by lines across the report. The small volume entitled "Additional Exhibits" contains weekly reports distributed by the secretary beginning with the week ending March 4, 1922 (p. 1), and continuing to the report dated February 24, 1923 (p. 41), although reports are not printed for all the weeks. In the first of these reports the mills were divided into groups, but in the report for the week ending May 20, 1922, and in the succeeding reports they were not so divided. Manifestly the resumption of this division after it had been determined to omit the number of the member reporting was to enable the members to identify as nearly as possible the members by whom the sales were made.

Until some time after July, 1923, the several groups and the numbers of the members in each group were as follows:

Grouping prior to July, 1923

Eastern lower Michigan mills	Western lower Michigan mills	Upper Michigan and Wisconsin mills
2	3	4
24	5	7
33	14	[1] 23
49	26	[1] 34
	30	42
	37	44
	47	[1] 45
		[1] 50

[1] Wisconsin.

One of the pages of the Monthly Barometer Report for September, 1923, dated October 19, 1923 (Vol. III, side p. 2863), shows that after the use of the identification numbers was abandoned, the Upper Michigan mills and the Wisconsin mills were placed in separate groups, and another page of the same report gives in a footnote the following explanation of the present grouping system (Vol. III, side p. 2866):

Group 1.	Eastern Lower Michigan Mills	4
2.	Western Lower Michigan Mills	6
3.	Upper Michigan Mills	4
4.	Wisconsin Mills	4
5.	Chicago, St. Paul, Tupper Lake Mills	3
	Total Mills	21

The record does not contain any statement as to the present grouping of the members, but it appears quite obvious that No. 47, William Horner, with a plant at Reed City in the Upper Peninsula of Michigan, has been transferred to the Upper

Michigan group, and that the members constituting each group are now as follows:

Grouping after July, 1923

Eastern lower Michigan mills	Western lower Michigan mills	Upper Michigan mills	Wisconsin mills	St. Paul, Chicago, Tupper Lake
2	3	7	23	22
24	5	42	34	48
33	14	44	45	51
49	26	47	50	----------
----------	30	----------	----------	----------
----------	37	----------	----------	----------

The creation of a separate group for the Wisconsin mills, so that one group only includes three mills, three groups only include four mills apiece, and the other group only includes six mills, must render it comparatively easy for any person well acquainted with the industry to determine with reasonable accuracy which member has made each sale reported.

The monthly reports are illustrated by Government Exhibit 40–5R (Vol. III, p. 350, side pp. 2049–2059). The first page is entitled "Stock Conditions and Barometer for March, 1923," and is dated April 17, 1923. It gives a complete analysis of current market conditions. The first table on the page gives the percentage sold of the available stock of maple, beech, and birch flooring; of maple flooring; and of maple 2¼" flooring; and of each grade of each of those three varieties as of March 31, 1923, March 1, 1923, and March 31, 1922, and the second table gives the increases in

the percentages sold (stated as " points up ") of the three varieties of flooring, of maple flooring, and of maple 2¼" flooring as compared with the same day the preceding month and with the same date the preceding year. Under these tables there is a column of statistics showing stocks on hand, unfilled orders, shipments, production, and new orders booked, on March 31, 1922, and March 31, 1923, and showing as to each the increase or decrease both in actual amounts and in percentages. At the bottom of the page is a comparison of the average values of 13/16" x 2¼" face Clear, No. 1 and Factory Maple Flooring for March, 1922, and March, 1923, and the increase stated both in dollars and in percentage. On the right-hand side of the page are seven columns which illustrate the stocks and unfilled orders on hand March 31, 1923, and the shipments, the production, the new orders booked, and the average values for March, 1923, compared with March, 1922.

The second page of this exhibit shows the following data as to each member individually for March, 1922, and March, 1923, to wit: "Stocks on Hand," "Unfilled Orders," "Shipments," "Production," "New Orders," and "Stock Changes," and the increase or decrease as to each. The third page is a record of the average prices realized f. o. b. flooring mills for new orders booked for 13/16" x 2¼" Clear, No. 1 and Factory maple flooring, standard grades and lengths, after deducting freight, the members

there appearing in groups and the average price being given for each member and for each group. On the next page appears, first, "Shipments of each wood March, 1922–1923," showing the increase, both actually and in percentage; second, "Production by Grades" of each variety of flooring and of all three varieties for the years 1916 to 1922, the average yearly production for that period, and the production for March, 1923; and, third, the average prices realized f. o. b. Michigan and Wisconsin mills for $\frac{13}{16}$" x 2¼" face maple flooring, after deducting freights and commissions, for each of the three grades, and for the product, for March of each year 1916–1923, and the averages for that period, and also for March, 1923, and a comparison of the figures for March of each later year, with March, 1916, as 100% (side p. 2052). The next page shows, first, flooring of each grade and dimension, all varieties, on hand March 31, 1923, and, second, unfilled orders on hand March 31, 1923, for each grade and dimension (side p. 2053).

Side page 2054 shows, first, maple flooring of each grade and dimension on hand March 31, 1923; and second, unfilled orders for maple on hand March 31, 1923. Side page 2055 shows the surplus maple flooring stock on March 31, 1923, of each grade and dimension. By " surplus " is meant an excess of 100,000 feet. Page 2056 shows maple flooring surplus in M feet March 31, 1923, and also

the " Summary of Surpluses." Page 2057 shows first, beech flooring on hand March 31, 1923, giving each grade and dimension, and second, unfilled orders for beech on hand. Page 2058 gives the same information with reference to birch flooring, and page 2059 is a record of the receipt of March, 1923, reports, and shows the date of the receipt of each report of stocks and unfilled orders, shipments, production and new orders, and average prices realized. Monthly reports for other dates are printed, but a study of those cited as Exhibit 40–YYY (Vol. III, p. 346, side p. 1620–1629), which is for May 17, 1919, shows that there is no substantial difference in their contents.

Exhibits 40 and 41–2 U (Vol. III, side pages 991–996 and 2107–2108) are respectively the Annual Statistical Report for the year 1921, dated February 17, 1922, and the Semi-Annual Statistical Report for the first half of 1923, dated July 14, 1923. It is not necessary to describe these reports in detail as they are in the same general form as the monthly report. Briefly stated, they summarize and consolidate the monthly statistics and compare the totals and the averages for the half year and the year with the statistics for the first half of the preceding year and with the preceding year.

An analysis of the reporting system clearly shows that there is no information withheld by one member from another; and that everyone is perfectly familiar, not only with summaries which show

market conditions generally, but also with the exact condition of the business of each of his fellow members.

The reporting system here in effect is more complete in its details than that used by the Hardwood Association, which organization was held to be illegal in *American Column & Lumber Company* v. *United States,* 257 U. S. 377.

Oral Testimony as to Value of Reporting System

The importance that is attached by the members to the information contained in these reports is not a matter of conjecture or inference, as the witnesses in this case have testified with an unusual degree of frankness upon the subject. This will appear from the following citations and quotations from the evidence of a number of the witnesses:

J. L. Colby, of Cummer-Diggens Company, after being cross-examined at length upon the subject (Vol. I, pp. 215–218), on reexamination says: "I don't want to give anyone the impression that we don't pay any attention to the statistics distributed by the association. I do want to state that the statistics are not the primary consideration with us " (pp. 221–2) ; and to the question " Why is that price always exchanged between you members if it is not worth anything?" he answered, " It is a matter of statistical information, some members might consider it worth more than others. I assume that the member can consider it or not just as he likes when he gets it." (Vol. I, p. 224.) This witness

probably was the least willing of all the witnesses to admit the manifest use of the statistics made by the members.

Mr. McLurg, of Kneeland-McLurg Lumber Company, testified as follows:

Q. You say, Mr. McLurg, that you consider those statistics when you go to make up prices?

A. Yes, sir.

Q. Are you the sales manager?

A. No, sir.

Q. You consider them pretty carefully, don't you?

A. I don't. My sales manager watches them. I pay very little attention to the selling.

Q. You examine and consider those weekly sales reports?

A. He does; yes, sir.

Q. And they show the prices?

A. Yes, sir.

Q. At which the sales were made?

A. Yes, sir.

Q. And you regard that as of value?

A. *Very valuable.*

Q. And you also regard it as very valuable, the reports as to production?

A. Not so much production as I do stocks on hand.

Q. Stocks on hand.

A. I don't care so much about production as I do with what they have on hand.

Q. Why is that valuable if it does not enter into the making of the price?

market conditions generally, but also with the exact condition of the business of each of his fellow members.

The reporting system here in effect is more complete in its details than that used by the Hardwood Association, which organization was held to be illegal in *American Column & Lumber Company* v. *United States,* 257 U. S. 377.

Oral Testimony as to Value of Reporting System

The importance that is attached by the members to the information contained in these reports is not a matter of conjecture or inference, as the witnesses in this case have testified with an unusual degree of frankness upon the subject. This will appear from the following citations and quotations from the evidence of a number of the witnesses:

J. L. Colby, of Cummer-Diggens Company, after being cross-examined at length upon the subject (Vol. I, pp. 215–218), on reexamination says: "I don't want to give anyone the impression that we don't pay any attention to the statistics distributed by the association. I do want to state that the statistics are not the primary consideration with us " (pp. 221–2); and to the question " Why is that price always exchanged between you members if it is not worth anything?" he answered, " It is a matter of statistical information, some members might consider it worth more than others. I assume that the member can consider it or not just as he likes when he gets it." (Vol. I, p. 224.) This witness

probably was the least willing of all the witnesses to admit the manifest use of the statistics made by the members.

Mr. McLurg, of Kneeland-McLurg Lumber Company, testified as follows:

Q. You say, Mr. McLurg, that you consider those statistics when you go to make up prices?

A. Yes, sir.

Q. Are you the sales manager?

A. No, sir.

Q. You consider them pretty carefully, don't you?

A. I don't. My sales manager watches them. I pay very little attention to the selling.

Q. You examine and consider those weekly sales reports?

A. He does; yes, sir.

Q. And they show the prices?

A. Yes, sir.

Q. At which the sales were made?

A. Yes, sir.

Q. And you regard that as of value?

A. *Very valuable.*

Q. And you also regard it as very valuable, the reports as to production?

A. Not so much production as I do stocks on hand.

Q. Stocks on hand.

A. I don't care so much about production as I do with what they have on hand.

Q. Why is that valuable if it does not enter into the making of the price?

A. *I said it did enter into my making the price.*

Q. If those statistics showed that those competitors were getting a good, big, high price, why, you follow, don't you?

A. If our stocks are such that we can, and if they are low, we buy from them, try to find out who it is and buy some stock.

Q. But if they get a good high price, you follow, don't you?

A. We try to get all we can; yes, sir.

Q. Well, you follow them?

A. We don't follow that as a lead.

Q. If they get a higher price than you do, you try to follow them, don't you?

A. Try to get all we can for our stock.

Q. *Mr. McLurg, if they are selling higher than you are, you try to follow them, don't you?*

A. *Yes, sir.* (Vol. I, pp. 229-230.)

Mr. DeWitt, of Holt Hardwood Company, when asked on examination in chief what the advantages of being a member of this association were, said:

Well, one of the big advantages is the statistical reports that we get; it enables us to find out what the market is doing, and as I testified before on that, then we can put the proper grade of lumber into our mills to produce the grade of flooring that is demanded by the market, and it is not only an advantage to the manufacturers but it is also an advantage to the consumer. If we did not do that, there would be times when there would be a great shortage of some

particular kind of flooring; naturally the price of that would be high and the consumer would suffer, but from the fact that we have that information it gives us a chance to keep our stock pretty well balanced with the requirements of the market; *also that same report gives us the prices being obtained by other members of the association; although that information is generally about two weeks old when we get it, it is valuable to us.* The standardization has been a very valuable thing. (Vol. I, p. 252.)

And on cross-examination this witness said:

Q. And that is the very reason you take those statistics, isn't it; you want to know what your competitors are getting for their lumber?

A. That was one of the reasons.

Q. Well, that is your main reason, isn't it?

A. No; the other parts of the statistics are also very valuable to us as I have already testified.

Q. It is all valuable.

A. It is all valuable, that part too.

Q. *When you go to make your price you consider all those statistics, don't you?*

A. *Yes, sir.*

Q. *And you fix the price very considerably by what you learn from these statistics, don't you?*

A. *That is one of our sources of information.*

Q. *An important one, isn't it?*

A. *Important one; yes.* (Vol. I, p. 257.)

Mr. Shepeck, of I. Stephenson Company, Trustees, on examination in chief testified:

> The statistics issued by the Association are a big benefit to us. The information that we gather from these statistics as to stocks on hand, production, new orders booked, also the weekly sales reports, are of considerable benefit to us. They enable us to form an opinion as to what the conditions are and assist us in intelligently handling our flooring business.
>
> Q. How do you handle your flooring business, whether you consider present prices or future prices, or both?
>
> A. We are concerned with both. (Vol. I, p. 264.)

And on cross-examination he testified:

> Q. Isn't your dollars and cents in the price which you are able to make on account of these statistics, there are your dollars and cents?
>
> A. Sometimes the statistics cost us money, in order to get out.
>
> Q. How do you lose money out of these statistics?
>
> A. I feel pretty good sometimes, until the statistics come along, and then I feel sick and cut my price.
>
> Q. If you didn't get the sickness you might have to cut more; sickness helps you in that case. If it wasn't for the statistics you wouldn't belong to that Association right now?

A. *No; I don't think we would; we might.* (Vol. I, p. 266.)

And again:

Q. But anyway, you do say that these statistics showing demand and supply and stocks on hand and all those things, and prices paid, *are of very great value to you?*

A. *Yes, sir.*

Q. And, of course, that means that they are of great value to you in that they enable you to get more money out of your lumber?

A. Not necessarily; no, sir.

Q. Isn't that what you are striving for, to get more money for your lumber?

A. To a certain extent; yes, sir.

Q. Would you be in business if it was not for the money you get out of it?

A. No, sir.

Q. You are striving for profits?

A. Yes, sir.

Q. And that is all you are striving for, profits?

A. Oh, not entirely; no.

Q. You are not doing it for exercise, are you?

A. No.

Q. Or amusement; you could get amusement somewheres else?

A. I get amusement out of my business.

Q. You are just the same as other men in business; you are in business to make money out of it?

A. Yes, sir.

Q. And the thing that is valuable to you is that which enables you to make more money?

A. It enables us to keep from going broke.

Q. That is the same thing?

A. Yes; to a certain extent.

Q. That is, it keeps you from losing money?

A. Yes, sir. (Vol. I, p. 267.)

Mr. Hodges, of the Oval Wood Dish Corporation of Tupper Lake, New York, who is the only member in or near that locality, testified in chief:

I think the statistics that are furnished our Company by the Secretary of the Maple Flooring Manufacturers' Association are very valuable.

The weekly reports are valuable as showing a trend of the market, whether the prices are going up or going down and another valuable feature is the amount of sales, that enable us to know approximately how much of each grade, for instance, has been sold within a certain time.

Q. Do you regard the prices there more or less important than the statistics with regard to volume?

A. I think the statistics in respect to volume are fully as valuable as the price statistics, because oftentimes it does not matter to me what somebody in Michigan is getting in prices; if I know my competitor who lives eleven miles from me is getting two dollars less than my figures show, that

would influence me more than what I might see in the sale reports. (Vol. I, p. 291.)

And again with reference to making prices:

> Well in the first place I think I would take into consideration the economic situation, that is, the general trend of the market, whether it was up or down, and then I would take into consideration my own particular stock conditions. If I had a surplus of some one item and wanted it moved, why I would be apt to make a lower price, *particularly if I saw that some one else was making a lower price on that same item.* On the other hand, if the general trend of the market was upward and I had no accumulation of that stock *and I saw somebody was getting more money than I was, it may tend to influence me to raise my prices.* (Vol. I, p. 292.)

And—

> The mere fact that some one else was charging higher prices or lower prices than I had been would not automatically cause me to lower or increase my prices. I would consider my own stock and the other conditions above mentioned. The fact that some one else was charging higher or lower prices than I was would be considered as one factor and would be given consideration by me. (Vol. I, p. 293.)

On cross-examination this witness said:

> Q. Now, in regard to those statistics, didn't you join this Association very largely

to get the information that is contained in those statistics?

A. Yes, sir.

Q. Don't you use it all the time?

A. What do you refer to?

Q. I mean all the statistics; don't you use them all?

A. Why, yes; certainly.

Q. Aren't you studying them continually with reference to your changing prices?

A. I wouldn't say that; but we do study them; we look them over wherever we get them and take them into account. *That is one of the factors that determine our price.*

Q. If it wasn't for those statistics you wouldn't belong to the Association, would you?

A. *I don't think so; it would be of no value to us.* (Vol. I, p. 300.)

Mr. Ralston, formerly Sales Manager for the Receiver of William Horner, in chief testified:

A. The Statistics, as a rule, *are very, very, valuable,* especially as regards the production and the stocks on hand and the general information given in these statistics that we received from time to time. (Vol. I, p. 324.)

And on cross-examination he testified as follows:

Q. You said these statistics that you get from the Association you regard as very valuable?

A. In the main; yes.

Q. And you emphasized the " very "—as a matter of fact, you repeated it. You re-

gard that as one of the most valuable activities in which the Association engaged, don't you?

A. The statistics?

Q. Yes.

A. Yes; as to costs and production, and etc.

Q. Taking statistics as a whole, regardless of prices and production?

A. I said before that there are some features of those statistics that I don't regard of any value at all, and never did.

Q. And there are some other features that are more valuable than other features?

A. Absolutely.

Q. And of course those statistics are valuable in that they aid you in getting more money for your lumber?

A. For our flooring?

Q. More money for your flooring?

A. Some cases, and some cases the opposite.

Q. If it didn't aid you in getting more money for your flooring, they wouldn't be of any value, would they?

A. There is something in that; true.

Q. Isn't that absolutely true?

A. Not always. (Vol. I, pp. 329–330.)

Mr. Klesner, the representative of the receiver for William Horner, testified as follows on cross-examination:

Q. If you were selling at 90 and they were selling at 95, and you got the information through that report of the fact that they

were selling at 95, you would go up to 95 at once, wouldn't you, or you will go at least to 94?

A. Well, possibly.

Q. Well, wouldn't you do it, isn't that common sense?

A. Yes; that is common sense.

Q. Why, of course, and that is the way you run your business, isn't it?

A. I will tell you, as I say, we pay very little attention to the report; we are simply governed by the market conditions, the price for lumber, the cost of manufacture, we try to get as near that price as we can, but if we can't get our price and we have to meet legitimate competition, naturally we do it if we need the business.

Q. *When you speak of market conditions the price is a part of the market condition?*

A. *Yes, sir.*

Q. *And the price revealed in those statistics is a part of the market conditions, isn't it?*

A. *Yes, sir.*

Q. *And the stock on hand is a part of the market conditions; that is true, isn't it?*

A. *Yes, sir.*

Q. *That is, the stock that belongs to everybody else and the stock that you have got is a part of your market conditions?*

A. *Yes, sir.*

Q. *And you are controlled by all of those things; as a matter of fact, you are controlled by the stock on hand and the price at which*

the flooring is moved—that is the fact, isn't it?

A. *That is the fact.*

Q. *And all those things are revealed by those statistics, aren't they?*

A. *Yes, sir.* **(Vol. I, p. 338.)**

Mr. Greene, of the West Michigan Flooring Company, after a lengthy cross-examination upon the subject, said:

Q. Let us see about working both ways. As a matter of fact you always want to get all you can for your lumber?

A. We are in the business for that purpose.

Q. And now after you get those reports, and those reports show, say, that you are selling at 95 and that your competitors are selling at 90, just as long as you can get 95 you will get it, won't you?

A. I presume I would; yes, sir.

Q. Yes; of course you will; never come down until you have to, of course.

A. But it is fair to say——

Q. Is that true?

A. I come down to meet market conditions.

Q. You never come down until you have to, until pressure is brought to bear on you from the demand; isn't that true?

A. That is usually immediately; yes, sir.

Q. Whether it is usual immediately or not, just as long as you can get your 95 you are going to get it, aren't you?

A. Yes, sir.

Q. But if you examine those reports and you are selling at 90, and they are selling at 95, you immediately are going to get your 95 if you possibly can, aren't you?

A. Not necessarily, if my stock condition does not warrant it.

Q. Not necessarily, but you are going to get it if you can, aren't you?

A. Within a period of time; yes, sir.

Q. Just as quick as you can?

A. I presume so.

Q. Don't you know? You run your business that way to get all the money you can out of it?

A. Yes, sir. (Vol. I, p. 391.)

Mr. Dewey, of Bigelow-Cooper Company, described his use of the statistics as follows:

> I analyze the statistics that are furnished us from time to time by the Secretary of the Association so as to get as intelligent an idea as possible of the condition of the industry. These statistics throw a great deal of light on that subject. I use the statistics in the same way as I use other information regarding general conditions. I prefer light rather than darkness, so far as business conditions and the conditions of the industry are concerned. (Vol. I, p. 397.)

The exhibits introduced in evidence by the Government also contain many statements showing the great value and importance attached by the members to the information contained in the statistics, and especially in the price statistics, furnished to

them by the association. As stated heretofore, no detailed reports of sales were furnished to the members until March, 1920; and the statements made prior to that date with reference to the current net-values reports, which were monthly reports of average net prices f. o. b. mills and to their effect in stabilizing, maintaining, and increasing prices, must be much more applicable to the effect of the present detailed weekly reports of individual sales. Some of these statements are as follows:

Market Conditions Committee Report, December 19, 1918

> As the present method of reporting Current Net Values was adopted by the Association, it is a matter of deep regret to the Committee that all the members do not make this report, as the Committee would then have complete data upon which to base its conclusions. As it now stands, the 23 members who exchange this report are advised of the prices obtained by each other, but they have no knowledge of the prices obtained by the six members who do not report, while each of the six members is traveling alone, and in the dark as to the prices obtained by the other 28 members of the Association. These conditions can not but have a depressing effect upon values, as all the members are not in the position to refute statements made by buyers regarding low prices, which they would be in if they knew from the reports of the member himself the prices he is getting for his Flooring. *All the steps taken during the past two years in the work of*

the Association, tending to greater publicity and a freer and franker exchange of information among the members themselves, have been of benefit to them, and in times of slackened demand and stories and rumors of low prices team-work among those who are vitally interested in maintaining stable conditions in their own industry has the greatest value to them. (Vol. III, p. 203.)

Market Conditions Committee Report, January 28, 1914

The improved method of reporting current net values should also be noted. The old plan was to report the sales during the month which were shipped during the same month. Now all of the sales of the specified items during the month are reported, regardless of when shipment is made. This covers a larger range of transactions and more clearly indicates the trend of prices from month to month. (Vol. III, pp. 207-8.)

Market Conditions Committee Report, February 13, 1914

It has been hoped that the few members who do not make the Current Net Values report would conclude to do so in order that every member may have the benefit of knowing what every other member is getting for his Flooring, as there is no question but that some of the members, who do not make this report, are led to believe that other members are selling for less than they are actually getting, and the same condition applies to the members who do report, respecting the prices the members who do not report are

said to be selling at. This, as you will readily see, can cause much demoralization in values, because if a buyer tells you that so-and-so is selling his Flooring at such a price, you are not in a position to refute his statement because you are not fortified with the information from the member himself of what he is getting for his Flooring. Whether or not all the members report, it would seem that the interests of the Association can be best served by sending to every member the individual reports of Current Net Values, so I trust the members who are making these reports will waive the reciprocal conditions under which their reports are made and permit the information to be sent hereafter to the entire membership with the other regular monthly reports. (Vol. III, pp. 331–332.)

Market Conditions Committee Report, March 25, 1914

In view of this data, the present selling values of flooring may be considered $3.50 off on Clear, $2.00 off on No. 1, and $3.50 off on Factory from the Recommended List of May 21, 1913, and while these values are lower than our statistics, the demand for our goods and the market price of the raw material warrant, *the Committee is convinced that without the exchange from month to month of the information in the individual reports of Current Net Values prices would have gone much lower because of the dull season of the year and the general uncertainty and apprehension regarding the business outlook for 1914.* (Vol. III, p. 205.)

Market Conditions Committee Report, September 24, 1914

In view of the complicated situation it would indeed seem prudent to go slow and be guided by a careful study of our statistics from month to month, pursue a policy of "watchful waiting" in respect to production, and safeguard ourselves all we can by a liberal exchange among ourselves of all available information regarding trade conditions as they develop. (Vol. III, pp. 219–20.)

Tenth Annual Report of the Secretary, January 29, 1915

You have already received the annual statistics, and while they will be reviewed in detail in the report of the Market Conditions Committee, I would like to submit a contrast of stock conditions and current net values during the past three years. It proves beyond a doubt that cooperation can be made helpful in bad times as well as in good times. (Vol. III, p. 116.)

Market Conditions Committee Report, February 25, 1915

Because of the critical situation we are now in it is of the utmost importance that our statistical reports be in the hands of the membership very early in the month in order that the information in the reports may be of greater value to the association.

* * * * * * *

May we not depend upon your cooperation in this respect, because after all it takes no more time to make out your reports on the 2d or 3d of the month than it does to make

them out two or three weeks later, and at this particular time of all times there is nothing more important to us all than to have accurate information as quickly as possible regarding conditions which have such a direct bearing upon our own welfare. (Vol. III, p. 233.)

Minutes of Association Meeting, July 16, 1915

The members who make the monthly reports of Current Net Values are in a position to analyze in detail the net prices obtained by other members and by each geographical group. If you are not making this report you are missing information that has proven to be of great value in handling sales. (Vol. III, p. 124.)

The great value both of the weekly sales reports and of the statistical reports, and the importance of their analysis by the members before attending the association meetings were emphasized in the Report of the Market Conditions Committee dated October 28, 1921, part of which reads as follows:

Weekly Sales Reports.—The importance of making the Weekly Sales Reports regularly and promptly was discussed and the great value of the information contained in the reports regarding the current state of the market was conceded, and three of the members of the Committee who are not making these reports promised to do so. All the other members of the Association who are not making these reports are earnestly urged

to do so, in order that every member of the Association may keep in close touch with conditions instead of working in the dark.

* * * * * * *

More Cooperation.—We wish to make the following recommendations in order that there may be more cooperation in the work of the Association:

1. That Dr. Earle, as President of the Association, is requested to call a general meeting of the Association to be held as early in November as possible.

2. *That all the members of the Association make their Weekly Sales Reports regularly and promptly.*

3. *That all the members send in during the first week in November their statistical reports for the month of October so that a conference can be held on November 16th or 17th.*

4. That if the Secretary receives by November 7th all the October reports from all the members, that his report be made out and mailed to the members on November 10th or 11th, *so they will receive the October statistics in advance of the meeting and have an opportunity to analyze them and can come to the meeting fully informed respecting trade conditions as reflected by the statistical reports.* (Vol. III, pp. 254–255.)

A letter from Mr. Keehn, dated December 3, 1921, to the three members who were not then contributing to the weekly sales reports, again emphasized the value of the information contained in them, and especially of the information as to the

current movement of flooring—a feature of the reports to which great importance was attached by several of the witnesses examined. This letter reads as follows (Vol. IV, pp. 535–536):

> GENTLEMEN: One of the members of your Market Conditions Committee, writing about our latest weekly Record of Completed Transactions, states that it is very gratifying to note the number of members who are now reporting regularly. They feel confident that the members who do not report, evidently having discontinued their reports because other members had neglected to report, now fail to realize the importance of the valuable information contained in our weekly reports and that all but three of the members are reporting.
>
> We believe our Weekly Sales Reports to the members have a number of very good features. Aside from their indication of the current trend of the market, the demand for each grade, face and thickness in each wood, the total volume alone of weekly bookings in each group, and the total of all groups, is enlightening.
>
> You probably had an unusually large volume of flooring orders for the week ended November 16th, and assumed that the experiences of the other members were similar, but could any member have known (or estimated) without the existence of our Weekly Sales Reports that the total New Business Booked of 19 members for the week ended November 19th was very close to five

millions? Without these reports they could have knowledge only of an increased demand for Maple, Beech, and Birch Flooring, but the real extent of this demand as affecting the different grades and sizes of our flooring in combined volume would not be known until weeks later, upon the compilation of our November statistical reports.

It has occurred to us that you may feel that you can not afford to be without this exchange of information when you learn that all but three of our members have indicated they want this information by taking a minute or two of their time to daily record all sales on the blank forms provided and mailing them to us at the close of each week. And we and the reporting members would like to have our weekly reports show our members' sales 100% reported. We can do this if you, and the other two missing members we are writing to-day, will kindly send us the report of sales for week ended to-day. May we count on your cooperation?

IX

Association Meetings

Article IX of the Articles of Association under which the defendants were operating when the petition was filed provides that an annual meeting for the election of officers and trustees and the transaction of other business shall be held on the third Wednesday of January of each year; that regular meetings for the transaction of business shall be held on the third Wednesday of April,

July, and October of each year; and that special meetings may be called by the President or a majority of the Board of Trustees on not less than five days' notice. (Vol. III, p. 67.) Each of the Articles of Association under which the defendants operated from 1916 to 1922 contained a similar provision (Vol. III, p. 17, p. 28, and p. 40), but the Articles in effect from January 1, 1913, to December 31, 1915, provided that there should be five regular meetings in addition to the annual meeting (Vol. III, p. 4).

Mr. Keehn testified that he never kept a minute book, but that he made rough notes and wrote them up and mimeographed them, and sent the reports to the members as memoranda of the proceedings of meetings. He also testified that he did not have any of the minutes of the meetings during the period when the Articles of Association dated January 1, 1913, or any of the succeeding articles were in effect, other than those he had given to the Department of Justice. (Vol. I, p. 79.) All those minutes or memoranda, and all other minutes, reports of the Market Conditions Committee, and reports and circular letters to members from the secretary, which the Government secured under subpœna duces tecum to each member of the association, were introduced in evidence and appear in various portions of the record. With reference to the Market Conditions Committee, Mr. Keehn stated:

> These associations at one time had a committee called " Market Conditions Commit-

tee," with, I think, about 7 or 8 or 9 members. The functions or rather the duties of that committee were in a general way to find out the state of the market, the trade conditions, and to make an analysis of conditions generally and report to the association as to their findings. *They sometimes made their reports to the association in the meetings,* sometimes by mail to the association. I sent out the reports of that committee to the members of the association, and when the reports were made verbally at association meetings I might reduce them to writing or they might be referred to in the minutes of the meetings. Anyway, I circulated them among the members of the association.

I couldn't say positively from what sources this committee got its information. I suppose from all sources. The committee ascertained from past transactions what the prices were at which maple flooring was being sold. **(Vol. I, p. 95.)**

The last report of the Market Conditions Committee which was introduced in evidence is dated October 28, 1921, and according to Mr. Keehn that committee was not succeeded by another committee; but a new committee was created called the "Cost Surveys Committee," which has been operating since in accordance with the articles of association of January 1, 1922. (Vol. I, p. 96.)

With reference to the number of meetings held, **Mr. Keehn testified:**

Q. Now Mr. Keehn, going on to another matter, you held meetings?

A. Yes.

Q. How often were those meetings held?

A. *During the past year I think they were held about monthly, there may have been months they were not held. In former years they were held quarterly and semiannually and annually.*

Q. When did you begin holding those meetings monthly?

A. I would say from memory some time late in 1921 or during the year 1922.

Q. * * * *Anyway, those meetings began to be held monthly after the decision in the Hardwood Lumber Company case.*

A. *Not in every case monthly, but I would say in a general way monthly.*

Q. Before that they had been held quarterly?

A. There were sometimes special meetings, and semiannual meetings and annual meetings.

The Court: Haven't you the records here that show the proceedings of these meetings?

A. We have many of them, but not any of the old ones.

Q. Did you keep minutes of all the meetings?

A. *We kept minutes of all meetings but didn't keep all minutes of all meetings.*

Q. What did you do with the minutes that you haven't got?

A. That we have got or haven't got?

Q. Haven't got?

A. They go back for a long period of time, and we don't keep all those things.

Q. Have you got all minutes for the last two years?

A. I think probably we have. (Vol. I, pp. 132–133.)

The first meeting in 1922 was held January 12th. Other meetings were held during that year on February 25th, March 9th, March 29th, April 20th, May 17th, June 21st, July 19th, August 16th, October 24th, November 15th, and December 19th.

We held meetings subsequent to that and are holding them now. (Vol. I, p. 134.)

And with reference to the proceedings and discussions at meetings of the association, Mr. Keehn testified:

We had no stenographer present at the meetings and didn't undertake to take down just what was said and done.

Q. You just made a memorandum of some things?

A. Made a memorandum of all things that were talked about in these meetings and wrote them up afterwards.

Q. Do you mean to swear that your minutes of those meetings show everything that was talked about?

A. By the Association as an Association meeting, with the exception of the details of the defense of this suit. That was not written out.

Q. Well, I believe you swore the other day that you didn't have, or didn't record the action of the meeting with reference to a discontinuing of that allotment?

A. No; we didn't record that. That was in 1920.

Q. In those meetings what did you discuss?

A. *Well, discussed trade conditions generally as reflected by statistical information; they discussed the market prices of rough maple flooring or lumber; they discussed manufacturing and market conditions;* they sometimes discussed labor conditions; they would devote a large amount of time to discussing the advertising campaign which the Association has had under way during the last year and a half or two years; spent considerable time on Grade Committee work, also on the petition presented to President Harding when he was alive about doing something on the duty on Canadian flooring; all those things were fully outlined in the minutes of the meeting.

Q. Did you ever discuss the price of maple flooring?

A. We do not discuss the price of maple flooring at the present time.

Q. Never mention it?

A. We do not discuss the future prices to be charged. There is no reason to discuss past prices because they are contained in the weekly sales report which the members have before they come to the meetings.

Q. You never mention the prices of flooring at all?

A. Not as an association discussion.

Q. What about the individuals that stand around?

A. I don't know what they talk about. They may talk about a hundred different things. I am speaking about the association discussions—what the association discusses.

Q. That is when they assemble around there and do not get up publicly to make speeches to each other?

A. They do not talk about the price of flooring they are going to charge.

They met every month and discussed the particular matters outlined in our minutes of the meetings. They were written up in the minutes of the meetings. They usually meet at the Congress Hotel. Sometimes about 11 o'clock, and staying in session until about 12.30 or 1 o'clock, then have lunch and get together again about half past 1 or 2 o'clock, and many of them go to the ball game, and that is the end of the meeting. It usually breaks up about three o'clock. (Vol. I, pp. 134–135.)

On cross-examination Mr. Keehn testified further with reference to the same matter:

We have never discussed the prices to be charged or asked for maple flooring. We of course have the weekly reports of sales and monthly report, and which are past transactions, and sometimes as those reports were distributed at the meeeting they looked them over. (Vol. I, p. 174.)

Mr. William L. Saunders stated on direct examination that at the association meetings in Chicago he met his maple-flooring friends with less trouble than would otherwise have been the case, that he was frequently able to dispose of rough maple lumber at the meetings to manufacturers who do not own their own stumpage; and that at the meetings they also discussed wages or manufacturing troubles, also car service, traffic difficulties, and the merits of the different flooring machines, etc. He also stated that standardization of flooring had been perfected only step by step during the past fifteen years and is one of the features of association work, and that at the meetings which he had attended there had never been any discussions with respect to the *future* prices of flooring.

On recross-examination Mr. Saunders testified as follows:

> Q. Since he went into these meeting matters, I will ask a question or two. You tried to prove the things you did not discuss when you get together. Do you ever say anything about the market for lumber?
>
> A. Of our rough lumber?
>
> Q. No; Maple Flooring; when you meet these gentlemen who are concerned in manufacturing Maple flooring, do you ever speak about market conditions?
>
> A. As to the question of supply and demand—things of that kind, do you mean?
>
> Q. Yes. Do you talk about that?

A. *Individually, not collectively, not as an Association.*

Q. *You mean as you are standing about together, or lunching together, you talk that all over?*

A. Yes, sir.

Q. Do you talk about the prices that you have been getting for your lumber?

Mr. DARBY. Do you mean flooring or lumber?

Mr. FOWLER. When I say lumber I mean flooring.

A. Personally, I have no knowledge of prices ever being talked.

Q. You talk about everything else but prices?

A. That is the least of our troubles.

Q. If you don't get a good price, you will soon go to the wall?

A. Yes, sir.

Q. That is what you are specially interested in?

A. Yes. sir. (Vol. I, p. 206.)

Q. So you mean to say that you gentlemen will talk about everything else connected with the Maple flooring industry but you won't hint prices?

A. I think that subject is the least discussed of any.

Q. Then it is discussed, is it? You say it is the least discussed?

A. Oh, it would be impossible not to mention it sometimes in your conversation. I might confess that my price was so-and-so,

and the other fellow might say his was so-and-so.

Q. Since you have been reporting your prices from week to week, every single sale to the Association, why are you so awfully particular not to talk about it between each other?

A. The individual member does not know what my prices are as I report them to the Association.

Q. He did up to July last, didn't he?

A. Yes.

Q. Before last July—if your mouth has been shut so tight since—before last July when you were reporting your prices to the Secretary and he was sending it right out to every member of the Association, why were you so awfully particular not to talk about it?

A. I took the chance of his remembering as to what my quotations were previously and it wasn't necessary for me to mention it.

Q. *Would you ever talk about what the prices would likely be in the future, whether prices were going up or down, market conditions were favorable or unfavorable, ever talk about that?*

A. *I might have expressed my opinion about that.*

Q. *Didn't you time and again talk that one thing?*

A. *You mean now as an individual talking to an individual?*

Q. *Individuals talking around there, either on the floor of the Association or at your luncheons, or anywhere?*

A. *Or in the lobby of the hotel?*
Q. *Lobby of the hotel or anywhere?*
A. *We might discuss those things.*
Q. *Well, didn't you, as a matter of fact?*
A. *I think, as a matter of fact, we would to certain extent.* (Vol. I, p. 207.)

Mr. Frank M. Hodges stated on his direct examination that there could not have been more than two or three meetings after he joined the association in August, 1921, and he did not remember whether he attended all of them, and that he attended perhaps two-thirds of the meetings during 1922. (Vol. I, pp. 295–296.) He then testified:

The COURT. Now, during 1922, at these meetings which you attended, was there any discussion of market conditions, trend of the market, prices realized?

A. I don't recall any such discussions in the meetings. We had reports of costs committees, of course, on rough lumber and manufacturing costs and things of that sort.

The COURT. You certainly discussed those, did you not?

A. Yes, sir.

The COURT. Can you tell me why? Was not the natural discussion of market conditions, the market trend, the outlook?

A. Yes.

The COURT. Will you tell me why there wasn't any discussion of it?

A. Well, I think that after the decision of the Supreme Court about those things that

our attorneys advised us that those things were not to be discussed; I don't recall.

Q. But you did discuss the past transactions, did you not?

A. Oh, yes.

Q. And the cost of rough lumber and manufacturing costs and the advertising campaign was discussed?

A. Yes, sir.

Q. And traffic questions would come up, but those of past transactions, I understand, you discussed.

A. What do you mean?

Q. These reports which would show what—the monthly reports of the secretary.

A. Oh, yes.

Q. But there was no understanding or agreement with respect to future prices.

A. No, sir.

The COURT. What benefit did you derive from discussing past transactions?

A. Well, we were enabled to find out how much stock of certain grades had been shipped and what had been obtained for it, that was valuable information.

The COURT. What was the benefit of that?

A. It shows what stock was being moved at the time.

The COURT. Well, it enabled you to forecast what was going to happen in the future?

A. To a certain extent.

The COURT. And that was the only benefit?

A. To a certain extent; yes, sir. (Vol. I, pp. 296–297.)

On cross-examination Mr. Hodges testified as follows:

Q. How far is Tupper Lake from Chicago?

A. Oh, it is probably 900 miles, something like that.

Q. How long would you be in session there at Chicago?

A. One day, usually.

Q. *When you had those meetings you had these weekly sales reports before you, didn't you?*

A. *Yes, sir.*

Q. *They were distributed around among you, weren't they?*

A. *Yes, sir.*

Q. *So that you would have them right before your eyes while you were going on with your discussions?*

A. *Sometimes they were.*

Q. Anyway, after you got there, he distributed them among you?

A. Possibly the last week's statistics, if they had not been mailed he would distribute them at the meeting.

Q. Distribute them monthly. These stock reports and shipments and things of that kind, you had them before you, too, didn't you?

A. Yes, sir.

Q. So you had the whole situation there right before your eyes, every member during those discussions, did you?

A. We did not discuss them at the meetings.

Q. What did you have them before your eyes for? What were they distributed among you for, and why did you have them in the meeting if you did not discuss them?

A. Well, we could look them over; they were distributed to us there rather than to be mailed to us at our home.

Q. Well, what did you talk about, then, that was in those reports, if you didn't talk about prices?

A. About stock conditions, manufacturing costs, things of that sort.

Q. Now, you mean to say, do you, that when it came to a question of price on past transactions that your mouths were simply shut; is that right?

A. I wouldn't say that entirely. (Vol. I, pp. 297–299.)

Mr. Ralston was one of the frankest witnesses examined with reference to the matters discussed at the association meetings.

On cross-examination he stated that he was a member of the Market Conditions Committee for about a year or a year and a half; that the committee simply gathered information as to the costs of manufacture, test runs, the average of the test runs, and general information on the markets and on conditions for the benefit of the members of the association; that there was no report made of any kind to amount to anything, but generally the committee just talked in the general meeting of what they had found, and that the report was discussed

in the open meeting. (Vol. I. p. 330.) He then testified as follows:

> Q. As a matter of fact, that is one of the principal things that was discussed in those meetings, was it not—the general market conditions?
>
> A. *The general market conditions were always discussed; yes.*
>
> Q. *And the range of prices?*
>
> A. *Sometimes.*
>
> Q. *Wasn't that one of the things that was generally discussed—range of prices?*
>
> A. *Not always; no.*
>
> Q. *Didn't you consider where the prices were, going down or going up, or had been going down or going up?*
>
> A. *There was probably some talk of that, more or less; yes.*
>
> Q. *That was the interesting thing, wasn't it, whether prices were going down or up?*
>
> A. *Absolutely it is to any manufacturer, it might be.*
>
> Q. When you were talking about general market conditions, it was with reference to whether it would justify prices going up or whether it would necessitate their going down?
>
> A. Not necessarily, it was merely the talk from that Committee was merely on general conditions and on the general state of the market.
>
> Q. Wasn't the ultimate thing you had in mind whether or not the price should be advanced or whether you would have to lower the price?

A. That may be true, I couldn't say what was in their minds.

Q. Really, wasn't that true that that is what you were driving at all the time?

A. *There is no question at all if I went to one of those meetings, I went there to get information if I could as to market conditions, and the reason I wanted that information was to know what I would do with my prices; yes.*

Q. That was the ultimate object you had in mind all the time?

A. *Absolutely.*

Q. *That is what you wanted all of this information for?*

A. *Why, it would be useless to us for any other purposes.*

Q. *And that is the reason all of you exchanged all this information about yourselves, was it?*

A. *Yes, it was spoken of that way.* (Vol. I, pp. 330–331.)

On recross-examination Mr. Ralston testified as follows:

Q. *You discussed past prices?*

A. *Past prices, yes; and general market conditions.*

Q. Did you stop right at the minute you were talking or did you stop an hour or two beforehand?

A. I really couldn't say where the stop was. The talk as a rule was all general.

Q. Just discussed the prices until you got up to the present and then you quit; is that it?

A. I didn't say that; I just simply said I really couldn't say. (Vol. I, pp. 332–333.)

An interesting commentary on the value of attending the Association meetings is contained in a letter dated January 31, 1923, from the North Branch Flooring Company to the Flanner Steger Land & Lumber Company, and in the answer of the latter company dated February 5, 1923. Part of the first letter reads as follows:

> The writer was very glad to see Mr. Flanner at the meeting last week and wishes to take this opportunity to encourage your regular representation at these meetings. *We can say from actual experience that the personal contact and association with the other members has become very valuable to us and we have been able to capitalize this to a remarkable degree.* (Vol. IV, p. 479.)

And the answer stated:

> *We are quite in accord with what you have to say regarding the value of attending the Flooring Association meetings.* It is the expectation of Mr. Frank Flanner and myself that some one from this company will be at these meetings. (Vol. IV, p. 480.)

The appellants' brief states that "inasmuch as the expenses of members to and from the monthly meetings were paid by the association, it is not surprising that a majority of the members usually attended these meetings" (p. 232). But although that fact may explain why the member from Tupper Lake is able to make the 900-mile trip to Chi-

cago every month, it does not explain why the member in Chicago is willing to contribute, through the association expense fund, a portion of the expenses of that trip. The latter fact certainly constitutes unparalled generosity on the part of the member in Chicago, if, as intimated in the appellant's brief, the primary object in attending the association meetings is to secure the instruction or diversion offered by a great city or to make sales to customers in Chicago.

Great emphasis is placed by counsel for the appellants on the alleged reformation in the practices of the association in accordance with an opinion given by Mr. Newman after the decision by the Supreme Court in the Hardwood case. As stated heretofore, however, no change was made in the reporting system of the association on account of that decision, and the only material modification made in the form of the association's activities appears to have consisted of the discontinuance of the Market Conditions Committee and of the monthly reports made by that committee analyzing and commenting on the association statistics, in accordance with the advice that the association "must see to it that no one classifies, analyzes, interprets, comments upon, or makes any recommendations concerning the same, or makes any prophesies as to the future prices, output, or other matters." (Vol. III, p. 152.)

During the period from 1913 through 1921 the members of the association regularly received

written analyses of conditions by the Market Conditions Committee along with their statistical reports, and it was not necessary for them to hold more than four or five meetings a year to transact the business of the Association. But, when the distribution of the committee's comments was stopped on advice of counsel, monthly meetings were begun so that the same information and advice could be obtained by word of mouth.

The character of the reports and observations which the members had regularly received from the association for many years, and of the value of those reports as a basis for estimating future conditions, is covered very adequately and fully in the Semiannual Report of the Market Conditions Committee dated July 20, 1917; which is as follows (Vol. IV, pp. 438–440):

> *To members:*
>
> GENTLEMEN: The statistical reports prepared by Mr. Keehn for the first half of the year give all the available data of that character. Whether such reports are regarded as merely a comprehensive review and record of a past period or whether they have an additional value as a guide for the future, depends largely upon the method of their analysis and interpretion. When the significance of each of the various factors of the statistical data is determined and the influence of other factors, such as outside competition, building activity, and manufacturing costs, buying seasons and the character of the demand, is properly estimated, we have

acquired the Eyes of Business, can see ahead with greater clearness, and can plan for the future with greater confidence of success.

As an aid in the analysis of statistics a barometer has appeared in our monthly reports during the past year to show a graphic comparison of conditions with the corresponding month of the previous year. The barometer gives a birdseye view of conditions but does not estimate the comparative value of its various factors. However, before discussing this feature, an explanation of the construction of the barometer, how and why it is thus made, may be informative and increase its value.

During January and February we had 25 members, during March 24, and during April, May, and June 23. The barometer is adjusted to these changing conditions in the following manner:

The first shaft is the Measure, and you may have noted that it is always the same height. It is an arbitrary yardstick.

The relative heights of the other shafts are determined by the percentage of increase or decrease of the various factors based on the reports of the same members for corresponding periods. Consequently the June 1916, business of the two members who have dropped out since the first of this year was not considered in making the barometer for June, 1917.

The barometer each month reflects a comparison under like statistical conditions with the same month of the previous year.

Returning now to the comparative values of the various factors of the barometer:

The factors are:

Stock on Hand.
Unfilled Orders.
Shipments.
Production.
New Business.
Average Values.

Inasmuch as the value of any factor may change with the changes in surrounding conditions, it is impossible to formulate any arbitrary or fixed rules for determining market conditions. The monthly combination of factors is kaleidoscopic—never twice the same. Consequently the significance of the various factors of the barometer must be estimated by judgment based on experience.

This may be illustrated by the barometer for June. Based on the half year, it shows slightly less than the average "Stocks on Hand," the lowest "Production," and the highest "Average Values" of the period. These are important factors and if considered by themselves would seem to foreshadow good results for July. But the other statistical factors show that relatively "Unfilled Orders" fell 26 points in June and that "New Business" and "Shipments" are the lowest in six months. This gives us comparative results based on corresponding periods last year.

To show the trend of current conditions, a comparison of May and June this year indicates that during June:

Stocks on Hand decreased 1 Point.
Unfilled Orders decreased 11 Points.
Shipments decreased 15 Points.
Production increased 4 Points.
New Business decreased 36 Points.
Average Values increased 3 Points.

The reduced volume of New Business in June may be due to earlier booking in anticipation of advancing prices, but the falling off in Shipments should be seriously considered. And it should also be noted that the first of this month records the smallest volume of Unfilled Orders shown this year.

It is obvious that right here the non-statistical factors demand attention. These are:

1. Building Activity.
2. Character of Demand.
3. Manufacturing Costs.
4. Outside Competition.
5. Buying Seasons.

We know (1) that there is a material decrease in building activity that requires hardwood flooring; (2) that the demand for Clear is relatively less than for No. 1 and Factory; (3) that the manufacturing cost of flooring was never before so high as it is now and that costs are increasing; (4) that outside competition is active and aggressive; and (5) that July is normally a quiet month for new business and is more likely to be so under present conditions.

The foregoing brief analysis of conditions the first of this month affords a basis for the conclusion that the volume of Shipments

and New Business for July will be less than normal, but that the special demand for No. 1 and Factory may support some advance in prices of those grades. It is also evident that at present the demand can not be increased by price concessions. Also that prices are not likely to be reduced on account of high manufacturing costs and easy warehouse conditions. The present manufacturing plan should be to reduce the output of Clear flooring and increase the output of No. 1 and Factory.

This is not a Semiannual Report in conventional form. It is rather a report and explanation of methods, and your committee has taken the liberty of offering it with the hope that it may suggest ways of analyzing our statistical reports from month to month so that they may be more valuable to you as a basis for estimating future conditions.

Respectfully submitted.

MORRIS E. THOMAS, *Chairman,*
E. HARVEY WILCE,
B. P. WHEDON,
WILLIAM E. COX,
GEORGE STRABLE,
C. H. LAW,
J. D. STAPLE,
Of Market Conditions Committee.

The monthly reports which the association now prepares and places in the hands of the members either before or at the monthly meetings, show the analysis of the statistical factors at a glance, so that

their interpretation by a committee of experts is not required; and the evidence clearly establishes that all the "non-statistical factors" referred to in the committee report quoted above, are freely and habitually discussed at the association meetings, that the members now have the weekly sales reports, and that they are therefore now—even if future prices are not discussed at association meetings—in a more advantageous position than ever before to reach a common analysis of conditions and consensus of opinion as to prices and production.

The defendants who testified, and counsel for appellants in their brief, emphasize the necessity for the frequent meetings to discuss questions relating to grades and grading rules, to standardization, to manufacturing difficulties, to advertising, to traffic questions, to the tariff on flooring, to freight rates, and to labor troubles, *but such questions must have arisen as frequently if not more frequently prior to 1922 than after that date, as no changes in the association grades or grading rules or in the standard sizes have been made since the present articles of association went into effect.*

The following table shows what subjects were actually discussed at the association meetings during 1922 after the reorganization of the association was completed and the new Articles of Association were adopted. *The first twelve subjects are those suggested by the defendants as those requiring frequent discussion, and the last seven subjects are*

those which the government contends suggest the correct answer to the question why the practice of holding monthly meetings was instituted after the decision by the Supreme Court in the Hardwood Case and the consequent discontinuance of the written reports analyzing and interpreting the statistics.

1. Standardization				July 19

[1] Not mentioned in memorandum of meeting, but given in call for meeting as one of the subjects for discussion.

[2] Representatives of Department of Justice present at meeting.

NOTE.—The minutes of the Association meetings from which the data showing the subjects discussed was taken appear in the record as follows: April 20, 1920, Vol. III, p. 164; May 17, 1922, Vol. III, p. 171; June 21, 1922, Vol. III, p. 173; **July 19, 1922, Vol. III, p.** 176; August 16, 1922, Vol. III, p. 181; October 24, 1922, Vol. III, p. 185; November 15, 1922, Vol. III, p. 191; and December 19, 1922, Vol. III, p. 197.

That flooring data, stock conditions, and average costs computed in accordance with Article XIV of the Articles of Association were subjects of primary importance for discussion at the Association meetings held in 1922 is further shown by a consideration of the letters sent out by Mr. Keehn to remind the members of each meeting.[1]

The letter dated May 10, 1922, with reference to the meeting to be held May 17, 1922, reads in part as follows:

> Among the subjects to be discussed at the meeting are the following:
>
> * * * * *
>
> 3. The Committee on Cost Surveys will meet on the afternoon of the 16th and will make a comprehensive analysis of the Average Cost of Manufacturing and Marketing Maple Flooring as ascertained according to Article XIV of the Articles of Association, and will make a report to the general meeting.
>
> If you have recently purchased any rough Maple Lumber on the open market or if you have any information regarding any purchases or sales of same, will you please send the information on the 15th to the Secretary, giving the prices F. O. B. sawmill (omitting the location of the sawmill), and the cost of

[1] Letters to members giving the dates of meetings and the subjects for discussion were sent out under the following dates, and are printed in the record as indicated: Vol. III, May 10, 1922, p. 170; June 15, p. 172; July 13, p. 175; Aug. 16, p. 181; Sept. 21, p. 184; Oct. 24, p. 185; Nov. 10, p. 190; Dec. 14, p. 196.

freight from the sawmill to your flooring plant? This information will be very useful to the committee in its work and it will be held strictly confidential and no information will be given revealing the identity of the buyer or seller, or the source of the information, if you so desire.

There has been a good volume of New Orders Booked since the last meeting, and it will be very interesting to know how business has been running during the first half of May. It looks as if the 13/16" x 2¼" face No. 1 Maple flooring will be oversold to a greater extent than on April 18th, the date of our last compilation.

Please remember to bring with you to the meeting the flooring data as per blank form below, so the data can be summarized and the members fully informed as to actual stock conditions, etc., on May 15th.

Flooring Data, May 1–15, Incl.

(Vol. III, p. 170.)

Each notification of a meeting to be held requested the members to send or bring flooring data as per the blank form copied above, and the letters

dated July 13, 1922, and Aug. 10, 1922, emphasized the importance of this information as follows:

> It is important to know how the flooring business is running so far this month, and we wish to suggest that if the members will supply the data as outlined on the blank form below, covering the first half of July, and mail the data to us at the close of business July 15th or on Monday the 17th at the latest, that we will compile same and have it ready as soon as the meeting is called to order. This will save time and give you a better opportunity to consider the relations of supply and demand as reflected by the data than if the matter is delayed by our not getting these reports until the members arrive in Chicago and then not getting them compiled until late in the afternoon. (Vol. III, July 13, p. 175.)
>
> Please be sure and bring with you to the meeting the flooring data as per blank form below *so that you will have as complete information as possible regarding statistical conditions on the day of the meeting.* (Vol. III, Aug. 10, p. 181.)

That the flooring data requested in each notification of a meeting is especially important in enabling the members to forecast future conditions, and that the discussion of the statistical and trade conditions at least was not confined to the past, is indicated by the letter dated February 19, 1923, which Mr. Keehn sent to the members and which reads as follows (Vol. IV, p. 470):

FEBRUARY BUSINESS

To members:

GENTLEMEN: We have received flooring data from 14 members of the Association covering the first 13 days of February, from which it is estimated that if the business during the remainder of February averages about the same as the first 13 days and if the trade experiences of the other 8 members are about the same, that the February business will turn out about as follows:

Shipments about 26% less than in January.

Production about 21% less than in January.

New orders about 41% less than in January.

The stock conditions of 13/16 x 2¼" face Maple flooring on February 13th of the same 14 members indicate as follows:

On Feb. 13—	Stocks on hand	Unfilled orders	Oversold	% sold 14 members	% sold Feb. 1, all members
Clear	2, 158 M	8, 502 M	6, 344 M	394%	411%
No. 1	1, 424	6, 812	5, 388	479	407
Fety	1, 099	3, 118	2, 019	284	389
	4, 681	18, 432	13, 751	394	405

A note as to a discussion of the subject "Trade conditions and the relations of supply and demand as reflected by our (the association's) statistical reports" is found in only two of the memoranda of meetings analyzed in the above table (p. 163). It is, however, reasonable to assume from the statement

in the letter dated December 14, 1922 (Vol. III, p. 196), to the effect that the November reports would be ready for the meeting so the members could know how the November business turned out, that those reports were discussed at the December meeting, to assume from the paragraph quoted above from the letter dated July 13, 1922 (p. 166), that the relations of supply and demand were discussed at the July meeting, and to assume from the following paragraphs in the letter dated October 24, 1922, not only that the subject of trade conditions and the relations of supply and demand was discussed at the October meeting, but also that it has been the principal subject for discussion at every meeting:

> *It has now been two months since there has been a "gathering of the clan," and it is hoped that every member of the Association will be represented at the meeting so that trade conditions and the relations of supply and demand for flooring can be discussed and considered.*
>
> We expect to have our statistical reports for the month of September made out and in the mail for you on the 19th or 20th, so that you will have an opportunity to look them over in advance of the meeting and see how the September business turned out. (Vol. III, p. 185.)

None of the memoranda of association meetings held since January 1, 1922, indicates that any dis-

cussion was held with reference to prices, past, present, or future, but the record contains letters to members dated June 15, 1922, and July 13, 1922, in which Mr. Keehn specially requested the members to send in their weekly sales reports so that he could make up the association report and have it ready for the general meeting. (Vol. IV, pp. 461 and 462.) The remark appended to the request of July 13, "hoping you will be able to do this so that you will have information up to date regarding the market," certainly indicates that the sales reports were intended to be used as the basis for a discussion at the meeting of past and up to the minute prices; and substantiates Mr. Ralston's testimony that past prices and general market conditions were discussed at the association meetings even after the 1922 reorganization.

The evidence considered heretofore with reference to the procedure and discussion at the association meetings establishes that, as in the case of the changes made in the sales and statistical reports shortly before the hearing in the court below, the change made in the activities of the association after the decision by the Supreme Court in the Hardwood Case related entirely to the form of the activities, and not at all to their substance and effect. The Market Conditions Committee was discharged, and the association resolved itself into a Committee of the Whole for the monthly discussion and analysis of the same matters

which had formerly been discussed and analyzed in the monthly reports of the Market Conditions Committee. In fact, the practice of having the Market Conditions Committee analyze, interpret, and comment on the statistics was discontinued even before that committee was discontinued, *because the members recognized the superior advantages of their present system of discussions at association meetings.* This is shown by the following paragraph from the minutes of the general meeting held August 19, 1921:

> *Market Conditions Committee.* — Mr. Thomas, Chairman of the Market Conditions Committee, stated that his Committee had nothing special to report as a Committee, no meeting having been held prior to the convening of the general meeting, *as the members of the Committee felt that trade conditions and our July statistics could be discussed to just as good, if not better, advantage by the Association as a whole as to hold a separate meeting of the Committee.* (Vol. III, p. 137.)

X

Results of the Association's Activities

The brief for appellants states (p. 161) that the Government has abandoned its contention that there has ever been uniformity of prices. The record clearly shows what the Government's contention was in the court below, and it maintains the same contention here; which is, that competi-

tion between defendants in the manufacture and sale of maple, beech, and birch flooring has been greatly suppressed, and that the prices of such flooring have been very materially increased in consequence of the practices pursued by this combination between defendants known as the "Maple Flooring Manufacturers' Association." As has been pointed out by the Government in previous cases, the results accomplished by these associations are manifested in different ways, dependent upon the character of the commodity manufactured or dealt in by the members and the existing market conditions. Through the influence of such a combination the prices of a commodity of uniform quality, like cement or linseed oil, under ordinary marketing conditions will be reduced to practically a dead level. However, when there is a sharp change in marketing conditions, as when the demand greatly increases or diminishes, there will necessarily be divergencies in prices till the demand and supply are again stabilized. If there were a marked subsidence at some point in the bottom of the ocean, it would require an appreciable time for the entire surface to again become level. Such a condition is illustrated by the prices of linseed oil during the existence of the Armstrong Bureau, as shown in the *Linseed Oil case* (262 U. S. 371).

When there is a wide difference in the quality and cost of production of the commodity, and especially if it is composed of many grades, like lumber, entire uniformity of prices is impossible. How-

ever, the variations will be much less when marketing conditions are normal than when abnormal. This is illustrated by the variations in the prices of lumber shown in the *Hardwood case* (257 U. S. 377). There the activities of the association actually produced a greater spread in prices. For illustration, the spread in prices of f. a. s. sap gum in January, 1919, was $7.00, while in January, 1920, it had increased to $22.50; and during the same period the spread in f. a. s. plain white oak increased from $6.00 to $81.25; and in No. 1 common poplar from $5.00 to $53.25. This, as this court found, was due to the activities of the association exerted upon the extraordinary economic conditions then existing.

The principal object of such an association is to enable its members to realize higher prices for their product; and therefore their practices are designed to press the prices upward. When a runaway market exists there is hardly any limit to the prices that may be obtained; but when conditions are normal there is a point beyond which prices can not be forced. As there must be leaders in every upward movement, there will necessarily be a variation in prices; but as the extreme point is approached the variations will decrease and prices will become nearer uniform.

Many of these associations do not seek uniformity. Their object is, not to eliminate *all* competition, but to destroy absolutely what they are pleased

to denominate "cut-throat" competition. They accomplish that end by agreeing either formally or tacitly upon a *minimum price,* which enables the most expensively manufactured goods to be sold at a profit, or at least not at a loss; and means are devised to enforce the agreement either by penalties or by moral force. Competition to sell *above* the minimum price is encouraged; *but that competition consists in each endeavoring to sell at a higher price than his competitors.* By so doing he makes a better showing among his fellows; and he knows that he will soon be imitated. This is exactly the character of the defendant association. According to the Government's theory the following should be the history of prices of flooring since the adoption and putting into effect of the last articles of association, which require among other practices the weekly distribution among the members of reports showing in detail the sales of competitors. When the first cost price list—really a minimum price list—was distributed some were selling below and some above the prices designated therein. Those selling above were not expected to, and did not reduce their prices to conform to the list, but those selling below raised their prices, probably gradually, until practically all sales were made *at or above* the designated prices.

In the meantime the competition to obtain higher prices than their competitors had caused many members to advance their prices. And when a

large per cent of them had made a substantial advance a new list was distributed with prices at a higher level. Of course, while the prices of many then conformed to or exceeded these new prices, some were selling below them, and a short time would be required for the prices of all to be advanced to the new level. New lists would be distributed just as often as the market would stand the strain. Therefore uniformity in figures need not be expected. But we may expect to find that a large per cent of the sales were made at the designated list prices, as it is only the bolder ones who take the initiative in advancing prices, and the others will not follow until they ascertain that the ground is secure. Furthermore, it may be expected that a number of sales will be found below the list prices, but they will gradually decrease after a new list has been adopted until another advance is announced.

So far as it possibly could after the data was received, the Government had tabulations made based on the weekly sales reports to ascertain how far the facts corroborate its contention. These tabulations constitute Exhibit 79, and most of them are printed in the record. (Vol. IV, pp. 583–796.) The evidence of Horace A. Lewis, a special agent of the Bureau of Investigation of the United States Department of Justice, who made the tabulations, and the discussion between court and counsel with reference to them, are found on pp. 846–859, Vol.

II, of the printed record. Briefly stated, the explanation of these tabulations is as follows:

The item 13/16" x 2¼" Maple Flooring, standard lengths, in the three grades clear, number one, and factory, was selected for the price comparison because it is the most representative. The 13/16" x 2¼" maple flooring constitutes approximately 70% of the entire amount of flooring produced by the members of the association, and the average percentages of the three grades produced are: Clear, 50%; No. 1, 35%; and Factory, 15%. The item 13/16" x 2¼" Clear Maple Flooring therefore constitutes approximately 35% of the total amount of flooring produced by the members. (Vol. IV, p. 842, Vol. III, side pp. 1622 and 2052.)

The tabulations based on the sales reports which were in the possession of the Government prior to the hearing in the court below were figured for the three grades, but those based on the reports which came into the possession of the Government during the course of the hearing were only figured for the clear grade because of the lack of time. Only the tabulations for the item 13/16" x 2¼" Clear Maple Flooring were therefore considered, and only those based on the sales reports for the weeks ending November 19, 1921, to June 30, 1923, inclusive, are printed in the record.

The procedure followed in making the tabulations was to take each sales report and to take from it and to set down on what Mr. Lewis called the tabulation sheet all the data given with reference

to each sale of the selected item. These sheets, therefore, have the same general appearance as the sales reports, and show in successive columns from left to right (1) the date of the order, (2) the number of the mill making the sale, (3) the quantity, (4) the delivered price per M, and (5) the average freight rate. These items of information are merely transcribed from the sales reports, except that during part of the period the sales reports give the index letters or freight-rate symbols, whereas the average or Cadillac freight rate is shown on all the tabulation sheets. Mr. Lewis testified, however, that in every case he decoded the freight symbols by using the freight-rate book. The next column is entitled "Actual freight allowed" and sometimes "Freight charged." It might more properly be termed "Actual Cadillac freight" or "Actual average freight," as it shows the freight per M feet calculated on the basis of the average freight rate shown on the sales report and of the association standard weight for the item of flooring under consideration of 2,000 pounds per M feet. The practice adopted for the association rate books is, however, followed and the nearest multiple of 25 is actually used for the "freight allowed." Each calculation was checked with the freight table showing the cost of freight per 1,000 ft., which is included in the July 19, 1923, Rate Book and Index of Towns. The data given in one other column on the tabulation sheets, "commissions," is transcribed directly from the sales reports.

A uniform practice was unfortunately not followed in presenting the remaining data on the tabulation sheets. The sheets which were prepared first show in the last column on the right what is called "Net Factory Price," which is the delivered price, less the freight, less the commission, if any. Other tabulation sheets show what is called sometimes "Net Price Cadillac" and sometimes "Price F. O. B. Cars at Mill." The columns so entitled show the delivered price less the freight. This might more properly be called the "Cadillac Base Price."

To determine whether the so-called "average costs" have been maintained as minimum prices, either of two methods could have been adopted for the purpose of comparing the prices actually obtained (as shown on the sales reports) with the so-called average cost; either the average cost *plus* the freight could have been compared with the delivered price reported (as was done on the sales reports during the operation of the January 6, 1921, Minimum Price Basis, as described heretofore on p. 39), or the delivered price reported *less* the freight could have been compared with the average cost. The Government chose the latter method, perhaps unfortunately, as the use of the former would not have given the appellants an opportunity to claim, as is done on pages 336–348 of their brief, *that the commission allowed, if any, should also have been deducted in order to arrive at the Cadil-*

lac base price. It is, however, frankly stated in the Appellants' Brief that that procedure, in accordance with which the elaborate calculations and charts appearing in the Brief and Appendices to the brief were prepared, *is based on the theory that what the seller received should be compared with the so-called "Average Cost."*

There is nothing in the record to sustain this contention, but every fact and circumstance is against it.

That the cost prices which were designated on the surveys of costs distributed among the members and were shown in the rate books, and which with the addition only of the average cost of freight—or Cadillac freight—were shown as the delivered costs or values on the sheets distributed for insertion in the rate books, were the ones to be observed in quoting prices and selling flooring regardless of whether or not a commission was allowed which made the seller's net realization less, is conclusively shown by the following facts:

(1) *The commission is actually embraced in the estimate of costs.* The questionnaire answered by the members, upon which answers the manufacturing and distributing costs are estimated, contains the following inquiry, "6. Selling expenses, *including commissions* and advertising and office expenses including selling administrative expenses." And in compiling the answers to the questionnaire sent out in May, 1922, the average of the replies to this question was $3.75 (see p. 69). The manufacturing and selling expenses added to the costs

of rough lumber, including the waste, constitute the " average costs," which are shown in the rate books—and the estimates of costs which are from time to time distributed. *If the commission is already included in the estimated costs why should it again be added to ascertain whether a sale is made at or under the so-called cost price; or the same thing, why should it be deducted from the price at which the sale is made? The commission is included in the estimated costs to avoid the necessity of doing that very thing.*

(2) The sales reports show that a commission is generally paid, but they do not show in any instance whether it is allowed to the purchaser as a deduction from the quoted price, or to a wholesaler or a commission man for his services, or to a salesman in lieu of a salary. Mr. McLurg testified that the Kneeland-McLurg Company does not allow the retail dealer any commission because it sells through traveling salesmen, which costs more than on commission and that it allows some wholesalers a commission of $1.50 to $2.00 (Vol. I, p. 229), and Mr. Shepeck testified that the I. Stephenson Company allows very few wholesalers a commission as it does not care to sell through them, but that it allows a commission to brokers and even pays its own traveling salesmen on a commission basis instead of a salary. (Vol. I, p. 262.) Mr. Ralston testified that from 1919 to May, 1923, while he was sales manager for William Horner, the largest manufacturer in the association, eighty per cent of his flooring was sold through representatives who were

wholesalers in various cities in the country and to whom commissions were allowed; (Vol. I, p. 319); Mr. Hodges testified that the Oval Wood Dish Corporation sells largely to jobbers and wholesalers and to some big yards and allows commissions (Vol. I, p. 288); Mr. Greene testified that the West Michigan Flooring Company sells through representatives who guarantee the accounts and to whom commissions are allowed (Vol. I, p. 385); and Mr. Dewey testified that exclusive representatives at various points throughout the United States handle the flooring of the Kneeland-Bigelow Company on a commission basis (Vol. I, p. 393). No other defendant testified about the method of distributing the product and allowing commissions, and in accordance with the stipulation as to what the other defendants would have testified to if called (Vol. I, p. 409), it is perfectly clear that most if not all of the commissions shown on the sales reports were allowed to wholesalers, commission men, or traveling salesmen, in payment for their services in the distribution of the product. There is no evidence to support the contention made in the appellants' brief (p. 342) that the allowance of commissions is merely a means of meeting competition or reducing prices; and an examination of the depositions of dealers in Chicago, New York, Boston and Philadelphia, which were introduced in evidence by the defendants and appear in Vol. I and Vol. II of the Record, fails to disclose any instance *of a price subject to commission being quoted to a retail dealer.*

(3) The trial court was inclined to the view that the base prices with which the sales prices should be compared were the prices designated in the surveys of costs and in the rate books *less* a commission of $2.00, that being the commission more often paid. This view is in fact borne out by the "Declaration of business policy," which accompanied Keehn's letter of September 16, 1921, wherein it was proposed to agree to pay 10% on all sales "at values below the average cost of production, plus the average cost of freight to destination * * * after allowing for commission not exceeding $2.00 per M feet to wholesalers and commission men and to our special representatives." (Vol. IV, p. 568.) In other words the standard for determining whether the proposed agreement was violated was to be the comparison of the delivered price minus the commission with the average cost minus the commission plus the freight. An examination of all the Weekly Sales Reports for 1922 and 1923 which are printed in the record shows that the following commissions were allowed: 14 of $1.00; 344 of $1.50; 1244 of $2.00; 3 of $2.50, and 3 of $3.00. The average of these commissions is $1.89, and that undoubtedly represents about the amount included in the average costs for commissions allowed. No average cost figure or price stated otherwise than in even dollars has ever been established, and therefore if the delivered prices less the freight *and less the commissions, if any,* are to be compared with the average cost with any pretense of fairness, *two dollars must be deducted from the*

average cost. As stated by the trial court, therefore, the method actually adopted on the Lewis Exhibit was against the Government.

(4) The rate books and the surveys of cost issued by the present association state prices in elaborate detail, they being figured out and shown in the rate book for thousands of points; and there is not anywhere a hint that any consideration should be given to the allowance of a commission. *If the commission were regarded as an additional selling expense to be taken into consideration in making prices, that fact would certainly have been suggested at some time in some way.*

In paragraph 3 of Mr. Keehn's letter which accompanied the freight rate book of 1922 he explained:

> For the further information of the members so called "Delivered Costs Charts" have been compiled. These charts include the Average Cost of Freight to destination of shipment; *in other words, the Average Cost of Freight is added to the Average Cost of the flooring f. o. b. cars at flooring* mills to illustrate what the Delivered Cost would be at destination. (Vol. III, p. 319.)

(5) The Minimum Price Plan of January 1, 1919, specified the commission which might be allowed "*from minimum prices in effect at time of sale.*" (Vol. III, p. 89.) In the Market Conditions Committee's report of June, 1919, with reference to "values of ⅜" " it was said:

> Please bear in mind that the ⅜" prices do not carry any concessions, but are net *being*

subject only to commissions to your registered special representatives and to registered wholesalers and commission men.

The Minimum Price Basis of January 6, 1921, did not specifically state that the commissions authorized might be allowed from the established minimum prices (Vol. III, p. 94), but the comparisons which the sales reports for January, 1921, made between the sales prices and the Minimum Price Basis prices as heretofore described on p. 39, show conclusively that that was the practice followed. There is therefore every reason to assume that the same understanding and practice as to the method of handling the allowance of commissions are still maintained.

(6) The prices actually considered, and very largely observed, were those designated in the surveys of costs and in the rate books. This is conconclusively shown by the tabulations hereafter discussed.

The actual comparison between the average cost as determined from time to time and reported to the members by the association, and the prices at which the members sold 13/16" x 2¼" clear maple flooring as shown by the weekly sales reports but reduced to a Cadillac base in the manner heretofore described, is made on what Mr. Lewis called the recaption sheets.

In order to illustrate clearly the manner of making this comparison, and also the different forms of tabulation sheets which were prepared, both the

tabulation sheets and the recaption sheets of sales for the weeks ending, respectively, January 6, 1923, and June 30, 1923, are set forth in full below:

TABULATION SHEET

Net factory prices maple flooring, ¹³⁄₁₆ x 2¼, for week ending January 6, 1923

(Vol. IV, p. 735)

CLEAR

Recaption Sheet

Average cost for second quarter of 1923 (Vol. IV, p. 795), 13/16 x 2¼ clear maple flooring was $105.00 f. o. b. cars at flooring mill, as shown by report of the association dated March 24, 1923, captioned Average Cost—Based upon composite results of nine test runs.

[Compiled from record of completed transaction report of sales made during the week ending June 30, 1923]

1	Sale	@ $95.00	total	6,000 ft.	
1	Sale	@ 98.00	"	22,000 ft.	
1	Sale	@ 100.00	"	15,000 ft.	
2	Sales	@ 100.25	"	20,000 ft.	
5	Sales			63,000 ft.	=18.9%
14	Sales	@ 105.00	total	210,000 ft.	=62.9%

3	Sales	@ 107.00	"	14,350 ft.	
2	Sales	@ 110.00	"	1,800 ft.	
1	Sale	@ 114.00	"	3,850 ft.	
1	Sale	@ 115.25	"	23,000 ft.	
9	Sales			61,000 ft.	=18.2%
28	Sales			334,000 ft.	=100%

It is apparent that the base prices compared with the average cost of $95.00 on the first recaption sheet above are not what are called the Net Factory Prices on the first tabulation sheet above but are those prices *plus the commission which had been deducted previously.* As explained above (p. 178), this is done in order to have the actual delivered sales prices reduced to the adopted price, but not to an actual mill realization basis.

A simple method of tabulation, and one that demonstrates the Government's contention that the commissions paid, if any, can not properly be con-

sidered when comparing the prices obtained by the members with the so-called average costs, is shown by refiguring and rearranging the tables above set forth (pp. 184, 186) as follows:

Week ending January 6, 1923—average cost or f. o. b. Cadillac price for 13/16" x 2¼" clear maple flooring, $95.00, as per determination of average cost, October 25, 1922.

SUMMARY

	Number of Sales	Feet	%
Delivered Sales *less* than Average Cost	5	63,000	18.9
Delivered Sales *at* Average Cost	14	210,000	62.9
Delivered Sales over Average Cost	9	61,000	18.2
Total	28	334,000	100.0

The results of the above calculations are of course exactly the same as the results of the comparisons shown on the recaption sheets set forth on pages 185, 187, but on account of the variations in delivered prices due to freight differentials, the method of comparison last used does not give the information as to the actual spreads in prices that is given by reducing all the actual prices reported to a common basis.

All the Freight Rate Books, Tables of Values, Tables of Delivered Values, Average Cost Charts, Delivered Cost Charts, and Tables of Concessions and Additions secured by the Government were introduced in evidence; and all those relating to the period from January 1, 1921, to June 30, 1923, were used as the basis for the comparisons between the actual prices reported and the average costs. The following table gives the several average costs established during the period from November 12, 1921, to June 30, 1923, and the references to the tables or charts printed in the record on which they appear:

Average Cost F. O. B. Cadillac, ¼" x 2¼" Clear Maple Flooring	Date Established	Title of Reports in Record	Reference
$90.00	Nov. 17, 1921	Letter to Members. November 17, 1921.	Vol. III. p 143.
$90.00	May 31, 1922	Survey of Costs, May 31. 1922	Vol. III, pp. 279–281.
		Rate Book and Average Cost Charts, etc., May 31, 1922.	Vol. III, side pp. 737–905.
$95.00	Oct. 25, 1922	Survey of Costs. October 25 1922.	Vol. III pp. 284–286.
$100.00	Feb. 15, 1923	Survey of Costs. February 15, 1923.	Vol. III, pp. 287–289.
		Tables of Differentials and Average Cost Charts, February 15, 1923.	Vol. III side pp. 910–929.
$100.00	March 10, 1923	Survey of Costs, March 10, 1923.	Vol. IV, pp. 497–499.
$105.00	March 24, 1923	Survey of Costs, March 24. 1923.	Vol. IV, pp. 499–501.

It should be kept in mind that the present articles of association were not adopted until some time in March, 1922. Prior to that time the association was in a rather chaotic condition, because of the decision of the lower court in the Hardwood case and the suggestion of a criminal prosecution by the Department of Justice. *But defendants were seeking a method by which closer cooperation could be observed. This was accomplished by the full and detailed reports of members and their distribution by the secretary, and through the meetings which were begun to be held monthly.* By October 25, 1922, the date of the first advance on this item after the adoption of the present articles, the scheme was working smoothly; and the data thereafter is especially interesting. However, the results of the comparisons which appear on all the recaption sheets printed in the record are shown below, in summarized and tabulated form:

Comparison of sales of $\frac{13}{16}$'' x 2¼'' clear maple flooring as reported by members and reduced to Cadillac Basis with average costs reported to members

(NOTE.—The brief for appellants (pp. 345-346) calls attention to the fact that for the weeks ending September 30, October 7, October 14, and October 21, 1922, the reception sheets compare the Cadillac Base prices with the average cost dated October 25, 1922, or $95.00, instead of with the earlier lower average cost of May 21, 1922, or $90.00. The error obviously was not unfair to the defendants, as it represented some sales as having been made at prices less than the average cost, which the Government contends is a *minimum price*, whereas the correct comparison shows that during those weeks *every sale was made at a price above the minimum price*. The corrected figures have been used in the above tabulation.)

The following tables give summaries of the above figures for: (1) Each month of the period from November 19, 1921, to June 30, 1923; (2) The period from November 19, 1921, to March 25, 1922, or until the reorganization of the Association was consummated by the adoption of the present articles of association; (3) The period from April 1, 1922, to June 30, 1923, or the entire period of the operation of the Association under its present articles of association; (4) The period from October 28, 1922, to June 30, 1923, when the Association was operating smoothly and was preparing and sending out Surveys of Costs at least quarterly, as provided for in the present articles of association, and (5) The entire period from November 19, 1921, to June 30, 1923.

The results shown clearly demonstrate that there has been a remarkable uniformity in the delivered prices charged by the defendants, and an even more remarkable observance of the so-called average costs as minimum prices, especially during the operation of the association under its present articles.

An analysis of the reception sheets clearly demonstrates the soundness of the Government's contentions that the so-called average costs are in fact

recommended prices, and that they exert a strong influence upon, in fact largely control, the selling prices. The so-called " Average Cost price " was advanced from $90 to $95 on October 25, 1922. In September 97.3% of the flooring marketed was sold at prices above $90 and 1.7% at that price, leaving only 1% sold below the pretended average cost. The advance therefore was made to establish a price which was already being received for a considerable amount of the flooring then sold. And notwithstanding the advance, 78.4% of the flooring sold in October brought more than, and 19.2% brought exactly, the designated price, leaving only 2.4% that sold for less than such price. The fact that 14% was sold for less than the designated price in November does not indicate that the price had been reduced. That resulted from the fact that $95 per M was the adopted price for the whole of November, while $90 was the adopted price in October up to the 25th day of the month.

The sheet for the week ending January 6, 1923, shows that only three sales were made under $95.00 per M; that the prices on two of these sales were only $1.00 per M and the price on the other was only 25c per M below, and that the total amount of these sales was only 19,000 ft., or 4.3% of the total volume sold during the week. The same sheet shows that *23 sales, totaling 220,700 ft., or 50.8% of the entire amount, were made exactly equal to the adopted price,* and that twelve sales aggregating

195,302, or 44.9% of the total amount, were made above such price. (Vol. IV, p. 734.)

No material changes in the comparative results appear on the reception sheets for the weeks ending, respectively, January 13, January 20, and January 27, 1923, except that the number and volume of sales made exactly equal to the adopted price were much larger. The figures for those weeks are as follows:

Sales at base price exactly equal to average cost for item of $95.00

Week ending	Sales	Ft.	% of total
January 13	46	1,262,800	91.4
January 20	95	1,739,050	86.8
January 27	91	1,287,000	85.2
February 3	63	1,302,957	80.0

For the same weeks the volume of sales made below such price were, respectively, 55,000 ft., or 3.9%; 194,000 ft., or 9.6%; 31,000 ft., or 2%; and 128,000 ft., or 7.4%, and during the first three of those weeks 71% of the total volume of the sales below and above the adopted price did not vary from it more than $1.00 per M. (Vol. IV, pp. 736, 739, 743, 747.)

The price of $100.00 per M, which was adopted February 15, 1923, first appears on the sheet for the week ending January 20, 1923, as the price on one small sale. It is the highest price appearing on that sheet. One small sale at the same price appears on the sheet for the week ending January 27, but on the sheet for the week ending February 3,

there are 12 sales for a total of 125,000 ft. at the $100.00 per M price. This represents 60% of the total volume sold above the established price of $95.00.

The sheet for the week ending February 10 (Vol. IV, p. 751) shows 3 sales totaling 29,000 ft. or 2.8% of the entire amount, made under the established price, 14 sales totaling 409,000 ft., or 39.2% of the entire amount made at exactly that price, and 30 sales totaling 603,350 ft., or 58% of the entire amount, made above it. Eighteen sales aggregating 513,100 ft., or 85% of the volume sold for more than such price, were made at the $100.00 per M. *Therefore $100.00 per M was accepted as the prevailing price for 13/16" x 2¼" Clear Maple flooring, and it was so established on February 15, 1923.*

The sheet for the week ending February 17, of course, does not reflect to any considerable extent any results from the distribution to the members of the increased average cost. The comparison for that week is therefore still made with the $95.00 average cost. The sheet shows 1 sale, aggregating 26,850 ft., or 2.8% of the total, at a price below the average cost; 16 sales, aggregating 269,500 ft., or 29.2% of the total, at the average cost price; and 34 sales, aggregating 626,300 ft., or 68% of the total, above the average cost price. Twenty-one sales, for a total of 357,100 ft., or 38.7% of the total, were made at the $100.00 base price. (Vol. IV, p. 754.)

The sheets for the weeks ending February 24 and March 3 show clearly the results accomplished by sending out the Association report dated February 15, which established the increased average cost. For the week ending February 17 twenty-two sales, aggregating 436,850 ft., or 47.4% of the total, were sold at prices less than $100.00, *but for the week ending February 24 only 8 sales, aggregating 167,000 ft., or 14.3% of the total, were sold at prices below the new average cost price of $100.00 per M; and for the week ending March 3 only 5 sales, aggregating 52,000, or only 7.2% of the total, were sold at prices below the average cost.* For the former week, five and for the latter three of the lower sales appearing on the two sheets were made at $95.00, the old average cost price. For the same weeks there were, respectively, 36 sales, aggregating 696,000 ft., or 59.8% of the total, and 31 sales, aggregating 552,000 ft., or 76.4% of the total, made exactly at the base price of $100.00. (Vol. IV, pp. 757, 760.)

The sheets for the weeks ending respectively March 10 and March 17 show respectively three sales aggregating 67,000 ft., or 9.3% of the total amount, and four sales aggregating 71,000, or 11.9% of the total amount, at prices less than the average cost; 22 sales aggregating 385,600 ft., or 53.3% of the total amount, and 21 sales aggregating 322,000 ft., or 54% of the total amount at prices exactly equal to the average cost; and 18 sales aggregating 271,839 ft., or 37.4% of the total amount, and 13

sales, aggregating 204,000 ft., or 34.1% of the total amount at prices above the average cost. (Vol. IV, pp. 763, 765.)

The price of $105.00 first appears on the sheet for the week ending February 24. The sheets for that and the following weeks show:

Sales at $105.00

Week ending	Sales	Feet	Per cent of total amount sold
February 24	2	8,000	0.7
March 3	7	58,370	8.0
March 10	10	197,000	27.3
March 17	6	119,000	19.9

A Survey of Costs dated March 10, 1923, was prepared and distributed to the members, but it did not make any change in the average cost for 13/16" x 2¼" Clear Maple Flooring. Another Survey of Costs dated March 24 was prepared and distributed, *and it adopted the base price of $105.00 as the new increased average cost.*

The sheet for the week ending March 24 shows 5 sales aggregating 74,000 ft., or 7.9% of the total amount, made at prices less than the average cost, the $100.00 average cost of February 15, of course, being still used as the basis of comparison, 26 sales aggregating 398,000 ft., or 42.4% of the total amount made at the prices exactly equal to the average cost, and 24 sales aggregating 466,300 ft., or 49.7% of the total amount, made at prices higher than the average cost. Fifteen of these sales ag-

gregating 242,300 ft., or 25.8%, of the total amount, were made at the price of $105.00 per M.

The full effect of the Survey of Costs dated March 24, 1923 (Saturday), could not of course be reflected in the sales for the week ending the next Saturday, March 31, but the sheet for that week nevertheless makes the comparison with the new average cost of $105.00. On that basis it shows 16 sales aggregating 297,400 ft., or 56.9% of the entire amount made at prices less than the average cost; seven sales aggregating 104,000 ft., or 19.9% of the entire amount made at the average cost price, and 5 sales aggregating 121,200 ft., or 23.2% of the entire amount made at prices above the average cost. Nine sales aggregating 151,500, or 28.9% of the entire amount, were sold at the old average cost price of $100.00, and if that had been used as the basis of comparison, only 3 sales representing .5% of the entire amount would have been sold below the average cost price.

The sheets for the weeks ending April 7 and April 14 reflect the full effect of the action establishing the increased average cost at $105.00 per M. They show:

Sales at price exactly equal to new average cost of $105.00

Week ending	Sales	Feet	Per cent of total amount sold
April 7	15	362,000	64.9
April 14	26	396,700	71.1

The same sheets show respectively 12 sales aggregating 106,800 ft., or 19.1% of the total amount, and 4 sales aggregating 32,500 ft., or 5.9% of the total amount, at prices below the average cost, but of these sales, respectively 5 sales aggregating 41,000 ft., or 38.4% (of amount sold below average cost), and 3 sales aggregating 28,000 ft., or 81.6%, were made at the old average cost.

In Appendices U and V to appellants' brief comparisons are made between the actual prices *for certain items* appearing on *a few sales reports,* with the established average costs of those items. Both the average freight and the commission allowed, if any, are deducted from each price reported, and the results, called the "net prices f. o. b. mill basis," are compared with the average costs. As demonstrated heretofore, this procedure creates an entirely false appearance unless the average commission, or $2.00, is also taken out of the average costs before making the comparisons, but this is not done. The same comparisons made in a correct manner show entirely different results, but for the following reasons a complete analysis of the correct comparisons would not give sufficient additional information to warrant the necessary expansion of this brief.

1. Appendix U to appellants' brief only makes comparisons between the average costs and certain prices appearing on the Sales Reports for the weeks ending March 4, 1922; May 20, 1922; June 3, 1922;

June 17, 1922; August 19, 1922; September 30, 1922; October 21, 1922; December 2, 1922; February 3, 1923; February 24, 1923, and March 17, 1923. *The appellants' brief does not explain how these scattered reports were selected for the purpose of making the comparisons, or why two reports were selected for some months while other months were disregarded entirely;* but even if an impartial selection had been made, as very apparently was not the case, and, say, the first or last report for each month had been selected as fairly representative of all, such a method of comparison could not possibly disclose the results of the combination as effectively as do the tables heretofore set forth with reference to all sales of the most representative item of maple flooring,—to 35% of the defendant's entire business.

2. No costs were established by the present association until May 31, 1922, and the comparisons of the prices appearing on the reports for the weeks ending March 4 and May 20, 1922, are made with the costs established on November 17, 1922. The time intervening between the dates of the costs and of the sales makes these comparisons practically valueless; especially as during that time the association's activities were in a rather chaotic condition while a plan was being devised which it was hoped would evade the effect of the decision by this court in the Hardwood Case. As might be expected from the circumstances, these reports do

not show any general conformity of the actual prices to the established costs.

The survey of costs dated May 31, 1922, did not change the cost prices of any item of clear flooring, but did increase the cost price of each item of No. 1 flooring $10.00 per M and of each item of Factory flooring $5.00 per M. It is therefore not fair to compare these new cost prices with the prices appearing on the report for the week ending June 3, 1922, and even the prices appearing on the report for the week ending June 17, 1922, can not alone give a true and complete picture of the results achieved by the May recommendation. However, these reports disclose the following interesting situations:

13/16" x 1½" No. 1 Maple Flooring. The report for the week ending May 20, 1922, shows 4 sales totaling 82,000 ft., or 63% of the entire amount at the average cost price of $58.00; 2 sales totaling 8,000 ft., or 6% of the entire amount under and 4 sales (all at $63.00 per M.), totaling 41,000 ft., or 31% of the entire amount over that price. Nevertheless the survey of costs dated May 31, 1922, increased the price of this item to $68.00, or five dollars over the highest sales price theretofore reported; and all the sales appearing on the report for the week ending June 3, 1922, were made at exactly the new established price. The report for the week ending June 17, 1922 shows three large mill sales of this item at $63.00 per M., which would

appear to be due to some special consideration, as otherwise the report shows only one sale of 20,000 ft. which was made at the old cost price of $58.00 and 5 sales totaling 37,000 ft. made at the new cost price.

13/16″ x 2″ No. 1 Maple Flooring. The report for the week ending May 20, 1922, shows one sale of 8,606 ft., or 31% of the total amount at the $62.00 cost price, two sales totaling 17,500 ft., or 64% under that price and one sale of 1,455 ft., or 5% over it, at $68.25. Yet the Survey of Costs dated May 31, 1922, increased the price of this item to $72.00; and the effect of this is shown by the fact that on the report for the week ending June 3, 1922, the lowest price for this item was $67.00 and the highest was $75.00, although none of the three sales reported was made at exactly the new cost price. Apparently the entire recommended increase on this item was not made effective, at least immediately, as the report for the week ending June 17, 1922, shows only one sale at the $72.00 cost price, one over it, and five under—66% of the entire quantity being sold at $67.00, or $5.00 over the old cost price.

13/16″ x 2¼″ Factory Maple Flooring. The report for the week ending March 4, 1922, shows no sales at the cost price of $25.00, and only 5 small sales totaling 27,650 ft., or 9% of the entire amount, at higher prices. The report for the week ending May 20, 1922, shows six sales totaling 26,767, or 7%

of the entire amount sold over the cost price of $25.00; 12 sales totaling 65,000 ft., or 16% at, and 23 sales totaling 315,000 ft., or 77% under that price. The highest price obtained on any sale was $29.75. *Nevertheless the cost price was increased to $30.00 on the May 31, 1922 Survey of Costs. The report for the week ending June 3, 1922, shows the immediate effect of that action, as 8 sales were made by seven different members of the association at exactly the new established price.* The prices on the factory items on all the sales reports vary much more than do those of the clear and No. 1 items, undoubtedly because the factory flooring under normal conditions is practically a by product from the manufacture of the better grades; and the effect of the increase in its cost price is best shown by the changes in the spreads and in the average prices. The following table shows these factors:

Week ending—	Low price	High price	Average price	Cost price
March 4, 1922	$17.50	$39.00	$22.89	$25.00
May 20, 1922	16.50	31.00	23.07	25.00
June 3, 1922	18.50	30.50	26.33	30.00
June 17, 1922	20.25	42.25	28.97	30.00
August 19, 1922	24.25	42.25	33.44	30.00

The instances cited show that the increases in the prices recommended by the Survey of Costs dated May 31, 1922 were not justified by the prices theretofore actually obtained, but that the prices obtained nevertheless responded immediately to the recommendations. In these instances it is obvious that the so called costs did not follow the prices, as

the appellants' brief (p. 346) claims, but that the prices followed the costs.

3. The appellants' brief on pp. 345–346 criticizes the government for comparing the prices on the reports for the weeks ending Septembr 30 to October 28, 1922, inclusive, with the average costs established by the Survey of Costs dated October 25, 1922—which made increases over the cost prices established on May 31, 1922, on all but three items. The error in the comparisons made by the Government was in favor of the appellants, but although the appellants claim that the compilation of the Lewis Exhibit on that basis was very unfair, *they nevertheless adopt the same error in their favor in making the comparisons between the average costs and the prices on the reports for the weeks ending September 30 and October 21, 1922.* Appendix U to the appellants' brief, pp. 11–14, therefore, shows nearly all the sales prices as less than the cost prices, but the same comparisons when made correctly show that practically all the prices reported were above the cost prices established May 31, 1922.

4. In selecting the additional data (Additional Exhibits, pp. 1–48) for use in comparing prices and average costs, appellants omitted entirely the item of 13/16″ x 2¼″ No. 1 flooring, although it represents approximately 24.5% of the defendants' entire business, and is second in that respect only to the item of 13/16″ x 2¼″ Clear which the Government

used for the comparisons in the Lewis Exhibit. The only item selected by appellants for their comparisons which represents any considerable volume of sales is the 13/16" x 2¼" Factory; and it represents only approximately 10.5% of the defendants' entire business. On the basis of value it is of course even less important. The reason for the selection of the items used in Appendix U to appellants' brief is apparent from the testimony of Mr. Saunders to the effect that they are practically by-products from the manufacture of the important items of 13/16" x 2¼" Clear and No. 1 flooring.. Mr. Saunders' testimony also makes it clear that any failures to maintain the agreed minimum prices, as well as the present average costs or recommended minimum prices, undoubtedly relate to the relatively unimportant items of flooring. He said:

> The architects of the country very largely control the width of flooring. In some localities you can not sell 3¼-inch face or 1½-inch face. In working up our lumber in the most economical method known in order to take care of our widths and avoid waste, we must make a certain amount of 3¼-inch and an inch and a half and two inch faces. It is necessary for us to sell such widths in the markets where they are used, regardless of price, when our surplus gets to a point where we feel that we must unload.
>
> It was impracticable to maintain the so-called minimum price plans for the reason that these various widths and grades, par-

ticularly the widths, would be dumped in the markets that were using them. For instance, the Eastern market uses—and it is practically the only market that does—3¼-inch face. I dare say when a 3¼-inch order goes out, everybody is right after it because that is one of the widths that accumulates on our hands. The 2¼-inch face is a standard article, and the architects of the country have gotten into the habit of ordering it, almost exclusively, regardless of whether it is in abundance or not. Possibly 75 per cent of our production of flooring is 13/16 by 2¼-inch face (Vol. I, p. 199).

5. Appendix V to appellants' brief makes comparisons similar to those in Appendix U, but based on the prices appearing in the sales reports for the weeks ending October 1, 1921; January 14, 1922; April 1, 1922; July 7, 1923; July 12, 1923; July 21, 1923, and November 3, 1923. The appellants' brief insists very earnestly that the present association should be judged solely by its expressed purposes and activities, without any reference to the defendant's previous activities for interpretation and clarification—yet in these comparisons presumably made to show the lack of effect of the present association's activities, only data are used which appear on sales reports either antedating the first determination of average cost by the present association; or postdating the filing of the Government's petition, the decision by the court below that

the petition states a cause of action, and the setting of the case for hearing. No analysis will therefore be made of the comparisons shown in this appendix.

XI

Economic Defense

The defendants introduced in evidence in the court below the depositions of Edward Gordon, Grant Keehn, Professor Hettinger, and Professor Vanderblue, statisticians and economists either now or formerly connected with the Harvard School of Business Administration. Mr. Gordon and Mr. Keehn explained a number of comparative charts and tables which were introduced as exhibits to their depositions, and on the basis of which they testified that, as stated by Mr. Keehn—

> the study which Mr. Gordon and I made developed data and material such as to clearly indicate that the members of the Association did not have the ability to continuously control the prices of maple flooring, or, even if it be assumed that they had such ability, comparisons with other prices, with prices of competing floorings, with the costs of maple flooring, and with the conditions of supply and demand of that product, do not offer any evidence of fixation or unreasonableness. (Vol. II, p. 714.)

Professor Hettinger and Vanderblue testified that they had reviewed the work of Mr. Gordon and Mr. Keehn and concurred in their conclusions.

The charts and tables introduced in connection with the defendants " economic defense " covered the period from 1913 through the first half of 1923, and the conclusion that they do not offer any evidence of the fixation or control of the prices of maple flooring of course pertains to the same period. According to these statisticians and economists, therefore, they have conclusively demonstrated that the agreements, called the Allotment Articles and the Minimum Price Plans and the Minimum Price Basis of the Maple Flooring Manufacturers Association, and the operation of the association and its members under and in accordance with those agreements; the practice of having a committee of experts, called the Market Conditions Committee, analyze statistics and conditions and advise the association members as to the prices they could and should obtain and as to the policies they should follow with reference to sales and production; and the practice of holding association meetings at which a " concensus of opinion " was frequently reached as to the prices that should be obtained, *did not constitute fixation or control of the prices of maple flooring.* If the price comparisons made by this economic defense have any value or probative force for the purpose for which they were used, they certainly indicate that there has been price fixation or control of the commodities used as the basis of comparison rather than that there has been no fixation or control of the prices of maple flooring.

John Knox Arnold, a special agent of the Federal Trade Commission who has been engaged for twelve years in the investigations of industries, usually under Congressional resolutions, testified as a witness for the Government. After analyzing the exhibits to the Gordon and Keehn depositions, Mr. Arnold stated a number of reasons why the conclusions reached by Mr. Keehn and Mr. Gordon can not possibly be proved by the charts and tables introduced by them for that purpose. Some of these reasons as given by Mr. Arnold are as follows:

> The Court: Let me ask you this question: From your experience in research work is it not true that unless there is an absolute monopoly and thus an absolute control, will not the general trend of prices of any commodity be in accordance with the law of supply and demand—now I mean by that the trend?
>
> A. The trend will be; yes, sir. (Vol. II, p. 821.)
>
> *It must be kept constantly in mind that such charts merely show the direction and rate of the change and not the extent or magnitude of the change.*
>
> An attempt has been made by means of various charts, indicated as exhibits in the testimony of Messrs. Gordon and Keehn, to show that other causes than concerted action or control have been responsible for the extent or magnitude of changes that have occurred in the prices, production, and stocks of maple flooring. To do this, it would of

course be necessary to account for one hundred per cent of all changes in prices, production, and stocks as being due to other causes, so as to leave nothing for the control cause to effect; but this has not been done; no such exact quantitative effect is shown by any of the charts; only trends and especially cyclical trends are shown, which is attempted to disprove control by ignoring it; by the same method it could be shown that costs of production have no effect upon prices of maple flooring. Merely omit costs and state that the other factors show the same trend of movement as the prices show, which would probably be true, and it would be proven that cost don't affect prices. (Vol. II, p. 823.)

In connection with what you have just stated, your Honor, I might add this, that in describing these charts and these trends, and so forth, I have not been criticising their use in connection with this so-called cyclical trend, which merely is a guess and something that is necessary, however, in the business, because it is a little better guess than a guess based on nothing. It has not been perfected up to this time, however, to any considerable extent. *What I am basing my remarks on is solely whether these charts and the comment on them prove that there was not control. I do not argue on the other side that the charts prove there was control, because you can not prove that by charts: you can't prove it either way.* (Vol. II, p. 824.)

There is another fact which shows the worthlessness of appellant's expert testimony. As pointed out in appellant's brief (p. 232) there are about 1,800 trade associations in the United States. Nearly every line of industry is dominated by one or more. Much of their activities is no doubt legitimate and much illegitimate when measured by the Government's contentions in this case. That the trend of prices of a very large per cent of the commodities produced in the United States is artificially affected by these associations there can not be the least doubt. Therefore the trend of prices in general can constitute no trustworthy basis for the comparison of prices of any particular commodity.

XII

Discussion of the law

It is believed that no principles of law can be better settled than are those which control the questions involved in this case; and that to refuse to apply them to the facts proven in this record would be in effect to overrule the previous decisions of this court, and to license trade associations to engage in every practice which they may pretend is adopted as a reasonable regulation to promote the general welfare of business, regardless of how it may effect production and prices, and how oppressive it may be upon the public. The cases which have a direct bearing upon the activities of associa-

tions are comparatively few in number, and will now be given more than passing consideration as was done in the former brief filed by the Government.

Eastern States Retail Lumber Dealers' Association v. *United States,* 234 U. S. 600, may be considered as the leading case in applying the Anti-trust Act to practices of trade associations. The association attacked was composed of retail lumber dealers; and the practice passed upon by the court was that of distributing among the members a list of manufacturers who dealt directly with consumers. The following was the form of the report distributed:

OFFICIAL REPORT

(Name of the particular association circulating it.) Statement to members (with the date)

You are reminded that it is because you are members of our Association and have an interest in common with your fellow members in the information contained in this statement, that they communicate it to you; and that they communicate it to you in strictest confidence and with the understanding that you are to receive it and treat it in the same way.

The following are reported as having solicited, quoted or as having sold direct to the consumers:

(Here follows a list of the names and addresses of various wholesale dealers)

Members upon learning of any instance of persons soliciting, quoting, or selling direct to consumers, should at once report same, and in so doing should, if possible, supply the following information:

The number and initials of car.

The name of consumer to whom the car is consigned.

The initials or name of shipper.

The date of arrival of car.

The place of delivery.

The point of origin.

The facts relative to the preparation and distribution of this list and the inferences to be drawn therefrom are thus stated by the court:

The record discloses a systematic circulation among the members of the defendant associations of the official report above quoted. The method of operation as stated by the learned counsel for the appellants is thus summarized in his brief:

" The names on this list are obtained and placed thereon as the result of complaints made by individual retailers. When an individual member of a retail association learns of a sale by a wholesaler to one of the customers of the retailer he may complain in writing to the secretary of his association, whose duty it is thereupon to ascertain the facts by correspondence with the wholesaler in question and such other means as may seem proper. Should the report or complaint be without proper foundation or should the secretary become satisfied that

the matter is a trifling one or the result of inadvertence, the incident usually terminates at this point; but should the complaint appear to be serious and well founded the case is submitted to the board of directors of the retail association at its next meeting and should the board be satisfied that the wholesaler is generally making a practice of selling to consumers or customers of the retail trade, the secretary is directed to report the name of such wholesaler for the official list. Thereupon the secretary sends the name to Mr. Crary of New York who adds it upon the next report to the names of those already thereupon. Each report contains the names of all wholesalers who have been reported from the very beginning as selling to consumers and whose names have not been removed for cause. The reports or lists after being printed in New York are distributed amongst the secretaries of the defendant associations; those for each association being marked with its name and in that way only being distinguished from those sent to the other associations. The secretary of each association then distributes the lists to his members. Should any wholesaler desire to have his name removed from the list he can have it done upon satisfactory assurance to the local secretary that he is no longer selling in competition with the retailers. In practice the greatest care is taken to make the list accurate, and as a matter of fact, it only contains the names of such wholesalers

as are absolutely committed to the practice of competing with retailers for the custom of builders and contractors."

The reading of the official report shows that it is intended to give confidential information to the members of the associations of the names of wholesalers reported as soliciting or selling directly to consumers, members upon learning of any such instances being called upon to promptly report the same, supplying detailed information as to the particulars of the transaction. When viewed in the light of the history of these associations and the conflict in which they were engaged to keep the retail trade to themselves and to prevent wholesalers from interfering with what they regarded as their rights in such trade there can be but one purpose in giving the information in this form to the members of the retail associations of the names of all wholesalers who by their attempt to invade the exclusive territory of the retailers, as they regard it, have been guilty of unfair competitive trade. These lists were quite commonly spoken of as blacklists, and when the attention of a retailer was brought to the name of a wholesaler who had acted in this wise it was with the evident purpose that he should know of such conduct and act accordingly. True it is that there is no agreement among the retailers to refrain from dealing with listed wholesalers, nor is there any penalty annexed for the failure so to do, but he is blind indeed who does not see the purpose in the

predetermined and periodical circulation of this report to put the ban upon wholesale dealers whose names appear in the list of unfair dealers trying by methods obnoxious to the retail dealers to supply the trade which they regard as their own. Indeed this purpose is practically conceded in the brief of the learned counsel for the appellants:

"It was and is conceded by defendants and the Court below found that the circulation of this information would have a natural tendency to cause retailers receiving these reports to withhold patronage from listed concerns. That was of course the very object of the defendants in circulating them."

In other words, the circulation of such information among the hundreds of retailers as to the alleged delinquency of a wholesaler with one of their number had and was intended to have the natural effect of causing such retailers to withhold their patronage from the concern listed. (234 U. S. 607–609.)

In reply to the contention that no agreement between the defendants was proven, the Court said:

But it is said that in order to show a combination or conspiracy within the Sherman Act some agreement must be shown under which the concerted action is taken. It is elementary, however, that conspiracies are seldom capable of proof by direct testimony and may be inferred from the things actually done, and when in this case by concerted action the names of wholesalers who were

> reported as having made sales to consumers were periodically reported to the other members of the associations, the conspiracy to accomplish that which was the natural consequence of such action may be readily inferred. (p. 612).

The pressure thus brought to bear upon the manufacturer, which induced him to trade through retailers and not directly to the public was not the only restraint deemed material by the court. With reference to the moral effect upon the retailers themselves who received the lists the court said:

> The circulation of these reports not only tends to directly restrain the freedom of commerce by preventing the listed dealers from entering into competition with retailers, as was held by the District Court, *but it directly tends to prevent other retailers who have no personal grievance against him and with whom he might trade from so doing, they being deterred solely because of the influence of the report circulated among the members of the associations.* In other words, the trade of the wholesaler with strangers was directly affected, not because of any supposed wrong which he had done to them, but because of the grievance of a member of one of the associations, who had reported a wrong to himself, which grievance when brought to the attention of others it was hoped would deter them from dealing with the offending party. This practice

> takes the case out of those normal and usual agreements in aid of trade and commerce which may be found not to be within the act and puts it within the prohibited class of undue and unreasonable restraints, such as was the particular subject of condemnation in *Loewe* v. *Lawlor, supra.* (pp. 612–613).

In answer to the contention that what was done was for the protection of the retail trade, the court said:

> The argument that the course pursued is necessary to the protection of the retail trade and promotive of the public welfare in providing retail facilities is answered by the fact that Congress, with the right to control the field of interstate commerce, has so legislated as to prevent resort to practices which unduly restrain competition or unduly obstruct the free flow of such commerce, and private choice of means must yield to the national authority thus exerted. *Addyston Pipe Co.* v. *United States,* 175 U. S. 211, 241, 242. (p. 613).

The court concluded its opinion thus:

> When the retailer goes beyond his personal right, and, conspiring and combining with others of like purpose, seeks to obstruct the free course of interstate trade and commerce and to unduly suppress competition by placing obnoxious wholesale dealers under the coercive influence of a condemnatory report circulated among others, actual

> or possible customers of the offenders, he exceeds his lawful rights, and such action brings him and those acting with him within the condemnation of the act of Congress, and the District Court was right in so holding. (p. 614).

The principles there decided are directly applicable to and in fact control this case, but the practice there condemned was simple and innocuous in comparison with the scheme adopted and enforced by defendants. There the immediate purpose was not the control or increase of prices, though prices were no doubt incidentally affected by the practice. It was not claimed that the general volume of business was reduced. The restraint consisted in diverting the trade from the path which it otherwise would have taken; or rather in forcing it to remain in its usual path. While the distribution of the list was made pursuant to an understanding between the members of the association, yet there was no agreement between them that they would give any consideration to the lists. The restraint resulted entirely from the moral effect the information distributed had upon the members. If one was " blind indeed who does not see the purpose in the predetermined and periodical circulation of this report " as said by the court in that case, he is unquestionably blind if he fails to see the purpose of the distribution by the defendant association of the pretended " average cost " tables, the freight rate books giving the pretended " delivered costs " of

flooring at thousands of points in the United States, the statistics showing every sale by each member and prices received, and the monthly meetings to discuss economic conditions, and all questions pertinent to the industry.

American Column & Lumber Co. v. *United States,* 257 U. S. 377, was the first case in which an association was attacked because it engaged in what is known as "Open Price Competition." As great effort is made by counsel for appellants to distinguish that case from the present one, the opinion of the court therein will be considered at some length. The opinion may be divided into four parts, to wit:

(1) A statement of the plan;
(2) The manner of its enforcement;
(3) The results of its operation; and
(4) Application of the law.

Beyond question what the court condemned was *the plan;* and the evidence showing the manner in which it was enforced and the results therefrom was cited and discussed only to show the purpose intended to be accomplished by the association and what was actually accomplished. In interpreting this decision, counsel for many associations, as was done by counsel for the defendant association, have made the mistake of assuming that the case is not an authority unless the identical acts be committed in enforcing the association's plan that were shown to have been committed by the association

attacked in that case; when in fact the precise character of the acts are unimportant, if the plan itself is of such nature that if enforced interstate commerce will be restrained thereby, and if the proof shows that the plan has been adopted and put in operation by the members of the association. An analysis of the opinion will show, not only that no element deemed essential in that case is wanting here, but that there are elements which did not there exist but are present here, that are specially vicious, and are within themselves violative of the antitrust act.

In beginning the discussion the court said:

> The activities which we shall see were comprehended within the "Open Competition Plan," (which is sometimes called "The New Competition,") have come to be widely adopted in our country, and, as this is the first time their legality has been before this court for decision, some detail of statement with respect to them is necessary (p. 392).

The court then quotes at some length from the report of the committee which evolved the plan. In that report the committee discussed the objects of the plan and the benefits expected to be derived therefrom; and as defendants in this case are operating the same open price plan that was there attacked and condemned, that report is as pertinent here as if made by a committee of the defendant association. With reference to that report and a sub-

sequent explanation of the objects and purposes of the plan, the court in part said:

> After stating that the purpose was not to restrict competition or to control prices but to "furnish information to enable each member to intelligently make prices and to intelligently govern his production," the committee continues:
>
> "The chief concern of the buyer, as we all know, is to see that the price he pays is no higher than that of his competitors, against whom he must sell his product in the market. The chief concern of the seller is to get as much as anybody else for his lumber; in other words to get what is termed the top of the market for the quality he offers. By making prices known to each other they will gradually tend toward a standard *in harmony with market conditions,* a situation advantageous to both buyer and seller."

Not long after the consolidation, a further explanation of the objects and purposes of the " Plan " was made in an appeal to members to join it, in which it is said:

" The theoretical proposition at the basis of the Open Competition plan is that,

" *Knowledge regarding prices actually made is all that is necessary to keep prices at reasonably stable and normal levels.*

"The Open Competition plan is a central clearing house for information on prices, trade statistics, and practices. By keeping all members fully and quickly informed of what the others have done, the work of the plan results in *a certain uniformity of trade practice*. There is no agreement to follow the practice of others, *although members do naturally follow their most intelligent competitors*, if they know what these competitors have been actually doing.

"The monthly meetings held in various sections of the country each month have improved the *human relations* existing between the members before the organization of this plan." (Italics the court's p. 392.)

After quoting at length from a subsequent communication sent to the members in which the advantages of the plan were recited, the court then stated in detail the system of reporting, first by members to the association, and second by the association to the members; and without quoting, or giving a summary of the court's langauge it is sufficient to say that the system of reports there described and the system used by defendants in this case are in every material feature precisely the same. One association may not have copied the "plan" from the other; but if not, they both originated in the same mind and were copied from the same pattern. It is true that in the plan there described provision was made for each member to file at the beginning of each month a price list; but

the proof showed without dispute that this requirement was never observed. *In the operation of the defendant association no such requirement is necessary because the association itself furnishes to all the members a minimum price list or a list of so-called "average costs" of manufacture and distribution.* After a description of the reporting system the court said:

> This extensive interchange of reports, supplemented as it was by monthly meetings at which an opportunity was afforded for discussion "of all subjects of interest to the members," very certainly constituted an organization through which agreements, actual or implied, could readily be arrived at and maintained, if the members desired to make them (p. 397).

The court then said that in practice three important additions were made to the plan:

First: Instead of the monthly meetings provided for, the territory in which the association was operating was divided into four districts and forty-nine meetings were held. However the proof showed that the division was for the convenience of the members; and the members really attended a meeting but once a month.

Second: Before each meeting a questionnaire was sent out asking for reports on production for the preceding month and estimated production for the next two months, and whether it was expected that the mill would be shut down, and if so for

how long; and also for the members' views as to market conditions. From the information thus received the statistician compiled a report which was distributed among the members attending the meeting.

The evidence heretofore cited shows that before each meeting the secretary of the defendant association either sends out his monthly report showing all facts from which market conditions can be judged, or distributes it among the members at the meeting. This report is based on the reports from the several members which contain all the information asked for in the questionnaire that was sent out by the statistician of the Hardwood Association. The only feature not present here was the request for an expression of opinion in writing by each member as to market conditions. But the members had all the data before them and fully discussed market conditions in the meetings. *Although there was no attempt made to keep full minutes of the discussions, yet it appears that in the eight meetings held in 1922 after the adoption of the present articles of association, "Stock Conditions" and flooring data were discussed in them all, and "Trade conditions and relations of supply and demand as reflected by statistical reports" were discussed in seven.* What then could have been the value of an expression of opinion on paper when the members freely and fully, and doubtless with much emphasis, expressed their views in meetings?

Third: While the plan provided for a monthly market letter, Gadd, the manager of statistics, actually sent out letters of that nature with the weekly sales reports; and it is upon comments made in those letters that chief reliance is had for distinguishing that case from the present one. In fact, after the defendant association had suspended its reporting system because of the decision in the Hardwood case, it was advised by counsel that the practice could safely be resumed if the reports were not accompanied by comments. *But when that was done, the members of the association began to hold meetings monthly, the object manifestly being that they might more frequently exchange their own views and receive the views of their expert statistician in regard to market conditions.*

After stating in detail the plan as adopted with the features added in practice the court said:

> Obviously the organization of the defendants constitutes a combination and confessedly they are engaged in a large way in the transportation and sale of lumber in interstate commerce so that there remains for decision only the question whether the system of doing business adopted resulted in that direct and undue restraint of interstate commerce which is condemned by this Antitrust statute.
>
> It has been repeatedly held by this court that the purpose of the statute is to maintain free competition in interstate commerce

> and that any concerted action by any combination of men or corporations to cause, or which in fact does cause, direct and undue restraint of competition in such commerce falls within the condemnation of the act and is unlawful (pp. 399–400).

The court then, after quoting from a number of authorities in which the Antitrust Act had been construed, quotes at length from communications sent by Gadd to the members and also from letters written by members to Gadd in response to a circular letter sent out by him asking for an expression of opinion as to benefits received from the operation of the plan. And these quotations are followed with the remark:

> These quotations are sufficient to show beyond discussion that the purpose of the organization and especially of the frequent meetings was to bring about a concerted effort to raise prices regardless of cost or merit, and so was unlawful, and that the members were soon entirely satisfied that the " Plan " was " carrying out the purpose for which it was intended " (p. 409).

Therefore the comments of Gadd and the statements of the members as to benefits derived from the plan was deemed important *because they showed the purpose of the organization.* And there is no justification whatever for the assumption that the identical evidence then introduced must appear in this record before that case can be considered a controlling authority in this one. As

above shown the members of the defendant association meet and discuss face to face the very questions discussed by Gadd in his market letters and they have present with them Secretary Keehn, with whom in astuteness Gadd can not be compared. There is no probability that the Government ever will be able to introduce in another case the same evidence with reference to the results accomplished by the association, because no other manager will ever write the members asking testimonials as to its benefits. But incidentally the same character of evidence appears in the letter from the North Branch Flooring Company to the Flanner Steger Land & Lumber Company dated February 5, 1923, in which it was said:

> We can say from actual experience that the personal contact and association with the other members has become very valuable to us *and we have been able to capitalize this to a remarkable degree.* (Vol. IV, p. 479.)

And in the reply it was said:

> *We are quite in accord with what you have to say regarding the value of attending the Flooring Association meetings.* (Vol. IV, p. 480.)

After a thorough review of the facts and the law the court said:

> **To call the activities of the defendants, as they are proved in this record, an "Open Competition Plan" of action is plainly a misleading misnomer.**
>
> Genuine competitors do not make daily, weekly, and monthly reports of the minutest

details of their business to their rivals, as the defendants did; they do not contract, as was done here, to submit their books to the discretionary audit and their stocks to the discretionary inspection of their rivals for the purpose of successfully competing with them; and they do not submit the details of their business to the analysis of an expert, jointly employed, and obtain from him a "harmonized" estimate of the market as it is and as, in his specially and confidentially informed judgment, it promises to be. This is not the conduct of competitors but is so clearly that of men united in an agreement, express or implied, to act together and pursue a common purpose under a common guide that, if it did not stand confessed a combination to restrict production and increase prices in interstate commerce and as, therefore, a direct restraint upon that commerce, as we have seen that it is, that conclusion must inevitably have been inferred from the facts which were proved. *To pronounce such abnormal conduct on the part of 365 natural competitors, controlling one-third of the trade of the country in an article of prime necessity, a "new form of competition" and not an old form of combination in restraint of trade, as it so plainly is, would be for this court to confess itself blinded by words and forms to realities which men in general very plainly see and understand and condemn, as an old evil in a new dress and with a new name.*

> The " Plan " is, essentially, simply an expansion of the gentlemen's agreement of former days, skillfully devised to evade the law. To call it open competition because the meetings were nominally open to the public, or because some voluminous reports were transmitted to the Department of Justice, or because no specific agreement to restrict trade or fix prices is proved, can not conceal the fact that the fundamental purpose of the " Plan " was to procure " harmonious " individual action among a large number of naturally competing dealers with respect to the volume of production and prices, without having any specific agreement with respect to them, and to rely for maintenance of concerted action in both respects, not upon fines and forfeitures as in earlier days, *but upon what experience has shown to be the more potent and dependable restraints, of business honor and social penalties—cautiously reinforced by many and elaborate reports, which would promptly expose to his associates any disposition in any member to deviate from the tacit understanding that all were to act together under the subtle direction of a single interpreter of their common purposes,* as evidenced in the minute reports of what they had done and in their expressed purposes as to what they intended to do (257 U. S. pp. 410–411).

We have endeavored to show that there was not an essential element in that case which is not present in this one. But, there are very important fea-

tures in the present case which did not exist in the Harwood case. *That case involved solely the open price plan. Here, while the open price plan is being operated in all of its vigor, there is added to it the estimation and distribution of so-called average cost prices of manufacture and distribution, which is nothing less than minimum price lists, and also the distribution of freight rate books showing the minimum prices at thousands of points in the United States so as to make easy the observance of these minimum prices. In short there is here presented a minimum price fixing system perfectly adjusted and effectively enforced by the exchange of information through the association.*

United States v. *American Linseed Oil Company*, 262 U. S. 371, involved the validity of an organization which functioned through a bureau. The manufacturers of linseed oil made separate but identical contracts with the bureau whereby they obligated themselves to furnish reports of their sales and prices to the bureau; and the bureau was to report the information to the other members. Monthly meetings were also provided for. The plan was operated through Mr. Armstrong, who called himself a bureau, instead of through an association conducted by a secretary as in the present case, or a manager as in the Hardwood case. Naturally there is a variation in the plan as applied to different industries. The production of linseed oil is seasonal; and it is sold generally for future delivery months in advance.

For the plan to work successfully in connection with that industry it was felt necessary that change of prices should be promptly reported. Every member was at perfect liberty, so the defendants all claimed, to change its price at any time and to any extent it might see fit; but if it offered oil to a prospective purchaser for less than its list price it immediately wired its offer to the bureau, which relayed it to the members. When it was suspected that a member had made a sale for less than its list price other members had the right to make inquiry of such member about the matter through the bureau. The evidence showed that the system as outlined in the contract was pretty rigidly enforced. The court after stating at length the provisions of the contracts and the manner in which they had been enforced said:

> The Sherman Act was intended to secure equality of opportunity and to protect the public against evils commonly incident to monopolies and those abnormal contracts and combinations which tend directly to suppress the conflict for advantage called competition—the play of the contending forces ordinarily engendered by an honest desire for gain. "The statute did not forbid or restrain the power to make normal and useful contracts to further trade by resorting to all normal methods, whether by agreement or otherwise, to accomplish such purpose. * * * The words restraint of trade should be given a meaning which would

not destroy the individual right to contract and render difficult if not impossible any movement of trade in the channels of interstate commerce—the free movement of which it was the purpose of the statute to protect." *United States* v. *American Tobacco Co.*, 221 U. S. 106, 179, 180; *Ramsay Co.* v. *Associated Bill Posters*, 260 U. S. 501; *Federal Trade Commission* v. *Sinclair Refining Co.*, 261 U. S. 463.

Certain it is that the defendants are associated in a new form of combination and are resorting to methods which are not normal. If, looking at the entire contract by which they are bound together, in the light of what has been done under it the Court can see that its necessary tendency is to suppress competition in trade between the States, the combination must be declared unlawful. That such is its tendency, we think, must be affirmed. To decide otherwise would be wholly inconsistent with the conclusion reached in American Column & Lumber Co. v. *United States, supra.* (pp. 388–389).

And the court thus concluded its opinion:

We are not called upon to say just when or how far competitors may reveal to each other the details of their affairs. In the absence of a purpose to monopolize *or the compulsion that results from contract or agreement,* the individual certainly may exercise great freedom; *but concerted action through combination presents a wholly different problem and is forbidden when the*

> *necessary tendency is to destroy the kind of competition to which the public has long looked for protection.* The situation here questioned is wholly unlike an exchange where dealers assemble and buy and sell openly; and the ordinary practice of reporting statistics to collectors stops far short of the practice which defendants adopted. Their manifest purpose was to defeat the Sherman Act without subjecting themselves to its penalties.
>
> The challenged plan is unlawful and an injunction should go against it as prayed by the original bill (p. 390).

In fact, as pointed out by the court in the Hardwood and Linseed Oil Cases, combinations in the form of associations engaging in practices of the nature heretofore described fall squarely within the prohibitions of the Antitrust Act as construed in many former cases.

While as said in *United States* v. *American Tobacco Co.*, 221 U. S. 106, 179, in referring to the previous decision in the Standard Oil case, " the statute did not forbid nor restrain the power to make *normal and usual contracts* to further trade by resorting to all *normal* methods, whether by agreement or otherwise to accomplish such purpose," yet as declared in the same case (p. 181), " in view of the general language of the statute and the public policy which it manifested, *there was no possibility of frustrating that policy by resorting to any disguise or subterfuge of form,*

since resort to reason rendered it impossible to escape by any indirection the prohibitions of the statute."

It is presumed that if the evidence showed that the members of the defendant association had entered into a positive agreement either written or verbal to observe as minimum selling prices a specified list giving the prices of the different kinds, grades and dimensions of flooring, there would be no disagreement that such a combination is unlawful. There can be no distinction in principle between agreeing upon a fixed uniform price and upon a fixed minimum price. The latter is in fact more vicious than the former because it not only destroys all competition below the agreed price, *but at the same time encourages competitors to press the prices upward.* If the observance of definite prices had been agreed upon by defendants and the agreement had been observed, there would have been no advancement of prices every time the high prices indicated that the market would stand an advance of the minimum, because there would have been no testing of the market for higher prices. That is, on October 25, 1922, the price of 15/16" x 2¼" clear maple flooring would not have been advanced from $90 to $95 per M, and on February 3, 1923, to $100, and on March 10 to $105; but the price would have continued at $90. If then it is unlawful to positively agree upon minimum prices, although no provision is made to enforce the agree-

ment, how can the plan adopted and now operated by defendants possibly escape condemnation? The old "gentlemen's agreement," which has been so often condemned by this court, was never very effective because of the disposition of the parties not to observe it. Some of the witnesses testify in this case that in years past prices of flooring were agreed upon, but the result was unsatisfactory. Literally this plan, as said by the court in the Hardwood case "is, essentially, simply an expansion of the gentlemen's agreement of former days, skillfully devised to evade the law." While it is impossible to prove a *positive* agreement written or verbal between the defendants that they would observe specified minimum prices, yet a system has been devised by which by moral coercion and "the inherent disposition to make all the money possible" *a practical observance of specified prices as a minimum has been actually accomplished.* And not only that, but through absolute freedom and an incentive to oversell those prices, they are steadily forced upward. Is it possible that the Antitrust Act is effective against a positive agreement which is not legally binding, and which can not be, and in fact is not successfully enforced, and at the same time is without virtue in the presence of a combination which effectually fixes minimum prices and compels an increase of prices? Is it the form and not the substance at which the Antitrust Act is directed? Such a

thought was of course expressly repudiated in the Hardwood and Linseed Oil cases. And if the system of exchanging information and holding meetings condemned in the Linseed Oil case was "a new form of combination," and a " resorting to methods which are not normal," and the scheme of reporting sales and prices, the advising of reduction in production of lumber and stability or increase of prices, and holding of monthly meetings proven in the Hardwood case was " simply an expansion of the gentlemen's agreement of former days," what can be said in defense of the plan or scheme devised and enforced by defendants? Here, when the bill was filed, not only were defendants exchanging information which laid bare to each other the minutest details as to stocks on hand, production, shipments, and quantities of flooring sold and prices at which sold, not only were they holding monthly meetings in which market conditions and every phase of the industry were fully discussed with admissions of members that views were at times interchanged, generally privately, on the floor or at their luncheons about the prohibited subject of prices, *but they also compute and distribute among the members what they claim to be* "AVERAGE *costs*" *of production and distribution, not the cost of any one member but claimed to be the* AVERAGE *of all, but really as heretofore demonstrated, not* COST *prices at all, but prices adjusted to meet market conditions; and these prices were*

accompanied with a freight rate book which gave the DELIVERED *prices at thousands of points in the United States and instructions how such prices could be easily computed for all other points. Is that the* USUAL *and* NORMAL *way in which real competitors conduct their business? When the Anti-trust Law was enacted did Congress have in mind such a scheme or device as a* USUAL *and* NORMAL *method for those engaged in the same industry to compete with each other?*

Why this distributing among the members of "*average* cost" prices? Why this sending out freight rate books showing the exact delivered prices at thousands of points? Why this weekly exchange of information as to sales and the exact prices received? Why these monthly meetings to discuss among each other production, market conditions and all other questions affecting the industry? Blind indeed is he who can understand that these practices were engaged in for any other purpose than to maintain minimum prices that would give the member most unfavorably situated some, and many members an exorbitant, profit; and at the same time to steadily and certainly increase prices. And who can believe that they did not accomplish such purpose? It is inconceivable that maple, birch, and beech flooring would have sold since March, 1922, at the same prices at which they have been sold had no such organization as the defendant associa-

tion existed, had each member of the association conducted his own business independent of such influences and in the way it was understood when the Antitrust Act was passed the business of genuine competitors is conducted. The closing remarks of Circuit Judge (subsequently Mr. Justice) Lurton in the great opinion delivered in *John D. Park & Sons Co.* v. *Hartman*, 153 Fed. 24, 46, is specially applicable in this case:

> *It has been suggested that we should have regard to new commercial conditions and a tendency toward a relaxation of old common-law principles which tend to prevent development on modern lines. This is an argument better addressed to legislative bodies than to the courts. Neither is it wise for the courts to countenance the introduction of artificial distinctions dependent upon the variant economic views of individual judges. Distinctions which are specious or analogies which are but apparent will but afford opportunities to whittle away broad economic principles lying at the bottom of our public policy, principles which have long received the sanction of statesmen and the approving recognition of a long line of jurists. A like argument is expected whenever some new method of circumvénting freedom of commerce comes under the tests of the law. It was made and answered by Judge Taft in the Addyston Pipe Case with a strength to which we can add nothing.*

The relief to which the Government is entitled

Defendants appear to insist that the association has the right to do certain things, as, for instance, to standardize maple flooring and maintain inspectors; and therefore that the court should specify what particular things the association can do, and so limit the injunction as to exclude such activities from its provisions. *But to comply with such contention would be for the court to undertake to construct an association for the defendants which according to the court's view would be a legitimate one.* This the court will not do, because it never can be determined in advance what the effect of a particular organization will be; and the court might authorize the formation of an association to exercise certain functions which in actual operation would result in the most serious restraint of interstate commerce. Certainly parties who have openly violated the law by creating and engaging in an unlawful combination can not invoke the agency of the court to create for them a different combination which the court might consider legitimate.

The situation here presented is quite different from the conditions existing when the acquisition of various properties by a corporation, or the merger of a number of corporations into one, have been held to constitute a monopoly or an unlawful combination in violation of the Anti-Trust Act. There the rights of property are involved, and the

court will not destroy the property, but direct that it be restored to the original owners, or be so divided that a further violation of the statute will not exist. But here no property rights are involved. There exists nothing but an agreement or combination which the defendants have entered into and in which they are engaging; and the status quo is restored and the restraints upon commerce are stopped by a simple decree declaring the agreement and combination unlawful, and inhibiting the defendants from further engaging therein, or in any combination of like character.

An unlawful conspiracy may be composed of elements each of which when considered alone is lawful. As said in *Swift* v. *United States,* 196 U. S. 375, 396:

> The scheme *as a whole* seems to us to be within reach of the law. The constituent elements, as we have stated them, are enough to give to the scheme a body and, for all that we can say, to accomplish it. Moreover, whatever we may think of them separately, when we take them up as distinct charges they are alleged sufficiently as elements of the scheme. *It is suggested that the several acts charged are lawful and that intent can make no difference. But they are bound together as the parts of a single plan. The plan may make the parts unlawful.*

Defendants' contention leads to the absurd result that where each element of a conspiracy is

when standing alone lawful no injunctive decree can be entered, although the conspiracy composed of these several elements may be unlawful and accomplish the most harmful results.

This question was conclusively settled in *American Column & Lumber Co.* v. *United States, supra. There the court entered a sweeping decree declaring the association an unlawful combination and inhibiting the defendants from engaging in any of the activities provided for by its organization.* On the hearing defendants' counsel earnestly insisted that the decree was too broad and that the court should specify certain things which the association could legitimately do. *The court disregarded this insistence and affirmed the decree of the court below intoto. A petition for a rehearing was filed, in which it was again urged upon the court that a limitation should be placed upon the decree and that the defendants should not be enjoined from separately doing a number of things prescribed by the association, but the petition was dismissed by the court.*

In fact the question had been settled in the case of *Swift* v. *United States,* 196 U. S. 375, 401–2. A broad decree inhibiting the defendants from engaging in any of the things alleged in the bill had been entered by the court below, and it was insisted that the decree should be modified in certain particulars. The only modification directed by the court was that in one or two particulars it should be made more specific. But the court especially considered

the allegations in the bill (the case had been disposed of on demurrer) wherein it was alleged that defendants had engaged in and would continue arrangements with the railroads whereby the defendants received, by means of rebates and other devices, rates less than the lawful rates for transportation, and were exclusively to enjoy and share this unlawful advantage to the exclusion of competition and the public (p. 392). The court stated that the acts here charged, apart from the combination and the intent, might perhaps not necessarily be unlawful except for the adjective which proclaimed them so, and the court assumed for the purpose of the decision that they were not unlawful, and that the defendants severally might lawfully obtain less than the regular rates for transportation if the circumstances were not substantially similar to those for which the regular rates were fixed; but the Court said:

> Whether this particular combination can be enjoined, as it is, apart from its connection with the other elements, if entered into with the intent to monopolize, as alleged, is a more delicate question. The question is how it would stand if the tenth section were the whole bill. Not every act that may be done with intent to produce an unlawful result is unlawful, or constitutes an attempt. It is a question of proximity and degree. The distinction between mere preparation and attempt is well known in the criminal law. *Commonwealth* v. *Peaslee,* 177 Massachu-

setts, 267, 272. The same distinction is recognized in cases like the present. *United States* v. *E. C. Knight Co.,* 156 U. S. 1, 13; *Kidd* v. *Pearson,* 128 U. S. 1, 23, 24. We are of opinion, however, that such a combination is within the meaning of the statute. It is obvious that no more powerful instrument of monopoly could be used than an advantage in the cost of transportation. And even if the advantage is one which the act of 1887 permits, which is denied, perhaps inadquately, by the adjective "unlawful," still a combination to use it for the purpose prohibited by the act of 1890 justifies the adjective and takes the permission away. (196 U. S. 401, 402).

For the foregoing reasons the decree of the court below should be in all things affirmed.

JAMES M. BECK,
Solicitor General.

J. A. FOWLER,
C. STANLEY THOMPSON,
Special Assistants to the Attorney General.

THE UNITED STATES OF AMERICA.

APPEAL FROM THE DISTRICT COURT OF THE UNITED STATES FOR THE WESTERN DISTRICT OF MICHIGAN.

STATEMENT AND BRIEF ON MOTION FOR PERMISSION TO FILE BRIEF AMICUS CURIAE ON BEHALF OF THE NATIONAL MALLEABLE & STEEL CASTINGS COMPANY, ET AL.

HERBERT POPE,
Counsel for The National Malleable & Steel Castings Company, et al., Petitioners.

GUNTHORP-WARREN PRINTING COMPANY, CHICAGO.

IN THE

Supreme Court of the United States.

OCTOBER TERM, A. D. 1924.

No. 342

MAPLE FLOORING MANUFACTURERS ASSOCIATION, W. D. YOUNG & COMPANY, MITCHELL BROTHERS COMPANY, *et al.*,

Appellants.

vs.

THE UNITED STATES OF AMERICA.

APPEAL FROM THE DISTRICT COURT OF THE UNITED STATES FOR THE WESTERN DISTRICT OF MICHIGAN.

MOTION FOR PERMISSION TO FILE A BRIEF AS AMICUS CURIAE IN THE ABOVE ENTITLED CAUSE ON BEHALF OF THE NATIONAL MALLEABLE & STEEL CASTINGS COMPANY, A CORPORATION OF OHIO, AND OTHER CORPORATE AND INDIVIDUAL DEFENDANTS NAMED IN AN INDICTMENT FOR ALLEGED VIOLATION OF THE SHERMAN ACT FILED IN THE DISTRICT COURT FOR THE NORTHERN DISTRICT OF OHIO, MARCH 27, 1924.

To the Honorable Chief Justice and Associate Justices of the Supreme Court of the United States:

Come now The National Malleable & Steel Castings Company, *et al.*, by their counsel, requesting permission to file the following brief as *amicus curiae* in the above entitled cause.

STATEMENT.

The indictment above referred to is brought against forty-seven corporations and forty-eight individuals, residing in widely separated parts of the country. The occasion for bringing the proceeding in the Northern District of Ohio is the general allegation in the indictment that the headquarters of an association, known as The American Malleable Castings Association, is at Cleveland, Ohio, and that the corporate defendants, who constitute some of the members of this association, "have required said association" to collect information from its members and distribute it to them.

The contention of the Government, as disclosed in various removal proceedings now pending, is similar to contentions made by it in the case at bar. It is argued that a trade association which collects and distributes information is an abnormal agency, that combinations of competitors which are not normal tend to restrain trade, and that such combinations therefore constitute a violation of the first section of the Sherman Act and must be assumed to accomplish an unreasonable restraint of trade, if such a result is in any way relevant. It is with reference to this contention of the Government that we ask leave to file the following brief as *amicus curiae* in the above entitled cause.

BRIEF.

All the industries of the country are necessarily concerned in the general theories advanced by the Government in the case at bar. Indictments are now being brought in other cases which, in the absence of any definite or enforceable agreements between competitors, are based upon inference and conjecture with reference to other relationships existing between them. The removal of individual defendants from one part of the country for trial in another is sought largely upon the assumption that there is probable cause to believe that any officer of a corporation which is a member of a trade association is guilty of a violation of the Sherman Act, because a trade association which collects statistics is an abnormal and unusual agency. The reasonable activities of business men designed to improve the condition of the industries in which they are engaged are brought in question because it is assumed, without regard to the circumstances in each case, that there are standardized or normal ways in which competitors always act unless they are engaged in a combination in restraint of trade, and that if they do not act in these normal ways then the existence of an agreement or combination in restraint of trade may readily be inferred.

The effort of the Department of Justice seems to be to convert the test of reasonableness established by this court with respect to restraint of trade into something else by the use of phrases—"the normal conduct of competitors" and "the natural law of supply and demand"—which are assumed to furnish a definite test or standard by which a violation of the Sherman Act may be

established. In fact, as indicated by the Government's brief in this case, the court is in effect asked to infer that business men talk about certain things—prices, costs, etc.—when they meet, because these are the things they are most interested in, and then, after making this inference, the court is asked to condemn this normal way of acting on the very ground that it is not a normal way for competitors to act and must be supposed to result in activities which are opposed to the "natural law of supply and demand."

We submit that the question of the reasonableness of a restraint of trade in any particular case cannot be determined by the mere use of phrases of this character, and that this court has not used such phrases for that purpose. This court is not in a position to take judicial notice of what it is normal or usual for business men to do under all the varying conditions under which business is conducted to-day. Business is conducted by human beings, and not by "economic men" or "normal competitors" about whose activities it is possible always to make definite predictions. The normally intelligent business man varies his conduct according to the circumstances in which he is placed.

The decision of this court in *National Association of Window Glass Manufacturers* v. *United States*, 263 U. S. 403, may seem to be based upon special and abnormal circumstances. As a matter of fact it serves to illustrate the accuracy of the general statement that there are no normal conditions affecting all kinds of business to-day, even assuming that such was the case at some remote time in the past. And the decision of this court in that case makes it clear that the question of restraint of trade must be determined upon the facts and circumstances in each case and not upon any assumption as to what a business man ordinarily does.

The outstanding facts about business to-day are the competitive conditions which exist between various lines of industry. Steel competes with different kinds of iron and other metals; brick and stone and concrete industries compete with one another and all compete with still other industries, and so on. The result is that those interested in one industry are forced in many ways to act together in order to maintain that industry in competition with others. When this condition exists, and competitors in a particular industry come together for the purpose of improving the position of their industry, it is impossible to lay definite boundaries to the matters that shall be discussed between them or as to the results which shall follow from such discussions. The courts are not in a position, without inquiry, to say that some conversations and activities are normal and others abnormal under all of these varying conditions. Just as the circumstances existing in the case of the window glass manufacturers justified certain definite agreements between competitors, so other conditions may justify in the case of other industries what the Department of Justice holds to be "abnormal" activities. Obviously phrases will not solve the problem in such cases. The question of the existence of an unreasonable restraint of trade in a particular case cannot be decided merely by saying that the competitors acted in a way that competitors do not act under ordinary conditions.

In order to determine—if it can be determined—how normal competitors act under all conditions under which business is conducted to-day, a very comprehensive study of all the industries of the country would be required. One thing is sure, however, and that is that the normal and intelligent competitor to-day will seek to be fully informed regarding his own business and the activities of his rivals. It is his business to be informed, and he

usually employs all available sources of knowledge. The fact is that there never was a time when business was conducted in the open as much as it is to-day. Helpful co-operation has taken the place of secret and underhand methods in most lines of industry. Not only has it been found that underhand methods do not pay, that honesty and fair dealing are the best business policy, but educated and well trained business men recognize that in the long run they gain rather than lose by exchanging ideas regarding business practices and methods and by treating one another as gentlemen instead of deadly enemies. There is certainly nothing illegal in a spirit of co-operation designed to improve business methods and make industry more efficient. No one can truthfully say that this is not a normal way for honest and honorable business men, even though competitors, to act.

The men engaged in an industry which has fallen into hard times will naturally and inevitably co-operate as far as they can for the purpose of improving its condition and making it again prosperous. Laws cannot and should not prevent them from taking such action as is necessary to the salvation of the industry in which their capital and labor are invested. It is idle to say that normal competitors prefer to let their business go to ruin rather than speak to one another or act together in a spirit of helpfulness. The normal competitor idolized by the Department of Justice never existed anywhere, or, if he did, he was the most hated and despised man in his community.

Lawyers take pride in having a strict regard for the ethics of their profession, but the suggestion that business men have a regard for ethical principles in the conduct of their affairs arouses a suspicion in the mind of a lawyer in the Department of Justice that there must be some illegal restraint of trade going forward. The thor-

ough-going pirate is the only business man not open to suspicion by the Department of Justice to-day. This is not imagination. In the opinion of more than one member of that Department there are few business men to-day who are not law breakers within the view which the Department of Justice takes of the Sherman Act. But if there is this inevitable tendency on the part of business men to violate the Sherman Act as thus construed, then it is obvious at least that that is the normal thing for business men to do, and it is at any rate a contradiction in terms to say that normal business men are violating the Sherman Act because their normal conduct is not normal.

The truth is that it has always been possible for competitors in business to be friends. Not until recent years has it been suggested that that fact raised the presumption of a moral obligation to violate the Sherman Act. At common law no such question could arise. Contracts in restraint of trade were not criminal acts; they were merely unenforceable. The question of restraint of trade could not arise unless there existed a contract which was enforceable in the courts except for the fact that it was against public policy because in restraint of trade. A mere moral obligation was not enforceable in the courts at all. But now that contracts in restraint of trade have been made criminal, or can be enjoined in a suit in equity, there is the constant suggestion that a contract in restraint of trade may be found in facts or circumstances which could not in any view have constituted a contract the enforceability of which could have come in question in the common law courts. The opportunity to infer a conspiracy is easily suggested, and there appear to be no definite legal limits to the modern doctrine of conspiracy. If it be assumed that it is normal for competitors to keep apart and not speak to one another, it is

easy to imply a conspiracy whenever two or more of them are found together. If they are found together it may be assumed that they will talk about something they ought not to talk about, because competitors who abnormally meet will normally violate the Sherman Act. The existence of an illegal conspiracy is thus easily proved, and it is not necessary to show overt acts in furtherance of it.

In *American Column & Lumber Co.* v. *U. S.* 257 U. S. 377, this court recognized the necessity of finding the existence of an illegal agreement in order to show a violation of the Sherman Act in such a case. It is evidence that this court found that an agreement existed (as was the case in *United States* v. *American Linseed Oil Company*, 262 U. S. 371) which was definite enough to be enforceable between the parties, except for the fact that it was in restraint of trade and therefore against public policy and invalid at common law and under the Sherman Act. It was not decided in that case that the Sherman Act had gone beyond the common law by including as contracts in restraint of trade implied or inferred agreements which could not have been contracts at all at common law—moral obligations of some sort which the courts did not recognize as enforceable under any circumstances.

A contract in restraint of trade between two competitors was just as illegal, that is unenforceable, at common law as a contract between many competitors. If we accept the suggestion of the Government that, under the first section of the Sherman Act, a moral obligation between competitors may be just as effectual as a legal obligation, then any friendly relationship between two competitors, any conversations between them, may serve as evidence of an illegal contract, combination or conspiracy in restraint of trade. All private conversations between competitors will be open to investigation. The investigation cannot be confined to such conversations as are car-

ried on at the meetings of a trade association. If it is to be inferred that competitors talk about forbidden things on such occasions the same inference may readily be made when they meet at other times—on the golf course or in a smoking car. Competitors belonging to the same church or the same college fraternity will inevitably and normally violate the Sherman Act. It is preposterous to think of their acting like the normal competitors imagined by the Department of Justice.

In the *Standard Oil case,* 221 U. S. 1, this court recognized that some standard outside the act itself was required for the interpretation of the Sherman Act in order to make that statute certain enough for enforcement. The conclusion of this court was that "the standard of reason which had been applied at the common law and in this country in dealing with subjects of the character embraced by the statute, was intended to be the measure used for the purpose of determining whether in a given case a particular act had or had not brought about the wrong against which the statute provided." It seems clear from this statement that the standard of reason must be applied with reference to the facts of each particular case, and that it cannot be assumed that there are standard methods used by business men in the conduct of their business under all circumstances, and that the use of any different methods is an interference with the natural law of supply and demand and constitutes an illegal restraint of trade.

The Sherman Act was not intended to be a barrier to reasonable progress in industrial development. The unprecedented growth of trade associations must be considered as evidence of a normal and inevitable development in industry. There must be strong, underlying economic reasons to account for such a development, and,

as we have already pointed out, it is a contradiction in terms to say that what is apparently a normal economic growth is open to suspicion as a violation of the reasonable standard established by the Sherman Act merely because it is not, according to the assumed standards of the Department of Justice, a normal way for business men, especially competitors, to act.

As a matter of definition the words "reasonable" and "normal" are not equivalent terms. What is normal in conduct is often irrational, unthinking, unintelligent, and what is abnormal is often conspicuously reasonable. Obviously, progress depends upon departure from the normal standards, using the word "normal" in one sense. If abnormal conduct in business or any other field of activity were prohibited society would become static. It is the operation of reason directed to the discovery of useful abnormalities which makes development and progress possible. To construe the Sherman Act as a prohibition of abnormal conduct in this sense would mean a reversal of the decision of this court in the *Standard Oil case* and in *National Association of Window Glass Manufacturers* v. *United States, supra.*

It is obvious that the word "normal" is a highly ambiguous word. If it is used to indicate what was usual at some indefinite time in the past, it means one thing. If it is used to mean what a reasonably intelligent man is likely to do under different circumstances, it means something else. If it is used to mean what an "economic man" or an "ordinary competitor" would always do under any circumstances, then it is difficult to say what it does mean.

Business men engaged in an industry which is in active competition with other industries will inevitably seek to foster and develop their own industry. They must, as

a matter of self-protection, seek not only to improve the quality of the product of their industry, but to persuade all those engaged in the industry to conduct their business in a way which will tend to develop and improve the industry rather than to sacrifice or destroy it. It is seldom, if ever, suggested that competitors may not freely exchange ideas regarding improvements in the quality of their product and be helpful to one another in similar ways, in the construction of plants and equipment, in the elimination of waste in manufacturing operations, in methods of accounting and office practice. Yet all of these things constitute to a more or less extent a restraint of trade. Binding agreements limiting the freedom of action of competitors even in such matters might, under some circumstances, constitute an unreasonable restraint of trade. Questions of costs and prices do not fall in a different category. It is impossible in many industries to separate quality and price. Quality and service are elements of competition as well as price, and in determining the existence of an unreasonable restraint of trade in a particular case the standard of reason must be applied in the same way, whether the subject matter of the restraint is quality, service or price. The Sherman Act has to do with the unreasonableness of the restraint of trade, not specifically with unreasonableness of price or of any of the other terms and conditions of a contract of sale. The unreasonableness of any restraint of trade, therefore, cannot be determined on the basis of any general rules regarding the customary conduct of business men or competitors, but upon the facts of the particular case. The principle applied in the case of *National Association of Window Glass Manufacturers* v. *United States, supra,* is the only one that can be considered as controlling.

If the question of the unreasonableness of the restraint must be determined in this way in each case, it is clearer

still that the existence of an agreement cannot be inferred merely from friendly relationships or conversations between competitors. One man has a perfect right to seek to influence the conduct of another, even a competitor, by an appeal to his intelligence without having it inferred that an illegal agreement in restraint of trade has been made between them. Competitors have always influenced one another in such ways and it is contrary to the facts to suggest that such influence is not normal. Competitors are men and deal with one another as men. No doubt a business man will talk more readily and more freely with one competitor than with another. In such cases, as in all other cases of human intercourse, a man of known honesty, integrity and character for fair dealing will have the confidence of his fellow men to a greater extent than others who do not have the same good reputation. If all competitors in a particular industry had the highest ideals regarding the conduct of their business, it would be strange indeed if the inference could therefore be made that they were conducting their business in accordance with an illegal agreement in restraint of trade. On that theory the "ethics" of the legal profession would be open to question, and any effort to raise the standard of conduct amongst business men would be a violation of the Sherman Act.

It is easy to understand why the views of the Department of Commerce and the views of the Department of Justice have come into conflict. One department is interested in improvements in industrial conditions and the other is insisting that change is not normal and is therefore illegal. It is impossible ordinarily to make changes in industrial conditions and practices without co-operation of some character on the part of those engaged in business, and it is necessary to use persuasion and influence to secure the co-operation and the changes in methods desired. If these essential activities are always

to be open to question, and if co-operation by those engaged in a particular industry for the purpose of developing the industry and increasing its effectiveness in competition with other industries is to be held illegal, then it is obvious that the Sherman Act has been turned into an instrument designed to prevent the operation of the natural law of supply and demand in a field in which it is most essential that this law should operate freely and without restraint. The Sherman Act itself will then tend to restrain trade unduly and unreasonably, and will become a contributing cause of the very evil it was designed to prevent. This new and inflexible rule must operate in the same way with respect to all industries and occupations. Co-operation by laborers and farmers, notwithstanding Section 6 of the Clayton Act, to secure—not by agreement limiting freedom of action but by the use of knowledge and intelligence—better conditions, better wages and better prices, will be just as much opposed to the rule that what has been normal, within the view of the Department of Justice, must continue to prevail, as co-operation by men of affairs engaged in other industries to accomplish the same desirable results for their industries. Is this to be the final result of the application of the standard of reason in this field of the law?

We respectfully submit that the Sherman Act cannot properly be made definite and certain by making the rule of reasonableness with respect to restraint of trade equivalent to a fixed standard of conduct based upon an assumption as to what it has been normal for men in the past to do.

Respectfully submitted,

HERBERT POPE,

Counsel for The National Malleable & Steel Castings Company, et al., Petitioners.

CHICAGO, February 24, 1925.

The parties in the foregoing cause are hereby notified that the undersigned will, on Monday, the second day of March, 1925, at the opening of the court on that day, or as soon thereafter as counsel may be heard, submit the foregoing motion for leave to file a brief herein as *amicus curiae*.

HERBERT POPE,

Counsel for The National Malleable & Steel Castings Company, et al.

Due service of the foregoing notice of motion and brief is hereby admitted, this 27th day of February, 1925.

JACOB NEWMAN,
HENRY L. STERN,
CONRAD H. POPPENHUSEN and
EDWARD R. JOHNSTON,

Counsel for Appellants.

Counsel for United States.

We hereby consent to the filing of the foregoing brief *amicus curiae* herein.

JACOB NEWMAN,
HENRY L. STERN,
CONRAD H. POPPENHUSEN and
EDWARD R. JOHNSTON,

Counsel for Appellants.

(Sgd) Jno. M. Bach

Commodities Used by the United States Bureau of Labor Statistics in Constructing Its Index Numbers of Wholesale Prices

Commodity

Farm Products—Group I

(a) Grains:

- Barley, malting, Chicago.
- Corn, Chicago—
  - Contract grades.
  - No. 3 mixed.
- Oats, contract grades, Chicago.
- Rye, No. 2, Chicago.
- Wheat—
  - No. 1, northern spring, Chicago.
  - No. 2, red winter, Chicago.
  - No. 2, hard winter, Kansas City.
  - No. 1, northern spring, Minneapolis.
  - No. 1, hard white, Portland, Oreg.

(b) Live stock and poultry:

- Cattle, steers, Chicago.
  - Choice to prime.
  - Good to choice.
- Hogs, Chicago.
  - Heavy.
  - Light.
- Sheep, Chicago.
  - Ewes, native, all grades.
  - Lambs, western, good to choice.
  - Wethers, fed, good to choice.
- Poultry, live fowls—
  - Chicago.
  - New York.

(c) Other farm products:

- Beans, medium, choice, New York.
- Clover seed, contract grades, Chicago.
- Cotton, middling—
  - New Orleans.
  - New York.
- Cotton seed, average price at gin.

Eggs, fresh—
Firsts, western, Boston.
Firsts, Chicago.
Extra firsts, Cincinnati.
Candled, New Orleans.
Firsts, New York.
Extra firsts, western, Philadelphia.
Extra pullets, San Francisco.
Flaxseed, No. 1, Minneapolis.
Hay—
Alfalfa, No. 1, Kansas City.
Clover, mixed, No. 1, Cincinnati.
Timothy, No. 1, Chicago.
Hides and skins—
Calfskins, No. 1, country, Chicago.
Coatskins, Brazilian, New York.
Hides, heavy, country cows, No. 1, Chicago.
Hides, packers, heavy, native steers, Chicago.
Hides, packers, heavy, Texas steers, Chicago.

[fol. 6644] (c) Other farm products—Concluded.

Hops, prime to choice—
New York State, New York.
Pacific Coast, Portland, Oreg.
Milk, fresh—
Chicago.
New York.
San Francisco.
Onions, fresh, yellow, Chicago.
Peanuts, No. 1, Norfolk, Va.
Potatoes—
White, good to choice, Chicago.
Sweet, No. 1, Philadelphia.
Rice, New Orleans—
Blue Rose, head, clean.
Honduras, head, clean.
Tobacco, Burley, good leaf, dark red—
Louisville, Ky.
Wool, Ohio, Boston—
Fine clothing, scoured.
Fine delaine, scoured.
Half blood, scoured.
One-fourth and three eighth grades, scoured.

Foods—Group II

(a) Meats:

Beef, fresh—
Carcass, good native steers, Chicago
Sides, native, New York.

Beef, salt, extra mess, New York.
Hams, smoked, Chicago.
Lamb, dressed, Chicago.
Mutton, dressed, New York.
Pork, fresh—
Loins, Chicago.
Loins, Western, New York.
Pork, cured—
Mess, salt, New York.
Sides, rough, Chicago.
Sides, short, clear, Chicago.
Poultry, dressed—
Hens, heavy, Chicago.
Fowls, 48-56 pounds to dozen, New York.
Veal, dressed, good to prime, New York.

(b) Butter, cheese and milk:

Butter, creamery—
Boston—
Extra.
Firsts.
Seconds.
Chicago—
Extra.
Extra firsts.
Firsts.
Cincinnati—
Extra.
Centralized firsts.
Centralized seconds.
New Orleans—
Fancy.
Choice.
New York—
Extra.
Firsts.
Seconds.

[fol. 6645] (b) Butter, cheese, and milk—Concluded.

Butter, creamery—Concluded.

Philadelphia—
Extra.
Extra firsts.
Firsts.
St. Louis—
Extra.
San Francisco—
Extra.
Prime firsts.

Cheese, whole milk—
American twins, Chicago.
State, fresh flats, colored, average, New York.
California flats, fancy, San Francisco.
Milk, fresh. (See Farm products.)
Milk, condensed, 14-ounce tins, New York.
Milk, evaporated, 16-ounce tins, New York.

(c) Other foods:

Beans, medium, choice. (See Farm products.)
Bread—
Chicago.
Cincinnati.
New Orleans.
New York.
San Francisco.
Cocoa, beans, Arriba, New York.
Coffee, Rio, No. 7, New York.
Copra, South Sea, sun dried, New York.
Eggs, fresh. (See Farm products.)
Fish—
Cod, large, shore, pickled, cured, Gloucester, Mass.
Herring, large, split, New York.
Mackerel, salt, large, 3s, Boston.
Salmon, canned, Alaska, red, factory.
Flour, rye, white, Minneapolis.
Flour, wheat—
Winter patents, Kansas City.
Winter straights, Kansas City.
Standard patents, Minneapolis.
Second patents, Minneapolis.
Patents, Portland, Oreg.
Patents, soft, winter, St. Louis.
Straights, soft, winter, St. Louis.
Patents, Toledo.
Fruit, dried, New York—
Apples, evaporated, State, choice.
Currants, uncleaned, barrels.
Prunes, California, 60-70s.
Raisins, coast, seeded, bulk.
Fruit, fresh—
Apples, Baldwins, Chicago.
Bananas, Jamaica, 9s, New York.
Lemons, California (300-360 count), Chicago.
Oranges, California, choice, Chicago.
Glucose, 42° mixing, New York.
Hominy grits, bulk, car lots, f. o. b. mill.
Lard, prime contract, New York.
Meal, corn—
White, f. o. b. Decatur, Ill.
Yellow, Philadelphia.

[fol. 6646] (c) Other foods—Concluded.

Molasses, New Orleans, fancy, New York.
Oatmeal, car lots, in barrels (180 pounds), New York.
Oleomargarine, standard, uncolored, Chicago.
Oleo oil, extra, Chicago.
Pepper, black, Singapore, New York.
Rice. (See Farm products.)
Salt, American, medium, Chicago.
Sugar, New York—
Granulated, in barrels.
Raw, 96° centrifugal.
Tallow, edible, Chicago.
Tea, Forosa, fine, New York.
Vegetables, canned—
Corn, Maryland-Maine style, New York.
Peas, State and western, No. 5, New York.
Tomatoes, New Jersey, standard, No. 3, New York.
Vegetables, fresh. (See Farm products.)
Coconut, crude, Pacific Coast.
Corn, crude, in barrels, New York.
Cottonseed, prime, summer, yellow, New York.
Olive, edible, in barrels, New York.
Peanut, crude, f. o. b. mill.
Soya bean, crude, in barrels, New York.
Vinegar, cider, 40 grain, in barrels, New York.

Clothes & Clothing—Group III

(a) Boots and shoes, factory:

Children's—
Little boys', gun metal, blucher.
Child's, gun metal, polish, high cut.
Misses', black, vici, polish, high cut.
Youths', gun metal, blucher.
Men's—
Black, calf, blucher.
Black, calf, Goodyear welt, bal.
Black, dress, Goodyear welt, side leather.
Gun metal, Goodyear welt, blucher.
Mahogany, chrome, side, Goodyear welt, bal.
Tan, dress, Goodyear welt, Calf.
Tan, dress, Goodyear welt, side leather.
Tan, grain, blucher.
Vici kid, black, Goodyear welt.
Women's—
Black, kid, Goodyear welt, 8½-inch lace.
Kid, Goodyear welt, 9-inch lace.
Kid, McKay sewed, 8½-inch lace.
Patent leather pump McKay sewed.

(b) Cotton goods:

Denims, Mass., 2.20 yards to the pound, New York.
Drillings, brown, New York.
Massachusetts D standard, 30-inch.
Pepperell, 29-inch, 2.85 yards to the pound.
Flannels, New York—
Colored, 2.75 yards to the pound.
Unbleached, 3.80 yards to the pound.
Ginghams—
Amoskeag, 27-inch, 6.37 yards to the pound, New York.
Lancaster, 26½-inch, 6.50 yards to the pound, Boston.
Hosiery—
Men's half hose, combed yarn, New York.
Women's, cotton, silk mercerized, mock seam, New York.
Women's, combed yarn, 16-ounce, New York.

[fol. 6647] (b) Cotton goods—Concluded.

Muslin, bleached, 4/4—
Fruit of the Loom, New York.
Lonsdale, factory.
Rough Rider, New York.
Wamsutta, factory.
Print cloth, 27-inch, 7.60 yards to the pound, Boston.
Sheeting, brown, 4/4—
Indian Head, 2.85 yards to the pound, Boston.
Pepperell, 3.75 yards to the pound, New York.
Ware Shoals, 4 yards to the pound, New York.
Thread, 6-cord, J. & P. Coats, New York.
Underwear—
Men's shirts and drawers, New York.
Women's union suits, combed yarn, New York.
Yarn, Boston—
Carded, white mulespun, northern, 10/1 cones.
Carded, white, mulespun, northern, 22/1 cones.
Twisted, ordinary, weaving, 20/2.
Twisted, ordinary, weaving, 40/2.

(c) Woolen goods:

Flannel, white 4/4, Ballard Vale, No. 3, factory.
Overcoating, soft-faced, black, Boston.
Suitings—
Cay worsted, diagonal, 12-ounce, factory.
Clay worsted, diagonal, 16-ounce, factory.
Middlesex, wool-dyed, blue, 16-ounce, New York.
Serge, 11-ounce, factory.

Trousering, cotton warp, 11-11½-ounce, New York.
Underwear—
Merino, shirts and drawers, factory.
Men's union suits, 33 per cent worsted, New York.
Women's dress goods—
Broadcloth, 9½-ounce, 54-56-inch, New York.
French serge, 35-inch, factory.
Poplar cloth, cotton warp, factory.
Sicilian cloth, cotton warp, 50-inch, New York.
Storm serge, double warp, 50-inch, factory.
Yarn—
Crossbred stock, 2/32s, Boston.
Half blood, 2/40s, Philadelphia.
Fine domestic, 2/50s, Philadelphia.

(d) Silk, etc.:

Linen shoe thread, 10s, Barbour, New York.
Silk, raw—
China, Canton filature, extra extra A, New York.
Japan, Kansai, No. 1, New York.
Japan, special extra extra, New York.
Silk yarn, New York.
Domestic, gray spun, 60/1.
Domestic, gray spun, 60/2, No. 1.

Fuel & Lighting—Group IV

(a) Anthracite coal, New York, tidewater.

Broken.
Chestnut.
Egg.
Stove.

(b) Bituminous coal:

Mine run, Chicago.
Prepared sizes, Chicago.
Screenings, Chicago.

[fol. 6648] (b) Bituminous coal—Concluded.

Mine run, Kanawha, Cincinnati.
Mine run, smokeless, New River, Cincinnati.
Prepared sizes, Pittsburgh.
Indiana, No. 4 mine run, f. o. b. Indianapolis.

(c) Other fuel and lighting:

Coke, Connellsville, furnace, at ovens.
Gasoline, motor, New York.

Matches, average of several brands, New York.
Crude petroleum, at wells—
California, 20°.
Kansas-Oklahoma.
Pennsylvania.
Refined petroleum, New York
Standard white, 110° fire test.
Water white, 150° test.

Metal & Metal Products—Group V

(a) Iron and steel:

Iron ore, lower lake ports—
Mesaba, Bessemer, 55 per cent.
Non-Bessemer, 51½ per cent.
Pig iron—
Basic, valley furnace.
Bessemer, Pittsburgh.
Foundry, No. 2, northern, Pittsburgh.
Foundry, No. 2, Birmingham, Ala.
Ferromanganese, seaboard.
Spiegeleisen, 18 and 22 per cent, furnace.
Bar iron.
Best refined, Philadelphia.
Common, f. o. b. Pittsburgh.
Bars, reinforcing, Pittsburgh.
Nails, wire, Pittsburgh.
Pipe, cast-iron, 6-inch, New York.
Skelp grooved, Pittsburgh.
Steel billets, Pittsburgh.
Bessemer.
Open hearth.
Steel merchants bars, Pittsburgh.
Steel plates, tank, Pittsburgh.
Steel rails, Pittsburgh—
Bessemer, standard.
Open hearth, standard.
Steel sheets, black, f. o. b. Pittsburgh.
Steel, structural shapes, Pittsburgh.
Terneplate, 8 pounds I. C., Pittsburgh.
Tin plate, domestic, coke, Pittsburgh.
Wire—
Barbed, galvanized, Chicago.
Plain, fence, annealed, Pittsburgh.

(b) Nonferrous metals:

Aluminum, New York.
Copper, ingot, electrolytic, refinery.
Copper, sheet, New York.

Copper wire, bare, mill.
Lead pig, New York.
Lead pipe, New York.
Quicksilver, New York.
Silver, bar, fine, New York.
Tin, pig, New York.
Zinc, sheet, factory.
Zinc, slab, New York.

Building Materials—Group VI

(a) Lumber:

Douglas fir, mill—
No. 1 common, boards.
No. 2 and better, drop siding.

[fol. 6649] (a) Lumber—Concluded.

Gum, sap, firsts and seconds, St. Louis.
Hemlock, northern, No. 1, Chicago.
Maple, hard, No. 1 common 4/4, Chicago.
Oak, white, plain, No. 1 common, 4/4, Cincinnati.
Pine, white, No. 2 barn, Buffalo, N. Y.
Pine, yellow, southern, mill—
Floorings, B. and better.
Timbers, square edge and sound.
Poplar, No. 1 common, 4/4, Cincinnati.
Spruce, eastern, random, Boston.
Lath, yellow pine, No. 1, f. o. b. mill.
Shingles—
Cypress, 16 inches long, mill.
Red cedar, 16 inches long, mill.

(b) Brick, common buildings, simple average of 82 yard prices.

(c) Structural steel. (See Metals and metal products.)

(d) Other building materials:

Cement, Portland, f. o. b. plant, simple average of 6 plant prices.
Crushed stone, 1½ inch, New York.
Gravel, f. o. b. pit, average of 22 plant prices.
Hollow tile, building, Chicago.
Lime, common, lump, f. o. b. plant, average of 15 plant prices.
Sand, building, f. o. b. pit, average of 26 plant prices.
Slate, roofing, f. o. b. quarry.
Glass, plate—
3 to 5 square feet, New York.
5 to 10 square feet, New York.

Glass, window, American, f. o. b. works.
Single, A.
Single, B.
Linseed oil, raw, New York.
Putty, commercial, New York.
Rosin, common to good, (B), New York.
Turpentine, southern, barrels, New York.
White lead, American, in oil, New York.
Zinc oxide (white zinc), New York.
Pipe, cast-iron. (See Metals and Metal Products.)
Copper, sheet. (See Metals and Metal Products.)
Copper wire. (See Metals and Metal Products.)
Lead pipe. (See Metals and Metal Products.)
Nails. (See Metals and Metal Products.)
Reinforcing bars. (See Metals and Metal Products.)
Roofing tin (terneplate). (See Metals and Metal Products.)
Zinc, Sheet. (See Metals and Metal Products.)

Chemicals & Drugs—Group VII

(a) Chemicals:

Acids, New York—
Acetic, 28 per cent.
Muriatic, 20°.
Nitric, 42°.
Stearic, triple pressed.
Sulphuric, 66°.
Alcohol, New York—
Denatured, No. 5, 188 proof.
Wood, refined, 95 per cent.
Alum, lump, New York.
Ammonia, anhydrous, New York.
Bleaching powder, New York.
Borax, crystals and granulated, New York.
Copper sulphate, 99 per cent, crystals, New York.
Copra, South Sea, sun dried, New York.
Formaldehyde, New York.
Oil, vegetable—
Coconut, crude, Pacific coast.
Corn, crude, in barrels, New York.

[fol. 6650] (a) Chemicals—Concluded.

Palm kernel, crude, New York.
Soya bean, crude, in barrels, New York.
Potash, caustic, 88-92 per cent, New York.
Sal Soda, New York.
Soda Ash, 58 Per cent, light, New York.
Soda, bicarbonate, American, f. o. b. works.

Soda, caustic, 76 per cent. solid, New York.
Soda, silicate of, 40°, New York.
Sulphur, crude, New York.
Tallow, inedible, packers' prime, Chicago.

(b) Fertilizer materials.

Acid phosphate, 16 per cent basis, bulk, New York.
Ammonia, sulphate, double bags, New York.
Ground bone, steamed, Chicago.
Muriate of potash, 80-85 per cent, H. C. L. bags, New York.
Phosphate rock, 68 per cent, f. o. b. mines.
Soda nitrate, 95 per cent, New York.
Tankage, 9 and 20 per cent, crushed, f. o. b. Chicago.

(c) Drugs and pharmaceuticals:

Acid, citric, domestic, crystals, New York.
Acid, tartaric, crystals, U. S. P., New York.
Alcohol, grain, 190 proof, U. S. P., New York.
Cream of tartar, pow-ered, New York.
Epsom salts, U. S. P., in barrels, New York.
Glycerine, refined, New York.
Opium, natural, U. S. P., New York.
Peroxide of hydrogen, 4-ounce bottles, New York.
Phenol, U. S. P. (carbolic acid), New York.
Quinine, sulphate, manufacturers' quotations, New York.

House Furnishing Goods—Group VIII

(a) Furniture:

Bedroom—
Bed, combination, factory.
Chair, all gum, cane seat, factory.
Chifforette, combination, factory.
Dresser, combination, factory.
Rocker, quartered oak, Chicago.
Set, 3 pieces, Chicago.
Dining room—
Buffet, combination, factory.
Chair, all gum, leather slip seat, factory.
Table, extension, combination, factory.
Living room—
Davenport, standard pattern, factory.
Table, library, combination, factory.
Kitchen—
Chair, hardwood, Chicago.
Refrigerator, lift top type, factory.
Table, with drawer, Chicago.

(b) Furnishings:

Blankets—
Cotton, colored, 2 pounds to the pair, New York.
Wool, 4 to 5 pounds to the pair, factory.
Carpets, factory—
Axminster, Bigelow.
Brussels, Bigelow.
Wilton, Bigelow.
Cutlery—
Carvers, 8-inch, factory.
Knives and forks, factory.

[fol. 6651] (b) Furnishings—Concluded.

Pails, galvanized iron, 10-quart, factory.
Sheeting, bleached, 10/4—
Pepperell, New York.
Wamsutta, factory.
Tableware—
Glass nappies, 4-inch, factory.
Glass pitchers, one-half gallon, factory.
Glass tumblers, one-third pint, factory.
Plates, white granite, 7-inch, factory.
Tea cups and saucers, white granite, factory.
Ticking, Amoskeag, A. C. A., 2.85 yards to pound, New York.
Tubs, galvanized iron, No. 3, factory.

Miscellaneous—Group IX

(a) Cattle feed:

Bran, Minneapolis.
Cottonseed meal, prime, New York.
Linseed meal, New York.
Mill-feed middlings, standard, Minneapolis.

(b) Leather:

Calf, chrome, B grade, Boston.
Glazed kid, black, top grade, Boston.
Harness, California oak, No. 1, Chicago.
Side, black, chrome, B grade, Boston.
Sole, Boston—
Hemlock, middle, No. 1.
Oak, scoured backs, heavy.
Union, middle weight.

(c) Paper and pulp:

Paper—
Newsprint, rolls, f. o. b. mill.
Wrapping, manila, No. 1, jute, New York.
Woodpulp, sulphite, domestic, unbleached, New York.

(d) Other miscellaneous:

Hemp, manila, fair current shipment, New York
Jute, raw, medium grades, New York.
Lubricating oil, paraffin, 903 gravity, New York.
Rope, pure manila, best grade, New York.
Rubber, Para, island, fine, New York.
Sisal, Mexican, current shipment, New York.
Soap—
Laundry, Cincinnati.
Laundry, Philadelphia.
Starch, laundry, bulk, New York.
Tobacco—
Plug, New York.
Smoking, 1-ounce bags, New York.

[fol. 6676] DEFENDANTS' GORDON EXHIBIT No. 14-A

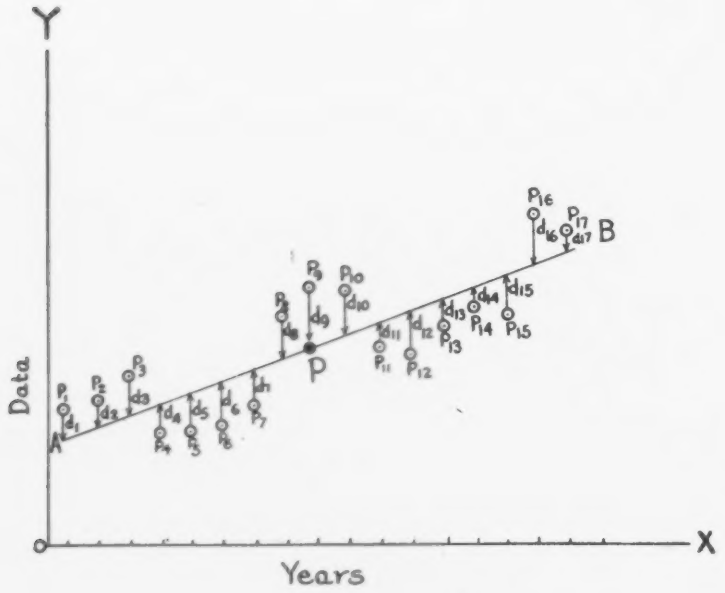
Method Used to Compute the Line of Secular Trend on Chart—Exhibit #14—for Building Permits Granted

The method of measuring this trend in new building was that of fitting a straight line to the data such that it was the line which "best fitted" the data. The secular trend line was computed by the

method of least squares (or method of moments).* This computation rests upon the principle that there is but one position for a straight line such that the sum of the squares of the distances (parallel to the y axis) from the data to this straight line are a minimum.

This statement may be understood better by reference to the figures below.

Let the points p_1, p_2.... p_{17} be located by the data (in our case, the volume of Building Permits Granted) and d_1, d_2, ... d_{17}, be the distances (parallel to the y axis) from the points to any straight line AB. Through the point P, the coördinates of which are the arithmetic averages of the abscissas (years) and ordinates [fol. 6677] (Permits). Then $d_1 + d_2 + \ldots + d_{17} = \pm o$ for any position of AB. But there is only one position of AB for which $d_1^2 + d_2^2 + \ldots + d_{17}^2 =$ a minimum. The straight line satisfying that condition "fits" the data according to the criterion of least squares (or method of moments).



* For the technique of least squares see Weld: "Theory of Errors or Least Squares"; for the method of moments, Elderton: "Frequency Curves and Correlation'," Yule: "Theory of Statistics," for practical application to economic data and simple explanation of curve fitting, Harvard Committee on Economic Research: "Review of Economic Statistics," January, 1919, pp. 8-18 (especially p. 12), and George R. Davies: "Introduction to Economic Statistics."

In order to compute this line, the following formulæ are used:

$$\text{the midpoint} = b = \frac{Sy}{n}$$

$$\text{the annual increment} = m = \frac{Sxy}{Sx^2}$$

where y represents the annual items, n the number of items and x the time in years measured from the origin (the middle year 1908 in this case). S is a summation sign, meaning "the sum of such terms as ...."

This example will be made clearer if we take the volume of Build- [fol. 6678] ing Permits Granted in fifty cities in the United States from 1900 to 1916 and actually work it out.

In the case of this series (see work sheet):

The sum off the annual totals 1900-1916 = Sy = 11,157.
The number of annual totals 1900-1916 = n = 17

$$\text{and } b = \frac{Sy}{n} = \frac{11{,}157}{17} = 656.3$$

(b is the ordinate of secular trend in the middle of the period, that is, 1908, and is nothing but the average of the series.)

The sum of xy = Sxy = (+26,030) + (—18,086 = 79944 and $Sx^2 = (-8)^2 + (-7)^2 + (+7)^2 + (+8)^2 = 408$ and $m = \frac{Sxy}{Sx^2}$

$$= \frac{7{,}944}{408} = 19.47$$

(m is the uniform increment each year)

We therefore know the ordinate of the line of secular trend for 1908 and may secure the others by merely adding the annual increment for each year forward and subtracting for each year in recession.

Add eight times increment (8×19.47) to secure the ordinate for 1916.

$$656.3 + 153.76 = 812.06$$

Subtract eight times increment to secure the ordinate for 1900.

$$656.3 - 155.76 = 500.54$$

Likewise all other points on the line may be computed.

The above formulæ were for annual data. If monthly data are used the formulæ become

$$\frac{6}{12} = \frac{Sy}{12n}$$

and

$$\frac{M}{144} - \frac{Sxy}{144Sx^2}$$

[fol. 6679] Thus, the ordinates of the line of trend of New Building Permits Granted in fifty cities were computed and the line projected through the later years from 1917 to 1923. The line represents what the volume of new building would ordinarily or normally have been. The distance between the ordinate of the line of trend and the ordinate of the actual series of building permits then represents the under or over construction of building in any year. The area between the line of trend and the actual data represents a rough approximation of the cumulative shortage.

[fol. 6681] DEFENDANTS' GORDON EXHIBIT No. 15

[fol. 6682] Commodities which Had a Higher Relative Price Peak Than Did "The Product"*

Commodity	Peak price (1913=100)	Year
Fertilizing materials, muriate of potash 80-85%	1013	1916
Potash caustic 88-92%	2425	1917
Hops, Pacific Coast	426	1920
Potatoes, white	424	1920
Cotton Flannel, colored—2¾ yds. to the lb	438	1920
Cotton Flannel, unbleached 3.8 yds. to the lb	428	1920
Cotton Muslin, fruit of the loom	403	1920
Cotton Muslin, Bleached: 4.4 Wamsutta <O> XX	427	1920
Woolen goods, underwear, union suits, 33% worsted	470	1920
Coke, Connellsville, furnace, Av. p. per short ton	443	1920
California crude petroleum	441	1920
Iron & steel augers—regular 1 inch	405	1920
Iron & steel butts, loose pin wrought steel, 3½ X 3½ in.	566	1920
Common Mortise Locks	397	1920
Lumber gum sap. First and second	397	1920
Bleaching powder	418	1920
Formaldehyde	550	1920
Soda, ash, light	566	1920
Quinine, manufacturing quotations	394	1920
House furnishings, tickings, Amoskeag, A. C. A	398	1920
Shoes, Leather glazed kid, top grades, from Brazilian skins	429	1920
The "Product" of members of the M. F. M. A.	397	1920

*Commodity Price Relatives taken from United States Bureau of Labor Statistics "Wholesale Price Bulletins." 1913=100.

Southern Division, ss:

CLERK'S CERTIFICATE

I, Charles J. Potter, Clerk of the District Court of the United States for the Western District of Michigan, do hereby certify that the exhibits herein contained are the original exhibits of the plaintiff and of the defendants in the case of the United States of America vs. The Maple Flooring Manufacturers Association et al., introduced in evidence at the hearing of said cause, which are required to be transmitted to the Supreme Court of the United States, by the order of said District Court, excepting, however, Plaintiff's exhibits 65-2C to 65-3B, there having been, through the inadvertence of the Stenographer no such marking of exhibits.

Witness my official signature and the seal of the aid District Court, at Grand Rapids in said District and Division, this 24th day of March in the year of our Lord one thousand nine hundred and twenty-four.

Charles J. Potter, Clerk, by Chas. L. Fitch, Deputy Clerk.
(Seal of the U. S. District Court, Western District of Mich., Southern Division.)

[fol. 6750] IN THE SUPREME COURT OF THE UNITED STATES

[Title omitted]

STIPULATION AS TO PARTS OF RECORD TO BE PRINTED—Filed April 3, 1924

Whereas, the appellants in the above entitled cause have given the appellees notice that they intend to rely upon all the propositions of law and fact contained in their assignment of errors herein; and

Whereas, the appellants have informed the appellees of the parts of the record which in their opinion should be printed and the appellees have likewise informed the appellants of the parts of the record which they wish to have printed.

Now, therefore, in consideration of the premises, and in order to comply with rule 10, the appellants and the appellees agree and stipulate as follows:

1. That—

(a) In the opinion of both parties all the transcript of the record transmitted by the clerk of the lower court except the last ten lines of page 1491 and all of pages 1492, 1493, 1494, 1495 and 1496;

(b) In the opinion of the appellees, Government exhibits or the parts thereof hereinafter indicated, viz: 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13 and 14; such parts of 15, 15a, to 15fff inclusive as are indicated thereon in blue pencil marks; such parts of 18, 18a to 18x, inclusive, as are indicated; 19, 20, 21, 22, 24, 25, 25a, 25b, 26, 27, 27a, 28, 28a, 28b, 28c, 28d, 28e, 28f, 28g, 28h, 28j, 28k, 28L, 28n, 28o, 28q, 29 30e; the two sheets dated May 22, 1913, and May 21, 1913, respectively, of 30f; such parts of 31 as are indicated; such parts of 31d to 31r, inclusive, as are indicated; 32; [fol. 6751] such parts of 33, 34, 34a to 34p, inclusive, and 35 as are indicated; 36; such parts of 37, 38 to 38k inclusive, as are indicated; 39a, 39c, 40-5r, 40-3y, 40-2s, 40a; such parts of 40 as are indicated; 41, 41a, 41b, 41c, 41d, 41-2u, 41-2v, 41-2w, 41-2x, 41-2y; 42; first and last sheets of 42a; first and last sheets of 42b; the reports dated October 28, 1913, January 20, 1914, February 23, 1922, respectively, of 42c; extra 43 or report dated March 2, 1920, as originally mimeographed; 43a, 43b, 43-2j, 43-2k; 43-2v, 43-3f, 43-5z, 43-6a, 44, 45, 46, 46a, 46b, 47, 48, 50, as originally mimeographed; such parts of 51 and 52 as are indicated; 57, 57a, 54b, 55c, 57d, 57e, 57f, 58, 58a, 59, 59a; such parts of 60 as are indicated; 61, 61a, 62, 63, 63a, 63b, 63c, 63d, 63e, 63f; such parts of 64 as are indicated; 65, 65-3k, 66; the typewritten tabulations of 68, excluding the letters and other documents attached thereto; 69, 70; first and last sheets of 73; such parts of 75 as are indicated; the financial statement with respect to termination of Association as of December 31, 1921 of 76; such parts of 76 and 76a as are indicated; such parts of 77, 78 and 79 as are indicated.

(c) In the opinion of appellants the following defendants' exhibits or parts thereof hereinafter indicated, viz: A, B, B-1, C, C-1, C-2, C-3, C-4, C-5, C-6, C-7, C-8, C-9, C-10, C-11; E; such parts of F and F1 as are indicated by blue pencil marks; G, G-1, H, H-1, H-2; such parts of I as are indicated; K, L, T, T-1, BB, CC-½, CC, CC-1, CC-2, CC-3, CC-4, DD, DD-1, EE, FF to FF-9, inclusive, GG, HH, II-1, II-2, JJ; such parts of KK as are indicated; such parts of LL as are indicated; OO, PP, QQ; defendants' Robertson exhibit #1; first sheet of defendants' Robertson exhibit #2; letter of June 20, 1919 addressed to Holt Hardwood Co. of defendants' Robertson exhibit #9; such parts of defendants' Robertson exhibits #13 and #20 to #31 inclusive as are indicated; defendants' Bacon exhibit #1; defendants' Brown exhibit #4; defendants' Gordon exhibits #1, #2, #3, #4, and #5; the graphs of defendants' Gordon exhibits #6 and #7; defendants' Gordon exhibit #8; the graphs of defendants' Gordon exhibits #9, #10, #11 and #12; defendants' Gordon exhibit #13; the graph of defendants' Gordon exhibit #14; defendants' Gordon exhibits #14-a, #14-¾, #15 and #16; the graphs of defendants' Grant Keehn exhibits #17, #18, #19, #20, #21, #22, #23, and #24; defendants' Grant Keehn exhibit #25; the graphs of defendants' Grant Keehn exhibits #26, #27, #28, #29, #29a, #29b and #30; such parts of defendants' Vanderblue exhibits #1 to #4 inclusive as are in-

dicated; the District Clerk's Certificate to the exhibits transmitted to the Supreme Court; and this stipulation,

are material and are necessary for the consideration of the points on which the appellants intend to rely.

[fol. 6752] 2. That a vertical line or a check made with a blue pencil was the method most generally used to indicate the parts of exhibits, or entire exhibits where not otherwise specified, which were deemed material by either of the parties hereto.

3. That all the exhibits above mentioned are original exhibits; that they were received in evidence during the hearing in the Court below, and that they were certified by the Clerk of said Court and transmitted with the transcript of the remainder of the record to the Supreme Court pursuant to agreement of the parties and the order of the District Court of the United States for the Southern District of Michigan.

4. That only the portions of the record and the exhibits and parts thereof above designated shall be printed by the Clerk of the Supreme Court; provided, however, that if there are any substantial errors in Government exhibit #79 and the parties shall not stipulate as to the facts, the appellants may have printed all or such parts of the other exhibits as in their judgment will correct such errors; provided further that either party may at any time within ninety days before the hearing of said cause correct any inadvertance or over-sight by designating other exhibits or parts thereof to be printed, upon condition, however, that such exhibits or parts thereof shall be printed, filed and served on opposing counsel at least sixty days before the date the cause shall have been set for oral argument, in which event the other party may likewise designate such other exhibits or parts thereof to be printed upon condition that said exhibits or parts thereof shall be printed, filed and served upon opposing counsel at least thirty days before the date the cause shall have been set for oral argument.

[fol. 6753] In witness whereof the parties hereto, by their respective counsel, have signed this stipulation, this 3d day of April, 1924.

Jacob Newman, Conrad Poppenhusen, H. L. Stern, Edward R. Johnston, Solicitors for Appellants. James M. Beck, Solicitor for Appellees.

[fol. 6755] SUPREME COURT OF THE UNITED STATES, OCTOBER TERM, 1923

No. 920

MAPLE FLOORING MANUFACTURERS ASSOCIATION et al., Appellants,

vs.

THE UNITED STATES OF AMERICA

STIPULATION TO CORRECT ORIGINAL EXHIBITS—Filed June 9, 1924

It is hereby stipulated and agreed between counsel for the appellants and counsel for the appellee that the error appearing in the original copy of Defendants' Exhibit No. 26, appearing at page 6729 of the original book of exhibits, may be corrected in the copies of the graph of Exhibit No. 26, to be furnished for the use of the court, by substituting "1919" for "1917" at the foot of the eighth column of said graph.

Newman, Poppenhusen, Stern & Johnston, E. G. S., Counsel for Appellants. James M. Beck, Solicitor General.

History of the Lumber Market from January 1, 1918, to June 1, 1923

The period covered by the dates above enumerated mark one of the most interesting eras in entire lumber annals, beginning with a period when this Nation was a participant with European Allied countries in the World War, going thru the last year of that war and proceeding thru the subsequent scarcity of all products of civilized life with its riot of prices at a height which had never been conceived, when all factories and workmen were pushed harder than during the fever of war-times until wants were fairly well satisfied and the expected realized, which, although somewhat anticipated, acted as a restraining force to further enlargements of industry and increase of values.

We see lumber advancing from the beginning of this period, especially lumber used in the manufacture of Maple Flooring and similar products, from a base of $30.00 per M for 4/4 #1 Common, $25.00 for #2 and $23.00 for #3 to $122.00 per M for the #1 Common, $82.00 for the #2 and $37.00 for the #3 in June 1920, and to recede from this pinnacle by the end of 1921 to $75.00 per M for the #1 Common, $45.00 for the #2 and $38.00 for the #3, and by October 1921, $40.00 per M for the #1 Common, $24.00 for the #2 and $17.00 for the #3; to advance slightly in June of the following year to $52.00 for the #1 Common, $32.00 for the #2 and $22.00 for the #3 and to gradually advance from these prices to $60.00 per M for the #1 Common, $40.00 for the #2 and $25.00 for the #3 of this year.

[fol. 5424] During the above period it is very interesting to note the cost of production of Maple Flooring lumber and we have taken as a basis of this cost the minimum wage paid in both the mill and woods departments of representative saw mills in the district of the Northern Peninsula of Michigan. At the beginning of this period, Jan. 1, 1918, common labor at the sawmill was receiving $2.50 per day and woods labor was receiving an average of $40.00 per month and keep. However, in the case of the mill labor no keep is included.

We note that saw mill labor advanced April 1, 1918 to $2.75 and August 1st to $2.90; woods labor showed no advance until August 1st and was advanced to $45.00 and again on Oct. 1st, to $50.00 per month, this rate being held until February 1st, 1919, at which time the sawmill labor had reached $3.00 per day. In June 1919 the sawmill labor was getting $3.25 per day and the woods labor $45.00 per month. At the end of this year, 1919, however, woods labor had reached $55.00 per month and sawmill labor $3.75 per day. We see a steady advance from this point, in both sawmill and woods labor, until Dec. 1, 1920, when sawmill labor had reached the hitherto unheard-of rate of $5.00 per day for common labor and woods labor $75.00 per month, which is the peak and highest wages ever paid in this district for labor. From this point a decline is noticed somewhat gradual and Jan. 1 1922 sees sawmill labor at $2.50 per day and woods labor $26.00 [fol. 5425] per month and keep. It advanced, however, until by the end of the year, on account of shortage of men, woods labor was receiving $40.00 per month and mill labor $3.00 per day from which point, during 1923, mill labor is advanced to $3.25 per day and woods labor to from $50.00 to $60.00 per month. According to the records kept by the J. W. Wells Lumber Co. the peak seems to have been reached both insofar as net returns on lumber are concerned and the highest wages paid for men both at mill and in the woods department, in Sept. 1920. This has special reference also to the net rates for Maple Flooring values, following very closely the cost of production and the law of supply and demand.

FILMING

MAPLE FLOORING MANUFACTURERS ASSN. ET AL. *v.* UNITED STATES.

APPEAL FROM THE DISTRICT COURT OF THE UNITED STATES FOR THE WESTERN DISTRICT OF MICHIGAN.

No. 342. Argued December 1, 2, 1924; reargued March 3, 1925.—Decided June 1, 1925.

1. In a suit to enjoin a trade association under the Anti-Trust Act in which the Government adduced, as evidence of guilty purpose, the history of earlier combinations which this one had superseded, *held* that there was no evidence of any present agreement or purpose to produce any effect on commerce other than that which necessarily would flow from the activities of the present association, and that the only question was whether that association, as actually conducted, had a necessary tendency to cause direct and undue restraint of competition condemned by the Act. P. 577.
2. Each case arising under the Sherman Act must be determined upon the particular facts disclosed by the record; and opinions of the Court in those cases must be read and applied in the light of their facts, with clear recognition of essential differences in that regard. P. 579.
3. Trade associations or combinations of individuals or corporations, which, as in this case, openly and fairly gather and disseminate information as to the cost of their product, the actual prices it has brought in past transactions, stocks on hand and approximate cost of transportation from the principal point of shipment to points of consumption, and meet and discuss such statistics without reaching or attempting to reach any agreement or concerted action respecting prices, production or the restraining of competition, do not thereby engage in an unlawful restraint of commerce. P. 582.
4. In a suit under the Anti-Trust Act to dissolve a trade association formed by numerous manufacturers of hard-wood flooring, the following activities were complained of: (1) Computation and distribution among the members of information as to the average cost of their products, based (a) on cost of raw material as ascertained and averaged by the association's secretary from reports of actual sales of rough lumber by members in open market, (b) on manufacturing costs ascertained through questionnaires sent the members, and (c) on percentage of waste in milling, ascertained through test runs made by selected members under direction of

the secretary; (2) compilation and distribution among them of booklets showing freight rates from a basing point to numerous points to which their products were shipped, enabling members to quote delivered prices promptly; (3) gathering by periodical reports from members of information as to the quantity and kind of flooring sold by them, dates of sales and prices received, average freight rates, commissions paid, amount and kinds of stock on hand, and of unfilled orders, monthly production and new orders booked; which information, embracing only past and closed transactions and omitting names of purchasers, current prices and many other details, was transmitted in summarized form to the members by the secretary of the association, without, however, revealing the identity of members in connection with specific information transmitted, and was given wide publicity through publication in trade journals, communication to the Department of Commerce, etc.; (4) monthly meetings at which problems of the industry were discussed, without discussion or agreement upon prices. *Held* that such activities did not constitute an unlawful restraint on commerce. *Am. Column Lumber Co.* v. *United States*, 257 U. S. 377; *United States* v. *Am. Linseed Oil Co.*, 262 U. S. 371, distinguished. P. 568.

Reversed.

APPEAL from a decree of the District Court awarding an injunction, in a suit brought by the Government under the Anti-Trust Act against a combination, in the form of a trade association, of manufacturers of hardwood flooring lumber.

Mr. Edward R. Johnston, with whom *Messrs. Jacob Newman, Conrad H. Poppenhausen, Henry L. Stern*, and *Henry Jackson Darby* were on the brief, for appellants.

Mr. J. A. Fowler, Special Assistant to the Attorney General, with whom the *Solicitor General* and *Mr. C. S. Thompson*, Special Assistant to the Attorney General, were on the brief, for the United States.

Mr. Herbert Pope filed a brief as *amicus curiae* for the National Malleable & Steel Castings Company, by special leave of Court.

MR. JUSTICE STONE delivered the opinion of the Court.

By bill in equity filed March 5, 1923, the United States asked an injunction restraining the defendants, who are appellants here, from violating § 1 of the Act of Congress of July 2, 1890, entitled, "An Act to Protect Trade and Commerce Against Unlawful Restraints and Monopolies" (c. 647, 26 Stat. 209), commonly known as the Sherman Act.

The defendants are the Maple Flooring Manufacturers Association, an unincorporated "trade association"; twenty-two corporate defendants, members of the Association, engaged in the business of selling and shipping maple, beech and birch flooring in interstate commerce, all but two of them having their principal places of business in Michigan, Minnesota or Wisconsin (one defendant being located in Illinois and one in New York); the several individual representatives of the corporate members of the Association; and George W. Keehn, Secretary of the Association. Of the corporate defendants, approximately one-half own timber lands and saw mills and are producers of the rough lumber from which they manufacture finished flooring, sold and shipped in interstate commerce. The other defendants purchase rough flooring lumber in the open market and manufacture it into finished flooring which is sold and shipped in interstate commerce. In 1922 there were in the States of Illinois, Michigan, Minnesota and Wisconsin seventeen non-member manufacturers of maple, beech and birch flooring and there were fifty-eight non-member manufacturers of maple, beech and birch flooring in the United States who reported to the Government. In that year thirty-eight non-member manufacturers reported a manufacturing capacity of 238,610,000 feet of flooring of the types mentioned and during the same year the manufacturing capacity of the defendants was 158,400,000 feet. Estimates

submitted in behalf of the Government indicate that in the year 1922 the defendants produced 70% of the total production of these types of flooring, the percentage having been gradually diminished during the five years preceding, the average for the five years being 74.2%. It is also in evidence that aside from non-member manufacturers who reported to the Government, there are numerous other non-member manufacturers of such flooring in the United States and Canada. The defendants own only a small proportion of the total stand, in the United States, of maple, beech and birch timber from which the various types of flooring produced and sold by defendants are manufactured.

In March, 1922, the corporate defendants organized the defendant Maple Flooring Manufacturers Association, but for many years prior to that time and certainly since 1913 a substantial number of the corporate defendants have participated actively in maintaining numerous successive trade associations of the same name, which were predecessors of the present association. The oral testimony and documentary evidence have covered a wide range and have reached a great volume which it will be impossible, within the limits of an opinion, to review in detail. The defendants have engaged in many activities to which no exception is taken by the Government and which are admittedly beneficial to the industry and to consumers; such as co-operative advertising and the standardization and improvement of the product. The activities, however, of the present Association of which the Government complains may be summarized as follows:

(1) The computation and distribution among the members of the association of the average cost to association members of all dimensions and grades of flooring.

(2) The compilation and distribution among members of a booklet showing freight rates on flooring from Cadil-

lac, Michigan, to between five and six thousand points of shipment in the United States.

(3) The gathering of statistics which at frequent intervals are supplied by each member of the Association to the Secretary of the Association giving complete information as to the quantity and kind of flooring sold and prices received by the reporting members, and the amount of stock on hand, which information is summarized by the Secretary and transmitted to members without, however, revealing the identity of the members in connection with any specific information thus transmitted.

(4) Meetings at which the representatives of members congregate and discuss the industry and exchange views as to its problems.

Before considering these phases of the activities of the Association, it should be pointed out that it is neither alleged nor proved that there was any agreement among the members of the Association either affecting production, fixing prices or for price maintenance. Both by the articles of association and in actual practice, members have been left free to sell their product at any price they choose and to conduct their business as they please. Although the bill alleges that the activities of the defendants hereinbefore referred to resulted in the maintenance of practical uniformity of net delivered prices as between the several corporate defendants, the evidence fails to establish such uniformity and it was not seriously urged before this Court that any substantial uniformity in price had in fact resulted from the activities of the Association, although it was conceded by defendants that the dissemination of information as to cost of the product and as to production and prices would tend to bring about uniformity in prices through the operation of economic law. Nor was there any direct proof that the activities of the Association had affected prices adversely to consumers. On the contrary, the defendants offered a great volume of evidence tending to show that the trend of

prices of the product of the defendants corresponded to the law of supply and demand and that it evidenced no abnormality when compared with the price of commodities generally. There is undisputed evidence that the prices of members were fair and reasonable and that they were usually lower than the prices of non-members and there is no claim that defendants were guilty of unfair or arbitrary trade practices.

The contention of the Government is that there is a combination among the defendants, which is admitted; that the effect of the activities of the defendants carried on under the plan of the Association must necessarily be to bring about a concerted effort on the part of members of the Association to maintain prices at levels having a close relation to the average cost of flooring reported to members and that consequently there is a necessary and inevitable restraint of interstate commerce and that therefore the plan of the Association itself is a violation of § 1 of the Sherman Act which should be enjoined regardless of its actual operation and effect so far as price maintenance is concerned. The case must turn therefore, on the effect of the activity of the defendants in the gathering and dissemination of information as to the cost of flooring, since, without that, the other activities complained of could have no material bearing on price levels in the industry; and it was to this phase of the case that the oral argument was mainly directed.

Having outlined the substantial issues in the case, it will now be convenient to examine more in detail the several activities of the defendants of which the Government complains.

Computation and distribution, among the members, of information as to the average cost of their product.

There are three principal elements which enter into the computation of the cost of finished flooring. They are

the cost of raw material, manufacturing cost and the percentage of waste in converting rough lumber into flooring. The information as to the cost of rough lumber was procured by the Secretary from reports of actual sales of lumber by members in the open market. From five to ten ascertained sales were taken as standard and the average was taken as the estimated cost of raw material. Manufacturing costs were ascertained by questionaires sent out to members by which members were requested to give information as to labor costs, cost of warehousing, insurance and taxes, interest at 6% on the value of the plant, selling expense, including commissions and cost of advertising, and depreciation of plant. From the total thus ascertained there was deducted the net profit from wood and other by-products. The net total cost thus ascertained of all members reporting was then averaged.

The percentage of waste in converting the rough lumber into flooring was ascertained by test runs made by selected members of the Association under the direction of the Secretary of the Association, in the course of which a given amount of rough lumber was converted into flooring of different sizes and the actual waste in the process ascertained and stated in terms of percentage. By combining the three elements of cost thus arrived at, the total cost per thousand feet of the aggregate of the different types and grades of flooring produced from a given amount of rough lumber was estimated. To this cost there was at one time added an estimated 5% for contingencies, which practice, however, was discontinued by resolution of the Association of July 19, 1923. For the element of manufacturing and marketing cost, the first of these estimates prepared in the manner described was based upon an average of such cost for the first half of 1921. Other successive estimates were prepared on a like basis during the first, third and fourth quarter of the year 1922.

In order to determine the cost of a given type or grade of flooring, it was necessary to distribute the total cost of the aggregate of the different types and grades of finished flooring produced from a given amount of rough lumber among the several types and grades thus produced. This distribution was made by the officials of the Association and the estimated cost thus determined was tabulated and distributed among the members of the Association. There is no substantial claim made on the part of the Government that the preparation of these estimates of cost was not made with all practicable accuracy or that they were in any respect not what they purported to be, an estimate of the actual cost of commercial grades of finished flooring fairly ascertained from the actual experience of members of the Association, except that the point is made by the Government that the distribution of cost among the several types and grades of finished flooring produced from a given amount of rough lumber was necessarily arbitrary and that it might be or become a cover for price fixing. Suffice it to say that neither the Government nor the defendants seem to have found it necessary to prove upon what principle of cost accounting this distribution of cost was made and there are no data from which any inference can be drawn as to whether or not it conformed to accepted practices of cost accounting applied to the manufacture of a diversified product from a single type of raw material.

The compilation and distribution among members of information as to freight rates.

Through the agency of the Secretary of the Association a booklet was compiled and distributed to members of the Association showing freight rates from Cadillac, Michigan, to numerous points throughout the United States to which the finished flooring is shipped by members of the

Association. It appears from the evidence to have been the usual practice in the maple flooring trade, to quote flooring at a delivered price and that purchasers of flooring usually will not buy on any other basis. The evidence, however, is undisputed that the defendants quote and sell on an f. o. b. mill basis whenever a purchaser so requests. It also appears that the mills of most of the members of the Association are located in small towns in Michigan and Wisconsin and that the average freight rates from these principal producing points in Michigan and Wisconsin to the principal centers of consumption in the United States are approximately the same as the freight rate from Cadillac, Michigan, to the same centers of consumption. There is abundant evidence that there were delays in securing quotations of freight rates from the local agents of carriers in towns in which the factories of defendants are located, which seriously interfered with prompt quotations of delivered prices to customers; that the actual aggregate difference between local freight rates for most of defendants' mills and the rate appearing in defendant's freight-rate book based on rates at Cadillac, Michigan, were so small as to be only nominal, and that the freight-rate book served a useful and legitimate purpose in enabling members to quote promptly a delivered price on their product by adding to their mill price a previously calculated freight rate which approximated closely to the actual rate from their own mill towns.

The Government bases its criticism of the use of the freight-rate book upon the fact that antecedent associations, maintained by defendants, incorporated in the freight-rate book a delivered price which was made up by adding the calculated freight rate from Cadillac, Michigan, to a minimum price under the so-called "minimum price plan" of previous associations, whereby the price was fixed at cost plus ten per cent. of profit. It is conceded

that the present Association does not include a delivered price in the freight-rate book, but it is urged by the Government that the circulation of the tables of estimated cost of flooring, together with a freight-rate book, enables members of the Association to fix a delivered price by adding to the estimated cost circulated among members, the calculated freight rate published in the freight-rate book, and that the freight-rate book used in conjunction with the published material as to estimated cost is merely a device whereby the defendants have continued the so-called minimum price plan formerly maintained by predecessor associations, which was a plan whereby the members co-operated in the maintenance of a fixed minimum price. Defendants maintain that the minimum price plan was never actually carried out by any predecessor association and that it was formally abandoned in February or March, 1920, after the failure to secure the approval of the plan by the Federal Trade Commission, and was never revived or continued.

It cannot, we think, be questioned that data as to the average cost of flooring circulated among the members of the Association when combined with a calculated freight rate which is either exactly or approximately the freight rate from the point of shipment, plus an arbitrary percentage of profit, could be made the basis for fixing prices or for an agreement for price maintenance, which, if found to exist, would under the decisions of this Court, constitute a violation of the Sherman Act. But, as we have already said, the record is barren of evidence that the published list of costs and the freight-rate book have been so used by the present Association. Consequently, the question which this Court must decide is whether the use of this material by members of the Association will necessarily have that effect so as to produce that unreasonable restraint of interstate commerce which is condemned by the Sherman Act.

The gathering and distributing among members of trade statistics.

It is contended by the Government that an analysis of the reporting system adopted by the defendants shows that there is no information withheld by one member from another, and that every member is perfectly familiar not only with the summaries which show the exact market condition generally, but also with the exact condition of the business of each of his fellow members. An examination of the record discloses that this is not an accurate statement of the statistical information distributed among members of the Association, certainly not within any recent period of the history of the successive associations. At the time of the filing of the bill, members reported weekly to the Secretary of the Association on forms showing dates of sales made by the reporting member, the quantity, the thickness and face, the grade, the kind of wood, the delivery, the prices at which sold, the average freight rate to destination and the rate of commission paid, if any. Members also reported monthly the amount of flooring on hand of each dimension and grade and the amount of unfilled orders. Monthly reports were also required showing the amount of production for each period and the new orders booked for each variety of flooring. The Association promptly reported back to the members statistics compiled from the reports of members including the identifying numbers of the mills making the reports, and information as to quantities, grades, prices, freight rates, etc., with respect to each sale. The names of purchasers were not reported and from and after July 19, 1923, the identifying number of the mill making the report was omitted. All reports of sales and prices dealt exclusively with past and closed transactions. The statistics gathered by the defendant Association are given wide publicity. They are published in trade journals

which are read by from 90 to 95% of the persons who purchase the products of Association members. They are sent to the Department of Commerce which publishes a monthly survey of current business. They are forwarded to the Federal Reserve and other banks and are available to anyone at any time desiring to use them. It is to be noted that the statistics gathered and disseminated do not include current price quotations; information as to employment conditions; geographical distribution of shipments; the names of customers or distribution by classes of purchasers; the details with respect to new orders booked, such as names of customers, geographical origin of orders; or details with respect to unfilled orders, such as names of customers, their geographical location; the names of members having surplus stocks on hand; the amount of rough lumber on hand; or information as to cancellation of orders. Nor do they differ in any essential respect from trade or business statistics which are freely gathered and publicly disseminated in numerous branches of industry producing a standardized product such as grain, cotton, coal oil, and involving interstate commerce, whose statistics disclose volume and material elements affecting costs of production, sales price and stock on hand.

Association Meetings.

The Articles of the defendant Association provide for regular meetings for the transaction of business on the third Wednesday of April, July and October of each year, and that special meetings may be called by the President or a majority of the Board of Trustees. During the year in which the bill of complaint was filed meetings appear to have been held monthly. Minutes of meetings were kept, although it is not contended that they constituted a complete record of the proceedings. Trade conditions generally, as reflected by the statistical information dis-

seminated among members, were discussed; the market prices of rough maple flooring were also discussed, as were also manufacturing and market conditions. Those members who did not produce rough flooring lumber improved the occasion of the monthly meetings to secure purchases of this commodity from other members. The testimony is explicit and not denied that, following the decision in *United States* v. *American Linseed Oil Co.*, 262 U. S. 371, (June, 1923) there was no discussion of prices in meetings. There was no occasion to discuss past prices, as those were fully detailed in the statistical reports, and the Association was advised by counsel that future prices were not a proper subject of discussion. It was admitted by several witnesses, however, that upon occasion the trend of prices and future prices became the subject of discussion outside the meeting among individual representatives of the defendants attending the meeting. The Government, however, does not charge, nor is it contended, that there was any understanding or agreement, either express or implied, at the meetings or elsewhere, with respect to prices.

Upon this state of the record, the District Court, from whose decision this appeal was taken, held that the plan or system operated by the defendants had a direct and necessary tendency to destroy competition; that the methods employed by them had at all times a controlling influence to impeding the economic laws of supply and demand, and tending to increase prices, and to stifle competition; that the plan of the Association was therefore inherently illegal; that in consequence the actual results flowing from such a plan and the execution of it are of secondary importance. The court accordingly decreed the dissolution of the defendants' association and enjoined them from engaging in activities complained of by the Government. In arriving at this result it was admitted that it was impossible to measure, either accurately or

even approximately, the effect of the activities of the defendants upon prices, production and competition in the flooring industry, for the reason that there could be, in the nature of things, no satisfactory standards of comparison. The court found no agreement to fix prices and that in fact lower prices have usually been quoted by members than by non-members of the Association. In reaching its conclusion, the court relied principally upon the necessary tendency or effect of the plan actually in operation and upon the past history of the Association and its predecessors as indicating a probable purpose on the part of the members of the Association to use the plan as a medium for effecting actual and undue restraint on interstate commerce, and it is urged here that the history of the successive Associations organized by the members of the defendant Association, or a majority of them, establishes a systematic purpose on the part of the corporate defendants to restrain interstate commerce.

It is pointed out that the Articles of the Association of January 1, 1913, embodied the so-called "allotment plan," which provided for an allotted percentage of the aggregate shipments of all members within a given period, to each member, with a provision for payment of a bonus or allowance to each member which did not make its full allotment or percentage of shipments. This plan was abandoned in March, 1920. On July 1, 1916, the Articles of Association of that date adopted a minimum price plan which it is claimed continued in effect until about January 1, 1921. This plan contemplated the establishment of a minimum price of maple, beech and birch flooring by members of the Association, such prices to consist of the average cost and expense of manufacturing and selling the product, plus an average profit of ten per cent. The plan provided drastic penalties for the sale of flooring at less than the minimum price so established. It is also charged that on January, 1921, the defendants, by agree-

ment, established a minimum price basis for the sale of flooring for the ensuing year. Under this plan the average net profit was reduced from ten to five per cent. and penalties for non-compliance with the minimum price scale were abolished.

It is conceded, however, that each of these several plans was abandoned and that the present Association, both by the terms of its Articles of Association and in actual practice, has confined itself to the activities which have already been described in some detail.

We think it might be urged, on the basis of this record, that the defendants, by their course of conduct, instead of evidencing the purpose of persistent violators of law, had steadily indicated a purpose to keep within the boundaries of legality as rapidly as those boundaries were marked out by the decisions of courts interpreting the Sherman Act. Whether, however, their general purpose was to become law-abiding members of the community or law breakers, it is not, we think, very material unless the court either can infer from this course of conduct a specific and continuing purpose or agreement or understanding on their part to do acts tending to effect an actual restraint of commerce (*United States* v. *United States Steel Corp'n*, 251 U. S. 417), or unless, on the other hand, it is established that the combination entered into by the defendants in the organization of the defendant Association, and its activities as now carried on, must necessarily result in such restraint. As already indicated, the record is barren of evidence tending to establish that there is any agreement or purpose or intention on the part of defendants to produce any effect upon commerce other than which would necessarily flow from the activities of the present Association, and in our view the Government must stand or fall upon its ability to bring the facts of the present case within the rule as laid down in *American Column Co.*

v. *United States*, 257 U. S. 377, where it was said, at p. 400:

"It has been repeatedly held by this Court that the purpose of the statute is to maintain free competition in interstate commerce and that any concerted action of men or corporations to cause, or which in fact does cause, direct and undue restraint of competition in such commerce falls within the condemnation of the Act and is unlawful";

and within the rule laid down by the Court in *United States* v. *American Linseed Oil Company*, 262 U. S. 371, at p. 390:

"In the absence of a purpose to monopolize or the compulsion that results from contract or agreement, the individual certainly may exercise great freedom; but concerted action through combination presents a wholly different problem and is forbidden when the necessary tendency is to destroy the kind of competition to which the public has long looked for protection."

It should be noted that the bill of complaint neither charges nor does the Government urge, that there was any purpose on the part of the defendants to monopolize commerce in maple, beech and birch flooring. It is not contended that there was the compulsion of any agreement fixing prices, restraining production or competition or otherwise restraining interstate commerce. In our view, therefore, the sole question presented by this record for our consideration is whether the combination of the defendants in their existing Association, as actually conducted by them, has a *necessary* tendency to cause direct and undue restraint of competition in commerce falling within the condemnation of the Act. In urging that such is the necessary effect, the Government relies mainly upon the decisions of this Court in *Eastern States Retail Lumber Dealers Association* v. *United States*, 234 U. S. 600; *American Column & Lumber Co.* v. *United States*, *supra*, and *United States* v. *American Linseed Oil Company*, *supra*.

It should be said at the outset, that in considering the application of the rule of decision in these cases to the situation presented by this record, it should be remembered that this Court has often announced that each case arising under the Sherman Act must be determined upon the particular facts disclosed by the record, and that the opinions in those cases must be read in the light of their facts and of a clear recognition of the essential differences in the facts of those cases, and in the facts of any new case to which the rule of earlier decisions is to be applied.

In *Eastern States Retail Lumber Dealers Association* v. *United States, supra,* the defendant members of the Association had entered into a combination and agreement whereby members were required to report to the Association the names of wholesale dealers in lumber who sold their product directly to consumers. The names of the offending wholesalers were placed upon a "black list" which was circulated among the members of the Association. The name of a blacklisted wholesaler could be removed from the list only on application to the secretary of the Association and on assurance that the offending wholesaler would no longer sell in competition with retailers. It was conceded by the defendants, and the court below found, that the circulation of this information would have a natural tendency to cause retailers receiving these reports to withhold patronage from listed concerns; that it therefore, necessarily, tended to restrain wholesalers from selling to the retail trade, which in itself was an undue and unreasonable restraint of commerce. Moreover, the court said, at p. 612:

"This record abounds in instances where the offending dealer was thus reported, the hoped for effect, unless he discontinued the offending practice, realized, and his trade directly and appreciably impaired."

There was thus presented a case in which the court could not only see that the combination would necessarily re-

sult in a restraint on commerce which was unreasonable, but where in fact such restraints had actually been effected by the concerted action of the defendants.

In American Column & Lumber Co. v. *United States, supra,* the defendant association adopted a plan for the gathering from its members daily and disseminating among them weekly, reports of all sales and shipments actually made, giving prices, names and addresses of purchasers, the kind, grade and quantity of commodity sold and shipped. Its plan provided for a monthly production report giving production of members during the previous month; a monthly stock report showing stock on hand on the first day of the month; current price lists, followed by prompt information as to new price quotations as made. Monthly meetings were held at which the extensive interchange of reports was supplemented by further exchange of information as to production, at which active and concerted efforts were made to suppress competition by the restriction of production. The secretary of the Association, in communications to members, actively urged curtailment of production and increase of prices. The record disclosed a systematic effort, participated in by the members of the Association and led and directed by the secretary of the Association, to cut down production and increase prices. The court not only held that this concerted effort was in itself unlawful, but that it resulted in an actual excessive increase of price to which the court found the "united action of this large and influential membership of dealers contributed greatly." The opinion of the court in that case rests squarely on the ground that there was a combination on the part of the members to secure concerted action in curtailment of production and increase of price, which actually resulted in a restraint of commerce, producing increase of price.

In *United States* v. *American Linseed Oil Co., supra,* defendants entered into an agreement, with provisions

for financial forfeitures in event of its violation, for the organization and maintenance of an exchange or bureau whose function it was to gather and distribute information among the members, as to all price lists covering the product of members. Members agreed, under heavy penalties for violation, to furnish to the Bureau a "schedule of prices and terms and adhere thereto—unless more onerous ones were obtained—until prepared to give immediate notice of departure therefrom for relay by the Bureau to members." Members were required by the agreement to report by telegraph all variations of prices; the names of prospective buyers; the point of shipment; the exact prices, terms and discounts; whether sales were made to jobber, or dealer or consumer; in what quantity; and to report also by telegraph all orders received; to report daily all carload sales of product, giving full details; all such information being treated as confidential and concealed from the buyers. All information received was made available to members through the statistical surveys of the Bureau. It was provided that any subscriber who had offered his product to a prospective buyer who did not purchase, should have the right to advise the Bureau of the unsuccessful offer and to request the Bureau to "bulletin" all its subscribers, asking specific information regarding any quotations for sale to such prospective buyer, and to make to subscribers a compilation report of the information secured by such "bulletin." Members were required to give the desired information. Each subscriber was required to furnish the Bureau, upon request, information pertaining to any buyer of the product and might request the Bureau to secure like information from all other subscribers "whenever it shall have an order or account with or inquiry from the buyer". The plan as organized, was actively carried out by the defendants and the court held that the plan as operated by the defendants was a violation of the Sherman Act in that "its necessary

tendency was to suppress competition in interstate commerce." It was held that the agreement for price maintenance accompanied by free exchange of information between competitors as to current prices of the product offered for sale; full details as to purchasers, actual and prospective; and the exchange of information as to buyers and those to whom offerings were made by sellers and of the terms of such offerings, could necessarily have only one purpose and effect, namely to restrain competition among sellers. The court said, at p. 389:

"If, looking at the entire contract by which they are bound together, in the light of what has been done under it the Court can see that its necessary tendency is to suppress competition in trade between the States, the combination must be declared unlawful. That such is its tendency, we think, must be affirmed."

It is not, we think, open to question that the dissemination of pertinent information concerning any trade or business tends to stabilize that trade or business and to produce uniformity of price and trade practice. Exchange of price quotations of market commodities tends to produce uniformity of prices in the markets of the world. Knowledge of the supplies of available merchandise tends to prevent over-production and to avoid the economic disturbances produced by business crises resulting from overproduction. But the natural effect of the acquisition of wider and more scientific knowledge of business conditions, on the minds of the individuals engaged in commerce, and its consequent effect in stabilizing production and price, can hardly be deemed a restraint of commerce or if so it cannot, we think, be said to be an unreasonable restraint, or in any respect unlawful.

It is the consensus of opinion of economists and of many of the most important agencies of Government that the public interest is served by the gathering and dissemination, in the widest possible manner, of information with

respect to the production and distribution, cost and prices in actual sales, of market commodities, because the making available of such information tends to stabilize trade and industry, to produce fairer price levels and to avoid the waste which inevitably attends the unintelligent conduct of economic enterprise. Free competition means a free and open market among both buyers and sellers for the sale and distribution of commodities. Competition does not become less free merely because the conduct of commercial operations becomes more intelligent through the free distribution of knowledge of all the essential factors entering into the commercial transaction.[1] General knowledge that there is an accumulation of surplus of any market commodity would undoubtedly tend to diminish production, but the dissemination of that information cannot in itself be said to be restraint upon commerce in any legal sense. The manufacturer is free to produce, but prudence and business foresight based on that knowledge influence free choice in favor of more limited production. Restraint upon free competition begins when improper use is made of that information through any concerted action which operates to restrain the freedom of action of those who buy and sell.

It was not the purpose or the intent of the Sherman Anti-Trust Law to inhibit the intelligent conduct of business operations, nor do we conceive that its purpose was to suppress such influences as might affect the operations of interstate commerce through the application to them of the individual intelligence of those engaged in commerce, enlightened by accurate information as to the essential elements of the economics of a trade or business, however

[1] See a suggestive analysis of the Competitive System by various Economists collected and commented on in Marshall's Readings on Industrial Society, 294, 419, 479, 498, 935. See Hobson The Evolution of Modern Capitalism, 403, 5; Elementary Principles of Economics, Irving Fisher, 427, et seq.

gathered or disseminated. Persons who unite in gathering and disseminating information in trade journals and statistical reports on industry; who gather and publish statistics as to the amount of production of commodities in interstate commerce, and who report market prices, are not engaged in unlawful conspiracies in restraint of trade merely because the ultimate result of their efforts may be to stabilize prices or limit production through a better understanding of economic laws and a more general ability to conform to them, for the simple reason that the Sherman Law neither repeals economic laws nor prohibits the gathering and dissemination of information. Sellers of any commodity who guide the daily conduct of their business on the basis of market reports would hardly be deemed to be conspirators engaged in restraint of interstate commerce. They would not be any the more so merely because they became stockholders in a corporation or joint owners of a trade journal, engaged in the business of compiling and publishing such reports.

We do not conceive that the members of trade associations become such conspirators merely because they gather and disseminate information, such as is here complained of, bearing on the business in which they are engaged and make use of it in the management and control of their individual businesses; nor do we think that the proper application of the principles of decision of *Eastern States Retail Lumber Association* v. *United States* or *American Column & Lumber Co.* v. *United States* or *United States* v. *American Linseed Oil Company* leads to any such result. The court held that the defendants in those cases were engaged in conspiracies against interstate trade and commerce because it was found that the character of the information which had been gathered and the use which was made of it led irresistibly to the conclusion that they had resulted, or would necessarily result, in a concerted effort of the defendants to curtail production or raise

prices of commodities shipped in interstate commerce. The unlawfulness of the combination arose not from the fact that the defendants had effected a combination to gather and disseminate information, but from the fact that the court inferred from the peculiar circumstances of each case that concerted action had resulted, or would necessarily result, in tending arbitrarily to lessen production or increase prices.

Viewed in this light, can it be said in the present case, that the character of the information gathered by the defendants, or the use which is being made of it, leads to any necessary inference that the defendants either have made or will make any different or other use of it than would normally be made if like statistics were published in a trade journal or were published by the Department of Commerce, to which all the gathered statistics are made available? The cost of production, prompt information as to the cost of transportation, are legitimate subjects of enquiry and knowledge in any industry. So likewise is the production of the commodity in that industry, the aggregate surplus stock, and the prices at which the commodity has actually been sold in the usual course of business.

We realize that such information, gathered and disseminated among the members of a trade or business, may be the basis of agreement or concerted action to lessen production arbitrarily or to raise prices beyond the levels of production and price which would prevail if no such agreement or concerted action ensued and those engaged in commerce were left free to base individual initiative on full information of the essential elements of their business. Such concerted action constitutes a restraint of commerce and is illegal and may be enjoined, as may any other combination or activity necessarily resulting in such concerted action as was the subject of consideration in *American Column & Lumber Co.* v. *United States, supra* and *United*

States v. *American Linseed Oil Co., supra.* But in the absence of proof of such agreement or concerted action having been actually reached or actually attempted, under the present plan of operation of defendants we can find no basis in the gathering and dissemination of such information by them or in their activities under their present organization for the inference that such concerted action will necessarily result within the rule laid down in those cases.

We decide only that trade associations or combinations of persons or corporations which openly and fairly gather and disseminate information as to the cost of their product, the volume of production, the actual price which the product has brought in past transactions, stocks of merchandise on hand, approximate cost of transportation from the principal point of shipment to the points of consumption, as did these defendants, and who, as they did, meet and discuss such information and statistics without however reaching or attempting to reach any agreement or any concerted action with respect to prices or production or restraining competition, do not thereby engage in unlawful restraint of commerce.

The decree of the District Court is reversed.

MR. CHIEF JUSTICE TAFT and MR. JUSTICE SANFORD dissent from the opinions of the majority of the Court in these two cases[1] on the ground that in their judgment the evidence in each case brings it substantially within the rules stated in the *American Column Co.* and *American Linseed Oil Co. Cases,* the authority of which, as they understand, is not questioned in the opinions of the majority of the Court.

[1] The present case and the one next following.

The separate opinion of MR. JUSTICE McREYNOLDS.

These causes[1] disclose carefully developed plans to cut down normal competition in interstate trade and commerce. Long impelled by this purpose, appellants have adopted various expedients through which they evidently hoped to defeat the policy of the law without subjecting themselves to punishment.

They are parties to definite and unusual combinations and agreements, whereby each is obligated to reveal to confederates the intimate details of his business and is restricted in his freedom of action. It seems to me that ordinary knowledge of human nature and of the impelling force of greed ought to permit no serious doubt concerning the ultimate outcome of the arrangements. We may confidently expect the destruction of that kind of competition long relied upon by the public for establishment of fair prices, and to preserve which the Anti-trust Act was passed.

United States v. *American Linseed Oil Co.*, 262 U. S. 371, states the doctrine which I think should be rigorously applied. Pious protestations and smug preambles but intensify distrust when men are found busy with schemes to enrich themselves through circumventions. And the Government ought not to be required supinely to await the final destruction of competitive conditions before demanding relief through the courts. The statute supplies means for prevention. Artful gestures should not hinder their application.

I think the courts below reached right conclusions and their decrees should be affirmed.
